(a) Under the first heading come the two great facts—the distinction between the various human interests, and the unity of Europe. The interests for the first time appearing distinct were then called spiritual and temporal. Men were impressed with the existence of other values than those of wealth and power, and they lived in the firm conviction that another and a better existence was to be attained by all who deserved it. To deserve heaven involved, indeed, partly moral and partly magical action; but, in any case, the conception of what was called the spiritual was based upon actual experience. On the other hand, men felt the need for material goods and for orderly administration. This need it is not necessary to explain in the 20th century. Out of those two needs came the mediæval Church and the mediæval attempts at political administration; but the delimitation of function was never decided. In political theory the observation of the facts was complicated by an unhistorical reading of the Bible and Aristotle. Men thought that they saw in the mediæval system the Jewish priesthood and kings, mingled with the society of the old city-State. And the spiritual and temporal needs, differently supplied and differently explained, gave rise to thinkers whom we may roughly classify as ecclesiastical or civil. But, since the Church had control of most of the teaching, the ecclesiastical view of society prevailed in the mediæval books. Thomas Aquinas may stand for many others in his subordination of the civil to the ecclesiastical authority. And even Dante grants in theory a superiority of the Church which he feared in practice. The whole issue was discussed as though it were only a question of two authorities to which all men were equally subject.

As for the unity of Europe, this great mediæval idea was not destroyed by the conflict of Church and State. In fact, Europe was one in its general culture and in its social classifications, although politically it was one only in sentiment. No effective organization of the political order was produced by this sentiment. But in theory all thinkers agreed that the basis of political organization was the interdependence of all the groups of the humanity which counted. The existence of the Eastern empire, of heathen kingdoms and of distant civilizations, hardly seemed to trouble the theorists. Civilized humanity for them was one family, the inhabitants of W. Europe.

(b) Mediæval political life was formed by the system called feudal and by kingship. The local administrations of feudalism remain effective in the quaint idea that ownership of land implies the

right to govern the inhabitants of that land, and in certain peculiar caste-sentiments; but as a political system feudalism gave place to kingship, and it has hardly been the occasion of any valuable political idea. In fact it was essentially pre-political and socially primitive. Kingship, on the other hand, has been important to political life and to theory. The mediæval king was a sacred person, responsible to God, and an exponent, with advisers, of 'natural' or of customary law. He was not a despot, a representative, an official, or the source of law. He became, especially in England and France, the focus of the effort towards settled and therefore centralized government and the symbol of the new national sentiment. In theory the king has some special divinely-given qualities; he is the necessary result of the desire for one kind of law in any group, and he seems to be given some peculiar physical power of transmitting abilities to his children.

5. The Renaissance.—The decay of the mediæval system, towards the end of the 14th cent., left the unity of Europe a vague memory, the conflict of Church and State a tiresome and half-forgotten quarrel, feudalism practically defunct, and kingship supreme. But the influence of a new economic situation, due in part to discoveries and inventions, together with the disappearance of old ideals and the appearance of political realism, soon transformed mediæval kingship into Renaissance sovereignty. Theory changed as quickly as practice. First, William of Ockham and his follower, Marsiglio of Padua, attempted to give to the State the prestige of the Church by proving it to be fundamentally necessary and not secondary in importance. Then the minds of great numbers of men were gradually turned away from the desire for heaven. This had the double effect of degrading all political conceptions into the merely economic and at the same time of lifting ordinary life by making it seem more worthy of consideration. The supreme political fact of the Renaissance was the existence of personal government in different mutually jealous groups. The situation is generally described in books on history—a subject that has become since the Renaissance predominantly political. Indeed, conscious political development began again at about this date. And this resulted in a succession of brilliant analyses of political life and suggestions of change. Machiavelli is the first and greatest observer of facts; he is valuable because neither the Bible nor Aristotle obscured his view of life as it was; and since his time no political thinking has been based upon books. Even his suggestions for the future are not more than observations of the plans usually followed. The State is for him an instrument of the prince, chiefly for the attainment of 'glory'; and it is essentially an organization for exploitation, either within its frontiers, of the many by the few, or, outside of its frontiers, of one group by another—an analysis which is not altogether inapplicable to modern States.

A slight change of experience is marked by the consolidation of personal government on a more economic and less military basis, over nations rather than districts. France and England provide the evidence, and Jean Bodin analyzes the new phase of political life. The monarch is less prominent in theory and the organization more, although even in Bodin the theory of government in general is always tending to become an analysis of personal rule only. The *Six Livres de la République* (Paris, 1576) expresses for the first time clearly the complete doctrine of sovereignty, at least with respect to the internal organization of the State. This was a great step forward. From that time it has been taken for granted that there is within each

politically organized group an authority, a source of law and administration, beyond or above which there is no other. Legal supremacy of one authority within one territory was, therefore, seen to be necessary for political life. Bodin, however, never lost sight of the fact that legal supremacy does not imply moral superiority, and that legal submission does not imply moral allegiance. He recognizes other institutions and even grants that they existed before the State; but he seems to say that, the State having come into existence, all other social allegiances derive their force from the State and bind only in subordination to the State. This is probably due to the influence of the Greek theory of the *πολις* and of Roman law. It marks the Renaissance identification of political with the whole of social theory. Hobbes's *Leviathan* (London, 1651) still remains the best expression of the full meaning of this attitude. The State is the highest, most complete, and at the same time most fundamental or original form of society. It is doubtful if Hobbes (*q.v.*) saw anything but perversity in other social obligations than those of the State. For him the real social world was altogether included in the two problems of the individual and the State. The original war of each against all was to be avoided only by the mutual agreement (compact or contract) to erect and to obey one authority above the whole group. Groups which had not so compacted were still essentially at war each with the other. This natural war of each against all, according to Hobbes, survives between organized groups or States, and it is described as the use of force and fraud. Within the frontiers of the State there is no appeal against 'the mortal god' who, in effect, is a monarch, although in theory the sovereign may be a multitude; and there is no appeal because force is against any such appeal. As for a Church, either it is the State itself in one of its functions or it is a subordinate form of society like a goose-club. Political realism could go no farther; and with some uncertainty perhaps, but with evident intention, force is made to be the fundamental political fact. Against this Locke's conception of civil government was in part a protest. Man is not for him quite so physical, and 'the state of nature' is clearly distinguished from war. Primitive man is rightly considered to have social tendencies; and Locke (*q.v.*) adds to the idea of a compact the valuable conception that civil administration is not based upon an unlimited surrender of individuality, but on limitation of independence with a view to particular purposes. He implies that these purposes are not the only purposes of life, and he definitely makes allegiance to a government depend upon its success in attaining the purpose for which it exists.

The two leading conceptions of the period in all writers were those of a state of nature and of a social compact or contract. They have been many times proved untenable, and, although they survived into the Revolutionary period and perhaps influenced the idea of 'the rights of man,' they had been already exploded. For it is obvious that primitive man was neither so unsocial as Hobbes imagined him nor so intelligent as Rousseau thought. And even as a logical basis for society, as opposed to a historical origin, a social compact implies far too calculating and conscious an activity. But perhaps now we need rather to understand the element of truth in these two ideas of the late Renaissance. It is true that political society is based, logically and historically, on a tangle of primitive impulses and that its best purpose is the preservation and development of the constructive tendencies which are 'natural'; on the other hand, it is true that a relation not un-

like a compact is logically implied in the half-reasoned acceptance by citizens of the political conditions under which they live.

The international law of this period deserves special consideration, for it reflects a new phase of political experience and adds something to political theory, but with strangely little effect upon the idea of sovereignty. International law was primarily an attempt to supply another conception for the mediæval idea of the unity of civilization. It was based upon the obvious facts that no State was isolated, and that the relations between States were not altogether those of force and fraud. There were indications that at intervals even sovereigns regarded other sovereigns as trustworthy or amicable; and, when the peculiar habit called war broke out, there seemed to be some limits set to the amount of force or to the intricacy of the fraud usually maintained. How was this to be explained? The attempts which were made to explain it culminated in Grotius (*q.v.*), who established or revived for many generations the conception of a natural law, with Christian connexions, superior to the will of States or princes. Besides being only the expression of the moral feeling of that particular period, this natural law, in so far as it was defined, was a mild restrictive suggestion which the international lawyers tried to believe was a command. But its presupposition was that the agents of States could use anything except a few peculiar practices, and need not feel even that restriction when the existence of their own form of government was in danger. Personal rule had created a mythical State-person, having all the qualities of personality except moral responsibility. At the close of the Renaissance period another great political realist appeared. Charles de Secondat Montesquieu set himself, in *L'Esprit des lois* (Geneva, 1748), to study political facts by the method of comparing the usages of different peoples. The evidence at his disposal was very deficient, but he arrived at some valuable conclusions—*e.g.*, that environment affects institutions. His attempt to distinguish the inner spirit of different forms of government as well as their external forms is also valuable.¹ His aloofness is partly that of the scholar, partly due to the spirit of the 18th cent., when passionate feeling had not yet disturbed or developed the course of political thought.

6. *Influence of Rousseau.*—Meanwhile the dumb majority were living and dying, hardly troubled by 'glory' and gradually rising to a hope for something more than food and clothing, of which, indeed, the prevailing social organization made the distribution more and more uneven. The movements of the following centuries were political largely because economic needs could not be supplied without political disruption. And it was beginning to be felt that government for the good of the governed should not be a kindly concession by the established powers, but a right—*i.e.*, it must be conceived as the very nature of government and the only basis of moral allegiance. A new and truer conception of humanity was shaking the barriers which divided social castes.

The new age was heralded by the work of Jean Jacques Rousseau (*q.v.*). Still moving in the confused region of contracts, rights, and sovereignty, Rousseau redeemed the old words and foretold a new spirit by his undeluded love of men. He thought in terms of real life, even when he used the musty language of his predecessors. In the analysis of fact Rousseau emphasized chiefly the dependence of the individual upon society for his thought and feeling as well as for his material wants, but he so phrased his conceptions that the

v. 2.

choice of the individual seemed to be the ultimate source of government. As for suggestions of social betterment, he required a complete supremacy of all adult men of the group, who were to rule directly through their agents. They were, however, to have power, not because of their combined force, but because their real will could not be mistaken. This was a moralizing of politics; but in effect Rousseau only transferred to popular government the absolutism and the divine right (*q.v.*) which had hitherto been allowed to personal government. Again, for him as well as for most of his contemporaries, the State meant the whole of organized society. And, again, in the effort to preserve local political vitality he repudiated the device of representative government. These are obvious mistakes. But the great importance of Rousseau is not merely due to the effect of his work on his own generation; it comes from the fact that he re-established the old Greek and fundamentally human idea of political society as an opportunity for the full realization of what is best in man. His argument is often bad and his language always ineffective, because of the obsolete conceptions with which he had to work. But one can feel the effort to express a new meaning. Men were to be truly free in political society; they were to find in it more than they had surrendered in the mythical contract; and they were to be 'citizens,' because 'subjects' only of the general will. The Revolution was intoxicated with the word 'citizen'; and it marks a new age, if we consider that for writers like Hobbes the products of the social contract are only subjects. With the title of citizen the common man felt that he could rise from his knees; and, even if later he mistakenly worshipped himself, he was at least given a dignity without which the political progress of recent years would have been impossible.

Burke, who imagined himself as far as possible opposed to Rousseau, is full of the same kind of humanism. He feels the naturalness of institutions and the value of tradition, but his intellectual analysis of facts is inadequate. The circumstances of the time often misled him into the maintenance of what was obsolete, and he saw objections against any new idea much more clearly than the evils of the established system.

The two great political changes of the period, of which the importance is hardly recognized even to-day, were the political experiments in N. America and in France. 'The rights of man,' vaguely conceived by English revolutionaries, were taken as the theoretical basis for the republic of the United States and, under the influence of thinkers, adopted by the revolutionaries of France. The phrase, however, sounds so empty to-day that it is difficult for us to understand the force that it once had. It meant that there was to be recognized by every political society a fundamental humanity in every man which should not be, as it still is, forgotten in the pursuit of wealth, or because governments desire to act without being criticized, or because we know that men differ in ability.

In the meantime men were turning away from the comparison of different organizations to the criticism of all organization in view of fundamental needs. The new question was not which form of administration was best for the attainment of old purposes, but what purpose any administration should pursue.

7. Utilitarianism and politics.—Political thought renewed its life in the utilitarians. The experience which gave rise to their calculus of pleasures was the dismal beginning of industrialism. At first a revolt against the restrictive influence of the

remnants of the mediæval system, utilitarianism (*q.v.*) became ultimately an appeal for the full and free development of all human beings. Jeremy Bentham was the source of the new energy. 'The greatest happiness of the greatest number' became the new gospel. The effect of Bentham's theory upon political practice was so obvious and is still so recent that even practical politicians admit in this case the importance of theory. For Bentham initiated the modern practice of continuous legislation. The State was not merely to maintain, but to develop and increase the opportunities for civilized life. From this period we derive the conception of a scientific use of legislation for definite social effects and the desire to have as few restrictions on individual action as is consistent with order. J. S. Mill (*q.v.*) was the most philosophical thinker of the new school, especially as regards the fact that spontaneous individual action is the only source of a valuable social life. So far as the analysis of fact is concerned, the most important influence upon political thought came from the new study of economic facts. At one time the State seemed to be concerned only or chiefly with wealth. Mill represents this element in the new phase of political thought. Much discussion turned upon commercial policy, and for the first time a proper attention was directed to the relation of administration and economic production. English political thought has since fallen into the hands of the lawyers, whose natural interest is in methods rather than in moral ends to be pursued. The problem of legal sovereignty has bulked largely in their imagination, and they have done admirable work in making the machinery of government more effective. Their deficiencies were due largely to an extreme provincialism. French thought, meanwhile, was making progress in the basic conceptions of political society. It was perceived that society could not be understood as a machine, and that the conception of individuals as nerveless similar units was destroying social vitality in the attempt to prevent the growth of privilege. The republic was criticized as severely as any monarchy had been. In Germany the philosophical study of man led to conceptions of society vaguely correct but hopelessly without reference to contemporary facts. The most valuable idea developed was that of the historical evolution of various forms of organization.

The attitude towards established government, adopted chiefly in France and England, was one of suspicion. It seemed to imply that the individual was best when alone or was by nature isolated. *Laissez-faire* (*q.v.*) led to brute conflict, and the State was becoming a machine for the use of manufacturers. The influence of the historical school, both on the Continent and in England, should be counted as correcting the mistakes of this false individualism. In practice it had been corrected, for the political influence of the later utilitarians was by no means directed to isolating the individual. But the theory of the State as a living and natural unit was needed to complete the tendency towards socializing all political activities. The historical school rightly looked back to a form of political humanism in their opposition to what appeared to be a too mechanical conception of society and the State. But their ambitions misled them. They lost sight of the individual in the endeavour to transcend him; they confounded the State with society as a whole and, in the desire for organic conceptions, they raised from the grave of Leviathan a monstrous ghost—the mystical State which is above all morality.

8. A new political theory.—The crude and as yet unexamined conceptions of nationalism at present popular are in part due to the mistakes of the

historical school. Already, however, especially among French writers, there is a return to the individualism (*q.v.*) of earlier times, with such corrections as must be allowed from the suggestions of Auguste Comte and his followers (see art. POSITIVISM). Society is clearly not a mere collection of individuals, nor is the State a mere contract of citizens; but, on the other hand, the social unit or the State is not to be explained except as a special form of relation between individuals. Neither the atomic individual nor the mystical crowd-mind is a fact; and with such negatives the history of political theory ends, except for the study of special or departmental interests.

Again, however, political life outgrows the formulæ of established theory. Within the frontiers of every civilized State independent quasi-voluntary associations have arisen—the trade-unions (*q.v.*). Across the frontier voluntary associations for the use of capital in undeveloped countries have become powerful. State action has immensely increased, and no clear limit appears as to what the State can do; but other organizations have begun to repudiate the idea that they owe their existence to the State. Further, by contrast to the preceding period, States are compelled by force of circumstances to act together; and, most important of all, for the first time in human history every human being is brought into continuous political contact with every other, since all the States of the world are at last connected. The mass of new facts has led to extreme specialization in action and thought; and so far no comprehensive view has become common nor is any suggestion of improvement generally accepted. Recent political thought is to be found embedded in the discussion of general social and economic questions. Socialism and syndicalism (*qq.v.*), although implying political conclusions, are far-reaching social movements rather than programmes of State action. For the old theories of the State begin to appear superficial to an age impatient of fundamental evils and unlikely for much longer to be satisfied with the modification of a few officialisms. Already there is evidence that a new political theory is arising out of the new social theory; and the new experiences of recent years will perhaps require an entirely new analysis of fact, not to speak of new suggestions of reform. It is becoming obvious that political thought should concern itself not only with devices of government, but with the establishment of more ideal purposes than those now commonly accepted.

Although the situation has indeed changed in so many ways that much of the old political theory is obsolete and all of it is inadequate, we owe much to the statesmen and thinkers of the past. The results acquired in practice are probably such as that the consent of the governed is essential for good government, that different situations need different systems, that political life changes and therefore the system of administration should change. These are principles which may be observed to be implied in the action of the more advanced political groups. In the sphere of theory the old truths still valid are such as that society is a real and natural whole, that man is made by society and yet the individual is the only source of development. But, naturally it is impossible to distinguish clearly theory from practice when we are making a summary of our indebtedness for the achievements of past ages. We can only build the future upon the good already established by men now dead. The greatest good, however, that we may derive from them, in the effort to elevate political action and illuminate political theory, is the power to repudiate

what we have inherited when it hampers our perception of evil or dulls our desire to destroy it.

POLYGAMY.—See MARRIAGE, FAMILY.

POLYNESIA.—1. **Introductory.**—Polynesia is the name given to a number of Pacific islands whose inhabitants are closely related to one another, speak dialects of substantially the same language, are similar in physique, and are, in fact, a distinct, though not a pure, race. The chief groups of islands included in the area are Samoa, Tonga, Tahiti and the Society Islands, the Hervey or Cook Islands, the Marquesas and the Paumotu, with the Hawaiian or Sandwich Islands to the north and New Zealand to the south. The Fiji Islands form part of Melanesia; but their people are largely Polynesian in character; and there are, scattered among the islands of Melanesia and Micronesia, small outlying settlements of people either wholly or partly Polynesian.

The Polynesians have long been subject to the influence of white men. Mission stations were established long ago in most of their groups, and the people have been in constant contact with travellers, traders, government officials, and others. The old religious beliefs have been swept away, and superseded by Christianity; early social and political systems and customs have been displaced; past cultures have been forgotten. It is therefore necessary, in writing about these things, to adopt the past tense, even though some of the matters spoken of still survive. It must not be assumed that every statement which follows applies to all the islands, the intention of this article being merely to indicate, as far as possible in the space available, some of the more widely spread or characteristic features of Polynesian customs and beliefs.

2. **Origin and migrations.**—It is believed that, prior to the migrations about to be mentioned, the islands of Polynesia, or many of them, must have been occupied by a people more primitive in culture than these later migrants. This belief is based upon a recognition of physical differences among the people; upon an investigation of the systems of relationship, nomenclature in connexion with those systems, and certain relationship duties and privileges found in Polynesia; upon a study of certain Polynesian beliefs, cultures, and customs, including the custom of *kava*-drinking; and upon a comparison of all these matters with what has been found in Melanesia. Much fresh light has been thrown upon this difficult subject by W. H. R. Rivers in his recent great work, *The History of Melanesian Society*. The later migrants moved into the Pacific from the islands of Indonesia; they had probably passed to those islands from an earlier home on the mainland of further India; and there are grounds for suggesting a still earlier home to the north-west. Their movements from India to Indonesia, and afterwards, by routes skirting some of the islands of Melanesia, to the Pacific, are believed to have been caused by pressure from behind; and it is thought that in the course of their migrations through Indonesia they themselves came in contact with, and to a certain extent pushed before them, Papuans or Melanesians then

occupying the islands. Their legends indicate that their first halting-places in the Pacific were probably the Fiji Islands, from which they reached the Samoan and Tongan groups, and from all these they spread westward among the other groups which now constitute the islands of Polynesia. Certain definite migrations are recorded in these legends; but there must have been unrecorded movements, and, indeed, it is possible that during the whole period there was a more or less undefined and intermittent process of passing from India southward and eastward. The period of what is regarded as the first recorded migration from India to Indonesia has been placed in the last century prior to the Christian era; but it has been suggested that the movement began some few hundred years earlier. Their first recorded appearance in Fiji has been allocated to the 5th cent. A.D., but probably there were Polynesian colonies in Fiji before then. It will be seen, therefore, that, if these figures are anything like correct, the whole period of migration may have been extremely prolonged; and, whatever may have occurred before the departures from India, there must have been, during this period, numberless times of separation and isolation of bodies of migrants, and the people must have come into contact with other races. Then, again, after the Polynesians were scattered about in the Pacific, further separation and opportunities for differentiation arose. It is therefore hardly to be wondered at that, when many centuries afterwards they came under the notice of white observers, it was found that, notwithstanding the general similarity among the people, there were marked differences in their cultures and beliefs. The period, extending over centuries, of occupation of the western islands—Fiji, Samoa, and Tonga—has been spoken of as the Homeric age of the Polynesians, when flourished so many of their heroes, whose deeds are embodied in the traditions and songs that form the classics of the race.

3. Political systems.—The political division of the people was largely geographical, each village, subdistrict, district, and large division of an island, and each island or group of islands, being to a large extent a separate entity, managing its own affairs. The political power, and such rude systems of justice as the people possessed, were in some of the islands mainly in the hands of the chiefs, small chiefs controlling villages and small districts and great chiefs ruling over the larger areas, whilst in most of the islands or groups there were powerful head chiefs, sometimes with special distinctive titles, who are generally spoken of by writers as 'kings.' In some of the islands there were classes of landed proprietors inferior in rank to the families of the chiefs, from whom they were distinct, but who nevertheless possessed considerable influence and power. This was the case in Tahiti, where no important proposal could be carried out without the concurrence of the landed proprietors, and perhaps still more so in the islands of the Samoan group, where each village, subdistrict, district, division, and island had its *fono*, or meeting of land-owners, by whom the affairs of the area under their jurisdiction were discussed and regulated, and whose powers rivalled, and in some places seem to have over-ridden, those of the chiefs.

4. Past clan systems.—There was little or no clearly defined system of division into clans, with their accompanying practices of clan exogamy and clan totemism; but there is abundant evidence that such a system must have prevailed in earlier days and that some of its features still survived. This evidence is diverse in character. An enormous number of their gods were incarnate or

immanent in animals and plants or in parts of them, in inanimate objects, such as stones, and in phenomena of nature; and the attitude of the people towards these things, and the imagined attitude of the latter towards the people, seem to point irresistibly to a totemic origin—that is to say, these visible representations of their gods were deified totems, or, as has been suggested, had been the totems of deified heroes and ancestors of long ago. For instance, a Polynesian would be unwilling to kill, and still more unwilling to eat, the animal which was the incarnation of his own god or that of his people, and the accidental killing of one of these animals, or the finding of it dead, would cause great distress, and perhaps involve a religious ceremony; he would, however, have no scruples in regard to the god of his neighbour or a neighbouring people. He not only trusted the incarnation of his god to do him no injury, provided, of course, he had not been guilty of a grave offence, but he actually looked to it for guidance, help, and protection. There is, moreover, evidence which points to beliefs as to animal incarnations having been the ancestors of their worshippers, or the offspring of human ancestresses. Then, as regards the more social aspects of a clan system, the attitude of the people towards one another includes features highly significant of clanship; these features are various, but by way of example reference may be made to the idea prevalent in some of the islands, that, if A killed B, it was a social and even religious duty of all B's people to join in retaliating, and their vengeance was directed, not only against A, but also against all his people, a whole village sometimes being involved in the matter. There were also clear and unmistakable relics of clan exogamy; and in some of the groups—notably in Tonga—family rank descended by a matrilineal system, and there were traces of the same thing in other groups.

5. Myths of creation.—The dominant idea of some of what are believed to have been the oldest Polynesian myths of creation was the evolution of light from darkness, with which was sometimes associated the beginning of sound and of stability.

The Maori myth told of the embrace of the original parents, sky and earth. So close was this embrace that their children, who were between them, were being smothered, until one of these, Tane, succeeded in forcing their father, the sky, upwards and so letting in light and air. The same myth was known in Niue (Savage Island); and the belief that the sky had originally been forced and propped up from below prevailed widely in Polynesia. The beautiful Marquesan legend told of the victory of Atea (representing light, or perhaps even the sun) over darkness, and of sound over silence; and the marriage of Atea with the dawn. The Hawaiian myth narrated the achievements of Kane—the Hawaiian spelling of Tane—representing light, and two other beings, representing sound and stability, who broke up darkness and chaos, admitted light, and created the heavens and earth and, lastly, man. In Mangaia (Hervey group) the legend of creation begins with references to certain spirit-beings, not of human form; and then goes on to tell of a woman, called the 'very beginning,' or the 'beginning and the bottom,' who dwelt in the depths below the earth, and of the children whom she produced by tearing off portions of her own flesh, of whom the eldest, Vatea, representing the noon, and so in effect the light, was the divine ancestor of mankind.

Several of the Polynesian myths, in the form of a recital of a series of consecutive births or evolutions, suggest the development of firm rock or foundation from sand, slime, or dust. Tane and Kane were the same god; Atea and Vatea were also the same as Tane, or at least represented the same conception; and to Tane must, perhaps, be accorded the original primacy in the Polynesian pantheon; though he had not retained it in all the groups, and in some of them, in particular, had been wholly or partially forgotten and supplanted by another god, Tangaroa, who was there regarded as the creator of all things. Another idea which was widely scattered in Polynesia was that the islands or groups had been dragged up by one or

other of their ancient gods, by means of a fish-hook, from the bottom of the sea.

6. Ideas as to earth, heaven, hades, etc.—A belief prevailing in Polynesia was that the earth—a term generally confined to one island or group of islands and the surrounding sea—was a flat surface, overarched by the sky, and ending abruptly at the horizon, where sea and sky met. In some of the groups we find the idea that the heavens, above the visible sky, were formed in a series of concentric layers or strata, the higher being darker than the lower, and the highest being absolutely dark. These upper or more distant heavens, spoken of as the region of Po, or night, were believed to envelop all things, both the visible sky and the earth, so that it was Po in the remote heavens above, and Po in the regions below the earth. This idea has an important bearing upon Polynesian beliefs as to the homes of their gods and the destination of the souls of the dead. The old migration traditions and myths point to the west as the place from which they came. The home of their gods, some of them known in most or all of the groups (possibly gods or living heroes of Indonesian or pre-Indonesian days), was a beautiful paradise away to the west, and in the region of darkness, which was believed in some islands to be in the sky above, and in others to be in the depths below. The apparent confusion between the distant west, beyond the horizon, and the sky above was natural, for anything coming from the former was visibly approaching from the sky; and the further confusion between the sky above and the region below arose from their conception of Po. Similarly, the most general belief as to the destiny of the souls of the dead was either that they went to live with the gods in their western paradise or that they passed into Po.

7. The soul during life.—The belief that man possessed a spiritual personality quite distinct from his physical body—a ghostly self, which we may call a soul—and that this soul survived the body at death is found throughout Polynesia; the statement as to survival must be qualified, however, by saying that in some islands it was believed that the souls of the low-class people died with their bodies. There was a distinction in their minds between this soul, on the one hand, and the mental and moral faculties and emotions, on the other. The belief that, when dreaming, the soul of the sleeper left his body and actually saw what appeared to him in his vision was apparently widely spread; and dreams were a recognized method of inspiration by the souls of the departed and the gods. In some of the islands the possession of a soul, or at all events of a mysterious invisible self, was attributed not to man alone, but also to animals, and even to trees, plants, and inanimate objects; and we find beliefs that with these also this invisible self survived the death of its owner.

8. Good and bad conduct.—It may be said generally that a man's conduct, as between himself and his fellow-men, had no influence upon his life on earth or upon the future of his soul. The only offences noticed by the gods were acts of disrespect to themselves—omissions of acts of devotion, shortcomings in performance of the usual religious observances, breaches of the tabu, and, perhaps especially, neglect in offering in sufficient quantities the required sacrifices, the last offence being one to which the priests, for obvious reasons, attached special importance. For offences of this sort the gods inflicted the punishment of illness; and, if the offence was serious and the gods were not appeased, the illness would be followed by death.

9. The soul after death.—The conduct of a man

during life, even as between him and the gods, had no influence upon the destination of his soul after death. In some of the islands all souls went to the same place; in others there was an alternative between what may be called heaven and some region under the earth—generally Po. But in nearly all the groups it was solely a question of rank, only the chiefs and upper classes going to heaven, and the common people, if their souls survived at all, going below; though in one group the alternative depended upon an entirely different matter.

In Samoa and Tonga the souls of chiefs went to their heaven, Bulotu, which was one of the homes of their gods—indeed, the souls of Tongan chiefs became gods; the souls of common people of Samoa went to a sort of hades, called Sa-le-fee, which was not exactly Po, but was for all practical purposes the same; the souls of common people of Tonga died (according to the more prevalent beliefs) with their bodies. Bulotu was away to the west; the Samoans believed it to be a region under the sea, and the Tongans thought that it was an island. It was a beautiful place, abundantly supplied with plants, bearing the richest fruits and most beautiful flowers, and with quantities of pigs; and, when the flowers were plucked and the pigs killed, others immediately took their place. Sa-le-fee was under the earth; it was the home of the family of the cuttlefish god, and, though not apparently a place of actual torture, was an unpleasant place to live in.

The Society Islands heaven was Rohutu-noa-noa, a home of the gods. It was primarily the destination of the souls of members of the great Society Islands semi-sacred Areoi society; but, as any one could go there whose surviving relatives could afford a somewhat expensive ceremony after his death, it was also in effect the destination of chiefs and important persons. All other souls went to Po. Rohutu-noa-noa, which was really Bulotu with another name, was by these people believed to be near (apparently above, in the sky) a mountain on the north-west side of the most westerly island of the group; the description of it is similar to that of Bulotu. All souls which did not attain to life in Rohutu-noa-noa had to go to Po, the journey to which appears to have been a westward one; it was a home of the gods, and was not regarded as a revolting or terrible place.

In Mangaia (Hervey Islands) the alternative destinations of the souls were paradise in the heavens above and a subterranean Po—both of them homes of the gods. Here the soul's destiny did not depend upon rank; the souls of those slain in battle went to paradise, but all others went to Po. The heavens were above, built of azure stone; and the souls that reached them were clothed with beautiful and sweet-scented flowers, laughed, danced, and enjoyed themselves in every way, looking down with disgust at the poor wretches in Po, who had to endure the indignity of being covered with the dung which fell from their more fortunate friends above. There were three points of departure for Po; but they all faced westward. The beliefs of the people of Rarotonga (Hervey Islands) were fundamentally similar to those of Mangaia.

In the Marquesas the souls of the upper classes went to heaven, this being, they thought, an island up in the sky, apparently beyond the seas, abounding in everything delightful; those of the lower classes went to Po, beneath the earth. Each of these was a home of the gods.

The Maoris of New Zealand recognized the idea of Po in its original form, as extending in concentric layers both above the visible sky and beneath the earth. Po above was the home of the gods;

and Po below was the destination of all human souls, which after death descended to the impenetrable darkness of its lowest depths, where they gradually pined away and ultimately became annihilated.

In Hawaii there was a common belief that the souls of the dead went to Po and were there eaten or annihilated by the gods; but there were variations of this belief.

It will be noticed that generally the alternative destinations were paradise and what we may call Hades; that each of these was a home of the gods; and that, whilst the former was delightful, the latter, though not necessarily a place of torment, was not a desirable residence—among other things it was always dark and gloomy. It will also be observed that heaven was usually supposed to be situated somewhere in the west; and so generally was Hades; for the most usual route to either one or the other was westerly, commencing with a rock facing the sea at the westerly end of the island group, from which the soul leapt into the sea. In New Zealand the leaping place was at the northerly extremity of the islands; but the migrations to this group of the Maoris were from central Polynesia, and a glance at a map will explain what might otherwise be regarded as an inconsistency. It may be that the custom which, as will be seen, prevailed in some of the islands of placing the remains of the dead in a canoe or a canoe-shaped receptacle is significant of a belief as to the journey of the soul when released from the body. It is thought that all these beliefs concerning the west must be associated with the early traditions of the people about the quarter from which their remote ancestors had migrated; for this would be the natural habitation of their oldest racial gods, and, to a certain extent, of their pantheon generally, and the natural destination of the souls of the dead.

In some of the islands it was believed that the soul during its journey might have a chance of turning back and re-entering its body. This was so in the Hervey Islands and in Samoa. In the latter group the belief was that, if the soul struck against a coco-nut-tree near the western land extremity at which it leapt into the sea, it could come back; and a man apparently dying, but afterwards recovering, was believed to have died and come to life again through this fortunate accident to his soul.

A belief which prevailed in many of the islands was that the souls, on reaching their ultimate destination, were eaten by the gods, or one of them. Except perhaps in one or two groups, this fate awaited only the souls that went to Po, and not those bound for paradise. It is sometimes spoken of by writers as a punishment for the people's sins against the gods. So far as the Society Islands were concerned, this statement receives some support; for we are told that in that group those who had sinned were eaten and the innocent were spared; in other groups it was the fate of all, good or bad. There is ground for suggesting that this soul-eating was not merely a matter of divine gastronomical enjoyment, but that there was connected with it an underlying idea of the passing of the souls through the gods, for the purpose of purifying them and making them fit to live among the gods.

The souls would sometimes linger about their old haunts before starting on their final journey, and in some of the groups they would actually return from their abode in paradise or Po and revisit their friends. They seem to have appeared usually in human form, but to have been immaterial and mist-like. Their visits were much dreaded by the people, though it does not appear

that they were usually believed to act malevolently during their wanderings.

10. **The gods.**—The Polynesian gods were extremely numerous, and differed widely in celebrity and power. They were greedy of respect and religious attentions and merciless with those who failed in these matters; but it cannot be said that they were regarded merely as a body of malignant beings, only to be propitiated. The people appealed to them for active guidance and assistance in all the affairs of life, both great and small, and relied confidently upon receiving it; and a large proportion of the omens which governed the people's decisions, even in most important matters such as peace or war, were the actions and movements, most carefully watched, of the divine incarnations. First in rank came what may be called the racial gods—great deities, one or more of whose names were known in nearly all the groups; these included Tane, Tangaroa, Rongo, Tiki (or Tii), Tu, Ru, the demigod Maui, and others; they were the oldest gods, possibly the divinities or heroes of the Polynesian ancestors in the Indonesian days or earlier. At the periods of visits of white men to the islands there was much confusion as to these gods. In one group only one or two were known, whilst in another group it would be another or others of them; in one group one held the supremacy, whilst in another group another was supreme; the beliefs as to the relationships of these gods, one to another, and even their origins, attributes, and spheres of influence, differed in the several groups. As a rule, they were not the objects of prayer and sacrifice, except on specially important occasions, the reason being that they were believed to be too remote to concern themselves with unimportant human affairs. Each island group, and many a single island, had gods wholly or mainly peculiar to itself; there were tutelar gods of specific sections of the people, of districts, and of villages, and family gods; and individual Polynesians had special gods, selected by themselves, or by their parents for them at birth, under whose protection and guidance they placed themselves. There were gods of the air, of the mountains, of valleys, of streams, of the sea, of animals, of plants, of fishes, of the forces and phenomena of nature. There were gods of various trades or occupations, from the most important productive labours to mere matters of personal entertainment. Of all these deities, some (including the great gods above mentioned) were spoken of as 'original gods,' or 'gods of night,' being regarded as having evolved themselves in the far distant past, never having been human; others were supposed to have been descended from, or created by, these original gods; others again were admittedly deified human beings. It may be said generally that these gods were believed to be influenced by sentiments, inclinations, and passions, and, as regards many of them, to engage in occupations and enjoyments very similar to those of the human race, though they were more enlightened and possessed supernatural powers. Very many of them were believed to be incarnate or immanent in, or to enter or take the forms of, birds, beasts, fishes, insects, plants, stones, and other inanimate objects and natural phenomena, all of which necessarily became sacred, each one to its own worshippers. There were, besides these deities, a number of spirits, some purely supernatural, others human in origin, some vindictive to humanity in general, others only to the enemies of their own clients, but all greatly feared by the people. It was usually through their help that sorcery was practised.

11. **Hero- and ancestor-worship.**—As many of the gods were admittedly departed human beings, and in some islands chiefs became gods immediately

after death, it may be said that the religion of the Polynesians included the worship of the dead. Whether it can be said that they were hero-worshippers or ancestor-worshippers depends mainly upon the definitions to be put upon these terms. As regards hero-worship, if, as is probable, a number of the Polynesian deities had been human beings—great chiefs, successful warriors, distinguished navigators, etc.—then to this extent their religion perhaps may be regarded as having had its origin, in part at all events, in hero-worship. As regards ancestor-worship, a Tongan chief would go to the grave of his deceased father or grandfather, and pray to him; but this does not necessarily mean ancestor-worship; the ancestor was regarded by the chief as a god, to whom he might pray, not merely because of ancestry, but because, having been a chief, the ancestor after death had become a god; and other people not descended from the deified chief also might pray to him. Some of the myths of creation ended in the birth of a god who was the ancestor of the human race, *i.e.* of the particular people who believed in the myth and worshipped the god; and this idea perhaps may be regarded as pointing to a past cult of ancestors. There is, however, no evidence to justify the suggestion of a general custom for members of families to worship their ancestors, either actual or collateral.

12. Sun-worship.—The evidence of sun-worship in the past is of a varied and scattered character; but its cumulative weight seems to be irresistible. Only a few indications of the nature of some of this evidence can be given here. Some of the gods are in certain groups associated with the sun—so much so that writers speak of them as sun-gods. There is a Tahitian legend, almost classic in form, concerning a god Hiro, which, though he was not there regarded as a sun-god, is very suggestive.

Hiro was voyaging with his companions in search of the *maro ura*, the special red girdle which was perhaps the most sacred object in Tahiti and is believed to have been specially connected with sun-worship. On one occasion, when he was sleeping in a grotto, evidently under the sea, his enemies, the gods of darkness, taking advantage of his absence, raised a violent storm, in the hope of destroying his boat and companions; Hiro, however, awaking just at daybreak, reappeared on the surface of the water, and with a look dispersed his enemies with the darkness.

Other evidence is connected with the great *Areoi* societies of the Society Islands and the Marquesas, and with certain seasonal festivals in which they engaged. These societies, which have been compared, and indeed associated, with the secret societies of Melanesia, appear, both from the legends as to their origin and from the performances in which they engaged, to have been connected with the worship of the sun. Among their performances in the Marquesas and perhaps in some of the islands in the Society group were certain seasonal festivals of a significant character. The summer, ending in April or May, was a season of rejoicing; but on its termination feasts were held to celebrate the departure of the gods to the abode of darkness; and, after these, prayers were offered to the gods to return. Then the *areoi* went into mourning, suspending all amusements, and retired to their homes to lament the absence of the gods; this continued until the spring, when, about October, they had another feast to celebrate the return of the gods (and especially, it would seem, the sun-god) and their period of rejoicing recommenced. These festivals, as might be expected, if the suggestion as to their significance is correct, were closely connected with the ideas of fertility and reproduction, and abundant crops and harvest. It may be noticed that this marked differentiation between summer and winter must in itself be regarded as an indication that these people came from some latitude very different

from that of the central Pacific islands. A custom of orientation of the bodies of the dead prevailed in some of the islands, but, in view of the beliefs of the people as to their place of origin, the homes of the gods, and the destination of the soul, this custom must not necessarily be regarded as evidence of sun-worship.

13. The priesthood.—There is ground for believing that at one time religious and civil authority were united in Polynesia. In Tonga there were two head chiefs or kings, of whom one, the *tuitonga*, held a purely sacred office, having little or no secular power, while the other, the *tuikano* or *tuikano*, was the actual civil and military ruler of the people; and the same division of the supreme power is found in Mangaia and Rotuma. The Tongan traditions go back to a time when religious and civil supremacy were united in the *tuitonga*, and tell of his parting with the latter; but probably the change was gradual. In some of the islands the head chief or king was the high-priest of the island; in all of them the chiefs, or at all events the higher chiefs, were regarded as divine or nearly so; and in some of them the chiefs were in many ways closely associated with the priesthood. In some of the groups there were recognized separate ranks or grades of priests, but this was not general. Considerable differences are found in the social status of the priests and their co-operation as an organized and distinct class. In some islands they formed a powerful united caste; in others they were merely members of the lay classes (and not necessarily of the highest of these), engaged in the ordinary vocations of life, and, except when actually inspired, having no special social status or power. Each of them, as a general rule, was associated with a specific god. As diviners and interpreters of the will of the gods, able in cases of illness to ascertain the cause of the divine displeasure and to specify the offerings required for its removal—offerings in which they usually had a substantial interest—they had considerable power; and the practice of sorcery gave them a special method of terrorizing the people. In some groups the sorcerers were regarded as a separate caste, distinct from and inferior to the priests, and there were certain ranks of priests who do not appear to have practised sorcery; but in some groups even high-class priests did this; and it cannot be said that there was any general defined distinction between priests and sorcerers. The father, or other head of the family, was in some of the groups the person to approach the tutelar family god.

14. Temples and places for disposal of the dead.—The Polynesians had temples and places for the disposal of the bodies of the dead. In many of the islands the temples were the mortuaries; in some the two were distinct. Where, as in Tonga, a chief became a god after death, the place where he was buried became in a sense a temple; for it was there that supplications would be addressed to him; but in Tonga they also had temples for their other gods. The temples included great national temples, temples of districts, of villages, and of families, the places of sepulture generally belonging to families. The great national temples, the domestic temples of the great chiefs, and in some of the islands the family burying-places of the chiefs were often massive structures; one form of these was a huge raised quadrangular arena, enclosed and supported on one or more of its sides by boundaries made of immense blocks of stone, the interior being flat, or rising upwards from the sides to the centre, and often wholly or partly paved. In some cases the stone boundary rose in steps; in some a portion of the enclosed arena was occupied by a massive stone structure, in the form

of a truncated pyramid, with sides rising in steps. The prevalence of this form of step-like boundary and pyramid may be a matter of some significance. In some islands the temples were merely houses, in form like domestic dwellings, and usually enclosed by an encircling fence. Similarly, in some of the islands, where it was the custom to keep the bodies of the dead above ground, house-like structures were erected for their retention.

In or about the larger temples there were usually some other erections connected with the religious rites conducted in them. These erections were different in the several groups; but they commonly included images, great and small, altars, upon which the sacrifices were laid, and houses for keeping some of the smaller images and other sacred objects, and for the occupation of priests and custodians of the temples. The images erected outside varied in character. Some were of stone and others of wood; some were rudely carved with more or less grotesque representations of the human form, others were not carved at all. And so with the smaller images kept inside the houses; some were merely shapeless logs of wood, or only poles or sticks, covered perhaps with sinnet and ornamented with red feathers—that sacred form of decoration throughout Polynesia; others were mere bundles of cloth, decorated with red feathers.

As regards all these objects, it must be stated that the old missionary idea that the people actually worshipped them was mistaken. They were images or symbols of the gods, to whom alone the worship was offered, and as such they were of course sacred; but this sanctity was not inherent in themselves, but due merely to their association with the gods. Sometimes, as in Tahiti, the god was supposed to enter temporarily one of these images, and through its medium to speak to the priest. On such an occasion the image would necessarily become specially sacred, just as the commonest Tongan layman would be sacred during a period of inspiration by the gods; but this does not mean that the image was worshipped as an 'idol.'

15. Religious observances.—Fear of the gods and spirits, the wish to turn away their wrath, and the desire to secure their guidance and help were for ever present in the minds of the Polynesians. Hence we have records of their methods of invocation and praise, possession, inspiration and divination, intercession, self-humiliation, offerings and sacrifices, and of their belief in omens, use of charms, and practices of sorcery. Religious ceremonies of one sort or another were associated, not only with the leading events of the lives of the people, from birth to death, but also with their daily life, their industries and occupations, and even amusements. Many of the prayers repeated by the priests were expressed in metaphorical and obscure language, the meaning of which was sometimes hardly understood by the speakers themselves; some of them included references to the traditions of the people, the genealogies of their chiefs, the feats of their heroes and histories of wars, and any other events of which the priests professed to have knowledge.

The faculty of obtaining inspiration from the gods and of expressing their wishes and intentions does not seem to have been nearly so much a monopoly of the priests as was that of invocation and intercession. In some of the islands any one might become temporarily inspired. Possession by the gods was generally indicated by great bodily agitation, in which the limbs became convulsed and the features distorted, the inspired person sometimes rolling on the ground in his frenzy, foaming at the mouth, and giving vent to violent cries. Thus they ascertained and announced

the will of the gods in matters great and small, public and private. In cases of illness the priests and sorcerers were the doctors, for they claimed to be able to find out the cause of illness—always either an offence by the patient or by some person connected with him, against the gods, or else sorcery—and plead with the gods for mercy, or try to counteract the machinations of the hostile sorcerer. There were actual remedies for known illnesses; but the curative powers of these remedies seem to have been attributed by the people to supernatural agency, the medicines being the vehicles or media by which the gods acted. The doings of these priests and sorcerers, and the articles, including medicines, used by them differed in the several islands, and indeed, as regards different individuals; but the predominant matters seem to have been the fees to be paid to themselves and the offerings to be made to the gods, this generally meaning, in part at least, to the priest. Sometimes one of these men would, without actually applying sorcery to make a man ill, frighten him into the belief that he was so and thus reap a harvest from him and his friends. Another customary feature was the acts of humiliation of the patient or his friends, intended to soften the hearts of the gods.

16. Omens.—Omens were believed in largely in Polynesia, some of them relating to the ordinary affairs of life, but the majority being connected with war. The people noted the position of the moon, the appearance of the stars, the forms and movements of the clouds, the advent of shooting stars and comets, the position of rainbows, the direction from which thunder was heard, the character and locality of lightning discharges, the sunset sky and other matters, and especially the movements and behaviour of birds and other living creatures in which their gods were supposed to be incarnate. The matters which these signs portended included, besides success or failure in war, the approach of death to a member of a household, the recovery or otherwise from an illness, the death of some chief, whose identity the omen did not disclose, or an invasion from a neighbouring island, etc. All these omens were believed to be signs sent by the gods; when the guidance was given by an animal incarnation, it was the god himself who was pointing out what should be done. The appearance before a Polynesian of the creature in which the god whom he worshipped was incarnate—perhaps a bird, a fish, or a crab—was sometimes regarded as a prognostication of his death; the god had come to receive his spirit.

17. Tabu.—The principle of the tabu, which was in effect a prohibition based upon the idea of sanctity, permeated deeply the minds of the Polynesians; it has been defined as a prohibition resting on a magico-religious sanction. There were certain forms of tabu which, though doubtless having a similar basis, were, in their application, of a social rather than an obviously religious character; and these cannot be dealt with here. Most of the other tabus fell under one or other of the following categories: they might be directed against (a) touching of a sacred person or object; (b) entering a sacred place or one in which a sacred ceremony was being performed; (c) doing certain things on certain solemn occasions; and (d) interfering with things upon which a specific tabu had been placed. The penalty usually expected for breach of any of these tabus was punishment by the gods, inflicted in the form of illness or even death. A few illustrations of these tabus will indicate their general character.

(a) The belief as to the sanctity of kings and great chiefs was almost universal in Polynesia, and none might come in contact with them, direct or indirect. In some of the islands no one

might touch one of these divine people or anything with which he had been in contact, or sit near him; in some places his food had to be thrown to him. In Tahiti the king was so sacred that any dwelling-house which he had entered, or furniture which he had used, or articles from or with which he had eaten or drunk could not be touched by any one else, and had to be burnt; even the ground upon which he trod became sacred, and so he had to be carried about on the shoulders of a bearer, who therefore himself became sacred. Any person who broke this tabu and came into contact, direct or indirect, became tabu himself. It was the same with those who had, in performance of the funeral offices, handled the bodies of the dead; they became tabu. The most widely recognized result of such a situation was that the person thus infected with sanctity must not handle his own food, as, if he did so, the sanctity would be transmitted to the food, and he would become ill and die. The removal of the tabu was effected in different ways in different islands. In Tonga, *e.g.*, a humble act of piety had to be performed before another great chief, whilst in Samoa the remedy was sprinkling with coco-nut-water. The tabu of the dead man was sometimes terminated on the completion of one of the regular funeral ceremonies.

(b) Entry into temples, or portions of them, and other sacred places, and even into private houses, when religious ceremonies were being carried on there, was in many islands forbidden to all except the priests, and perhaps the chiefs; and a violation of any tabu of this character would be regarded as a sacrilege, from which the direst consequences would ensue. The most widely spread form of tabu sign, intended to warn off trespassers, was a flag or piece of white cloth.

(c) There were certain acts of every-day life which were forbidden during the performance of certain solemn ceremonies and for a period after the death of a great chief. These differed somewhat in the several groups; but they included such things as eating food, or eating it in the day-time, lighting fires, engaging in certain occupations, launching a canoe, or passing in a canoe the place of ceremony or the place where the dead man lay.

(d) The placing of tabu upon specific things was a somewhat different matter. A king or chief, or perhaps a priest acting on his instructions, would place a general tabu upon a grove of coco-nut-trees or a patch of some other produce or upon the whole of some form of diet; and no man would dare to break it, even in secret. This restraint was not merely based on fear of discovery and earthly punishment; the tabu food was under the protection of the gods; a violation of the tabu would be an offence against them, and they would punish the offender. This point is illustrated by the fact that any man could place a tabu upon his own property; if it were, say, a coco-nut-tree, he would tie round it perhaps a frond of coco-nut or a wisp of grass or leaves; and any would-be pilferer knew well what this meant, and dared not risk the curse which would follow a violation of the tabu.

18. Sorcery.—Sorcery was practised by lower classes of priests, commonly spoken of by writers as sorcerers, and also, in some islands, by the higher priests. The supernatural beings through whose help it was accomplished were usually evil spirits, inferior in rank to the gods; but the gods themselves were not always superior to such work, at all events in some of the islands. One method of sorcery was what may be called contagious magic. A man, wishing to avenge himself on an enemy, procured some of his hair, saliva, urine, or excrement, or some remnants of his food, or a piece of his loin-cloth, or something else which had been in contact with his body, and handed this, with the requisite fee, to the sorcerer. The latter might take these things to his house or to the temple with which he was connected, and engage in incantations over them; or he might place them in a little bag, in which he carried images or other symbols of the supernatural beings whose aid he would invoke; and the bag might also contain such things as lizard-skin, parts of special plants, peculiarly formed stones, etc.; and he would probably bury the bag and its contents. Another method of contagious magic consisted in rubbing with a human skull food that a man was going to eat. Another form of sorcery was that of cursing. No doubt the prayers of the sorcerer engaged in contagious magic would be of the nature of curses; but in some of the islands it was believed that disaster could be brought upon the head of an enemy by merely cursing him. Presumably the imprecation was supposed to move the god or spirit, just as did the proceedings in connexion with contagious magic. In Tonga they had some special curses, amounting to commands that the

person cursed should maltreat a superior relation, such as 'Bake your grandfather till his skin turns into cracknel, and gnaw his skull for your share,' or 'Dig up your father by moonlight, and make soup of his bones,' and others of a highly indelicate character. These Tongan curses are referred to specifically because of what they would appear to involve. It was a tenet of Tongan religion that human merit, for failure in which a man might be punished by the gods, included among other things the paying of respect to aged persons and filial love; and it was considered a crime to eat food that a superior relative had touched; so, in pronouncing either of these curses, a man was commanding the committal of a double offence, for which the gods would punish the offender; for, if it was wrong to eat an aged relative's food, it must have been very wrong to eat the aged relative himself. How these curses operated is not stated; but it must not be assumed that it was believed that the victim would actually be impelled to commit the crime; for many of the Polynesian ceremonies were purely symbolic, and symbolism may well have been behind these curses, in the sense that the suggestion of the act took the place of its actual committal. Sometimes the victim was not aware of what was being attempted against him; but sometimes he was told of it, and then he would often pine away and die from sheer fright.

The underlying idea of Polynesian sorcery seems to have been that the supernatural being to whom the sorcerer appealed actually entered into the victim, sometimes perhaps through his food, and sometimes by direct entry into his body. The sensations of a person so possessed were far from pleasant; we are told, *e.g.*, of the evil spirit twisting and knotting the man's internal organs; and again of his causing the feeling of being transfixed internally by a barbed hook. These descriptions suggest certain internal complaints, which may well have been ignorantly attributed to sorcery.

There is a description by a missionary of a young Tahitian who had been subjected to sorcery. He was lying on the ground, writhing in anguish, foaming at the mouth, his eyes ready to start from his head, and his countenance exhibiting every form of terrific distortion and pain, while his limbs were agitated with violent and involuntary convulsions.

In some of the groups, however, the spell seems to have worked differently; in the Marquesas, for instance, it is said to have operated only slowly, the victim first becoming sick and then growing daily weaker, until, after about three weeks, he seemed to die from loss of strength.

In some of the islands there were alternative methods of saving a man who was under the spell of sorcery. One was to find out who was the sorcerer that had inflicted it, and by means of presents to him, exceeding in value those given to him by his original client, to induce him to call off the malignant and devouring spirit. The other was to call in the services of another sorcerer, associated with another supernatural spirit, more powerful than that which had produced the trouble, or perhaps, if only equal in power, stimulated to greater energy by more costly gifts. When a victim died, the instigator, or suspected instigator, of the calamity would often become himself the victim of persecution by the dead man's family.

19. Funeral ceremonies.—Something has already been said about the attitude and conduct of the priests, acting as doctors, diviners, and suppliants to the gods in time of illness. This matter of illness and subsequent death is also interesting as regards the attitude of the people, the relatives and friends of the sick man, especially when the invalid was a great chief or king, and thus the subject of anxiety and concern of a deep and

wide-spread character. Large numbers of people—relatives, friends, and chiefs and other important personages—came to the village of the dying man, bringing with them enormous quantities of cloth and of pigs and other food, to be offered to the offended gods. There was a general wailing, and much self-wounding and blood-letting; in the Tongan Islands women or children were in the case of a great chief strangled and offered to the gods; in the Marquesas on the illness of a priest enemy victims were sacrificed; sometimes only symbolic sacrifices were made, the people going to the temple with ropes round their necks, but not being actually slain. There is a narrative concerning the dying of a Tongan secular king, who was carried by his friends to the cook-house of the sacred king, and there placed over the cooking-hole, as a symbolic offering to the gods of the patient himself; we are told also of the same thing being done with the sacred king. The discovery that all efforts had been unavailing and that the chief was indeed dead was usually the occasion for a general howl of despair.

The methods of dealing with the bodies of the great dead, and the ceremonies with which the funerals were conducted, differed so widely in the several groups that it is impossible even to attempt to explain them here; there were, however, certain interesting features in some of the ceremonies, to which attention may be drawn, and a short statement may be made as to the modes of dealing with the corpse.

Immediately and for some time after the death all the people engaged in loud lamentations, which were, in most of the groups, renewed at certain stages of the funeral ceremonies. The lamentations were accompanied by most amazing self-wounding and laceration. The people in many of the groups would beat themselves almost senseless with clubs and other weapons, and stones, cut themselves shockingly on the heads, temples, cheeks, and breasts with instruments armed with sharks' teeth, lacerate themselves with shells, knives, and spears, sometimes driving spears into their limbs and bodies, or even through the cheeks into their mouths, thus making hideous wounds, from which the blood flowed profusely; they would tear off their hair in handfuls, and burn their bodies with lighted sticks or pieces of cloth. Various motives have been suggested by observers for these wild and excessive manifestations of grief. One suggestion is that it was intended to please the ghost, another that it was to please the gods, and yet another that it was merely a testimony of respect for the dead man's memory and of fidelity to his family. Any, or all, of these explanations may be correct; but none of them seems entirely adequate. It may be that a more correct explanation is to be deduced from the custom, which prevailed in Tahiti and perhaps others of the Society Islands, of catching the flowing blood in cloths and throwing these under the bier which held the corpse; and that the underlying idea was, or originally had been, an offering of blood to the ghost of the dead man, to strengthen it on its journey to the other world.

Another interesting practice, found in some of the islands, was that of giving the dead man some of his earthly possessions—either burying them with him or placing them on or near the bier—to which were sometimes added further offerings by his friends. Suggestions have been made by writers that the reason for the burial of the dead man's property with his body was that they were tabu; and this perhaps may have been the case as regards garments, mats, cloths, etc., which had been in contact with his dead body; but it can hardly be an explanation

of everything. The idea of providing the ghost with things for use in its new world is well known, and must surely be the explanation of many of the Polynesian practices. In Samoa valuable mats and other things were sometimes buried with the body; the grave of a warrior was surrounded with spears, fixed upright in the ground, while his club was sometimes placed on the ground and allowed to decay, no one daring to touch it; a few little trinkets and playthings might often be seen on the grave of a dead child. In Tonga most of the valuable property of the sacred chief, together with presents brought to the funeral, were buried with him. In Rarotonga they placed the dead chief's adze in his right hand, and his staff and drinking-cup by his side; and with a woman of rank they buried her cloth mallet and other domestic utensils. The practice of putting to death the dead man's wives and burying them with him prevailed, though apparently only to a limited extent, in the Tongan Islands. The custom of placing food on or near a grave or burial platform, and renewing it from time to time, was wide-spread.

Boxing and sham fights were usual features in most Polynesian festivities; but in some of the islands the ceremonies attending the burial of a chief included fights of a special character. In Mangaia (Hervey Islands) they had combats between parties, of which one was called 'the friends' and the other represented malignant spirits, and the former was always successful. In the Society Islands, when the body of a chief had been put on its resting-place—a bier, placed in the temple—it was surrounded by his family and people, all well armed. Shortly afterwards an armed party of friends from an adjoining district approached; they were called 'the mourners,' and they asked to be admitted to lament their chief. Permission was always refused; and thereupon arose a battle, which, though quite friendly and purely formal, often caused loss of life; and apparently the mourners were always the victors. In Samoa also they sometimes had combats which, though we have no description of them, there is reason for thinking had a special significance connecting them with those of Mangaia and the Society Islands. The special interest of these mock conflicts rests on the fact that a comparison of them with the ceremonial funeral combats usual in a district of Australia and in certain places in Melanesia seems to suggest that their underlying idea was an attack upon the hostile spirit that had caused the man's death.

Another curious ceremony practised in some of the islands may be called the 'burying of the dead man's sins.' In Tahiti a hole was dug in the ground, beneath the bier upon which the dead body lay; and the priest prayed to the god that the sins of the dead man, and especially that for which he had been called away, might be buried in the hole, so that the surviving relatives might be free from anxiety as to their future; the hole was then filled in, and the priest addressed the corpse, exhorting it (i.e. the ghost) to be content with its new conditions, and not to distress its surviving relatives by returning to them. Somewhat similar ceremonies were performed in some of the other islands.

20. Disposal of the corpse.—The methods of dealing with the corpse can be stated only in barest outline. Throughout Polynesia common people were usually buried underground with but little ceremony; but the modes of disposing of dead chiefs differed in the several groups.

In the Society Islands the body was taken to the seashore, and there is a statement that it was usually carried in a canoe as far as the opening of the reef, and back again. Within a short period

—generally three or four days after death—it was taken to the temple of the chief's family, and there placed upon a platform or bier, sheltered from sun and rain by a roof, in shape rather like an inverted canoe. There it was subjected to a process of preservation—a sort of simple embalming—and, when sufficiently dried up, it was wrapped in cloth, placed in a sitting posture on the bier, and allowed to remain exposed for an indefinite time. Ultimately it was buried underground beneath the platform. In time of war the bodies or their remains were often carried away to almost inaccessible spots in the mountains, in order to secure them from the sacrilege of the enemy.

In Tonga the body of a dead chief was carried, generally within a few days after death, to the burial-place of his family. The interment was underground in a vault, made of six huge masses of stone, one forming the bottom, four making the sides and ends, and one closing it in at the top, the whole being sunk underground, and covered with earth. These vaults were generally about 8 ft. long, 6 ft. broad, and 8 ft. deep; but that of a very important family might be larger, one such vault being described as capable of holding thirty bodies.

In Samoa there appear to have been alternative methods of disposing of the body. The more usual one was burial underground, some ten, fifteen, or twenty days after death. Ultimately the body was placed in a canoe, or a canoe-shaped receptacle, and buried underground, with its head to the east and its feet to the west, in the family vault—a stone structure within the family temple, evidently somewhat similar to that of Tonga. Above the vault was erected a mound of stones, neatly built up in an oblong slanting form, about 4 ft. high at the head, and 3 ft. at the foot. Sometimes, however, the body was subjected to a rude process of preservation or embalming, and then either placed in a canoe and sent adrift out to sea or placed on a stage erected in the forest, and there left to decay, after which the bones were collected and buried. One or two of the leading families had a custom of embalming the bodies of their dead, placing them on platforms raised on double canoes, in houses built for the purpose, and leaving them there. Some Samoans used to exhume the dead bodies of their relatives, sever the head—that most sacred member in Polynesia—and reinter it in a family burying-place in the mountains, the intention being to save the head from enemies in case of war.

In Mangaia (Hervey Islands) the bodies of the dead were usually deposited in caves. Some of these were of the nature of chasms, into which the body had to be let down with vine ropes from above, and a description of one discloses that it was full of water, into which the body was dropped; others were apparently caves that could be entered from below. Some bodies were buried underground in the temples. They were fixed in a doubled-up position, with the chin and knees meeting, and the limbs secured with sinnet cord, and were then placed in the grave, face downward, with the head turning towards the east. A thin covering of earth was laid over the body, and heavy stones were piled on the top.

In the Marquesas the body was usually retained in the house in which the man had died, or in another house—sometimes for weeks or months; and there is a statement that it was flayed, the skin being preserved among the family treasures. Eventually it was put in a canoe-shaped coffin, which was placed upon a covered platform or bier (evidently very like that of the Society Islands) in the temple. Later, when the flesh had all decayed away, the bones were cleaned, and some of them

were kept as relics, the rest being buried in the temple. Sometimes the body, it would seem, was kept in a private dwelling-house until the time came for cleaning and breaking up the skeleton. The death of a high-priest involved human sacrifice and a cannibal feast; but apparently all the victims were not eaten. If the high-priest had been killed in battle, and his body had not been recovered from the enemy, his soul, we are told, could not travel to its destination until they had captured and killed a sufficient number of enemy men to paddle it thither; and fighting would actually take place for the purpose of securing a full crew.

In New Zealand the mode of dealing with the remains of the dead differed in the several parts of the islands. In some places the body was buried in a sitting posture underground in the house of the dead man; one or more of his wives strangled themselves, and several slaves were killed, so that the ghost might not be without attendants. After an interval of about four weeks the body was taken up for the purpose of a further funeral ceremony, and then reinterred. After two years the bones were again dug up, scraped, painted red (the sacred colour of Polynesia), wrapped up in mats, and deposited in a canoe, which was elevated on a pole, or in a small house, or they were placed on a stage at the top of a sacred tree, or put into a hollow trunk, or conveyed to a cave or a fissure in the rocks, or burnt. Another custom was to put the body into a kind of frame, formed by two pieces of an old canoe, and standing about 6 ft. high, the body being placed in a sitting posture on a grating in the hollow place between the parts of the canoe. After a time the skeleton was removed and scraped. Near the seaside bodies were often buried in the sand drifts.

In Hawaii some of the bones of the kings and principal chiefs were preserved, and either deposited in the temple or distributed among the relatives; and the rest of the remains were either burnt or buried. The bodies of priests and chiefs of inferior rank were laid out straight and buried in that position; and a pile of stones, and often a surrounding circle of high poles, marked the position of the grave. Priests were buried in the temples at which they had officiated. For other people natural graves were preferred, such as caves in the sides of steep rocks, or large subterranean caverns. Their artificial graves were only shallow, and were often dug in their gardens, or sometimes in their houses or in sequestered spots near them, the bodies being generally placed in them in a sitting posture.

LITERATURE.—The literature relating to the Polynesians is extensive and of a varied character; but the following are a few of the more important works: A. Fornander, *An Account of the Polynesian Race*, 8 vols., London, 1878–86; S. Percy Smith, *Hawaikii*, do. 1910; W. H. R. Rivers, *The Hist. of Melanesian Society*, 2 vols., Cambridge, 1914; Horatio Hale, *Ethnography and Philology* (U.S. Exploring Expedition, 1838–42, vol. vi.), Philadelphia, 1846; Captain Cook, *Voyages*, London, several edd.; G. Turner, *Samoa a Hundred Years Ago*, do. 1884; J. B. Stair, *Old Samoa*, do. 1897; G. Brown, *Melanesians and Polynesians*, do. 1910; A. Kramer, *Die Samoa-Inseln*, 2 vols. and supplement, Stuttgart, 1901–08; W. Mariner, *An Account of the Natives of the Tonga Islands* (compiled by J. Martin), 2 vols., Edinburgh, 1827; B. Thomson, *The Diversions of a Prime Minister*, do. 1894, *Savage Island*, London, 1902; W. Ellis, *Polynesian Researches*, 4 vols., do. 1832–36; J. A. Moerenhout, *Voyages aux Iles du Grand Océan*, 2 vols., Paris, 1837; Mrs. Salmon, *The Memoirs of Arii Taimai*, do. 1901; W. W. Gill, *Myths and Songs from the S. Pacific*, London, 1876, *Sketches of Savage Life in Polynesia*, do. 1881, *Life in the Southern Isles*, do. 1876; G. Mathias, *Lettres sur les Iles marquées ou Noukahiva*, do. 1843; D. ROBERT W. WILLIAMSON.

POLYTHEISM.—Polytheism is the stage or phase of the religious development of mankind in which the belief in and worship of many gods prevails. It is distinguished from the previous stage (polydæmonism) by the nature, and from the subsequent stage (pantheism, monotheism) by the number, of the objects of worship.

1. The antecedents of polytheism.—It is not necessary to retrace the development from its beginnings in animism (*q.v.*) or possibly an even earlier animatism (R. R. Marett, *The Threshold of Religion*, p. 15). Only two general remarks need be made.

(a) In the first place, the primitive monotheism which has been asserted has not been proved, as the assertion rests on insufficient and inconclusive evidence; and to this view applies the same objection as to the view that polytheism belongs to the pre-animistic stage.

'I am not at present prepared to admit,' says Marett (p. xvii), 'the postulate of a world-wide degeneration from the belief in such beings ["high gods"], as accounting for pre-animistic phenomena in general. On the contrary, I assume for working purposes that Mr. Lang's "high gods" must have had a psychological pre-history of some kind which, if known, would connect them with vaguer and ever vaguer shapes—phantoms teeming in the penumbra of the primitive mind, and dancing about the darkling rim of the tribal fire-circle.'

From the psychological standpoint the movement of the mind from the indefinite to the definite, the incoherent to the coherent, multiplicity to unity, is incomparably more probable than the reverse process. It is incumbent on us to try to make the development of the religious consciousness intelligible; and this we do, not by assuming any belief as a 'bolt from the blue,' a gift from heaven dropped down on earth, but by connecting it with the probable movement in the human mind under the given conditions of life.

(b) In the second place, totemism (*q.v.*) cannot be assumed as primitive or as a necessary phase of the development of the religious consciousness.

'The totemistic theory of the origin of worship has been widely propagated through the brilliant and learned monograph of W. R. Smith (*Journ. Philol.* ix. 75 ff.), and its fascinating exposition by Jevons (*Introduction to the History of Religion*, 1896); but the main body of English anthropologists refuse to regard it as primitive, while in France the hypothesis has been subjected to close and learned criticism (Marillier, 'La place du Totémisme dans l'évolution religieuse,' in *Rev. de l'Hist. des Religions*, 1897-98). Totemism seems most intelligible when viewed as formed under the play of savage thought or misconception, and as intruding upon and overrunning earlier forms of worship which found a god in nature or the spirits of men' (*HDB* iv. 331^b).

Totemism assumes that the stage of generalization in thought has been reached, as the totem is not an individual, but an animal or plant class, and also presupposes the stage of tribal unity in life, neither of which can be regarded as primitive. There is not the same evidence that all religions have passed through a totemistic stage as there is regarding an animistic; and the psychological probability is not so great. We can hardly say that it appears necessary for religious thought to have passed through this phase. We cannot therefore connect polytheism so exclusively with totemism as Jevons does (pp. 234-248). Where the phase of totemism did exist, it is not at all improbable that, as he argues, the objects of the tribal cults, when a political union took place, were either fused together (syncretism), if for one or other of the reasons he suggests the spirits were not definitely enough distinguished either in belief or in worship to remain apart, or placed side by side in a national pantheon (polytheism). Totemism, however, was not monotheistic (belief in the existence of one God alone), nor even had it reached

the stage of monolatry (the worship of one God combined with the belief in the existence of others).

As Jevons concedes (p. 239), 'the sky-god, whose favour is essential to the herbage which supports the herdsman's cattle, as well as to the farmer's crops, may be worshipped concurrently with the totem plant or animal, and retain his independence, as the Tytaus, Zeus, Jupiter, of the Aryans, did.'

Accordingly, we may question whether his statement, 'polytheism is the price which must be paid for political development' (p. 241), is so absolutely or universally applicable. Even where totemism does prevail, is it so certain that it must advance to monotheism? Polytheism need not then be regarded as a relapse from totemism; it may be regarded generally as an advance on polydæmonism (the belief in an indefinite multitude of spirits, and the worship of some of them). It must, of course, be understood that the distinction is logical, for our thought, rather than chronological, in time. Polydæmonism and polytheism overlap and intermingle. Gods and spirits may be worshipped together; but we may call a religion polytheistic when the worship of the gods is more prominent.

2. The transition from polydæmonism to polytheism.—How shall we distinguish the spirit from the god as the object of worship?

(a) The conception of the spirit is less definite than the conception of the god; he has less individuality; he has generally no name. As the god is conceived more definitely, he is less confined to, and more detached from, the individual object than the spirit which inhabits and controls it, and yet is not separated from it. As the god gets more of 'a name,' he has less of 'a local habitation' than the spirit. As man realizes more fully his weakness in comparison with the forces of nature, which he conceives as living, he endows the objects of his worship with powers, which we may at least describe as 'superhuman,' if 'supernatural' suggests too advanced a mode of thought; the god has more power than the spirit.

(b) Again, as man gets more familiar with the world, he begins to observe resemblances and connexions; he begins to classify plants and animals; he begins to recognize the effect of the great objects of nature—sun, moon, earth, etc.—on his environment; he begins to think of the objects in nature (may we say?) departmentally rather than individually. Each tree, stone, or stream may have its own spirit; there is a god of vegetation, of a land, of seas and rivers.

'The material progress made by man,' says Jevons (p. 234), 'as he advanced from the material basis of subsistence on roots, fruits, and the chase, first to pastoral and then to agricultural life, required that he should make an ever-increasing use for his own ends of natural forces. These forces were to him living beings with superhuman powers, of whom he stood in dread, but whose co-operation he required. Without some confidence that it was possible, if he set about it in the right way, to secure their favour and assistance, his efforts would have been paralysed. That confidence was given him by religion; he was brought into friendly relations with powers from which, in his previously narrow circle of interests, he had had little to hope or to gain.'

This practical interest was the main, if not the sole, motive of the intellectual development sketched above. Speaking generally, the relation to the gods is more definite, intimate, and confident than that to the spirits. As man comes, as it were, to be at home in his world, getting to know it, and so to use it more for his own good, the powers that he depends on, and whose assistance he seeks, appear to him more friendly, and he cultivates their friendship more carefully.

(c) Man only gradually distinguishes himself from living creatures, and animals especially; and thus his conception of the spirits or gods is not at once anthropomorphic. He does not at once make his god in his own likeness. There is a stage, which we may call the zoomorphic, when he thinks of the spirits as living beings. There follow as

stage, even where totemism does not prevail, where, feeling his kinship with some animals at least, he thinks of the spirits or gods as altogether animal, or partly animal and partly human. We may call this the therianthrope stage. At last, when he lifts himself above all his fellow-creatures, he thinks of the gods as men (or women) of like passions and forms as himself (the anthropopathic or anthropomorphic stage). In Egyptian religion we have a conspicuous instance of this development (see art. GOD [Egyptian]).

At first the god is an animal: 'Khnum of Elephantine was a ram, Hathor a cow, Nekhebt a vulture, Bast a cat, Horus a falcon, Anubis a jackal, Sebek a crocodile, Thoth an ibis, and so on' (G. F. Moore, *Hist. of Religions*, i. 147). Next the god is represented with an animal-head; lastly the god assumes a human form, but the animal which once represented him remains sacred to him.

3. The mythology of polytheism.—So much it seems possible to state of a general character about polytheism. The development of polytheism in each religion was determined by so many varied and varying factors that no simple uniformity but a bewildering variety appeared. Physical conditions, racial characteristics, political circumstances, historical occurrences—all affected the forms assumed by the belief and worship of the many gods. The personification of natural processes, the endowment of these gods with human qualities, passions, relations, and activities, the free play of the imagination with this varied material, the reflex influence of language on thought, metaphor begetting myth, the absence of any control of this development by scientific knowledge, moral sense, and religious reverence—all these factors combined explain the luxuriant, extravagant, and sometimes grotesque and even offensive mythology which connects itself with polytheism in the religions of mankind.

(a) *The moral defects of mythology.*—The description of natural processes as the personal actions of gods and goddesses, especially the comparison of these processes to sexual relations, results in the ascription to deity of what to a more developed moral sense appears immorality, although there was no such intention originally. Religion is more conservative in belief and worship than is morality, and much is told about the gods which a decent man would not do. Paul's condemnation of polytheism had been anticipated by Xenophanes in the ridicule which he casts upon anthropomorphism and anthropopathism.

'The Ethiopians imagine their gods flat-nosed and black; the Thracians, blue-eyed and red-haired; and if cattle and horses or lions had hands and could draw, horses would draw the gods as horses and cattle as cattle—each kind would make its gods in its own likeness' (Moore, i. 458).

To quote Xenophanes' own words:

'Homer and Hesiod ascribe to the gods everything that among men is a shame and a disgrace—theft, adultery, and deceit' (quoted by Moore, *loc. cit.*).

Only one other instance of such criticism of popular mythology need be given—Amphitryon's address to Zeus in the *Herakles* of Euripides:

'O Zeus, in vain I shared my wife with thee, in vain I called thee father of my son; thou hast not proved the friend thou dost pretend to be. Mortal that I am, I am much better than thou, a great god! For I did not betray Herakles's children, but thou understandest how stealthily to find thy way to men's beds, taking possession of others' couches without their consent, but how to save thine own friends thou dost not know. Thou art a stupid god, if not an honest one!' (quoted by Moore, p. 488).

It is no wonder that Plato desired that these stories should not be told to children because corrupting to their morals.

(b) *National differences in mythology.*—Not all nations were equally interested in their gods to develop a mythology about them. Of the Chinese deities Moore says:

'These powers have no plastic, dramatic individuality, like the gods of Greece; no mythology recites their exploits. They have definite functions, and by these alone they themselves are

defined. In this, as in other respects, the religion of China strikingly resembles that of the Romans; for a practical people it is enough to know what the gods do, and what their worshippers have to do to secure their favour, without trying to imagine what they are like' (p. 22).

But China and Japan offer the same contrast as Rome and Greece; for Shintō has an abundant and even grotesque genealogy of its many gods. Like Greece in the wealth of its mythology, Japan differs from it in the representation of the gods. While Greece represented the gods in the likeness of man, in a Japanese temple the deity is represented by some holy object (*shintai*) in which the spiritual presence (*mitama*) dwells; thus a mirror is the symbol of the presence of the sun-goddess. While Greece in its matchless art endowed its gods with beauty of form, Indian idols are 'to our taste grotesquely hideous—a human body with an elephant's head; tricephalous monsters; heads with a third eye in the middle of the forehead; human trunks with supernumerary arms and legs, and the like' (Moore, p. 345). Of this difference Moore offers an interesting explanation:

'It should be remembered, however, that all this ugliness is symbolical; the supernatural powers of the deity are intended to be expressed by these unnatural forms. The Hindu gods are less beautiful than the purely anthropomorphic gods of Greek art, because of the effort to make them more manifestly divine' (p. 345 f.).

In China heaven (T'ien) is the supreme emperor (Shang-ti), and determines both the moral and the natural order; in Japan the sun-goddess takes the highest place, but she has no relation to any moral order, although Japan did possess a customary morality even before the advent of Confucianism.

(c) *The influence of political conditions on mythology.*—Political conditions very directly and potently affected religious ideas. Over each city-State in Egypt a god watched, cared, and ruled; when political combinations took place, the gods were brought into relation to one another. The chief god had a wife and a son. Amon of Thebes has as wife Mut (=Nekhbt of Eleithyiaopolis) and as son Montu (of Hermonthis). These triads have a special peculiarity:

'The son is the successor of his father, and it is his destiny in turn to marry his mother and so to reproduce himself, that is his own successor; and so though constantly dying he is ever renewed. The mother, not being a sun-god, does not die. If we remember that the gods have to do with the sun these things need not shock us, nor need we wonder at the statement which is very frequently met with, that a god is self-begotten, or that he produces his own members' (A. Menzies, *Hist. of Religion*, p. 135).

Rā, the solar deity of Heliopolis, rose to be the supreme god of the Middle Kingdom; but, as the political importance of the provincial cities increased, their local cults could not be suppressed, and each deity was in turn identified with Rā, and appropriated his attributes.

'From the Heliopolitan priests came also a theogony which put the god of their city, Atum, at the beginning of all things, and derived from him, through two intermediate generations, the gods of the Osirian circle as it appeared in the Delta' (Moore, p. 169).

When Babylon became the capital of the new dynasty in Babylonia, its god Marduk supplanted Enlil of Nippur, claimed Ea of Eridu with his wisdom as his father, and made Nabu, the god of Borsippa, his son and prophet. In one hymn the other gods are treated as only variant names of Marduk in his varying functions.

(d) *The influence of religion on mythology.*—The changes in thought about the gods did not, however, always depend on political conditions; religious belief and worship must also be taken into account. Before Marduk assumed the supremacy, the gods at the head of the pantheon were Ea of Eridu, Enlil of Nippur, and Anu, held in high honour, if not the patron deity, in Uruk; and they owed their place to the influence on the religious development exercised by their temples and priest-

hoods. An attempt at systematic theology appears in the partition of the universe among these three gods; Anu rules in heaven, Enlil in earth and air, and Ea in the waters. The Vedic gods are divided into three classes also—gods of the sky, gods of the air, and gods of the earth. Another interesting feature of the Vedic polytheism is that there are indications of the supersession of one order of gods by another, the *asuras* by the *devas*. Varuna, Mitra, and Rta fall into the background, and their places are taken by Indra, the Maruts, etc. While in the Rigveda the *asuras* are gods, in the Atharvaveda they have become demons. In the Iranian sister-religion the reverse process took place. If Ahura Mazda is the same god as Varuna, he becomes supreme in Zoroastrianism, and is in conflict with the *daevas*, the gods of the popular religion.

India offers an interesting illustration of the reflex influence of the worship on the theology. Sacrifice is conveyed to the gods by means of fire. Fire itself (Agni) becomes deified, and yet he is being constantly reborn when two sticks are rubbed together to produce the spark. The drink of the gods is *soma*. They love it so much that the gift of it can influence them. Soma becomes a god with power over the other gods. *Brahman*, the absolute deity of religious speculation, is probably to be traced back to the hymn or prayer which accompanied sacrifice (see Max Müller, *Origin and Growth of Religion*, pp. 358, 359, note). The Hindu Trimurti is a priestly device to combine their cult with the popular worship of Viṣṇu and Śiva. These two gods, together with Brahmā (masc.), the personal god, are manifestations of *Brahman* (neut.), the absolute reality.

(e) *The reflex influence of language on mythology.*—One instance of this must suffice. As a rule, heaven is thought of as father and earth as mother; so in the Vedic mythology, in which Dyaus and Prthivi are the universal parents, and in the Maori. In Egypt by an accident of grammatical gender the earth (Geb) is masculine, and the heaven or sky (Nut) is feminine; and the relation in the myth has to be altered accordingly. The influences affecting the ideas about the gods and their functions and relations being so manifold, it is evident that we cannot treat polytheism as one phenomenon of which any description of a general character can be given.

POPOL VUH.—The *Popol Vuh* is a mythic and heroic saga of the Quiche Indians of Guatemala, on whose mythology and ancient history it is our chief source of information. It is of great comparative value when studied in conjunction with the mythology of the pre-Columbian inhabitants of Mexico and Yucatan. The text, as extant, was written by a Christianized native of Guatemala some time in the 17th cent., and was copied in the Quiche language, in which it was originally written, by a monk of the Order of Predicadores, Francisco Ximenez, who added a Spanish translation and scholia.

A great deal of doubt has been cast upon the genuineness of the *Popol Vuh*, and it has been contended that it is merely the imaginative production of a Quiche native whose ideas were coloured by Christian influences; but these reflexions on this venerable compilation originated with persons who were for the most part unacquainted with the history and mythology of Central America, who possessed no insight into aboriginal habits of thought, and who, in short, were improperly equipped for the criticism of such a work.

C. Scherzer, an Austrian savant, became aware that such a work as the *Popol Vuh* had existed through the medium of a letter from the Abbé Brasseur de Bourbourg to the Duc de Valmy, in which the Abbé deplored the supposed loss of the collection. Bent on the recovery of a relic of such profound interest, Scherzer journeyed to Guatemala in 1854 or 1855, found that the *Popol Vuh* had been made use of early in the 19th cent. by a certain Don Felix Cabrera, and was successful in tracing the missing MS in the library of the university of San Carlos, in the city of Guatemala. It appears that Ximenez had deposited it in the library of his convent at Chichicastenango, whence it passed to the library of San Carlos in 1830. Scherzer copied the Spanish translation of the MS, as did Brasseur, and these were published at Vienna and Paris in 1856 and 1861 respectively. Most unfortunately the Spanish and French translations leave much to be desired as regards accuracy, and the misleading notes which accompany them must be read very critically. A Spanish translation, published as a number of the *Biblioteca Centro-Americana*, is scarcely more accurate, but is burdened by notes which show a total ignorance of his subject on the part of the editor, and which are substantially those of Brasseur.

The name *Popol Vuh* means, in its literal translation, according to some authorities, 'The Book of the Mat,' or, in more sophisticated phrase, 'The Record of the Community,' but it is likely that a correct rendering of the title is 'The Collection of Written Leaves,' *popol* signifying the prepared bark upon which aboriginal writing is often set down, and *vuh*, 'paper' or 'book,' from the verb *uoch*, 'to write.' Thus a still more simple translation would give 'The Book of Bark.' It is a work of the same family as the Chinese *History of the Five Books*, the Japanese *Nihongi*, the Danish *History of Saxo*, the *Heimskringla* of Snorre, and some of the Hindu sacred books—a compilation in which pure mythology gradually shades off into veritable history. The language in which it was composed, the Quiche, is a dialect of the great Maya-Quiche tongue, spoken at the time of the discovery in Western Guatemala, where it is still used by the natives, and it is the only remaining monument of this tongue. Evidence is not wanting to prove the considerable antiquity of the compilation, and a decided metrical tendency in its composition would lead us to the conclusion that it was originally composed in metre, and that consequently, like the poems of Homer and Ossian, before it was reduced to writing it depended for its popularity upon the aboriginal memory alone. On the other hand, it must be admitted that the work as we possess it probably does not stand in its pristine simplicity; that it has become sophisticated in a certain degree by Christian thought and influence can hardly be doubted; but it cannot be too strongly insisted upon that such sophistication is merely a surface one, and that it has not succeeded in penetrating to the lower strata of aboriginal thought. The evidence of language, too, is certain proof that it was penned by none other than a member of the Quiche race. The almost insur-

mountable difficulties of the Quiche language render it impossible that a European of the 17th cent. could have in any way tampered with the compilation, and the evidence of its contents is conclusive, as the Quiche mythology concurs in many respects with those of Mexico and Yucatan, which were as sealed books to the scholars of the time in which the MS was written. Furthermore, the Quiche mythology, as set forth in the pages of the *Popol Vuh*, accords in its general characteristics with the great laws of mythologic science.

The *Popol Vuh* is divided into four books, the first cosmological, the second dealing with the adventures of certain hero-gods in the nether world, the third detailing the origin and early migrations of the Quiche race, and the last a pseudo-chronicle of the Quiche kings.

In the beginning we see the god Hurakan ('the one-legged') hovering in the dense and primeval gloom over a waste of waters. As a mighty wind he passed over the surface of the sea and ejaculated the one word 'Earth.' In answer to his evocation the solid land rose slowly from the deep—vast, wet, and unstable. The gods took counsel together, presided over by Hurakan. Gucumatz, the serpent covered with green feathers, and Xpiyacoc and Xmucane, male and female creative divinities, were present.

Gucumatz is merely a Quiche variant of the Mexican Quetzalcoatl, known to the Maya as Kukulcan. It must be borne in mind that to the Nahuas of Mexico Quetzalcoatl was an alien deity, and regarded as a culture-hero who brought them the seeds of civilization and then departed, whereas in the *Popol Vuh* we find him a native deity, assisting in the act of creation. It is strange to find him acting as the inferior of Hurakan, and, in fact, in this pantheon on the whole we cannot discover much affinity with Maya forms, so far as we are at present acquainted with the characteristics of these. The affinities, oddly enough, seem to be with Mexican deities. *E.g.*, Hurakan may be safely equated with Tezcatlipoca, and Xpiyacoc and Xmucane have all the characteristics of Ometecutli and Omeciuatl. Certainly Gucumatz has many points of contact with P. Schellhas's god P which he identifies with Kukulcan. As a Quiche deity, Gucumatz would undoubtedly seem to figure as a rain-god pure and simple—rather a different rôle from that which he plays in the mythology of the Mexicans. His serpent form is symbolic of water; and, as the god of the elements whose shape is serpentine is almost universal throughout N. America, but by no means so in the southern sub-continent, there is a possibility that he originated in the north. Of course, it is possible that as Quetzalcoatl he may have been adopted by the Mexicans from the Southern Maya, and that his name and fame may have filtered northwards, where they are found even to-day, as in the Kumsnóotl, or Kanikilak, of certain British Columbian tribes.

As the result of the deliberations of the gods, animals were created, but as yet man was not. The want of a higher type of being was felt, and, to supply the deficiency, the gods carved mannikins out of wood, and endowed them with life. But these were frivolous and irreverent, and in their nature too puppet-like to be quite human; so the gods, irritated by their conduct, resolved upon their destruction. Hurakan therefore sent a great flood upon the mannikin folk, which was accompanied by a resinous rain falling from the heavens. In their drowning the mannikins were tormented by fierce birds which plucked out their eyes and tore their flesh; and, as the rain increased, the animals and plants, and even the domestic utensils that they had made, their millstones, plates, and cups, rose up against them and jeered at them. The wretched mannikins rushed hither and thither in their despair, but could find no place of shelter, until at last all were drowned, save a mere handful whose descendants are said to be 'the little monkeys that live in the woods.'

The composite character of the *Popol Vuh* may be recognized from the circumstance that we discover at least three agencies assisting in the work of creation. From this it appears that three separate cosmologies may have been welded together

into one account, as in the case of other and more familiar instances, the most remarkable of which will readily occur to all students of comparative religion.

After earth had somewhat recovered from this deluge, there arose a being, orgulous and full of pride, named Vukub-cakix, which signifies 'seven times the colour of fire,' or 'very brilliant,' an earth-god like the Scandinavian Jotunn or Greek Titans, who took the shape of the arara bird or great macaw. His eyes were of silver, his teeth of emerald, and his body was composed of various precious metals. His overweening conceit so irritated the gods that they resolved upon his destruction. To that end they dispatched the twin hero-gods Hun-ahpu and Xbalanque to earth, to chastise the arrogance of Vukub-cakix. These, arriving in his domain, wounded the god severely in the mouth with a dart from a magic blow-pipe. Afterwards, with Xpiyacoc and Xmucane, they proceeded to his dwelling, disguised as physicians, and extracted the unfortunate Titan's emerald teeth, for which they substituted grains of maize. After the operation Vukub-cakix expired.

This would seem to be a myth explaining the first fertilization of the earth with seed, and the substitution of the maize-plant for the green, virgin soil. But the progeny of Vukub-cakix had yet to be disposed of. Zipacna, the earth-heaper, and Cabakan, the earth-quake, were also destroyed by craft, so that the race of Titans was now extinct.

The second book yields much interesting material for the mythologist. It relates the under-world adventures of Hunhun-ahpu and Vukub-hun-ahpu, the sons of Xpiyacoc and Xmucane.

Hunhun-ahpu and his brothers were great exponents of the native game of ball, a kind of hockey. On one occasion the course of their play took them into the vicinity of the realm of Xibalba, the under world, the monarchs of which challenged them to a game with the malicious intent, common to all supernatural folk, of defeating and disgracing them. The challenge was accepted, and, after crossing over a river of blood, the brothers came to the residence of the lord of the Quiche hades, where they underwent a series of insults and tortures. First they were requested to place themselves in a seat of honour, but hastily arose when they found that it was a red-hot stone. Then they were thrust into the House of Gloom, where they were tortured, killed, and buried. The head of Hunhun-ahpu was, however, suspended from a tree, which speedily became covered with gourds. Xquiq ('blood'), the daughter of a notable of Xibalba, was standing underneath its shade, when the head of Hunhun-ahpu exhaled from her palm, so that she conceived. The head told her to go to his home on earth, where she would be received by Xmucane, to whom she must tell the story of the brothers' tragic fate. She did so, but Xmucane would not at first credit her story. Xquiq, however, to prove her supernatural origin, gathered a basket of maize where no maize grew—quite a natural thing for a deity of the under world to do, as they are invariably associated with the growing of grain. Xquiq became the mother of Hun-ahpu and Xbalanque, the twin-heroes alluded to in the first book. They were so noisy that Xmucane, their grandmother, thrust them out of doors. Extremely precocious, they were made to clear ground for the plantation of maize, but, as they possessed magic tools which could work of themselves, they went on hunting expeditions and neglected their duties, and during the night the wild animals met and undid the work that the magic tools had accomplished. The brothers watched for the purpose of capturing the miscreants, but the animals escaped, all save one, the rat, which in return for its life recounted to them the glorious deeds of their father and uncle, and how they had been entrapped in Xibalba. Shortly after this the twins themselves received a challenge to play ball from the lords of the under world, which they accepted. On their arrival in Xibalba, the community of which seems to have been conducted on the lines of a native secret society with a form of initiation, they passed scatheless through several of the ordeals, and defeated the lords of the Plutonian realm at ball. They were placed in the House of Lances, but escaped by bribing the lancers. They were then thrust into the House of Cold, where they cheated their tormentors by warming themselves with burning pine-cones. In the House of Tigers and the House of Gloom they passed a night each without misfortune, but in the House of Bats Hun-ahpu's head was cut off by Camazotz, ruler of the bats. The head was suspended in the ball-court, but the tortoise passed by the severed neck of Hun-ahpu, to which it became attached, turning into a new head.

The Camazotz here referred to is a figure of some importance. With the Central American peoples generally the bat was the symbol of gloom and darkness, therefore Camazotz is the god of subterranean caves in which that animal is usually found. It is plain, in fact, that here we have to deal with a form of the deity of mountain caverns and cave-worship. Pictures of the bat-god are found in the Borgian, Vatican, and Fejervary Codices—all Mexican MSS—as Seler first pointed out, and

this is strange, as in Mexico itself the cult of a bat-god does not appear to have been known. But it is probable that the MSS which give representations of this god originated near the southern borders of the Mexican empire, nearer the sphere of Maya influence. In the Borgian Codex the bat-god is represented as holding a severed human head in the left hand, and as in the act of tearing a man's head from the body with his right hand. He is also frequently met with on the Copan reliefs, and in the Maya Dresden Codex, and his head appears in the Maya conventional sign for the cardinal point of the north. In a vase excavated by E. P. Dieseldorff he is well portrayed with outstretched wings on which are depicted half-moons, symbolic of his nocturnal character. We find his name also reproduced in that of the two royal families of the Cakchiquels, who were called Ah-po-zotzil and Ah-po-xa, and, according to another passage in the *Popol Vuh*, we find that the Cakchiquels designated him Zotzilaha Chamalcán, who, we are told, took the bat for his image. But Zotzilaha does not mean 'bat,' but 'bat's house,' therefore it is reasonable to suppose that this god possessed more than one form, i.e., that, besides the bat which he symbolized, he had the form of a cave-god.

The brothers, having outwitted their fiendish hosts, now entered upon a veritable orgy of magic, even submitting to be killed and coming to life again, after their bones had been beaten to powder and thrown into the river. The monarchs of Xibalba requested to be killed also, but, as the brothers omitted to revive them, their reign was at an end. They then showed themselves in their true colours, degraded the princes of Xibalba, and, after paying fitting funeral honours to their father and uncle, set them in the heavens as the sun and moon.

In this myth it is easy to see the harrying of hell so common to the mythologies of all nations. The Quiche Xibalba is, of course, a place of the dead, with many departments, like the Egyptian Amenti, where both just and unjust alike are lodged. The savage mind trembles at the idea of a place of eternal doom of which it knows nothing; therefore it invents myths of the descent into its hades of its most heroic and god-like figures, who are described as achieving the conquest of the terrors of death and hell, and making the way easy for those who come after them.

In the third book we find the gods once more in council, their object this time being the creation of man.

Four perfect men were fashioned by Huracán out of red and white maize. But these beings were too perfect, and in knowledge closely approached to the gods themselves. The creators, alarmed at this condition of things, felt that it was not good that man should approach them in wisdom, so they contracted his sight so that he might only be able to see a portion of the earth. The gods then provided the first four men with wives. These eight people were the ancestors of the Quiche only, the progenitors of other tribes being created subsequently. As yet there was no sun in the heavens, and, despite the prayers of the early Quiche, no luminary appeared. A desire to migrate came upon the first men, and they set out for Tulan-Zuiva. Attempts have been made to identify this locality with the city of Tollan, the capital of the Toltecs of ancient Mexico. In that place the Quiche received gods, each man being given a special and probably tribal deity. One of these, Tohil, whose name signifies 'the rumbler,' and who is a thunder- and rain-god, probably a variant of Quetzalcoatl or Guicamat, supplied the emigrants with fire by striking his feet (which were composed of flint) together, and producing lightning. At Tulan the speech of men became confounded, so that the four progenitors of the Quiche could no longer comprehend one another. Leaving Tulan under the leadership of Tohil, they wandered on, meeting innumerable hardships, making their way through desolate mountain-passes, and passing through the sea, which was miraculously divided for their journey from shore to shore. At length they came to the mountain Hacavitz, called after one of their gods, where they halted, as they had been told that at this spot they should see the sun. At last he appeared above the horizon, weak and as reflected in a glass, and, as his beams lighted upon them, the tribal gods were turned into stone, as were the gods worshipped by the animals.

It is probable that this myth recounts a migration from the cold north to the warm south. The sun grows stronger as the journey proceeds, which would seem to show that, to begin with, the

ancestors of the Quiche people must have dwelt in a comparatively cold climate. T. A. Joyce (*Mexican Archaeology*, p. 362 f.) sees in this myth the adoption of a solar calendar or rather the fixing of a date to form a starting-point for a time-count modelled on solar time. The whole myth is strikingly akin to that of the wanderings of the Israelites, but the conditions of migration undergone by the Quiche, though similar to those recounted in the book of Exodus, possess as many points of difference, and are by no means a mere variation of the Scriptural version, as stated by short-sighted collators of both. The best proof that the myth is of purely native origin is that such myths of undoubted aboriginal manufacture abound in America. Thus we find in an Aztec migration-myth in the Boturini Collection that the Aztecs issuing from Aztlan carried their god Huitzilopochtli before them when they came by water to Colhuacan. We also find a similar myth in the *Wallam Olum*, or Painted Records of the Lenapé Indians, which state that the Lenapé left the dwelling of Talli for the Snake Land, to reach which they passed over the water of the frozen sea. The *Popol Vuh*, indeed, may be a dim and distant echo of a migration from N.E. Asia to American soil. The circumstance that the tribal gods of the Quiche were turned to stone on the appearance of the sun recalls a myth of the Zúñi Indians of New Mexico, in which the great gods turned certain animals into stone, which afterwards became fetiches.

The fourth book of the *Popol Vuh* is almost purely pseudo-historical, and as such possesses no interest for the student of comparative religion. Enough has been said to prove that the *Popol Vuh* is the New World's richest mythological mine, abounding with treasure awaiting those who will take the pains to unearth it. In especial there can be no question that it throws much light upon the mythologies of the Mexicans and Maya, but our knowledge of these is so slight that at present it is found not a little difficult to apply the light shed by the *Popol Vuh* so as to dispel the gloom which surrounds them.

LITERATURE.—Brasseur de Bourbourg, *Popol Vuh*, Paris, 1861; F. Ximenez, *Los Historias del Origen de los Indios de Guatemala*, Vienna, 1856; L. Spence, *The Popol Vuh* (in 'Popular Studies in Mythology, Romance, and Folk-lore' series), London, 1908, *The Myths of Mexico and Peru*, do. 1913; T. A. Joyce, *Mexican Archaeology*, do. 1914. The brief essay of Max Müller upon the *Popol Vuh* is worthless. A tr. is in course of preparation in Austria, and a tr. from the original Quiche is understood to be in progress by a distinguished German student of Mexican archaeology. LEWIS SPENCE.

POSITIVISM.—1. Derivation and definition. —Derived from the French *positif*, 'sure,' 'certain,' 'positivism' was the term chosen by Auguste Comte to designate a system of thought and life dealing with realities and based on the sure results reached by scientific methods, which aimed not only at certainty, but also at precision in the varying degree that each particular branch of science allows. When, however, the word was applied to a system of life as well as of thought, it obtained the additional connotation of 'useful'; and, as our knowledge of the world depends on the powers of mankind, we also get the meaning 'relative.' With the study of biology and sociology, science becomes organic, and, with the recognition of the union of mankind in the social organism, sympathetic. Positivism, therefore, in spite of its name, is not purely intellectual. It is not only

real, certain, and precise, but also useful, relative, organic, and sympathetic.

2. **History before Comte.**—The general application of scientific methods, the accumulation of a mass of ordered knowledge, the building up in turn of the various abstract sciences—all this has been a long and gradual process. While in the theocracies of Babylon and Egypt concrete facts were observed, recorded, and utilized, calendars made, canals dug, land measured, temples and pyramids built, it was only in Greece that abstract laws of co-existence and succession were formulated. But the abstract science of Greece made considerable progress only in mathematics and astronomy; it was essentially statical, failing to solve even so simple a problem as that presented by the acceleration of a falling body; it did not reach the subjects—health, politics, morals—most interesting to mankind, for in these subjects Greek knowledge remained almost entirely concrete and empirical. Other interests and needs, the development of Roman law, the rise of a new religion, the inroads of the barbarians, distracted the attention of the ancient world, and Greek science not only ceased to make progress, but would have been lost, had it not been preserved and even slightly increased by the Arabs. At the Renaissance the scientific advance was resumed. Copernicus, Kepler, and Galileo introduced the new astronomy; the earth ceased to be the centre of the universe; problems of motion were successfully solved. Bacon and Descartes discussed the purpose, methods, and scope of science, and the former foresaw its extension to social and moral phenomena. In the two centuries after Bacon the sciences of physics, chemistry, and biology made great progress, and a long series of thinkers began tentatively to investigate the laws of social structure and development, the working of the human mind, and the relation of subject and object. Building on the results of these labours and gathering up the scattered threads of these 18th cent. investigations, Comte founded a scientific philosophy and a purely human religion.

3. **Comte.**—Auguste Comte was born at Montpellier on 19th Jan. 1798, the son of a revenue officer of small means. His parents were royalists and devout Catholics, but he had abandoned theology before he was fifteen, and was throughout his life a firm republican. At the Lycée at Montpellier he showed such precocity that, while still a pupil, he took the place of the absent mathematical professor. Thence he passed to the famous Polytechnic School, first of his list in the entrance examination when sixteen, though he was not allowed to join till the next year. In 1816—the year after Waterloo—he took a leading part in a demonstration against an unpopular official, and was expelled with the other students of his year, the whole school being suspected of republican sentiments. He was, however, already known to some eminent men, and on their recommendation he obtained pupils. Later he was appointed to two small mathematical posts in the Polytechnic as teacher and examiner. Having already published some important essays, he began, in 1826, a course of lectures on the positive philosophy, which was interrupted by a mental breakdown; but after his recovery it was resumed and completed. The course was attended by some of the most eminent men of science of the day, and formed a first sketch of the *Positive Philosophy* (6 vols., 1830–42). This was followed in 1848 by the *General View of Positivism*, the introduction to his second great work, the *Positive Polity* (4 vols., the last being published in 1854). Between the two works his outlook on life had developed. An early marriage had turned out unhappy; his wife grudged his devotion to his

chosen task, and wished to direct his powers into more lucrative channels; eventually she left him. Some years afterwards he formed a devoted friendship for Madame de Vaux, whose husband was a fugitive from justice. Clotilde de Vaux was not perhaps a woman of exceptional mental capacity, but she was quite able to appreciate Comte's genius. She was not, however, in the least in love with him, and their friendship led to no closer union. It began in April 1844, and ended by her death just a year later. This short episode had a lasting effect on his career. From the outset, as he had shown in his early essays, he had sought the good of mankind as the proper goal of all human effort. But he had sought it by an intellectual regeneration, a philosophy of science, a synthesis of human knowledge. Clotilde de Vaux could add nothing to his intellectual equipment, but their friendship opened his eyes to sides of human life previously unseen, to other needs of the human heart and other values in human conduct. Henceforth, while recognizing the primary necessity of scientific synthesis, he saw that there must be a synthesis embracing all sides of human nature, action, and affection as well as intellect—in other words, a religion at once scientific and human. Thus he became the founder of the Religion of Humanity. This was the dominant note of the *Positive Polity* and the *Catechism of Positive Religion*. In his last work, the *Subjective Synthesis*, he returned to mathematics, considered from a social and religious point of view. A companion treatise on morals he did not live to write. He died on 5th Sept. 1857, in Paris, and was buried in Père Lachaise Cemetery. A monument was erected to his memory outside the Sorbonne in 1898. Many years before his death he was deprived of his posts at the Polytechnic; for the scientific specialists disliked his insistence on synthesis, and vehemently rejected his claim that science should fulfil a social mission. Some of his earlier supporters, notably M. P. E. Littré and John Stuart Mill, declined to follow him in his religious developments. But he gathered round him a small body of disciples who remained after his death to defend his memory and propagate his ideas.

When twenty years old, Comte became acquainted with Henri Saint-Simon (1760–1825), who was already famous. Saint-Simon had conceived the idea of a reformed social order in which all the resources of the State should be used for the benefit of the whole people, and was in fact one of the originators of modern socialism, though the word was then unknown, while, unlike most socialists, he had no confidence in democratic institutions. He believed that the new order must rest on a basis of science; but he had led a roving and adventurous life little compatible with scientific studies. This lack Comte seemed eminently fitted to supply. He wrote his two earliest essays under Saint-Simon's influence, and the third at his request; but, when this was written, it was the master who first perceived the discrepancy between his ideas and those of his disciple. Saint-Simon had expressed his purpose in the title which he had suggested: 'Plan of the Scientific Operations necessary for reorganizing Society.' He wanted an immediate application of science to this purpose. Comte saw that much more was needed, and that a much longer task lay before him: a new science of sociology must be founded irrespective of any immediate application; and science itself stood in need of reorganization. He soon came to see that a scientific philosophy must precede a polity founded on science. Thus, after six years, master and disciple separated; and Comte, who in every other case was so ready to acknowledge his indebtedness to his predecessors,

always insisted that Condorcet was his immediate intellectual ancestor, and that he owed nothing to Saint-Simon. It is true that he gained little intellectually from the connexion; for Saint-Simon's ideas were constantly changing and often inconsistent—he was a visionary rather than a systematic thinker. Nevertheless, Comte was affected both for good and for evil: for good, since Saint-Simon was well fitted to impress on him the need of reconstruction, and had some confused glimpses of its true conditions; for evil, because he retained to the end of his life Saint-Simon's tendency to expect quick results and to outrun scientific forecast in his zeal for social reconstruction. The first is, indeed, the common failing of reformers; the second led Comte to make his forecasts of the future more detailed than the complex character of social phenomena allows.

It was in this third essay (1822) that Comte put forward his law of intellectual development, which he named the 'Law of the Three States,' and his classification of the sciences. The former had already been stated by Turgot in an early thesis, but without adequate proof or recognition of its scope; and it was open to fatal misunderstanding unless combined with a classification of the sciences in the order of their historic development. Here is a statement of the law by Comte:

'From the nature of the human intellect each branch of knowledge, in its development, is necessarily obliged to pass through three different theoretical states: the theological or fictitious state; the metaphysical or abstract state; the scientific or positive state' (*Early Essays in Social Philosophy*, Eng. tr.², p. 181).

In the first stage men, interpreting the unknown by the known, attribute the phenomena of the world without to the action of beings moved by human passions; in the third they content themselves with discovering the order in which events occur, noting the relations of co-existence or succession, which give the conditions of human action. Between these there is a transitional stage in which personified or merely verbal entities take the place of divine wills. Thus a pestilence, which is in primitive times or among backward peoples a punishment sent by the gods, passes into an entity, which comes and goes without assigned cause, till with increasing knowledge the conditions of its appearance and the course of its development are discovered, its microbe isolated, it may be, and so its prevention or cure becomes possible. The natural rights of man, supposed the same in all ages and under all conditions, supply an example in politics of the metaphysical transition from the divine right of kings to the ordering of society in accordance with the needs of a developing civilization. Of such entities Nature is the most general. At the beginning of the transition it is hardly distinguishable from a divinity or at least a living being, as in such expressions as 'Nature abhors a vacuum.' In the end it becomes a convenient summary for the totality of phenomena and their laws.

But, in order to understand correctly the Law of the Three States, a classification of the abstract sciences was necessary. Comte proposed to range them in a linear series, beginning with the most general and simple and proceeding to the most special and complex—mathematics, astronomy (celestial physics), physics, chemistry, biology, and sociology, to which he afterwards added ethics, the first four being condensed into cosmology on occasion. This order was that actually followed by the sciences in their historic development—the order in which they in turn reached the positive stage. Herbert Spencer attacked this classification on the ground that no linear arrangement was possible, the sciences being interdependent. But classification is a logical artifice, which usually

accentuates the divisions found in nature, and is intended for the assistance of human reason. For exposition a linear order is necessary, and of such orders Comte's conforms most nearly to the order of historical development; and in its main lines it has been adopted by Spencer himself in his exposition of the synthetic philosophy, with one amendment which does not affect the order of the series. This amendment consists in the intercalation of psychology between biology and sociology. In fact, the most serious criticism directed against Comte's classification is that he has treated psychology as a department—the concluding section—of biology and not as a separate science; but, if the criticism be allowed, it would mean only the insertion of a new term, not a recasting of the whole. Whether psychology is to be considered as a separate science depends, according to Comte's principles, on whether it requires a new method; for the main distinction between the various sciences lies in the methods necessary for their investigation.

It will thus be seen, if we consider the Law of the Three States in combination with the classification of the sciences, that at any given period all three stages will be represented, the simpler sciences being already positive, while the more complex are partly or wholly metaphysical or theological. In the earliest societies of which we have knowledge some simple positive notions will have been derived from practical life, while even in the present age the most complex sciences have not become completely positive.

Comte is generally recognized as the founder of sociology. It is true that the necessary conditions of human society were discussed by Aristotle, and that therefore, in its purely static aspects, the subject was studied in ancient Greece. Early in the 18th cent. Vico attempted to establish a new science of society, but the necessary foundation in the simpler sciences was wanting; the same century saw the successful treatment of many isolated questions relating to social structure and development; and towards its close Herder, Kant, and Condorcet sought the laws of the progress of civilization in the study of history. But Comte was the first to map out the field of sociology, to show its true relation to the earlier sciences, especially biology, to distinguish social statics from social dynamics, and to put forward and apply the special method proper to the latter. In this, which Comte called 'historic filiation' and J. S. Mill 'inverse deduction,' a generalization is made inductively from the facts of history. Then the same result is deduced by showing how the sequence of events could be attributed to the known facts of human nature, or to what we already know of the development of societies and the conditions of social action. By this method Comte reached his law of intellectual development and corresponding laws of the evolution of activity and affection. Thus in the Western transition, while human activity was at first organized for conquest and then for defence, eventually industry becomes recognized as the chief occupation of mankind. In correspondence with this the status of the workers changes from slavery to serfdom and then to freedom. In the last stage there is a further advance from the metaphysical concept of individual rights and the absolute control of wealth by its possessor to the acceptance of social duty or convenience as regulating industrial relations. In the language of Pierre Laffitte, Comte's successor as leader of the Positivist body, we should regard 'wealth as social in its origin and destination' (*The Positive Science of Morals*, Eng. tr., p. 191). So, too, there is a widening of the moral sphere, a law of moral progress. At one

time moral duties are bounded by the family, class, or tribe. Later they are extended to all of the same city or nation. Finally, they include the whole human race.

The field of social statics, as we have seen, had been cultivated from ancient times. Comte, however, made some important additions to the work of his predecessors. He brought out more fully than they had done the co-ordination that exists between institutions in corresponding stages of social evolution, while avoiding the error of supposing this co-ordination to be as exact as in biology, where R. Owen was able from a single bone to reconstruct the form of an extinct bird. More important is Comte's classification of the elements of society—first into spiritual and temporal, these tending to further subdivision, the former into emotionals and intellectals, the latter into chiefs and people. The progress of sociology has not been so rapid as Comte hoped, but it is now generally recognized as a science under that name, which he gave it. The chief sociologists since his time have pursued the study from rather different standpoints. Herbert Spencer has dealt largely with the influence on the social organism of the laws of the lower sciences, especially the biological laws of heredity. P. G. Frédéric Le Play has shown how the environment chiefly affects social structure and development indirectly through its control of industry, the work of the hunter, the fisher, the shepherd, and the tiller of the soil each giving rise to a different type of civilization. But in sociology physical and biological laws only give the conditions of social existence. The environment is most powerful in the early stages of civilization and becomes less and less so as the social heritage grows. Following the example of other sciences, sociology must discover laws by the direct study of social phenomena, the structure of human societies, and the development of human civilization. In this field Comte has been the chief pioneer.

The importance of his discoveries is seen in the light which they throw on history. He traces the development of civilization from fetishism or animism, through astrolatry, the worship of the heavenly bodies, to polytheism, found in a theocratic form in the great river valleys, isolated by strong natural barriers, as in Egypt, or in a military form in Greece or Rome. In Greece the geographical configuration of the country did not favour a career of conquest, and amid the freedom and rivalry of the small city-States Greek art and Greek science arose. Rome, on the contrary, conquered and united the Mediterranean world. Polytheism passed into monotheism and conquest into defence. For some centuries the energies and intellect of the West were occupied in civilizing the barbarian and creating the Catholic Church. But, as that was accomplished, a new intellectual curiosity arose, stimulated by contact with the Muhammadan world and later by the revival of ancient learning. From the 14th cent. onwards Europe entered on that revolutionary transition which culminated in the 18th. But, alongside of the movement of destruction, the breakdown of the old institutions and beliefs, there was a movement of construction, the building up of modern science. In this growth of science Comte saw the promise of the close of the revolutionary era, for scientific results were true for all, transcending national bounds and giving a certitude in which all could share. From a study of the past he reached the following conclusions as to the characteristics of the new era: (1) as the field of scientific investigation was continually enlarging, as that was becoming more and more the test of certitude and the bond of intellectual unity, the

philosophy of the future must be founded on science, and the religion of the future must be compatible with science; (2) however much the peace of the world might be troubled by nations in a more backward stage of civilization—and even in Europe some are behind others—industry was becoming more and more the chief occupation of man's energies; peace was becoming normal, war abnormal; (3) in politics the metaphysical conception of natural rights, the same in all places and times, was giving way to the acceptance of duties, changing with the development of civilization; (4) conduct was being more and more judged by human and social standards. Aristotle had described man as a civic animal. 'We are members one of another' (Eph 4th), St. Paul proclaimed. In the 17th cent. this recognition of solidarity was extended—at least in the intellectual sphere—to continuity, when Pascal said:

'The whole succession of men during the course of so many centuries should be considered as one man, ever living and continually learning' (*Préface sur le Traité du Vide, Œuvres*, Paris, 1908, ii. 139).

In Comte's view the human race formed one great organism, Humanity, living a continuous life in accordance with its own laws of development, its elements becoming more and more closely connected. The individual as such is an abstraction; for every one is a member of a family, then of a city or nation, and finally of Humanity, which is made up of all the nations of the earth. On these collective elements the thought and life of each individual depend, and that thought and life necessarily differ in different stages of human development. Each is the child of his own nation and time.

Religion, in Comte's definition, consists in the full harmony of life, and embraces equally the heart and the intellect, 'for both of these must concur to produce any true unity of life' (*Positive Polity*, Eng. tr., ii. 8). Its function is to regulate the individual life and to combine collective lives. In the earlier stages of man's development this was attained by the unconscious creation, first of fetishes, then of gods, the unknown outside being interpreted in terms of men's own feelings. But intellectually, in one department after another, natural laws take the place of divine wills, and in morals the desire to please or appease the gods becomes less potent as a motive for good actions than the love of our fellow-men. Humanity thus becomes the new centre of unity; the Religion of Humanity, a religion capable of uniting all, and 'Live for others' its guiding principle. The term 'altruism,' now in general use, was introduced by Comte.

Three sources of misunderstanding must be guarded against in considering this religion. (1) It is not mere cosmopolitanism. Humanity is made up of families and nations. For the great mass of men and women—indeed, for all in many relations of their lives—it must be served through service to family and country, to kinsmen, friends, and fellow-countrymen. Humanity is strengthened, not by reducing all nations to one level, but by each nation in its free development bringing to the common service of mankind the special aptitudes and resources which it has developed. Devotion to Humanity is based upon family affection and love of country. Humanity does not set aside nationality; it only controls it, making a nation's glory consist in service and not in domination. (2) Positivism does not regard the earlier religions as bad and false. They are such approximations to the truth as were possible in the ages in which they arose. Their acceptance and, indeed, their continued existence, where they still exist, show that they answer to certain human needs:

and, so far as they fulfil a necessary function, to be destroyed, they must be replaced. They were centres of unity to their adherents, even when their rivalry made for disunion. Thus Positivists honour the great teachers of all religions and gladly accept what is permanent in their work—e.g., the separation of spiritual from temporal power under the mediæval Church. But they also honour apostles of enlightenment like Diderot and Condorcet, who, though they failed justly to appreciate the past, made ready the way for the future. (3) Altruism is inconsistent with self-immolation or with purposeless self-denial. Pleasure is not an evil, except where it involves neglect of duty in ourselves or pain to others. To live for others implies the maintenance of our full powers of service, including physical health and cheerfulness of temper. Asceticism, save as training for service, is alien to the Religion of Humanity.

Comte has been blamed for neglect of epistemology and formal logic. The latter he considered best studied in the several sciences, methods being thus seen in their application. As to the former, the validity of scientific methods and the underlying assumptions of science were in his view sufficiently established by the success of modern science and the continual extension of its sphere. The uniformity of nature, the reign of natural law, the relativity of knowledge, the distinction between subjective and objective derived from Kant, were accepted as postulates of scientific investigation. He did, however, formulate under the designation *The First Philosophy* a series of general principles or laws on which the abstract sciences rest. Hypotheses, far from being condemned, were held to be legitimate provided they were verifiable. Without the use of hypothesis scientific discovery is impossible. Knowledge was not to be pursued for its own sake, but for a social purpose.

'Know in order to foresee, and foresee in order to provide' (*Politique positive*, I., table facing p. 726).

As to those ultimate problems which occupied so large a space in man's early speculations, Comte considered them insoluble. The absolute is out of reach of man's relative powers. We can postulate benevolence of his immediate environment and the laws that control his destiny only in so far as they have allowed Humanity to arise and develop. To that extent the earth and the whole body of natural laws—'le grand milieu,' in Comte's expression—were rightly venerated by mankind, but only as a consequence of their relation to Humanity. The old cosmogonies made man the objective centre of the universe. Comte aimed only at a subjective synthesis. In positivism all knowledge is viewed in its relation to man, and human knowledge is considered adequate for all human needs. At the same time Comte was not purely intellectualist. He recognized the effect of practical life and feeling on thought. He took all sides of human nature into account. He insisted on the need of social aims even in scientific inquiry.

'The Intellect should always be the servant of the Heart, never its slave' (*A General View of Positivism*, Eng. tr.², original title page).

To the positive philosophy corresponds a positive education, replacing instruction in letters by a training in science and a knowledge of realities. Comte divided the education of the young into three phases. Till seven years of age the child would remain entirely in his mother's charge, gradually exercising his powers, but in an informal way, and not even being taught to read. From seven to fourteen, while he would learn to read and write, his education would be mainly artistic. He would sing and draw, and become acquainted with the literature of his own country, and possibly

towards the end of the period he might begin to study foreign languages. Comte hoped that eventually mothers who had already received a positivist education would be capable of teaching their children during the second, as well as the first, period, but for the present he recognized that this would be impossible. Finally, in the third stage, from fourteen to twenty-one, the youth, while engaged in preparing for the active work of his life—in general as apprentice—would follow courses on all the seven abstract sciences, from mathematics to ethics, on two evenings in the week during the first two years, on one evening during the last five. Girls would go through precisely the same course, except that, to prevent overstrain, they would have only one evening a week throughout. For such classes to be largely attended, they would obviously have to fulfil certain conditions.

(1) The hours of labour would have to be short. Comte hoped that the hours even of adults would ultimately be reduced to thirty-five a week. (2) The study of each science must be limited. There was to be no question of training the boys and girls to be teachers of mathematics or chemists or surgeons. For such professional instruction there would be special institutions. The general courses would be open to all and would have to recognize two limitations. They must be sufficient only (a) to give the student a grasp of scientific method, of the scientific way of looking at the world, and (b) to enable him to proceed to the later sciences. Each science would be pursued—till the last was reached—in order to understand its method and have a firm basis for later studies. (3) The course of seven years must form a connected whole, and be infused with a social purpose. The teachers, therefore, were to be men of philosophic outlook—Comte referred to them as a philosophical priesthood—who, while their chief business would be teaching, would also form a spiritual power, international as science is, and independent of political parties, who, as they would renounce all temporal ambition, could give disinterested counsel in relation to public affairs.

Many other institutions were suggested by Comte. Of these it is possible here to describe only the Positivist Library and the Positivist Calendars.

The Positivist Library for the Nineteenth Century was a selection of books made by Comte, 'with the view of guiding the more thoughtful minds among the people in their choice of books for constant use.' It is divided into four sections: poetry and fiction, science, history, and philosophy and religion. Of these the first and last have naturally the most permanent interest, the one containing the great masterpieces of imaginative literature from Homer and Æschylus to Goethe and Walter Scott, the other, not only the sacred books of Hebrew, Christian, and Muslim, the Bible and the Qur'an, with St. Augustine, St. Bernard, Thomas à Kempis, and Bossuet, but the great philosophers, from Aristotle, through Bacon and Descartes, to Diderot, Condorcet, and Comte. The collection was purely provisional and intended only for the West. It includes only those religious writings that have directly affected Western civilization; it excludes the great epics of India. This is in the main true also of the Historical Calendar, though the first month contains the names of Buddha, Confucius, and Zoroaster as well as those of Moses, Isaiah, and Muhammad. The year is divided into thirteen months, each representing a phase in human development: theocratic civilization, ancient poetry, philosophy, science, military civilization, catholicism, feudalism, modern epic poetry, industry, drama, philosophy, statesmanship, and science. The month is divided into

twenty-eight days. At the head of each month is a great name, Homer, Dante, Shakespeare for the three months of poetry, Aristotle and Descartes for the two of philosophy, Julius Caesar, St. Paul, Charlemagne, etc. Other types preside over each week, while every day recalls some eminent man, with substitutes in some cases for leap-years. The whole forms a wonderful picture of European progress from the dawn of history to the French Revolution. It is professedly a record of construction rather than destruction; except in the first month it deals almost entirely with the West; it is temporary, save as a historical sketch, and even historical values change. On the other hand, the Abstract Calendar is general and permanent. In this the first month is dedicated to Humanity, the next five to family and industrial relationships, then three to the preparatory historic phases, fetishism, polytheism, and monotheism, and the last four to the normal functions—the moral providence of women, the intellectual providence of the teachers and thinkers, the material providence of the industrial leaders, and the general providence of the proletariat. Both Calendars end with an additional day not included in any month—a day dedicated to no particular individual but to 'all the dead,' since every man, in the course of his life, however useless or degraded, has done some useful or even honourable actions. In leap-year one day more has to be added, and this is devoted to a general commemoration of those illustrious women who, under exceptional circumstances, have, like Joan of Arc, passed beyond the sphere of woman's ordinary duties. Under the influence of a higher standard of education, Comte thought the number of such women would increase in the future, but that the great mass of women would still devote themselves to the indispensable duties of the home, and remain the moral providence of Humanity. The first day of the first month of the year was assigned as the festival of Humanity, not as the day of all the dead, a commemoration of the individuals who compose the human race, but as the day of that great human organism considered as a whole and built up by the convergent efforts of all generations. Comte also instituted a series of nine social sacraments 'consecrating all the successive phases of private life by connecting each with public life' (*The Catechism of Positive Religion*, Eng. tr.², p. 90).

4. Spread of positivism.—Comte founded the Positivist Society of Paris in 1848. His philosophy was spread from an independent standpoint in England by John Stuart Mill, George Henry Lewes, and Harriet Martineau. Later a Positivist Society was founded in London by Richard Congreve, E. S. Beesly, J. H. Bridges, Frederic Harrison, and Henry Crompton. They concerned themselves not only with the philosophic but also with the religious side of his teaching and with the practical application of positivism to public affairs. Believing with Comte that 'the proletariat class is not, properly speaking, a class at all, but constitutes the body of society' (*A General View of Positivism*, Eng. tr.², p. 147), and that trade unionism is a powerful instrument for the emancipation of the workers, the English positivists were foremost in the agitation for the strengthening and legal recognition of the Unions. Believing that politics should be subordinate to moral considerations, they have actively opposed all schemes of aggressive imperialism, whether on the part of their own or on that of other countries, and they protested in 1871 against the dismemberment of France. Recognizing that Humanity consists, not of an undifferentiated aggregate, but in a consensus of free nations, they have supported the claims of subject nationalities, as Ireland and Poland, to

control their own internal affairs and develop in their own way. The term 'Comtist' was repudiated by Comte, and has not been accepted by positivists, as it misinterprets the relationship between that great teacher and those who have carried on the positivist movement and propagated the Religion of Humanity since his death. Positivism being founded on science and on scientific philosophy, its doctrine and practice must be adapted to the new truth that results from scientific development. It is a synthesis, but not a closed and rigid synthesis. It is a relative, an organic, and an expanding synthesis, in which all new developments of science must find their place. The positive philosophy neither began nor ended with Comte, though it was under the inspiration of his genius that positivism ceased to be purely intellectual, and embraced not only the intellect, but also the feelings and activity of man.

At present there exist an International Positivist Society with its seat in Paris, of which Emile Corra is president, and local Positivist Societies (some of which are attached to the International Society and some independent) in many places—notably in London and Liverpool, and in several parts of Latin America, with scattered groups or individuals in almost every country. Among distinguished adherents in the past or present may be mentioned, in addition to the English positivists named above, in France Pierre Laffitte, who succeeded Comte, and had among his disciples many of the founders of the Third French Republic, George Eliot, the English novelist, John Kells Ingram in Ireland, Benjamin Constant Botelho de Magalens, founder of the Brazilian Republic, Theophilo Braga, chief of the provisional government and second President of the Portuguese Republic, Ahmed Riza, speaker of the first Turkish Parliament after the Revolution, and Dwarka Nath Mitter, first Indian Judge of the High Court at Calcutta. *La Revue positiviste internationale*, published six times a year at Paris, is the organ of the central body. *The Positivist Review* is published monthly in London.

5. Principles.—The English Positivist Committee (The Church of Humanity, 19 Chapel Street, Lamb's Conduit Street, London, W.C.) have recently issued the following statement under the title, 'Some Principles of the Religion of Humanity.'

'As the bounds of human love and duty extend from family to country, from country to all races and peoples, as science develops till it embraces the laws of the world and of life, of Man and Society, Humanity becomes recognised as an organic whole, which has existed through the ages and has continually grown in knowledge and unity. The old religions are seen to be worthy of honour so far as they foreshadowed this unity, as they inspired love and service, the pursuit of social aims, and the advance in righteousness and knowledge. The Religion of Humanity attains these ends more completely and more directly; for it has grown out of the whole past of Man; it is inspired by human love; it is based solely on human science; it has human service as its highest aim. It gives us a criterion of duty and a test of progress. In the presence of our duty to Humanity, all lesser duties find their true place and meaning. We can reconcile family affection and private friendship with public endeavour, devotion to country with love of all mankind.

The Religion of Humanity does not destroy the older religions; it fulfils their highest aims. It does not weaken family ties; it purifies and consecrates them. It does not repudiate the love of country; it honours each nation, however small or primitive, as a necessary element of a greater whole—an element more glorious as in its free development it brings its special gifts to the general service and the common task. It does not disregard physical and material well-being; but it subordinates them to the social and moral point of view, considering human happiness of greater importance than the accumulation of wealth, and the welfare of the great mass of the people than that of any section. This religion is based on the positive philosophy which includes in its scope the social organisation, the historic filiation of the ages, and the conduct of Man in Society, and it involves full liberty of speech and teaching for all. Humanity and science, love and knowledge, are alike necessary to right action. Inspired by the one, and enlightened by the other, we go forward in the great work of human service' (*Leaflet*, p. 11).

The Committee invites the adhesion of 'all those who wish to see life inspired by a human religion, guided by a philosophy founded on science and directed to the service of Man' (*ib.* p. 2).

LITERATURE.—i. **PRECURSORS OF COMTE IN THE 17TH AND 18TH CENTURIES.**—F. Bacon, *Novum Organum* (under title, *Instauratio Magna*), London, 1620; R. Descartes, *Discours de la Méthode*, Leyden, 1637, Eng. tr., London, 1649; T. Hobbes, *Leviathan*, London, 1651; G. Vico, *Scienza Nuova*, Naples, 1725, Fr. tr., Paris, 1835; D. Hume, *Treatise of Human Nature*, London, 1739, *Four Dissertations*, the first being *The Natural Hist. of Religion*, do. 1757; C. de S. Montesquieu, *De l'Esprit des lois*, Geneva, 1748, Eng. tr., London, 1752; J. G. von Herder, *Ideen zur Philosophie der Gesch. der Menschheit*, Riga and Leipzig, 1784-91, Eng. tr., London, 1900; I. Kant, *Werke*, Leipzig, 1858-59, esp. *Politische Meinungen*, Königsberg, 1794, Eng. tr., London, 1798; M. J. A. N. Condorcet, *Esquisse d'un tableau historique de l'esprit humain*, Paris, 1795, Eng. tr., London, 1795. For relations of positivism to 18th cent. thought cf. John Morley, *Diderot and the Encyclopedists*, London, 1878.

ii. **WORKS BY AUGUSTE COMTE.**—Essays contributed to various periodicals, 1819-28, collected as *Opuscules de Philosophie sociale*, in appendix to the *Politique*, Eng. tr., *Early Essays on Social Philosophy*, London, 1911, *Cours de philosophie positive*, 6 vols., Paris, 1830-42, Eng. tr., much condensed, by Harriet Martineau, London, 1896 (the first two chs. have been tr. as *The Fundamental Principles of the Positive Philosophy*, London, 1905), *Traité élémentaire de géométrie analytique*, Paris, 1843, *Traité philosophique d'astronomie populaire*, do. 1844 (preliminary discourse published separately as *Discours sur l'esprit positif*, do. 1844, tr. E. S. Beesly, London, 1903), *Discours sur l'ensemble du positivisme*, Paris, 1848 (forms the introduction to the *Politique*, tr. J. H. Bridges, *A General View of Positivism*, London, 1908), *Système de politique positive*, 4 vols., Paris, 1851-54, tr. J. H. Bridges, F. Harrison, E. S. Beesly, and R. Congreve, *The Positive Polity*, London, 1875-77 (the third volume

is a history of human progress), *Catechisme positiviste*, Paris, 1852, Eng. tr., *The Catechism of Positive Religion*, London, 1891, *Appel aux conservateurs*, Paris, 1855, Eng. tr., London, 1889, *Synthèse subjective*, Paris, 1856, Eng. tr. of introd. ch. only, London, 1891, *The Positivist Calendar of Auguste Comte and other Tables*, London, 1905.

iii. **LATER POSITIVIST WORKS.**—P. Laffitte, *Les grands Types de l'humanité*, 2 vols., Paris, 1875-76, *De la Morale positive*, Havre, 1881, tr. J. C. Hall, *The Positive Science of Morals*, London, 1908, *Cours de philosophie première*, 2 vols., Paris, 1889-94, *Catholicisme*, do. 1897; J. F. E. Robinet, *Notice sur l'œuvre et la vie d'Auguste Comte*, do. 1891; E. S. Beesly, J. H. Bridges, F. Harrison (ed.), V. Lushington, etc., *The New Calendar of Great Men*, London, 1892 (biographies of the 558 in the Positivist Calendar); J. H. Bridges, *Essays and Addresses*, do. 1907, *Illustrations of Positivism*, enlarged and classified ed., do. 1915; F. Harrison, *The Creed of a Layman*, do. 1907, *The Philosophy of Common Sense*, do. 1907, *National and Social Problems*, do. 1908, *Realities and Ideals*, do. 1908, *The Positive Evolution of Religion*, do. 1913; Mrs. F. Harrison (ed.), *Service of Man* (a hymn book), do. 1908; J. K. Ingram, *Outlines of the Hist. of Religion*, do. 1900.

iv. **CRITICAL OR INDEPENDENT WORKS ON POSITIVISM.**—J. S. Mill, *A System of Logic*, London, 1843, *Auguste Comte and Positivism*, do. 1865 (answer by J. H. Bridges, *The Unity of Comte's Life and Doctrine*, do. 1910); H. Spencer, *The Classification of the Sciences; to which are added Reasons for dissenting from the Philosophy of M. Comte*, do. 1864; G. H. Lewes, *Biographical Hist. of Philosophy*, 2 vols., do. 1867, art. 'Comte'; H. Gruber, *Auguste Comte, der Begründer des Positivismus*, Freiburg, 1889, Fr. tr., Paris, 1892, *Der Positivismus vom Tode August Comte's bis auf unsere Tage* (1857-91), Freiburg, 1891, Fr. tr., Paris, 1893; F. Alengry, *Essai historique et critique sur la sociologie chez Auguste Comte*, do. 1900; L. Lévy-Bruhl, *La Philosophie d'Auguste Comte*, do. 1900, Eng. tr., London, 1903; V. Branford and P. Geddes, *The Coming Polity*, London, 1917.

POSSESSION (Introductory and Primitive).—

The belief that supernatural powers, spiritual or divine, may become embodied in man, either permanently or temporarily, is found at all stages of human development and has had a profound effect on the history of religious belief. Possession, a temporary embodiment of an influence or spirit alien to the subject, is a conception in full logical agreement with primitive animistic theories; it was officially recognized in the early Christian Church; and it underlay the cruder forms of modern revivalism. Abnormal physical and psychological manifestations are regarded as evidence of the presence of a deity or spirit, good or evil, and every word and action of the subject are held to be outside his or her control and to proceed solely from the indwelling power. The primitive mind has been quick to seize the advantage of the supposed presence of a supernatural being in order to influence or ascertain the future course of events, and this in one form or another has persisted throughout the religious and spiritual history of mankind. And, since those who are, or have been, under the influence of possession are regarded as oracles, prophets, magicians, and diviners, it has followed that, where the physical and mental peculiarities which are regarded as signs of the spiritual influence are not present from natural causes, they have been simulated or artificially induced. Possession in primitive custom may, therefore, be distinguished as being either involuntary or voluntary. This distinction, though not clearly present to the primitive mind, is nevertheless real.

1. **Origin of belief.**—The spiritual theory of the universe, which is the basis of primitive modes of thought and ascribes powers and attributes which would now be regarded as supernatural to every

man or woman, might be held adequate to account for the nature of the belief. It is clear, however, that, while this attitude of the primitive mind has suggested its general form, its interest centres in what is abnormal in the phenomena. The constant association of possession with pathological states of mind and body indicates that as a theory it is an attempt to explain the existence of epileptics, neurotics, pervers, and those who are subject to other forms of mental diseases. It is particularly significant that it is precisely in those areas in which what is known as 'arctic hysteria' is prevalent, and especially in Siberia, that the mediumistic side of the shaman's functions are most prominent and most constantly in request.

2. **Description of phenomena.**—The interesting physical and psychical phenomena of possession as described both in antiquity and in recent times are essentially identical wherever encountered. The subject, having attained by means of some stimulus or other a state of intense emotional excitement, is seized with convulsive shiverings and shakings of the body, makes violent gestures with the arms, and his looks become wild and excited.

An account of a case of possession in the Sandwich Islands says that the priest who was the subject worked himself up to the highest pitch of frenzy, the limbs seemed convulsed, the body swelled, the countenance became terrific and the features distorted, the eyes wild and strained. While in this state, he rolled on the earth, foaming at the mouth as if labouring under the influence of the divinity. The will of the gods was then revealed in shrill cries, in violent and often indistinct sounds. When the response of the oracle had been given, the violent paroxysm gradually subsided and comparative composure ensued (W. Ellis, *Polynesian Researches*, London, 1832-36, i. 372-375). This account may well be compared with that given by Vergil:

subito non vultus, non color unus.
Non comptæ mansere comæ; sed pectus anhelum,
Et rabie fera corda tument; majorque videri,
Nec mortale sonans; afflata est numine quando
Jam propiore dei' (*Æn.* vi. 47-51).

The exclamations, the cry 'Apollo,' and the disjointed utterances with which Cassandra in the *Agamemnon* begins to prophesy under the influence of the god (*Esch. Agam.* 1072f.) in like manner find a parallel in the description of possession among primitive races. In the Vedda ceremony the shaman cries 'Ah, Ah,' as the *yaka* enters into possession of him and when it leaves; in Fiji, when the priest was seized, the god announced his name with the subject's voice (*GB*, pt. I, *The Magic Art*, London, 1911, I. 378, quoting L. Fison).

The gradual cessation of the paroxysm is not universal. Among the Veddas the termination of possession takes place suddenly after a crucial act in the pantomime of which the ceremonial consists and the shaman falls back exhausted into the arms of his supporters. In a careful study of the phenomena in the Vedda shaman Seligmann says that, although the performer can co-ordinate his movements, he has only a general idea of what he is doing and is more or less in an automatic condition in which he goes through all the emotional movements of the dance correctly and in the proper order. He acts without complete volitional consciousness. The shamans themselves said that both at the beginning and at the end of the performance they were seized with vertigo and nausea. One said that he heard booming noises in his ears when the spirits left him. Apparently the determining factors are a profound belief in the reality of possession and a subconscious attitude of expectancy. It appears to be clear that the possession of the bystanders is non-volitional. A Sinhalese 'devil-dancer' appeared to suffer considerable pain, or at any rate inconvenience, although he did not wish to be, and had taken pains to avoid becoming, possessed. At the end of the dance the performer seems to be genuinely tired. The Veddas show no particular indications of a neurotic or hysterical tendency (C. G. and B. Z. Seligmann, *The Veddas*, Cambridge, 1911, pp. 130, 134f., 209ff.).

3. Possession and disease.—Although the primitive theory of possession does not discriminate between the cause of cases which are pathological and those in which an abnormal state is the result of the more or less voluntary action of the subject, both alike being attributed to the presence of spirits, in practice a distinction is made between an accidental or occasional seizure and the ceremonial observance of rites to summon spirits to materialize for a special purpose.

Forms of possession which, in the light of this distinction, might be classed in the former category, would include such as are explained as arising from neglect of what is fitting in respect of, or by way of offerings to, a spirit.

Among the Lushai of India, on the occasion of the tribal feasts, the spirits of the dead are believed to be present and it is usual to place offerings of food for them in the eaves of the houses. If it should happen that a girl who has recently lost her mother should fall in a faint, it is taken as a case of possession; 'the dead has taken her place.' This is a sign that the spirit is not satisfied with the costume and ornaments with which she was decked on the occasion of the funeral. In order that the girl may be relieved and the spirit appeased, her clothes, ornaments, etc., are placed on that part of the floor where the body lay and one of her old petticoats and cloths is burnt in the forge (J. Shakespeare, *The Lushai Kuki Clans*, London, 1912, p. 65).

Possession may follow some act of impiety.

It is recorded that a Javanese coolie in the Malay Peninsula who cut down a tree known to be tenanted by a *hantu* (spirit) was seized by something resembling an epileptic fit, which was regarded by the Malays as possession. No Malay would cut down a tree known as the abode of a spirit unless directed to do so in the course of an exorcism conducted by the medicine-man (C. O. Blagden, quoted by W. W. Skeat, *Malay Magic*, London, 1900, p. 64f.).

Near relatives appear to be peculiarly susceptible to attacks by spirits of the deceased, as in the Lushai case of mother and daughter cited above. In other cases, as, e.g., among the Akikúyu, who believe diseases to be caused by *n'góna* (spirits of the dead), there is peculiar danger for the relatives.

The *n'góna* haunt especially the place of the man's death and, if he has been an evil liver, his spirit does as much harm as possible, in particular by taking possession of people whenever he has an opportunity. In such cases the medicine-man is called in to interpret the spirit's desire. If it is not satisfied, it will torment its victim at night and probably cause madness (W. S. and K. Routledge, *With a Prehistoric People*, London, 1910, p. 240f.).

Possession and causing madness are here specifically mentioned as activities of an evil spirit, but among the primitive theories of disease causation by spirits who enter into or torment the patient holds a prominent place. The therapeutic measures of the medicine-man, in so far as they are

not purely materialistic, like the extraction of a bone or pebble, are largely directed towards driving out or propitiating the demons or spirits responsible for the disease (see art. SHAMANISM). It also finds expression in the customs of driving out disease-spirits at special festivals, of sending them away in boats, or of diverting them to a scapegoat.

It is, however, to the more violent and abnormal forms of disease in particular that the theory of possession is applied.

The Bathonga hold that possession in the form in which it is recognized among them is caused by the spirits of the dead, not, be it noted, spirits of their own dead, but Zulu or Bannao spirits. It occurs chiefly among those who travel outside Thonga boundaries. The attacks are not confined to the time of their absence from their own country; they may bring back the infection with them, and, indeed, though now less frequently than formerly, at times the disease has assumed the proportions of an epidemic. The preliminary symptoms are a nervous crisis, persistent pain in chest, hicough, extraordinary yawning, and emaciation. If, after consultation of the divinary bones, the medicine-man decides that the patient is possessed, the spirit is exorcized. In the course of the elaborate series of ceremonies which follows the patient in a frenzy, declares the name of the spirit which possesses him, speaking in Zulu or Njao even if he has no previous acquaintance with the language. The spirits are appeased by the offering of a goat. When the throat of the goat is cut, the patient sucks blood from the cut until his stomach is full and is then torn away from the carcass by the bystanders. He is given drugs which act as an emetic and the spirit is declared to have left him. At the end of the ceremony which closes the rites, and after a probationary period of a year, the possessed are regarded as fully initiated medicine-men and are distinguished by white beads woven into their hair (H. A. Junod, *Life of a S. African Tribe*, London, 1913, ii. 436ff.). Among the Zulu, where possession occurs in a very similar form and with almost identical symptoms, it is ascribed to the ancestral spirits (*amatongo*); from some it departs of its own accord, others have the ghost laid, while in other cases the disease is allowed to take its own course and they become diviners (H. Callaway, *Religious System of the Amazulu*, London, 1870, pp. 135, 239, etc.).

The magico-medical theories of the Malays which are based upon the idea of 'mischiefs' are peculiarly instructive as illustrations of this side of the possession theory. As an example may be cited the form of treatment which aims at inducing the disease to pass along a parti-coloured thread from the patient to small dough figures of birds, beasts, and fishes (Skeat, p. 432f.).

In Borneo the pagan tribes regard madmen as possessed by some *toh* (spirit), while the Melanau extend this theory to other forms of sickness. Exorcism for possession is practised by all the pagan tribes, least frequently among the Kayans, most elaborately among the Klemantan. The different forms of dementia are ascribed to different devils. They are said to be ghosts with red eyes; the *amok* devil comes from the swamp and is different from the suicide devil, both being distinct from the devils which cause simple lunacy (C. Hose and W. McDougall, *Pagan Tribes of Borneo*, London, 1912, ii. 23, 31, 46).

It will not be necessary to enter more fully into this side of the subject here, on which further information may be found elsewhere (see artt. DISEASE AND MEDICINE, SHAMANISM). Enough has been said to indicate that, while possession is one of the more important theories of disease, it is applied especially to those cases in which peculiarly violent or abnormal symptoms are plainly to be observed.

4. Possession and initiation.—The pathological character of those affections which are regarded by primitive peoples as evidence of possession is such that the symptoms of the disease or weakness would recur at more or less frequent intervals. It is therefore not surprising to find that those who are subject to such nervous crises come to be regarded as a class apart—a class of peculiar sanctity. This offers in part an explanation of the origin and power of the medicine-man on one side of his functions—as healer, wonder-worker, and prophet. Those who have been in such close relation with the spirits are expected to have special power over them and special knowledge of their will (see J. G. Frazer, *The Belief in Immortality*, i., London, 1913, p. 15).

The Bathonga who had been exorcized for possession after a period of probation himself became a medicine-man and exorcist (Junod, ii. 436f.). The Melanau woman who has been under the influence of the *toh*, when she has undergone the full

ceremony of exorcism, becomes a medicine-woman with full powers to summon the spirits to assist her in healing others (Hose-McDougall, ii. 130).

In both these cases the abnormal condition did not bring about the automatic inclusion of the subject in the class of medicine-men and -women. The further ceremonies beyond the minimum necessary for mere exorcism, as well as the probationary year in the Thonga case, suggest that, while the actual case of possession had indicated the fitness of the subject, some further process was necessary before he or she was regarded as fully qualified. In this connexion it may be mentioned that in the secret societies, and especially in those of W. Africa, of which initiation is such an important feature, the spiritualistic element which is prominent in certain forms of possession appears to be strongly cultivated (see Hutton Webster, *Primitive Secret Societies*, New York, 1908, p. 174 ff., and P. A. Talbot, *In the Shadow of the Bush*, do. 1912, p. 40). On the other hand, the mere fact of possession is sometimes adequate to secure recognition of magical powers.

Among the Patagonians those who were seized with the falling sickness or St. Vitus' dance were at once selected to be sorcerers as chosen by the demons themselves (T. Falkner, *Description of Patagonia*, Hereford, 1774, p. 116). In some cases the power was confined to certain families; among some Siberian tribes the office of shaman tended to become hereditary, but the supernatural gift was a necessary qualification, and the shamans also adopted children who appeared suitable to succeed them, i.e. those who showed signs of an epileptic or neurotic tendency. Notwithstanding the prevalence of arctic hysteria, it is probable that the qualities necessary for a successful shaman were not too common, as not only must he differ from the ordinary patient in having great control over himself between the fits, which occurred only at the ceremonies, but he had also to have a strong personality, tact, and knowledge to control those with whom he came into contact (M. A. Czaplicka, *Aboriginal Siberia*, Oxford, 1914, p. 169 ff.; *PC*, London, 1903, ii. 133, quoting Georgi).

Yet, notwithstanding their selection on the grounds of special fitness, whether due to inheritance or as manifested in the susceptibility to possession, the shamans, after a call which usually follows an acute nervous crisis, have to undergo a period of preparation varying from tribe to tribe, but which in the case of the Yakuts is a lengthy and elaborate ceremony of initiation.

On the other hand, even where a predisposition or the actual symptoms of previous disease were not a condition of becoming a priest, diviner, or soothsayer, the novitiate often imposed conditions which could not fail to lead to an abnormal or unhealthy frame of mind.

The probationary periods required from the aspirant to the profession of the medicine-man among the N. American tribes not infrequently included long fasts and periods of solitude spent in the mountains, during which the novice saw visions, dreamed dreams, and entered into relation with spirits, while the immediate followers of the medicine-men in periodic seclusion in the woods often inflict upon themselves mutilations and injuries which suggest the influence of hysteria (O. Hill-Tout, *British North America, i. The Far West*, London, 1907, p. 174 f.; *NR*, San Francisco, 1882-83, i. 170 f., 202, 284, 777, etc.). Among the Chukchi, Koryak, and Gilyak, during the long periods of seclusion in the forests, not only did the shamans learn and practise their professional arts—singing, dancing, ventriloquism, and playing the drum—but they endured hardships of cold, hunger, and solitude which could not but intensify their natural predisposition towards hysteria (Czaplicka, p. 178 f.).

These facts appear to lend support to the view that possession voluntarily induced was not entirely imposture, as those in whom lay the power of acting as media would be recruited from neurotic and mentally weak members of the community who, having a natural predisposition to instability, would be peculiarly susceptible to the influence of excitement and auto-suggestion.

In view of the sanctity of the chief and king and the close connexion of these offices with that of priest and medicine-man, it is not surprising to find that it is believed that the presence of the deity or the spirits may be made manifest in the person of the ruler or leader of a community.

In the Sandwich Islands the god spoke through the king (Ellis, *loc. cit.*). In Fiji the god could be approached only through the medium of the priest, who announced the will of the deity while under the influence of divine possession, but the offices of priest and chief were combined. If, however, the chief was of high rank, it was considered derogatory to his dignity that he should become possessed (B. Thomson, *Fijians*, London, 1908, p. 159).

5. *The spirit helper.*—As a result of the seclusion which forms part of the novitiate both in Siberia and in N. America, the shaman acquires a familiar spirit or helper which usually appears to him in the form of some animal. When he becomes possessed subsequently, it is by the intermediation of this helper that he comes into relation with the spirit world.

In the Siberian séance, the shaman being a skilled ventriloquist, the voices of the spirits come from all sides of the room as well as from the ceiling. The spirits speak with their own voices, unless they happen to be wolf, fox, or raven, which can speak in the language of man. Sometimes the shaman himself does not understand the language; it may be a mixture of Koryak, Yakut, and Yukaghir, and it may have to be translated for the benefit of Russianized shamans. One Tungus shaman having Koryak spirits, they spoke through him in that tongue. The Asiatic Eskimos have a spirit language analogous to that of the Eskimos of Alaska and Eastern N. America. On the other hand, a Chukchi shamaness, while in a state of possession, in which she produced small pebbles from a larger pebble with no apparent change in the latter, by wringing it with her hands, was unable to answer questions except by signs, because, it was said, she had temporarily lost the knowledge of her own language (Czaplicka, pp. 231, 233).

6. *Voluntary possession.*—The theory of possession is not applied solely to those intermittent manifestations of abnormality to which it owes its origin. It could hardly be expected that those who are subject to attacks should not take advantage of the power given them by the feelings of awe and terror aroused by their supposed relation to the spirit world. But, as a crisis of their disease cannot be relied upon to coincide with the moment when their advice may be sought or their assistance invoked by the ordinary member of the community, possession is superinduced voluntarily by an artificial stimulus. The fact that in the majority of cases possession is not a morbid state due to purely natural causes, but is artificially induced, as well as the comparative certainty and facility with which the state of exaltation is attained, has caused question to be raised as to the genuine character of the manifestations and the honesty of the performers. When the peculiar temperament of the performers is taken into account, however, there can be little doubt that, notwithstanding imposture in details, the seizure is genuine and the performer himself often believes to a great extent in the reality of his powers. Many writers concur in ascribing a peculiar cast of countenance to the medicine-man as distinct from other members of his tribe. There is often said to be an appearance of evasive cunning and malice, especially in the expression of the eyes. More probably it is due to a highly-strung or neurotic temperament (see especially writers quoted in Czaplicka, *loc. cit.*).

Various means are employed to superinduce the state of possession. These are usually of such a character as might be expected to set up a state of automatism in the chief actor, and, where possession is not confined to the central figure, to stir up a sympathetic state of excitement in the bystanders. Usually some form of action with a strong rhythmic appeal is a prominent feature in the preliminary ceremonies.

The Veda form of possession is preceded by a dance in which the shaman, while uttering invocations to the spirits, circles round the offerings; the dance increases in speed until the seizure takes place. In one dance in which there were two principal performers the second joined in when the first, who had already become possessed, waved a cloth in front of him. This cloth was the vehicle by which the spirit was supposed to have entered the first dancer, and presumably by the action of waving the cloth in front of the second it was also transmitted to him (C. G. and B. Z. Seligmann, p. 230). In Borneo the Kayan medicine-women, in the course of the exorcism of the

evil spirit for the cure of disease, whirl round until they fall in a faint (Hose-McDougall, ii. 183).

Among all the Siberian tribes the most important part of the shaman's outfit is the magic drum, on which he beats at first softly and then louder and louder as his excitement increases. The shamans of the Chukchi and the Asiatic Eskimo sing while beating the drum, and responses are given by an answering chorus consisting in the former case of novices, in the latter of the members of the shaman's family (Czaplicka, p. 230 f.). The Samoyed shaman holds in one hand two arrows, from the points of which hang two bells, and in the other a mystic staff, with which he beats the bells rhythmically as he sings (*ib.* p. 239). In the course of the Bathonga ceremony for exorcizing the spirit of possession—a ceremony which consisted chiefly of an orgy of noise made by drums, rattles, etc., round the subject, sometimes for as long a period as a fortnight—the patient composes a song, usually in Zulu, by the repetition of which subsequently he can be roused or arouse himself to a state of excitation. This is his special song and is used by him on all occasions when, having become a fully-fledged medicine-man, he exercises his powers. One peculiarity connected with this song is that it is invariably composed in Zulu or Njao, even though the subject is unacquainted with these languages. In Fiji the priest appears to set up a state of auto-hypnosis. He takes in his hand, and gazes fixedly at, a whale's tooth until he begins to tremble with a violent muscular action and to sob (Thomson, p. 160). The Yakut shaman also in the preliminary performance gazes fixedly on some point in the darkened room, usually the fire. The peculiar effect of suggestion is indicated in this case by the artificial hicough which the shaman keeps up during the early part of the performance in the complete silence of a darkened room before he begins to beat his drum (W. Sieroszewski, quoted in Czaplicka, p. 235).

The action of other means employed is more obvious. Intoxicants of various kinds are used.

In Mangaia before giving oracles the priests drank an intoxicating liquor (W. W. Gill, *Myths and Songs from the S. Pacific*, London, 1876, p. 76). In Bali incense was inhaled by the seer or he was surrounded by a band of singing men and women (F. A. Liefrinck, quoted in *GB*³, pt. i., *The Magic Art*, i. 379).

Smoke from the foliage of a sacred tree or plant was sometimes used.

Among the tribes of the Hindu Kush the priestess veiled her head with a cloth and inhaled smoke from the fire of the sacred cedar until seized with convulsions (J. Biddulph, *Tribes of the Hindoo Koosh*, Calcutta, 1880, p. 97). The priestess of Apollo ate and was fumigated with laurel, while the Bacchanals ate ivy (Plut. *Quæst. Rom.* 112). In Uganda tobacco was smoked (J. Roscoe, 'Further Notes on the Manners and Customs of the Baganda,' *JRAI* xxxii. [1902] 42). Chukchi and Tungus shamans smoked pipes containing narcotic tobacco; the Yakuts also smoked, swallowing the smoke (Czaplicka, pp. 230, 234). In Madura the medium inhaled incense as she sat on a tripod (*GB*³, pt. i., *The Magic Art*, i. 384).

A repulsive but not uncommon method of excitation was to suck or drink the blood of a sacrificial victim.

Among the Kuruvikkārāns of S. India the goddess Kali descends on the priest after he has sucked blood from a goat of which the throat has been cut (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, iv. 187). In S. Celebes the priest runs to put his head inside the carcass of a pig which has been cut open. The impulsive character of this act may be compared with the convulsive sucking of the victim's blood in the Bathonga case quoted above (*GB*³, pt. i., *The Magic Art*, i. 382). Analogous examples are to be found in the records of antiquity. In Rhetra, the religious capital of the W. Slavs, the priest tasted the blood of the victim in order to prophesy better (F. J. Mone, *Gesch. des Heidenthums*, Leipzig, 1822, p. 188). The heathen of Harrān, although holding blood unclean and the food of demons, drank it in order to enter into communion with them. In ancient Greece drinking bulls' blood was both a test of the chastity of the priestess and, in Argos, at Egira in Achaia, a preliminary to the descent of the priestess into the cave from which she prophesied (*GB*³, pt. i., *The Magic Art*, i. 381 f.). In S. India self-mutilation was part of the rite. The devil-dancer cuts and lacerates his flesh with a huge whip till the blood flows, presses a torch to his breast, drinks blood from his own wounds and then from the throat of the sacrificial victim (R. Caldwell, 'On Demonolatry in S. India,' *JASB* i. [1832] 101 ff.).

7. Objects to be attained by possession.—(a) *Oracles, divination, and prophecy.*—It follows from the primitive interpretation of this abnormal state of exaltation as one of possession by a spirit or by a deity that anything said by the subject while in this state should be regarded as the utterance of the spirit itself. A condition of the success of an attempt to exorcize the possessing spirit is that it should be compelled to declare through the mouth of the victim either its name, thus giving the operator power over it in accordance with a generally recognized rule of magical practice, or its

desires (usually a request for offerings), knowledge of which makes it possible for it to be expelled by propitiation. It requires only a slight extension of the argument that these sayings are an expression of the will of the gods to transform them into a channel for the revelation of the future. There is abundant evidence in the recorded instances of possession to show that this is not merely an *a priori* view, but is in accordance with the facts, and, even when the state of possession may have been induced primarily with another object in view, advantage has been taken to obtain knowledge of the future through the possessed person.

In the Sandwich Islands it was believed that, when the priest had reached the height of his frenzy, he revealed the will of the gods. But it was also held that the god did not leave him immediately after his recovery, but continued to possess him for two or three days longer. During this time, when he wore a cloth of a peculiar kind in order to mark his abnormal condition, all his acts were regarded as those of the god, and the greatest attention was paid to his expressions and his whole deportment (Ellis, i. 372-375).

When it is believed that these manifestations of the deity or of spirits are not such involuntary seizures as may occur at any time or to any person, but are subject to what to the savage mind must appear to be certain rules or natural laws, in that they can be superinduced by magical formulæ or magical acts, or in virtue of magical powers inherent in certain individuals, the custom arises of performing these actions or resorting to these individuals whenever it is desired to obtain knowledge of the future. Those who are subject to possession by entering voluntarily into the state of exaltation at the request of their consultants attain the position of oracles. Analogies more or less close to the priestess of Apollo at Delphi and the Sibyl at Cumæ are found in almost every part of the world.

The germ of the prophetic character of possession is to be seen in the Vedda dance in honour of the *nae yaku*, when the direction in which game will be found is indicated by the direction in which the pot of rice falls after it has been set spinning by the shaman as his last act before he ends his performance. In another dance the shaman splits a coco-nut with an *aude* (ceremonial arrow); if a clean break is made, the animal to be shot will be a female, but, if the edge is jagged, it will be a male (C. G. and B. Z. Seligmann, pp. 221, 223). In Bali it was held that, when the *pérmās* had been taken to the temple and had been raised to a proper pitch of excitement by the incense and the singing of groups of men and women who surrounded him, his soul left his body, which was then at the disposal of the deity. He was regarded as a god and as such gave answers to all questions (F. A. Liefrinck, quoted in *GB*³, pt. i., *The Magic Art*, i. 379).

The belief that the subject spoke no longer with his own voice but with that of the god is supported by peculiarities of diction and intonation. The utterance may be intermittent or the quality of the voice may be changed.

The Patagonian shaman, when he has worked himself into a frenzy by drumming and rattling, speaks in a low mournful voice (Falkner, *loc. cit.*). In the Sandwich Islands the god gives utterance through the priest to shrill cries and sounds violent and indistinct (Ellis, pp. 352, 373). In Guinea the fetish woman snorts and gasps and her responses are given in a shrill whistling voice (Römer, *Guinea*, p. 57, quoted in *PC*⁴, p. 134 f.). As already mentioned, the Siberian shaman, by his skill in ventriloquism, was able to convince his audience of the presence of his spirit or spirits by the cries, appropriate to their supposed animal form, which they uttered. In the case of those animals which spoke with the human voice their utterance was distinguished by a peculiar timbre (Czaplicka, p. 231).

(b) *Propitiation.*—These abnormal manifestations may also be evoked in order to propitiate spiritual powers or to enter into communion with those powers; or they may even become an act of worship.

This aspect of the belief is very apparent in the pantomime dances of the Veddas, which form the most important element in their ritual and of which the essential object is that the shaman, the central figure, should become possessed by the spirits invoked. The end to be attained is the material success of the tribe, especially success in the matter of food supply, by propitiating the spirits of the recently dead and those spirits who are specially concerned with hunting, the gathering of honey, and the like. These dances are of the greatest interest; their details throw much light on similar dances elsewhere and on the belief in possession generally. The details of the ceremony, and

especially the eating of the offerings after its termination by all present, point to an attempt thoroughly to unite the spirit in a community of membership with the group and thus to secure the exercise of his power to its advantage, the shaman being both the convener and the vehicle of materialization. The dances take place around offerings to the *yaku* (spirits of the dead). The shaman, while dancing and uttering an invocation summoning the spirits, is seized by the *yaku* invoked. It is interesting to note that the spirit cannot enter directly into the shaman, but only by some vehicle, an *aude*, sword, cloth, or other object held in his hand,¹ or the leaves of a bower of branches usually erected near by. The bower is beaten and stripped when the dance is over in order that the spirits may not linger in the neighbourhood longer than is thought desirable. When the spirit enters the shaman, his first act is to approve the offering; this is signified by the shaman bending over the bowl in which it is contained and then springing away. It is expected that the spirit will grant them what they desire out of gratitude. The pantomime dance then begins; the movement usually leads up to some critical action, after which the shaman collapses. This critical act in a dance devoted to Kande Wauniya, a hunting hero, of which the object is to secure success in hunting, is the shooting of the *sambar* deer by the medicine-man. Another dance, in which Bambura Yaka is invoked for success in getting yams and pigs, staple foods, involves three separate possessions of the chief performer, one of each of the personages mentioned as helping Bambura to kill the boar in the hunting story represented by the action of the dance. In each of the dances the spirit invoked to take possession of the dancers and accept the offerings is appropriate to the end desired, Kande Wauniya for success in hunting, Bambura Yaka for pigs and yams, Pata Yaka in childbirth, Dola Yaka for success in collecting rock honey, Rahu Yaku in collecting the honey and in illness. One of the chief dances is that in honour of the *nae yaku*, the recently dead. Some of the dances, in addition to being intended to secure success in the future, are thanksgivings for past favours (C. G. and B. Z. Seligmann, p. 209 ff.).

Possession also forms an element in Malay dances, which, although now a form of amusement, retain some traces of a religious origin. The dance is preceded by an invocation and offering to the spirit of dancing, during which it is usual for the performer to lie down, but in the 'monkey-dance', which is performed by a girl of about ten years of age, she lies in a swinging cradle, is rocked until she is dizzy, and is fed with salt and areca-nut. At the end of the invocation the spirit is supposed to have taken possession of the dancer. Sometimes the dancer in the monkey-dance is said to perform extraordinary feats of climbing while under the spirit's influence. The child is called by name when it is time for her to recover or, if that fails, she is bathed with coco-nut milk. At the end of the dances an invocation escorts the spirit home. In the 'spit-dance' the dancer holds two iron spits in his hand which at a certain point in the dance he drives into his arms, where they hang (Skeat, pp. 463-467).²

(c) *The treatment of disease.*—As has been stated above, the primitive theory of disease, in one of its forms, attributes it to the influence of spirits. This being the case, it is thought that its cure may be effected by entering into relation with the spirits and ascertaining their will. Frequently desire to obtain a knowledge of the future is merely secondary. The function of the Siberian shamanistic rites of possession was primarily to remove disease; only when this was accomplished did the shaman at times turn to prophecy. Among the Yakuts the gift of prophecy, however, was retained for some time after the cessation of the rites (Czaplicka, p. 237).

An instructive instance in which the relation of possession to both propitiation and cure of disease is illustrated is to be found in the *bori* cult of the Hausas of Nigeria and Tunis. The *bori* are spirits, some of Muhammadan origin, some purely pagan, who are regarded as the cause of the various diseases. Each spirit is known by name, is responsible for a particular disease, and is summoned to the accompaniment of drumming and the burning of incense by his or her special song. The

dancers, both male and female, are 'mounted' by the spirits in the great ceremonial dances when offerings are made. In addition to these propitiatory ceremonies which avert the attacks of disease, the medium may be called into consultation in case of an actual illness to make the offerings to appease the offended spirit, or for purposes of divination (A. J. N. Tremearne, *The Ban of the Bori*, London, n.d. [1914], pp. 243 ff., 280 ff.).

In S. India and Ceylon in the course of the devil-dances the performers by becoming possessed enter into relation with the demons who are responsible for cases of illness. It may be noted, however, that in some cases the aim of the performer is to avoid possession by the spirit responsible for the disease, especially if the spirit be very powerful. In the Gonagalla ceremony, at the stage when the Riri Yaka was invoked, a cock was substituted for the dancer as the subject for possession owing to the great malignity of this spirit (B. Z. Seligmann, *JRAI* xxxviii. 374).

In such dances as these the object of the dancer is to cure or to avert disease by appeasing or propitiating the spirits responsible, and in these cases possession is only one of the means, though it may be the most important, by which the goodwill of the spirits is secured and made manifest.

In Cambodia in the time of an epidemic the villagers will seek a man whom they consider suitable, take him to the temple, and then, when he is possessed by the god, ask him to ward off the plague from their village (J. Moura, *Le Royaume de Cambodge*, Paris, 1883, i. 177).

But, while in this case and in other cases—e.g., the *bori* quoted above—spiritual causation is recognized, the exact relation of the spirit to the patient is not clearly expressed. When, however, disease is regarded as due to an indwelling spirit, the obvious aim of the exorcist is to drive out the possessing influence. Such is the case in the Thonga form of possession, when the object of the exorcist is to master the spirit by learning its name and thus acquiring power to drive it away. It is possible to trace the development of the idea of the relation of possession and disease through various stages. The exorcist as among the Bathonga, Zulus, Kayans, and many other peoples, some already mentioned, is usually one who has himself or herself suffered from possession, and therefore may be supposed to stand in a peculiar relation to the spirits. Even when disease is attributed to a material cause, a pebble or bone introduced by magical means into the body, the assistance of the deity may be invoked through his agent.

In Poso in Central Celebes, when the priestess is consulted in a case of disease, she becomes possessed and it is the god who speaks through her mouth, and through her hands draws the evil from the patient (*GB*³, pt. i., *The Magic Art*, i. 379 f., quoting A. C. Kruijt).

The intervention may be less direct and the god or spirit may do nothing more than indicate the measures propitiatory or therapeutic that will relieve the patient, as among the Aikidyu (Routledge, p. 241). On the other hand, a logical development is to summon a stronger spirit to possess the exorcist and drive out the malignant spirit.

This is the object of the elaborate rite of the Melanans of Borneo. If a woman who is possessed goes through the complete rite of exorcism known as *bayok*, she herself becomes an exorcist and can cast out devils from others. This rite is divided into three parts, extending with intervals over eleven nights: the first part is to satisfy the people, the second part to appease the spirits, and the third secures the patient's acceptance as an exorcist. The *bayok adang* ceremony is undertaken when fowls and eggs have been offered without effect to good spirits. It takes place in a room which is elaborately decorated and on the floor of which coloured rice in the shape of crocodiles, popcorn, maize, tobacco, etc., have been scattered as an offering. The object of the ceremony is to summon the evil spirits to take possession of the medicine-women, three or four of whom are present. In the course of the ceremony the patient is brought to the centre of the room and is whirled round in a sealed cone of shavings until she has been worked up into a frenzy. The medicine-women themselves whirl round until they fall in a faint. The native explanation of the ceremony is that it serves as a summons to the spirits, who keep on coming until one sufficiently strong to deal with the case arrives. This one then takes possession of the chief medicine-woman, and in her person eats the rice and other offerings which have been prepared. The spirit in her then calls out the evil spirit from the patient. Sometimes a rattan swing is provided for the patient and chief medicine-woman.

¹ It is stated that carved bamboos and arrows to be used for a similar purpose were found in the hut of a Sakai medicine-man (W. W. Skeat and C. O. Blagden, *Pagan Races of the Malay Peninsula*, London, 1906, ii. 252). In the Sinhalese devil-dance at Gonagalla, however, while a sword brought the dancer *en rapport* with the spirits, an arrow was used to prevent possession by a dangerous spirit (B. Z. Seligmann, 'A Devil Ceremony of the Peasant Sinhalese', *JRAI* xxxviii. [1908] 372).

² Insensibility to pain or invulnerability is a mark of divine possession. In Bali, when the divinity had seized the possessed person, his body became immaterial and therefore invulnerable, and in the dance with swords or pikes which followed no weapon could hurt him. The S. Indian devil-dancer cut and lacerated his flesh until the blood flowed. The Siberian shaman apparently stabbed himself in the body with a knife in the course of the rite as practised among the Kamchadal Eskimos, Chukchi, Jukaghir, and some other of the Siberian tribes, but close observers consider this an effect of sleight of hand, at most a scratch being responsible for the blood shown (Czaplicka, p. 233).

while near at hand is a stand for the evil spirit (Hose-McDougall, pp. 28, 31, 46, 130 ff.).

The Sakai and Jakun, when they have built their little shelters, place the patient inside and then call upon the spirits to descend on themselves. The Blandas summon the spirits of elephants and monkeys (Skeat-Blagden, ii. 252, 295), while the Malay *parawang*, in dealing with a serious case of illness after possession by the tiger-spirit, when he imitates the actions and voice of that animal in movement, in eating, and in licking the body of the patient, engages in a hand-to-hand conflict with the malignant spirit and stabs it after it has taken refuge in jars of water or other receptacles placed for the purpose (Skeat, pp. 436-444).

8. Possession of animals and inanimate objects.—Finally it may be noted that possession is not confined to human beings.

The Todas believe that gods sometimes possess their buffaloes (W. H. R. Rivers, *The Todas*, London, 1906, p. 451). This may be compared with the belief that disease may be transferred to cattle. When the cattle of the Bahima suffer from an epidemic, it is the custom to secure by means of a ceremony the transfer of the disease to one member of the herd which is then driven out for sacrifice as scapegoat (J. Roscoe, 'The Bahima: a Cow Tribe of Enkole in the Uganda Protectorate', *J.R.A.I.* xxxvii. [1907] 111). The Yakut shaman sometimes frightens away disease, driving it off by spitting and blowing, but sometimes it is transferred to cattle, which are then sacrificed. The dance which forms part of the ceremony is said to be symbolical of their journey to the sky, and in olden days, it is said, there were shamans who themselves ascended to the heavens (Sieroszewski, in Czaplicka, p. 237 f.).

Among the Malays, in a species of spiritualistic performance, after invocation and offerings, spirits are made to take possession of inanimate objects such as palm-blossoms or a fish-trap, and make them go through the motions of a dance. A parallel may be found in the spiritualistic performances of the shaman of the Reindeer Chukchi. Their spirits are said to be very mischievous. Invisible hands turn everything in the tents upside down and throw different objects about. Should the spectators try to touch the spirit, they resent it and may kill the shaman by stabbing him or breaking his head (Czaplicka, p. 232).

LITERATURE.—This is sufficiently quoted throughout.

E. N. FALLAIZE.

POSSESSION (Greek and Roman).—The conception of divine possession—the incarnation of a god in human form—prevailed extensively in the earlier stages of religious history. It may be that, as evidenced by the practices of Australian savages, this consciousness in states of excitement of an internal but overmastering force is felt without relation to a personal god (J. E. Harrison, *Themis*, Cambridge, 1912, p. 65); but such considerations are inapplicable to the Greeks of the historical age. When the body of the priest or celebrant passed for a time into the possession of the god, all his acts and words were not merely prompted by but proceeded from the god himself. The devotee identified himself with the god and affected to exercise the divine functions. Illustrations may be drawn from the professions of savage medicine-men, such as the *wakan* men of the Dakotas or the Maori *tohungas* (A. Lang, *Myth, Ritual, and Religion*, i. 112 f.). The best of the Greek instances is the giving of the name Bacchus to those who participated as worshippers in the orgiastic cult of Dionysus (schol. Aristoph. *Eq.* 408); and the impersonations of the Curetes, who took part in the Cretan mysteries of Zagreus (Eur. frag. 472), were similar to those enacted by the enthusiastic followers of the god at Eleusis or Delphi. The ultimate explanation of these phenomena—whether the collective emotion of the group meeting together for the performance of mimetic rites, when projected and externalized, led to the conception of a personalized god (J. E. Harrison, p. 46), or whether, again, the religion of Dionysus was entirely developed from the worship of a god of vegetation (*GB*³, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, i. 1 ff.)—cannot be discussed here. It is sufficient to observe that in all cults where the god enters into the worshipper the worshipper regularly assumes the name of the god. The famous line, to which Plato alludes (*Phædo*, 69 D)—'Many are the thyrsus-bearers, but few are the inspired (Bacchi)'—may be ascribed to the

theological movement of the 6th cent. B.C., which laid increased stress on the mystical value of the communion of the celebrant with the god (C. A. Lobeck, *Aglaophamus*, Königsberg, 1829, p. 813; T. Gomperz, *Greek Thinkers*, Eng. tr., London, 1901, i. 132). Less familiar instances are Sabi and Sabæ, names given to the inspired worshippers of Sabazius (H. Usener, *Götternamen*, Bonn, 1896, p. 44), Bassaræ and Bassarides applied to the Mænads (Athenæus, 198 E; Nonnus, *Dionys.* 14. 395), Cybebi, the designation of the enraped votaries of the Great Mother (Phot. s.v. *Κύβητος*), Hermæ, the boy attendants at the oracle of Trophonius (Paus. ix. 39. 7), and Melissæ, the bee-priestesses of Demeter and other deities (A. B. Cook, in *JHS* xv. [1895] 14 f.; Frazer, *Paus.* viii. xiii. 1). With the last we cannot fail to compare the Thriæ, the prophetic bee-goddesses mentioned below, and the dove-priestesses (Peleiades) at Dodona (R. C. Jebb, *Soph. Trach.*, Cambridge, 1892, p. 202 ff.). The identity of the Peleiades is obscure, but it has recently been suggested with some plausibility that the name was given to a class of magicians who, by intimate association with the birds, had learnt to understand their language, and, as the birds' interpreters, wore a kind of bird-dress when giving response to their questioners (W. R. Halliday, *Greek Divination*, p. 265 ff.). The external association displayed in this mimicry may be compared with the wearing of horns by the Thracian Mænads (*Μυαλλόνες*) in order to identify themselves with the bull-god Dionysus (schol. Lycophr. 1237). These impersonations are not always or even usually to be classed as merely deliberate impostures. The visionary who is conscious of the divine possession yields to the emotional impulses stirred in his responsive nature by the whirling dance, the wild music of the flutes, and the intoxication of the midnight hour. And it would not be difficult to adduce modern parallels for the hallucinations of the Bacchantes, when they saw the earth flowing with milk, wine, and honey, and inhaled the fragrance of Syrian unguents (Plat. *Ion*, 534 A; Eur. *Bacch.* 141 ff.), or for their insensibility to the attack of fire and sword (Eur. *Bacch.* 747; Ov. *Trist.* iv. i. 41 f.).

The condition of the inspired devotee is described as a divine seizure (*κάτοχος, θεόληπτος*); and the original sense of the word 'enthusiasm' (cf. *ἐνθεος, ἐνθεάζειν*) is derived from the indwelling faculty which evokes the display of superhuman power. Corresponding to the entrance into the devotee of an overmastering force was the release of the soul from its corporeal subjection (*ἐκστασις*, our 'ecstasy'; cf. Plat. *Ion*, 534 B). This temporary expropriation is defined as a brief madness (Galen, xix. 462), which is not to be understood as an irresponsible unsteadiness, but rather as the complete occupation of the mental faculties by a sacred energy (Procl. in Plato, *Rep.* 59. 19). A description of the outward effects of inspiration is given by Vergil in connexion with the visit of Æneas to the Cumæan Sibyl:

'Even as she spoke neither her features nor her complexion remained the same, nor was her hair confined within its braid; her bosom heaved, and her wild heart was swollen with frenzy; her stature was larger to the sight, her voice no longer human: so soon was she inspired by the breath of the god as it came ever nearer. . . . At length, no longer submitting herself to Phœbus, the prophetic rages furiously in her cavern, if so be she may succeed in flinging off the mighty god from her bosom. All the more he plies her frenzied mouth, subduing her wild heart, and fashions her to his will by constraint' (*Æn.* vi. 46 ff., 77 ff.).

Even more explicitly Lucan (v. 161 ff.) describes the vapour from the chasm inspiring the Pythia, and the god forcing his way through the whole of her frame, and compelling her nature to yield to his exclusive guidance. Then he passes to an account of her distraction, as she shakes the

sacred garlands from her head, and overturns the holy vessels of the temple in feverish efforts to escape from the wrath of the god.

The notion that the entrance of the divine afflatus swells the physical frame of the seer recurs in *Ov. Fast.* vi. 537 ff., where Ino consults Carmentis, the prophetic mother of Evander; and the reluctance of the seer to yield to the overpowering strength of the god is illustrated by Cassandra's cry:

'Again the fearful pangs of true prophetic vision stir my soul, and whirl me with their dizzy prelude' (*Æsch. Ag.* 1214 f.).

Those who would avail themselves of the prophet's insight must encounter his natural tendency to resist by binding him fast when they have caught him (*A. Lang, Making of Religion*, p. 142)—a proceeding which receives illustration from the story of Proteus (*Hom. Od.* iv. 415 ff.; *Verg. Georg.* iv. 395 ff.). It has been observed that a divine possession produces the appearance of madness; and, while especially characteristic of the diviner (cf. *Eur. Bacch.* 298), the signs of madness are wont to accompany every ecstatic impulse, as when Hector with foaming mouth and flashing eyes rushes upon the Greek ships, and savage Ares entering into him fills every sinew with increased might (*Hom. Il.* xv. 605, xvii. 210 f.). For inspiration may be put in operation by the agency of various deities, more particularly of those whose individuality was less firmly marked or whose worship was infected with Oriental or at least foreign influences. To the latter class, besides the instances already mentioned, may be assigned the inspiration of Hecate and Cybele (*Eur. Hipp.* 142 ff.). The former, who belong to an earlier and indigenous stratum of thought, include Pan (*Poll. i.* 19), the Nymphs (*νυμφόληπτος*), and the Muses (*μουσόληπτος*). The Muses (*q.v.*) are merely a subdivision of the Nymphs (*FHG i.* 36); and the Nymphs themselves, of whom the Sphragitides of Cithæron may be cited as typical (*Paus. ix.* iii. 9; *Plut. Aristid.* 11), were gradually forced to yield the sanctities of their shrines to the superior majesty of the Olympians. Plutarch (*Amat.* 16, p. 758 E) includes various kinds of inspiration (*ἐπιπνοαί*) which overturns the reason under the generic term 'enthusiasm.' Besides the inspiration of the diviner by Apollo, he names the Bacchic frenzy of Dionysus, with which he couples the orgiastic ecstasies of Cybele and Pan, the poets' frenzy inspired by the Muses, the warlike frenzy of Ares, and what he calls the fiercest and most fiery of all, the frenzy of love. It must be remembered that Plutarch was writing as a philosopher and man of letters; for in popular estimation the inspiration of the seer was essentially distinct from the rest. Although Apollo had no monopoly of divination, the presiding functionaries of the leading oracles, such as the Pythia at Delphi and the Sibyl of Erythræ, passed increasingly into his service. Among the exceptions may be mentioned Erato, prophetess of Pan at Lycosura in Arcadia (*Paus. viii.* xxxvii. 11), and the ministers who prophesied at the temple of Artemis Sarpедonia in Cilicia (*Strabo*, p. 676).

The entrance into the ecstatic condition was not effected without the co-operation of the seer himself, and various methods were adopted to bring him into communion with the god. The drinking of wine, supposed to contain the vital essence of the god, was practised by the priests at the shrine of Dionysus among the Thracian Ligyræi (*Macrob. i.* xviii. 1). The oracle of the Clarian Apollo at Colophon was served by a priest drawn from a particular class, who, although utterly ignorant of letters, was able, after drinking the water of a secret spring, to give utterance to oracles composed in formal verse (*Tac. Ann.* ii. 54). A similar potency was ascribed to the waters of the Delphian

Cassotis (*Paus. x.* xxiv. 7) and of the sacred well at Hysia in Boeotia (*ib.* ix. ii. 1). The mystical power of the water might be manifested otherwise, as at the oracle of Apollo Thyreus near Cyaneæ in Lycia, where the spring showed to any one looking into it whatever he wished to see (*ib.* vii. xxi. 13). The priestess of Apollo Diradiotes at Argos became inspired by drinking the blood of a lamb which had been sacrificed (*ib.* ii. xxiv. 1), and Pliny records that, as a preliminary to the exercise of her prophetic power, the priestess of Earth at Ægira in Achaia was accustomed to drink the blood of a bull (*HN* xxviii. 147). The crudity of the conception that the eating of the flesh of a prophetic animal imparts the prophetic faculty by way of corporeal assimilation is illustrated by the remarkable statement of Porphyry (*de Abst.* ii. 48) that those who wish to become possessed of a prophetic spirit swallow the most effective parts of similarly endowed animals, such as the hearts of crows, moles, and hawks. The temple of Apollo at Delphi occupied the site of an old Earth-oracle, which was placed over a deep chasm with a narrow outlet. Here the Pythia, seated on a tripod above the outlet, received the mephitic vapours which rose from the hollow, and was thereby inspired to the utterance of the answers appropriate to the needs of the inquirers (*Strabo*, p. 419; *Cic. de Divin.* i. 79; *Pliny, HN* ii. 206). Herodotus relates (*vii.* 111) that at a Thracian oracle of Dionysus belonging to the Satræ, and situated among the loftiest peaks, a priestess of the religious order of the Bessi pronounced the oracles in the same manner as the Pythia, *i.e.* in a condition of ecstatic rapture—but how induced he does not explain. However the result was attained, at Delphi the supremacy of Apollo was acknowledged by his priestess, when, before entering upon her duties, she chewed laurel-leaves (*Lucian, Bis Accus.* 1) or was fumigated with their smoke (*Plut. Pyth. Or.* 6, p. 397 A). Similarly, the Bacchic frenzy was believed to be imparted by the ivy which the Bacchanals ate (*Plut. Quest. Rom.* 112, p. 291 A). The Thriæ of Mt. Parnassus were conceived either as actually having the form of bees or as winged females with a bee's body from the waist; in either case they were fabled as willing to utter true prophecy when they had fed on fresh honey and were inspired by its intoxicating madness (*Hom. hymn Herm.* 561 f.; with Allen and Sikes's [London, 1904] Appendix, p. 313). Sometimes inspiration was conferred as the result of a sexual union: Numa exercised prophetic power in his capacity as the husband of Egeria (*Plut. Num.* 8); and Apollo was said to have espoused not only Cassandra, but also the Sibyl Herophile (*Paus. x.* xii. 2) and the priestess at Patara in Lycia (*Herod. i.* 182).

Whether Theoclymenus in the *Odyssey* (xx. 350) is described as under the influence of inspiration has been disputed; but Calchas and Helenus speak the words that Apollo puts into their mouth (*Il.* i. 385, vii. 53), and the story of Cassandra is a clear proof that the phenomenon was familiar to the writers of the Cyclic epics. From an early date the constitution of Lycurgus was believed to have been inspired from heaven, whether Lycurgus himself was the direct medium for conveying the divine message (*Plato, Legg.* 691 E), or was formally commissioned by the Pythian oracle (*Herod.* i. 65). The sayings of inspired prophets began to be collected perhaps first during the progress of the religious movement of the 6th cent., to which reference has already been made. The prophet Amphilytus encouraged Pisistratus with an oracle immediately before his victory at Pallene (*Herod.* i. 62), and Onomacritus, the founder of the Orphic community at Athens, who lived at the court of

the tyrant, was charged with the preparation of a collection of the oracles attributed to Musæus, and was subsequently banished for interpolating it with his own compositions (*ib.* vii. 6). Besides the oracles of Musæus the most notorious were those assigned to Bakis—originally the generic term for a seer, whence a fictitious personality was developed. Collections of oracles were not merely preserved among the state records, but circulated freely among the public without any official endorsement. In fact, the calling of an oracle-monger tended to grow into a profession, which traded on the credulity and superstition of the masses; and the extent of the evil may be measured by the violence with which Diopieithes and others of the same class are denounced by Aristophanes (*Eg.* 1085, etc.). Another impostor of the same period was Eurycles the ventriloquist, who claimed to be inspired by an indwelling demon (see DEMONS AND SPIRITS [Greek]). In later ages the belief in demons, fostered even among cultivated circles by the adherence to it of the Stoic philosophy, kept alive also the notion that the divine power could inform and stimulate the human seer. When pressed to account for the failure of the Pythian oracle to maintain its former reputation, Chrysippus (ii. 1215 [Arn.]) was content to explain that the peculiar virtue of the locality, which imparted her inspiration to the priestess by means of the exhalations rising from the ground, had decayed through lapse of time. The Stoic theories of the universal immanence of the divine *πνεῦμα*, and of the harmonious co-ordination of every part of the world (ii. 546 [Arn.]), seemed to give a scientific sanction to the popular belief in the inspiration of the professional diviners (ii. 1211 [Arn.]).

A position of special eminence was accorded to the Sibyl, whose earliest mention is to be found in Heraclitus:

'The Sibyl with raving voice speaks words that have no part in laughter or in rich apparel or in unguents. Yet she prevails; for it is the god who drives her' (frag. 92, in H. Diels, *Fragmente der Vorsokratiker*, i. 3 94).

The name is believed to be of Semitic origin, and to bear the meaning 'seized by the god' (Gruppe, *Gr. Myth.* p. 927). It will be observed that in Heraclitus, as in Aristophanes (*Pax*, 1095) and Plato (*Phædr.* 244 B), there is no mention of more than one Sibyl; and there is very little doubt that her original home—*i.e.* from the Greek point of view—was at Erythræ on the west coast of Asia Minor (Paus. x. xii. 7). In the later authorities several Sibyls are mentioned, so that the name, once introduced, seems to have spread over the Greek world (cf. Livy, i. 7). One of the most famous was the Sibyl of Cumæ introduced by Vergil into the narrative of *Æn.* vi., and it was she who, according to the legend, brought the Sibylline books to King Tarquin.

The idea of possession may be traced also in the ritual of the dream-oracle. The dream itself was a divine message sent to the sleeper in concrete form (Hom. *Od.* iv. 796 ff.), and clear evidence is wanting that it was commonly regarded as the working of a demonic being within the body of the sleeper himself. On the contrary, it is the normal belief of savages that the soul of the sleeper passes out of his body during sleep (*GB*³, pt. ii., *Taboo and the Perils of the Soul*, London, 1911, p. 36 ff.); and there are some indications that a similar view was adopted by the Greeks (Cic. *de Divin.* i. 30, etc.). Nevertheless, the custom whereby inquirers were wont to spread beneath them the skin of the sacrificial victim before seeking sleep in the temple—a custom which is well attested for the shrine of Amphiaræus in Attica, and for other places (Frazer, on Paus. i. xxxiv. 5)—shows that the revelation of the dream required for its transmis-

sion the establishment of a special relation between the worshipper and the god. It has also been suggested that the sleeping on the bare earth attested for ordinary persons (Lucian, *Necyom.* 7), as well as for the Selli of Dodona (Hom. *Il.* xvi. 235), was intended to assist the entrance into the body of the sleeper of the chthonic influences coming from below. Sometimes the inquirer is not brought directly into contact with the sacred influence, but receives his message from the lips of a priestly intermediary, whose functions are similar to those of the medium in modern spiritualism. At the temple of Dionysus at Amphiclea in Phocis the god was said to announce cures for sickness in dreams, not directly, but using the priest as his inspired mouth-piece (Paus. x. xxxiii. 11). Further, inscriptional evidence seems to prove the existence of a class of inspired persons (*κράτοι*), who superintended the incubation-rites at various dream-oracles in Egypt and Syria (Gruppe, p. 928).

The Greek poets always spoke of themselves and of other singers as inspired (*θεῶς ἀοιδός* [cf. Hom. *Od.* iv. 17; Pind. frag. 150; Bacchyl. viii. 3]). This was not so much a metaphor as a survival, since the origin of the conception is to be referred to a primitive era in which the functions of poet and seer were not yet differentiated. The early medicine-man, like Apollo himself, was at once prophet, poet, doctor, diviner, and wizard; but the gradual emergence of the various arts and sciences continually stripped him of his attributes (Halliday, pp. 57, 75). Hence, even in the earliest of our literary records, poetry and divination appear as distinct arts; and in the 5th cent. the sense of their original connexion had so entirely disappeared that it was almost a paradox for Democritus to declare that no good poetry was possible without a mental ardour and inspiration akin to madness (frags. 17, 18 [Diels]). Similarly, the Platonic Socrates asserted that poets compose their songs not by virtue of any wisdom or skill, but owing to a kind of natural inspiration, like that of seers and prophets (*Apol.* 22 C, *Ion*, 533 E). Inspiration had come to be a general notion covering many different kinds of activity which seemed to spring from some transcendent or pre-eminent ability. It was in accordance with this habit of thought that Pindar, emphasizing his preference for inborn over acquired characteristics, spoke of all wisdom as inspired (*Ol.* ix. 28, xi. 10). Since it was the characteristic of seers, as being merely the mouth-pieces of the god, to utter what they did not understand, Plato concluded that statesmen, who, though often successful in their speeches and policies, were equally ignorant of the real meaning of their words, must be guided by divine inspiration (*Meno*, 99 C, D). Again, the wisdom of the philosopher may be described as enthusiasm in the fullest sense; for, though derided by the masses as dotage, it is derived from constant association with the divine (*Phædr.* 249 D).

Roman religion has been so much overlaid with Greek innovations, particularly in so far as our evidence is derived from literary sources, that it is generally difficult to discover old Italian beliefs which have not been contaminated with foreign associations. The early date of this Greek influence may be gauged by the legend which refers the acquisition of the Sibylline books to the end of the regal period, and by the authentic statement that they were first consulted in the year 496 B.C. (Dion. Hal. vi. 17). It is certain, however, that prophetic inspiration must have been as familiar to the old Roman religion as it has been found to be everywhere else; and it is unnecessary in this place to do more than refer to some scanty traces of native divination which occasionally meet us in Latin literature. Besides the Sibylline books, we

read of collections of oracles attributed to Marcius and Publicius (Cic. *de Divin.* i. 115, ii. 113). Of the latter nothing further is known, but the *carmina Marciana*, if Livy's extract (xxv. 12) may be trusted, contained allusions to Greek myths, and must have been of comparatively late origin. To take another illustration, there is no doubt that Faunus was a native Italian wood-spirit, although he was constantly assimilated to Pan by Grecizing writers. Moreover, Fauni (in the plural) are well-evidenced as the semi-divine occupants of oracular shrines. Ennius, in a well-known line, refers to the verses in which Fauns or prophets chanted of old (213 [ed. J. Vahlen, Leipzig, 1854]). Vergil described the visit of Latinus to the dream-oracle of Faunus at Albunea, where a sacred spring in the midst of a dark grove emitted sulphurous fumes (*Æn.* vii. 81 ff.). This character of Faunus is confirmed by the tradition that his wife was named Fatua, and that she foretold the future in the frenzy of divine inspiration (Justin, xliii. 1. 8). He himself also bore the title Fatuus, which, though connected by modern philologists (K. Brugmann, *Comparative Grammar*, Eng. tr., London, 1888, i. 151; W. M. Lindsay, *Latin Language*, Oxford, 1894, p. 324) with *fa-rī*, 'to speak,' was understood by the ancients as descriptive of the inspired madness of the seer (Plin. *HN* xxvii. 107). In his mantic capacity Faunus was associated with Picus, the woodpecker-king or prophetic bird-spirit (Plut. *Num.* 15; see also Harrison, *Themis*, p. 106 ff.).

LITERATURE.—E. B. Tylor, *PC*, London, 1908, pp. 124-143; A. Lang, *Myth, Ritual, and Religion*, do. 1899, i. 108 ff.; *The Making of Religion*, do. 1898; J. G. Frazer, *GB*, do. 1911-15; O. Gruppe, *Griechische Mythologie und Religionsgeschichte*, Munich, 1906, p. 924 ff.; E. Rohde, *Psyche*, Tübingen, 1910, ii. 19 ff.; W. R. Halliday, *Greek Divination*, London, 1913, pp. 64-99.

A. C. PEARSON.

POSSESSION (Indian).—The question of the possession of spirits in the case of the medium, who in a state of hysteria mutters incoherent words which are interpreted as oracles, and of persons in an abnormal condition, as at puberty, pregnancy, and the like, has been discussed in art. **DEMONS AND SPIRITS (Indian)**, vol. iv. p. 604 ff. In the present article some points hitherto unnoticed are considered.

1. Possession at domestic rites.—Cases of possession often occur at domestic rites.

(a) *Death*.—The practice of the Paniyans of Madras is typical:

A man enters with his legs girt with bells, the music of which is supposed to scare the malevolent spirits which are present at the time of a death. He advances with short steps, rolling his eyes and staggering to and fro, sawing the air with two short sticks which he holds in his hands, and thus works himself into a frenzied state of inspiration, while the mourners wall and ask why the dead has been taken from them. Presently a convulsive shiver attacks the medium, who staggers more violently, and at last falls on the ground. He tries to support himself by holding one of the poles of the funeral shed, while he gasps out disjointed sentences which are taken to be the voice of the god.

The object here is to ascertain the fate of the spirit of the dead man, and to discover the cause of his death, which may be due to some misconduct on the part of his relatives—witchcraft, sorcery, or the like. In another form of the rite in the same tribe the intention seems to be to secure communion with the deity who is supposed to be responsible for the death.

Here three masked dancers—one representing the tribal goddess, the other two her ministers—waving sticks and shivering, go before each elder of the tribe and apparently receive his blessing, the elder placing his hands on their faces as a form of salutation, and then rubbing them on his own face. The man representing the goddess then seats himself on a stool and gives an address to the assemblage, admonishing them as to their future conduct (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, vi. 67, 69).

The desire to effect communion with the spirit of a person lately dead is illustrated by the practice of the Tiyans of Madras.

A girl becomes possessed by the spirit, and talks and acts, it is said, just like the person who has lately died, calling the children, relatives, and friends by name, and giving commands for the future conduct of the surviving members of the family. 'After this, the spirit is severed from earthly trammels, and attains heavenly bliss' (*ib.* vii. 91).

(b) *Marriage*.—The Gollas of Madras at their marriages worship Gangā, the goddess of the river Ganges.

They draw coloured figures on the floor of the house and during the preparation of these some people, more particularly boys and those of feeble mind, are excluded from the yard, as some ill luck would befall them if they caught sight of the figures before the rite of removing the evil eye from them had been performed. Food and incense are waved before the figure of Gangā, and a cock is sacrificed, its neck being wrung. The three men who perform the rite prostrate themselves before the goddess and salute her. One of them gradually begins to perspire, and the spectators exclaim that he is about to become possessed by the spirit of an ancestor. Taking up a sword, he tries to cut himself with it, but he is careful to use only the blunt edge. The sword is wrested from him and placed on the figure of the goddess. He then walks round the figure, shaking and twisting his body. Then the bridegroom enters, and he also becomes possessed. Incense and lights are carried round the figure, and the man representing the ancestor announces that the marriage will be fortunate; in other words, the family ancestor sanctions the union of the couple (*ib.* ii. 295).

2. Possession among Muhammadans.—The cult of spirits is a later addition to the orthodox form of Islām, but it is inevitable in India where so many of the converts are drawn from animistic tribes and castes. Among people of this class the spirit-scaring power of the tombs of certain saints and martyrs is prominent.

The shrine of Mirān Sayyid 'Alī, at Unjā in N. Gujarāt, is famous for its power of relieving persons attacked by spirits. When such a patient arrives, the warden (*mujawir*) provides him with accommodation in one of the open rooms or outhouses of the shrine. In the evening he takes his place beside the railing of the saint's grave and is given a cup of water from the shrine well or cistern. If he is really spirit-possessed, the spirit manifests itself by causing him to shake his body, or, in the case of a woman, to fling her hair about and roll her eyes. If after one or two draughts of water these effects are not produced, the ailment is supposed to be constitutional, and the remedy prescribed is the external or internal use of the leaves of the tree which grows near the saint's grave. This is said to be of a variety elsewhere unknown, but to have grown from a piece of wood which the saint used to clean his teeth—an idea which savours of Buddhism (*PR* ii. 89 f.). In more serious cases the patient seems to be dragged by some unseen force, writhing and raving as if he were undergoing chastisement. 'At last when he gives a faithful promise of future good conduct, and when the fit is exhausted, he removes himself from the place, often with a shoe between his teeth as a sign of abject admission of defeat, and runs from the shrine enclosure, and drops as if dead. He is now in his proper senses, the wild and fagged look in his face during the days of his possession has disappeared, the dazed expression with the snake-like fixedness of the eyeballs is gone. He regains his usual spirits, and after the performance of his vow is sent back to his home' (*BG* ix. pt. ii [1899] 128 f.).

3. *Shaikh Saddū*.—Among the spirits which attack women in India the chief is Shaikh Saddū. He was a learned man, but a hypocrite, who found a copper lamp engraved with mystical characters. When he lighted it, as in the case of Aladdin (*R. F. Burton, Book of the Thousand Nights and a Night*, London, 1894, x. 33 ff.), a *jinn* appeared to serve him. But, when he employed the *jinn* to gain for him the daughter of a king and to appropriate a mosque which he coveted, the spirits tore him to pieces.

'It is very common to hear the vulgar people say if any of their friends is affected with melancholy, hypochondria, etc., "Ay, it is the spirit of Shaikh Saddū has possessed him." In such cases the spirit is to be dislodged from the afflicted person by sweetmeats, to be distributed among the poor; to which is added, if possible, the sacrifice of a black goat' (Mrs. Meer Hasan Ali, *Observations on the Mussulmans of India*, London, 1832, ii. 323 ff.).

Some women, regarded as impious by the orthodox, dress themselves in men's clothes, and have a séance in which Shaikh Saddū 'comes on the head' of one of them.

She becomes possessed, waves her head about, and women who desire any special boon, such as the birth of a child, implore her aid. The medium gives her a packet of betel-leaves, and some which she has herself chewed, or sweets

'which she with her profound faith, actually esta. However, God is Lord of all, and it depends on His will and pleasure whether the woman shall be with child or not. But if perchance she should bring forth a child, the belief of these unfortunate creatures in these things is wonderfully confirmed, and they turn real infidels. Should she not have a child, she concludes Miyān [the saint] is angry with her, and repeats the ceremony with redoubled credulity' (Jaffur Shureef, *Qanoone-Islam; or the Customs of the Mussulmans of India*², Madras, 1863, p. 184 f.).

LITERATURE.—The literature has been quoted in the article; see also *ERE* iv. 608.

W. CROOKE.

POSSESSION (Japanese).—*Kangakari*, which is a contraction of *kami*, 'god,' and *kakari*, a word implying the idea of 'possession,' means literally 'god-attachment,' and expresses the idea of the passive attitude of a man under a superior influence which takes possession of him. The Japanese also use two words of Chinese origin to denote inspiration, *shintaku* and *takusen*, both of which imply the idea of divine revelation—of a communication made by divinity by means of an inspired man as intermediary. In pure Japanese the latter idea is also rendered by the expression *kami no shirase*, 'information of the god.'

1. In ancient literature.—This supernatural phenomenon is described in the most ancient Shintō documents. One of the most important mythological tales is that of a famous goddess, Ame no Uzume (the Dread Female of Heaven), who is a sort of prophetess. It is she who, by a sacred dance before the rock cavern in which the sun-goddess has hidden, finally leads her to reappear and lighten the world again. In this connexion an expression is employed in the *Kojiki* (*kamugakari-shite*, 'accomplishing divine possession') which is not very clear, and may be taken in the sense of feigned possession (this is the sense adopted by B. H. Chamberlain, *Kojiki*², Tokyo, 1906, p. 69, n. 32); but the corresponding passage in the *Nihongi* rather seems to indicate that it is real possession (see *Nihongi*, Shūkai ed., i. 40; and cf. tr. by W. G. Aston, London, 1896, i. 44). Moreover, Uzume is regarded as the mythical ancestor of the *sarume* (monkey-women), who performed religious dances (*kagura*) at court; and the divinely-inspired utterance which, according to the *Nihongi*, she pronounced in front of the celestial cavern (and which, according to another version, consisted only of the words *Hi, fu, mi, yo, itsu, mi, nana, ya, kokono, to*—simply the numerals from one to ten) is the prototype of the revelations of the *miko* ('august child'), young priestesses attached to the principal Shintō temples, who dance the *kagura* to this day and sometimes acted as mediums, particularly at Ise.

Another and more characteristic case of possession is furnished by the prelude to the story of the expedition of the empress Jingō, the first legendary conqueror of Korea. The scene, which is one of ancient grandeur, is thus described in the *Kojiki*:

'The Empress, Her Augustness Princess Okinaga-tarashi [the ancient name of the empress], was at that time divinely possessed. So when the Heavenly Sovereign [Emperor Chūai], dwelling at the palace of Kashiki in Tsukushi [Kyūshū], was about to smite the Land of Kumaso, the Heavenly Sovereign played on his august lute [the *Azuma-koto*, an instrument 5 or 6 ft. long, with six strings], and the Prime Minister, the Noble Take-uchi, being in the pure court (*sa-niha*), requested the divine orders. Hereupon the Empress, divinely possessed, charged him with this instruction and counsel: "There is a land to the Westward, and in that land is abundance of various treasures dazzling to the eye, from gold and silver downwards. I will now bestow this land upon thee." Then the Heavenly Sovereign replied, saying: "If one ascend to a high place and look Westward, no country is to be seen. There is only the great sea"; and saying, "They are lying Deities," he pushed away his august lute, did not play on it, and sat silent. Then the Deities were very angry, and said: "Altogether as for this empire, it is not a land over which thou oughtest to rule. Do thou go to the one road!" (i.e. Hades). Hereupon the Prime Minister, the noble Take-uchi, said: "[I am filled with] awe, my Heavenly Sovereign! Continue playing thy great august lute." Then he slowly drew his august lute to him, and languidly

played on it. So almost immediately the sound of the august lute became inaudible. On their forthwith lifting a light and looking, [the Heavenly Sovereign] was dead' (*Kojiki*, 284 f.; cf. *Nihongi*, i. 221 f.).

After the tragic death of the emperor, which was the punishment for his impiety, the empress and her prime minister, alarmed and dismayed, perform the ceremonies of the Great Purification of the country; then Take-uchi tries to obtain a new inspiration from the gods.

'The Noble Take-uchi again stood in the pure court and requested the Deities' commands. Thereupon the manner of their instruction and counsel was exactly the same as on the former day: "Altogether this land is a land to be ruled over by the august child in thine Augustness's august womb." [The deities now speak to, as well as through, the empress.] Then the Noble Take-uchi said: "[I am filled with] awe, my Great Deities! The august child in this Deity's womb, what [sort of] child may it be?" [The Deities] replied, saying: "It is a male child." Then [the Noble Take-uchi] requested more particularly, [saying]: "I wish to know the august names of the Great Deities whose words have now instructed us." Forthwith [the Deities] replied, saying: "It is the august doing of the Great-August-Heaven-Shining-Deity; likewise it is the three Great Deities Bottom-Possessing-Male, Middle-Possessing-Male and Surface-Possessing-Male [three of the deities born at the time of the purification of Izanagi, on his return from Hades], etc. . . ." (*Kojiki*, 286 f.).

Whereupon these divinities reveal the offerings and mysterious rites by means of which the crossing of the sea and the conquest of Korea will be successfully accomplished.

It is to be noted that, in this text, the empress is accorded 'divinity' (*kami*). This title may have been given to her, as sometimes happened, simply on account of her supreme rank (cf. *Kojiki*, 333, 364 f., etc.); but it is more probable that, as has been supposed by the native commentator Motoori, the prime minister made an exceptional use of the title here, because at the moment she was 'divinely possessed.' However this may be, both this narrative and that of the death of the emperor have a corresponding passage in the *Nihongi* (i. 225 f.) which shows that the interrogation of the gods in a sacred place, with a lute accompaniment, in order to know their names and desires, was a form of divination regularly employed in the most ancient Shintō; and we see also that this practice admitted of the presence of two persons, the one, in a state of possession, serving as a medium, and the other entrusted with the asking of the necessary questions, and also, no doubt, with the explanation of the obscure answers, as the priests of Delphi interpreted the unintelligible words of the pythoness.

2. Development and modification by Buddhism.

—After these fundamental narratives of the sacred books, mention might be made of many other cases of inspiration in the course of Japanese history. Without relating them here in detail, we may draw from them two observations of a general kind. (1) Any persons whatever may be possessed as subjects of divination. They may be men (e.g., *Nihongi*, i. 225, 391 f., ii. 317 f.), particularly inferior priests (i. 76 f., 318), or women (i. 152, 221), especially priestesses (i. 176), or even children (i. 163). (2) We find that the objects of inspiration are usually the oracles of a god who demands a cult either for himself (e.g., *Nihongi*, i. 154 f., 163, 221, ii. 76 f.) or for some other god (i. 391 f.), or who complains that his already existing cult is neglected (i. 152, ii. 77, 318), asks for the erection of a new temple (i. 176, ii. 77), or specifies the particular offerings and observances agreeable to him (i. 153, 222, 226, 391 f., ii. 77, 318). All this represents something rather vulgar. It is, in a word, a secondary divinatory practice, which the court and the upper Shintō clergy, faithful to the official method of the 'Greater Divination' (see *DIVINATION* [Japanese], vol. iv. p. 802), regard with a certain mistrust. E.g., in the year 812 a decree announced penalties against peasants who, without reason, predicted good or bad fortune.

It is true that this document ordered the local authorities to report to the central government all authentic predictions. But later, when, in 1348, a bonze of Ise, after a thousand days of prayers, found floating on the sea a glittering sword, which a young boy, divinely inspired, declared to be one of the three imperial insignia—the sacred sword lost in 1184 at the great naval battle of Dan-no-ura—the court refused to recognize it as such. This shows that, if possession plays an important part in the most ancient Shintō, it tends afterwards to become rather a popular proceeding, more and more neglected by the official religion.

On the other hand, however, Buddhism lays hold of it, and often avails itself of it in its politics and its 'pious expedients' (*hōben*), i.e. cleverly appropriating Shintō by representing its gods as incarnations of its own saints. Thus, in the 8th cent., the priest Gyōgi, having prayed seven days and seven nights under a tree near the great temple of Ise, receives an oracle the result of which is that the sun-goddess must be identified with Vairocana, a Buddhist personification of spiritual illumination and purity. At the same time this foreign influence brings to Japanese possession moral characteristics which pure Shintō did not know. Henceforth the gods teach kindness, charity towards the poor, righteousness, purity of heart—all Buddhist and Confucian virtues. Even Hachiman, the terrible god of war, enjoins on his followers pity for mendicants and lepers, for ants and crickets. A glance through the odd collection of oracles of the *Wa Rongo* ('Japanese Analects,' 1669), of which Aston gives an analysis (*Shinto*, London, 1905, pp. 367-372), will make one realize this transformation. It is a mixture of foreign ideas, attributed to the gods of various Shintōist temples, which contradict not only each other but all that we know of these Japanese gods. At the same time, however, there are in many cases conceptions of a much higher moral level than that of the old indigenous religions.

3. Present-day practice.—At the present day possession is represented chiefly by popular practices of which the principal element is hypnotism. It is certain that this phenomenon was the basis of primitive possession, although the ancient documents do not describe it minutely. Nervous phenomena in general played a large part in Shintō, and gave birth especially to some curious beliefs and legends founded on dissociation of personality (see M. Revon, *Anthologie de la littérature japonaise*, Paris, 1910, pp. 58, 134, etc.). Hysteria was also well known to the early Japanese, who treated it by massage (see W. N. Whitney, 'Notes on the History of Medical Progress in Japan,' in *TASJ* xii. pt. iv. [Tōkyō, 1885] 351). This state of things being understood, it is not astonishing to find that in our day the hypnotic crisis constitutes the essential point of the spiritual séances so well described by Percival Lowell ('Esoteric Shinto,' in *TASJ* xxi. [1893] 106-135, 152-197, 241-270, xii. pt. i. [1894] 1-26, and *Occult Japan*, Boston, 1895).

In a purified place a small group of believers assemble, of whom the principal personages are the *naka-za* ('middle-seat'), i.e. the medium, and the *mae-za* ('front-seat'), who directs the ceremony and interrogates the medium himself. It is easy to recognize in these two modern rôles those which we have already found, in primitive times, in the persons of the divinely-possessed Empress Jingō and her minister Take-uchi. After various preliminary ceremonies (in which Buddhist influence is sufficiently marked, by the employment, as accompaniment to the songs, of the *shaku-jō*, a staff to the end of which metal rings are attached, as well as of incense, and by other foreign customs), the *naka-za* sits down, closes his eyes and receives from the *mae-za* the *gohēi*, i.e. a wand adorned with strips of white paper, which is the sacred emblem of Shintō. Then there is singing, and the descent of the god (*kami-oroshi*) is awaited. At first the *naka-za* remains motionless, but suddenly the *gohēi* quivers in his hands, and gradually trembles more and more until the man enters into a state of convulsion. In some cases his eyes remain half-closed; in others they open,

and, when the crisis subsides into a permanent trembling, remain fixed, with the look peculiar to hypnosis. The man has then become a god, and the *mae-za*, bowing respectfully, first asks his name, and then puts some questions to him, to which the god, on his part, replies. When this dialogue is finished, the *naka-za*, after a last prayer, rouses him by striking him on the back. After that one of the audience offers him a cup of water, and, when he manages to drink it, others rub his arms and his body until he recovers from his catalepsy.

It may be added that, even in some forms of inspiration in which hypnotism does not play the principal part, as in divination by the *eki*, the soothsayer allows himself to be put into a certain nervous state, marked by a violent contraction of the face, foaming of the lips, and trembling or the whole body. The present writer has seen a man in this state of traditional delirium in the exercise of his prophetic office, who was ordinarily quite gentle—the famous soothsayer Takashima (cf. *DIVINATION* [Japanese], vol. iv. p. 804^b).

4. Possession by human spirits.—There is another kind of possession, in which it is not gods that are invoked, but human spirits, either of living men, or, more frequently, of the dead, and especially of deceased relatives. These evocations are practised, also by means of hypnosis, by sorceresses called *ichi-ko*, or *agata-miko*, or sometimes *azusa-miko*, because in their conjurations they make use of the *azusa-yumi*, a bow of *azusa*-wood. Some are parish mediums, others itinerant mediums of a more humble position. This necromancy is, however, a modern custom.

5. Animal-possession.—The last form of possession to be noticed is possession by the fox, the badger, and other animals. The Japanese employ for animal-possession the same expression as for divine possession: 'to be possessed by the fox' is *kitsune ga kakari*. But the fox and the badger do not appear in the primitive documents unless just as any other animals, and Aston is wrong (*Nihongi*, i. 59, n. 10) in including their enchantments among the calamities (*wazahahi*) which required ritual purification. He has confused two aspects of the Japanese fox, which must be all the more carefully distinguished because they are in direct opposition to each other. If the fox holds a place in Shintō, it is only on account of its gradual identification with the god Inari, 'the Man of the Rice,' who is himself connected with Uka no Mi-tama, 'the August Spirit of Food,' a hypostasis of the goddess of food, Ukemochi. It is only in Buddhism that he is regarded as an agent of possession; and he appears there not as a beneficent god, but, on the contrary, as an evil demon.¹ The traditional badger (*tanuki*, which in fact is not a real badger, but a small black fox, the *canis procynoides*) also appears only in popular superstitions, just as does the *mujina*, a kind of badger mentioned in some tales of the *Nihongi* (i. 184, ii. 155).

A famous story in Japan is that of the badger in a monastery which assumed the shape of a tea-kettle and, by its fantastic gambols, caused consternation among all the priests. When they sold it to a coppersmith, the animal took its own shape again, and made the fortune of its new master, who exhibited it as an animal both curious and sacred (A. B. Mitford, *Tales of Old Japan*, London, 1888, p. 175 f.).

That these popular beliefs persist even to-day is shown by a well-known anecdote.

In 1889 a phantom train suddenly appeared to the engine-driver of a real train on the line from Tōkyō to Yokohama. After a desperate pursuit the phantom train was overtaken, and a fox was found crushed to pieces under the wheels of the real locomotive.

¹ For the legendary point of view see W. de Visser, 'The Fox and Badger in the Japanese Folklore,' in *TASJ* xxxvi. pt. iii. [1908]; Lafcadio Hearn, *Glimpses of Unfamiliar Japan*, Boston, 1896, i. 310 f.; W. Anderson, *Catal. of Jap. and Chin. Paintings in the British Museum*, London, 1886, pp. 391, 424; J. M. James, in *TASJ* vii. pt. iv. [1890] 276 f., etc.; cf. also J. L. Nevius, *Demon Possession and Allied Themes*, Chicago, 1894, pp. 46, 51, 71, 104, 202; for the medical point of view the observations of E. Baelz, of the University of Tōkyō, a résumé of which will be found in B. H. Chamberlain, *Things Japanese*, Tōkyō, 1898, s.v. 'Demoniacal Possession.'

It must also be mentioned that, besides persons possessed by the fox, there are others who possess the fox (*kitsune-mochi*) and can, like the fox himself, employ charms against their enemies. In the old province of Izumo whole families exist who are supposed to have invisible foxes protecting them; but these families are regarded with a general feeling of repulsion, and it is only other families also possessing the fox who will agree to become united to them by marriage. Lastly, it may be recalled in this connexion that the soul of the dead fox is sometimes employed in a kind of secondary divination practised by the *kitsune-tsukahi* (see DIVINATION [Japanese], vol. iv. p. 803^b).

LITERATURE.—The literature is cited throughout the article.

MICHEL REVON.

POSSESSION (Semitic and Christian).—Among the Semitic peoples, as among the other peoples of the world, there survived from the animistic stage of culture the belief that a spirit can take possession of a person either for good or for evil. This will be made more clear by passing in review the facts in detail.

1. Babylonia and Assyria.—Among the ancient Babylonians the idea of possession in its completest form survived only in the case of evil spirits, though some attenuated traces of the conception that the spirit of a god might take possession of a man are also found. In every period of Babylonian history it was believed that sickness was caused by a demon which entered into persons and took possession of them. This conception is reflected in the oldest Babylonian religious text known, an incantation inscribed on a foundation cylinder of the time of the dynasty of Akkad, about 2800–2600 B.C., now in the University Museum in Philadelphia. The cylinder is fragmentary, the beginning being broken away. But in one of the early columns the demon is addressed thus:

‘The light of the city,—in the light of the city are they.
The darkness of the city,—in the darkness of the city are they.
The people of the city,—among the people of the city are they.’

In a later column we read:

‘Enlil declares to him:
“Gone is the sickness from the face of the land.”
Asa protector he removed it,—
Enlil’s are they,—
As a protector he removed it.’

It is clear from this text that sickness was a demon, but a demon that Enlil could expel. The beneficent god was more powerful than the demon.

The Babylonians distinguished one demon from another just as a modern physician distinguishes one germ from another. Ashakku was the demon of a wasting disease, perhaps a form of tuberculosis. Akkhazu, the ‘seizer,’ was the demon of liver troubles. Labartu, who was pictured as a monster with swine sucking at her breasts, attacked women in childbirth and their infant children.¹ Toothache was supposed to be caused by a demon that was identified with a worm. This is made clear by the following text:

‘After Anu [had created the heavens]
The heavens created the earth,
The earth created the rivers,
The rivers created the canals,
The canals created the marsh,
The marsh created the worm.
Then came the worm weeping before Shamsab;
Before Ea came her tears:
“What wilt thou give me for my food?
What wilt thou give me as mine to destroy?”
“I will give thee the ripe figs (?) and soft pomegranates (?).”
“Me! What are these ripe figs (?) to me? And soft pomegranates (?)?
Lift me up, between the teeth and the jaw-bone set me,

That I may destroy the blood of the teeth,
And ruin their strength,
Grasp the prong and seize the root.”’¹

As disease was possession by a demon, so cure consisted of expelling the demon from the body. This is most clearly shown in an incantation text in which the demon is addressed thus:²

‘Out! Out! Far away! Far away!
Shame! Shame! Perish! Perish!
Turn thy body! Out! Far away!
From my body go out!
From my body far away!
From my body, for shame!
From my body, perish!
From my body turn!
From my body thy body!
Into my body do not return!
To my body do not approach!
In my body do not dwell!
On my body do not press!
By Shamash, the mighty, be exorcized!
By Ea, lord of all, be exorcized!
By Marduk, chief exorcizer of the gods, be exorcized!
By the fire-god, who burns you, be exorcized!
From my body be ye separated!’

It was a common belief that demons of sickness might enter the body through the agency of other people. Such bewitchment or the casting of a spell over the body of another was an easy way of avenging real or supposed injuries. So frequent were attempts to bewitch personal enemies, and so potent were the spells or charms believed to be, that the second section of the Code of Hammurabi is directed against the practice. It is taken up immediately after cases in which men are accused of a capital crime, and one who was accused of practising such arts was compelled by the law to purge himself by the ordeal of plunging into the sacred river. If he could swim out, he was innocent.

This belief in bewitchment is recognized in a number of the incantations, as in the following:³

‘An evil curse, like a demon, rests upon the man,
A voice, a wretchedness has fallen upon him,
A voice not good has fallen upon him,
An evil curse, a ban of pestilence!
That man an evil curse has slaughtered like a lamb;
His god has retired from his body,
His prayer-answering goddess stands aside,
The voice, the wretchedness covers him like a garment, it overwhelms him
Marduk saw him,
Into the house of Ea, his father, he entered and spoke:
“My father, an evil curse, like a demon, has fallen on a man.”
A second time he said to him:
“What that man should do I do not know. By what may he be cured?”
Ea answered his son Marduk:
“My son, what dost thou not know? What can I add to thee?
Marduk, what dost thou not know? What can I add to thee?
What I know, thou knowest.
Go to him, my son Marduk,
To the house of holy cleansing take him,
His ban loose, his ban break!
The restless evil of his body,
Whether it be curse of his father,
Or curse of his mother,
Or curse of his elder brother,
Or curse of a pest-demon,
Or curse of a man unknown,
Like an onion may it be peeled off,
Like a date may it be cut off,
Like a palm-raceme may it be broken off!
O curse, by Heaven be thou exorcized!
By the Earth be thou exorcized!”’

This text makes it clear that, when the demon took possession of a person, the god or goddess (in other words, good spirits) was believed to withdraw. A similar conception prevailed among the Hebrews.

¹ For the original see *Cuneiform Texts from Babylonian Tablets in the British Museum*, xvii. [1903] 50, and for trr. R. W. Rogers, *The Religion of Babylonia and Assyria*, New York, 1908, p. 155, *Cuneiform Parallels to the OT*, do. 1912, p. 52 ff.; and H. Gressmann, *Altorientalische Texte und Bilder zum AT*, Tübingen, 1909, p. 28.

³ H. Zimmern, *Beiträge zur Kenntnis der babylonischen Religion*, Tafel v. 1 ff.

¹ Cf. M. Jastrow, *The Medicine of the Babylonians and Assyrians*, p. 7.

In order to exorcize the demon not only words but symbolic acts were employed. The incantation from which the last quotation comes is continued by a series of sections, each devoted to a symbolic casting into the fire of different kinds of material—an onion, a date, a palm-raceme, a little fleece, a goat-skin, wool, and seed. The portion of it which accompanied the use of the onion reads:

'As this onion is peeled and cast into the fire,
The devouring flame seizes it,
In a garden it will never be planted,
Amid pools and irrigating-ditches will not be placed,
Its roots will not strike into the ground,
Its stalk will not shoot up, will never see the sun,
Unto the feast of a god or a king will not approach,
So be the curse, the ban, the torture, the bewitchment,
The sickness, sighing, sin, misdeed, wrong, and transgression,—
The sickness which in my body, my flesh, my members dwells.
As this onion is peeled and
On this day the devouring flame seizes it,
May the curse be removed! May I see light!'

Similar utterances accompanied the burning of the other materials. To such an extent did the belief in the possession of evil demons prevail that, at least in later times, the whole life of Babylonia was pervaded by the fear of them. This is proved by the extent and variety of the incantation literature. This need not be more fully quoted here, as its fundamental conceptions are embodied in the extracts given above. The rest of it presents in different ways and with a variety of outward symbols endless variations of this theme.

Because of the difficulties of life in the Babylonian climate, struggle, sickness, and pain were more common than exultant joy. Perhaps it was for this reason that, while belief in the possession of demons was developed to a pseudo-science, there is almost no trace of a belief in the possession of a man by a good spirit or god. Nevertheless men who accomplished unusual deeds recognized that their power was not their own—that it came to them from the gods. As a rule, however, they did not claim possession of the gods, but held that each god had imparted to them some special attribute of his as a gift.

Thus Lugalzaggisi, the first to carry the Babylonian arms to the Mediterranean coast (c. 2300 B.C.), claims that intelligence was given him by Enki, the god of wisdom, that he was nourished with the milk of life by Ninkharsag, that he was called by Shamash, and chosen to be the king of the world by Enlil.¹ Earlier than he Eannatum, the conquering king of Lagash, made similar claims. Eannatum also relates a more intimate religious experience. When the men of Umma had raided the fertile plain of Guedin and carried off the crop which was of such value to the men of Lagash, Eannatum fell on his face before the god Ningirsu and prayed for guidance in the important crisis. Thereupon Ningirsu appeared to him, apparently in a dream (we cannot be sure, since the text is broken) and gave him the desired guidance and power. Filled with enthusiasm because of this communion with his god, Eannatum went forth and completely subdued his enemies.²

Five or six centuries after Eannatum Gudea, another ruler of Lagash, had a similar experience. The overflow of the rivers had failed, and a famine had resulted. Naturally the ruler was most anxious. Two gods appeared to him in a dream and told him to rebuild the temple of Eninnu,³ which he proceeded to do. Evidently Gudea believed that in this experience divine intelligence was imparted to him, for he boasts that he introduced by his superior understanding a new type of temple architecture.

This method of gaining divine power continued down to the end of the Assyrian period, though in a somewhat attenuated form.

In the time of Ashurbanipal, e.g., when the king was once invading Elam, both he and his troops were in trouble on account of the river Ididi being in flood. Ashurbanipal prayed, and the goddess Ishtar answered, but now it was not the king to whom the goddess appeared in a dream, but a seer.⁴ The vision came by proxy.

² *Ib.* p. 13, and L. W. King, *Hist. of Sumer and Akkad*, London, 1910, p. 123 ff.

³ See Thureau-Dangin, pp. 89-93.

⁴ Cf. G. A. Barton, *Archæology and the Bible*, Philadelphia, 1916, p. 417.

Perhaps it was because of the heightening of this conception—that gods occasionally appeared to their devoted followers and empowered them to unusual deeds—into a belief that these exceptional men were possessed by the gods or by divine powers that led to the deification of a few Babylonian rulers. It has long been one of the puzzles of Babylonian history why Naram-Sin, Gudea, Dungi, Bur-Sin, and Gimil-Sin claimed to be gods. Granted that the last two may have inherited the title from Dungi, why should it have been accorded spontaneously to three of Babylonia's great rulers, and not to a number of others equally great? None of the theories previously put forward (such as Egyptian influence or the possession of the shrine of Nippur) is adequate. A more probable hypothesis would seem to be that for some reason Naram-Sin, Gudea, and Dungi were believed to be possessed of the divine powers.

2. Phœnicia.—While most of the Phœnician literature has perished, interesting evidence of Phœnician belief in possession is found in an Egyptian document known as the 'Report of Wenamon,'¹ an Egyptian who was sent to Byblos (Gebel) in Phœnicia in the reign of Ramses XII. (1118-1090 B.C.). It was a troubled period of history, and Wenamon had many adventures, being robbed at Dor on his way to Phœnicia, and driven by adverse winds to Cyprus on his way home. Fortunately he lived to narrate his experiences, not the least of which occurred at Byblos itself.

The king of Byblos, Zakar-Baal, was at first unfriendly. This part of the narrative runs:

'I spent nineteen days in his [harbour], and he continually sent to me daily saying: "Betake thyself from my harbour."

Now, when he sacrificed to his gods, the god seized one of his noble youths, making him frenzied, so that he said:

"Bring [the god] hither! Bring the messenger of Amon who hath him, Send him and let him go."

'The god' in this passage refers to an image of the Theban god Amon called Amon-of-the-way—a kind of travelling Amon which Wenamon had with him. Wenamon continues:

'Now, while the frenzied (youth) continued in frenzy during this night, I found a ship for Egypt, and I loaded all my belongings into it.'

He then relates how, as he was about to flee, Zakar-Baal, at the command of the god through the frenzied youth, sent and recalled him.

The whole incident shows that the Phœnicians believed in possession by a god, and that what was uttered by one so possessed was a divine command that should be given the strictest heed. It is a conception of prophecy familiar to students of the OT.

3. Israel.—The OT affords much evidence that the belief in possession in Israel in the early days of her history was identical with that in Phœnicia. A classical instance of this is Balaam.

The king of Moab sent for him to curse Israel. Balaam strongly desired to comply; to comply meant rich rewards. But, according to the E account, Jahweh met Balaam in the way, and 'put a word in Balaam's mouth' (Nu 23^{4f.}). Jahweh so took possession of Balaam that in spite of his desires he blessed Israel. The J document says of his experience, 'The spirit of God came upon him' [Balaam] (24²).

That Balaam had the ecstatic experience of the Byblite youth is clearly shown by the poems attributed to him. One of these describes him as the man

'Who seeth the vision of the Almighty,
Falling down and having his eyes open' (24^{16b})—

clearly a description of the frenzied or ecstatic state. The powerlessness of Balaam when thus possessed by the divine spirit is expressed in the lines:

'How shall I curse, whom God hath not cursed?
And how shall I defy, whom Jahweh hath not defied?' (23⁸).

A still more patent example of the view that pro-

¹ For the whole document see Breasted, *Ancient Records of Egypt*, iv. §§ 583-591, or, for the most important parts of it, Barton, pp. 352-355.

phesy is the result of ecstatic possession is afforded by the case of King Saul.

According to the narrative in 1 S 19^{18a}, when David fled for protection to Samuel, Saul sent messengers to bring David back. 'And when they saw the company of the prophets prophesying, and Samuel standing as head over them, the spirit of God came upon the messengers of Saul, and they also prophesied.' The experiment was repeated three times, with the same result. The messengers were so overcome with the ecstasy that some one else had to return to tell Saul what had happened. Finally Saul himself started to go and fetch David, and 'the spirit of God came upon him also, and he went on, and prophesied, until he came to Naioth in Ramah. And he also stripped off his clothes, and he also prophesied before Samuel, and lay down naked all that day and all that night. Wherefore they say, Is Saul also among the prophets?'

It is clear from this story that the prophetic frenzy in the case of Saul rendered him unconscious or, at any rate, unable to stand. It also so possessed him that he became regardless of the ordinary proprieties of dress. Not only is it impossible to obtain stronger evidence of possession, but it is made clear that Samuel's prophecy was also of this order. Indeed *nibba*, 'he prophesied,' is a passive form, indicating that his words bubbled out under the influence of the power that possessed him.

That this was still the conception of prophecy in the time of Elisha is shown by the narrative in 2 K 3, which gives an account of the campaign of Jehoram, Jehoshaphat, and the king of Edom against Moab.

Elisha accompanied the expedition, and, when the prophet was asked for an oracle concerning where they could find a water-supply, he called for a minstrel to play before him. As the minstrel played, 'the hand of Jahweh came upon him,' i.e., the prophetic ecstasy was induced, and he gave the desired oracle.

From this type of prophecy the literary prophets of later time clearly differentiated themselves. Amos declared: 'I am no *nabi*!' (7¹⁴). We find in this period no trace of possession by demons, for in Hebrew thought the spirits were not yet differentiated into good and bad. They were still non-ethical. They were regarded by men as good or evil according as Jahweh sent them on missions that were for the benefit or for the injury of mankind. This is shown by the narrative in 1 K 22, in which the prophet Micaiah explains the fact that the other prophets of the court of Ahab differed from him, because Jahweh had sent forth a spirit to be a lying spirit in the mouths of these prophets.

The case of King Saul was of the same type. We find his melancholia or insanity explained thus: 'Now the spirit of Jahweh had departed from Saul, and an evil spirit from Jahweh troubled him' (1 S 16¹⁴). The evil spirit came from Jahweh, just as the spirit of Jahweh did, but it was evil because its effects were different. Just as in Babylonia the god and goddess were thought to depart before the demon could come into the man, so the spirit of Jahweh departed before the evil spirit entered into Saul. His possession by this spirit was believed to be the cause of his darkened reason.

The idea of possession appears also to have included the belief that a person could be possessed of the spirit of a departed person. Thus a necromancer is described as *baal 'ob*, 'the possessor of an *ov*.' The meaning of *'ob* is obscure, but apparently it refers to the spirit of the dead. Thus in 1 S 28, where Saul consulted a woman who possessed an *'ob*, the spirit of Samuel seemed to possess her, for she spoke as though she were Samuel. Necromancers were also called *yiddéoni*, and they were described in Is 8¹⁹ as those 'who chirp and mutter'—possibly because they spoke in the voices of the dead.

In the time after the Exile the literature affords little trace of the conception of possession by the spirit of God. God had become in the theology of the time exalted and remote. Prophets con-

tinued to speak, but, as in the case of Zechariah, they received their messages through angels. Eventually even prophecy died out and apocalyptic took its place, and the apocalypses record visions which the God, once nigh, but now most remote, had formerly vouchsafed to men. In such an age the idea of divine possession became impossible.

In this period the belief in demons was fully developed (see DEMONS AND SPIRITS [Heb.]). Apparently the older view that men might be possessed of a supernatural being continued, but it was inferred in all such cases that the patient was possessed of a demon and not by the spirit of God. While there is no direct evidence on this point in the literature, the prevalence of the belief in demoniacal possession by the people of Palestine that is reflected in the NT is sufficient proof. It is predicted in Zec 13^{3a} that in future, when any shall prophesy, 'his father and his mother that begat him . . . shall thrust him through when he prophesieth.' This prediction belongs to the latest of the Hebrew prophecies. Was it not uttered because possession was now coming to be regarded as always possession of the devil? See, further, PROPHECY (Hebrew).

4. Arabia.—The beliefs of the early Arabs concerning spirits and possession were similar to those of early Israel. The Arabs believed in a great mass of spirits called *jinn*, or *jan* (the more common name is *jinn*).¹ These were not pure spirits, for they were often represented as hairy and often as having the form of an ostrich or a snake. It was believed that, when a *jinni* was killed, a solid carcass was left behind. Nevertheless the *jinn* had the power to appear and disappear, to assume temporarily any form that pleased them. They are usually spoken of collectively, and were not individualized. Similarly they were originally non-ethical. Whether they were good or bad depended upon the attitude that for the time being they assumed towards men. They were generally supposed to inhabit desolate places and to be unsocial in nature. Their powers were superhuman and they were capable of taking possession of men.

Poets were supposed to owe their power to such possession.

E.g., it is related of Hassān ibn Thābit, a devoted follower of Muhammad who was very useful to the Prophet in replying in a sort of poetry to abusive attacks upon his master, that, while still a young man, before the rise of Islam, he met one day in a street of Medina a female *jinni*, who leaped upon him and compelled him to utter three verses of poetry. This was his initiation into the versifier's art. Thereafter he was a poet, but each poem came to him as the result of inspiration from the *jinn*.²

The separateness of the poets from other men greatly impressed the Arabs.

'From time to time, too, in the intense nervous susceptibility of the Arab race in the keen desert air, there fell upon him [the poet] cataleptic rigors, swoons, and dreams, from which he returned with strange words in his mouth.'³

So the poets, when under inspiration, were believed to be under the power of *jinn*. This gave them great distinction. They were, before Islām, often the leaders and representatives of these tribes. Honour was accorded them, not from appreciation of intellectual endowment or of artistic genius, but because of their uncanny connexion with the supernatural. There is a striking parallel between the way in which the poet Hassān 'was thrown down by the female spirit and had verses pressed out of him,' and the way in which 'the first utterances of prophecy were pressed from Muhammad by the angel Gabriel.'⁴ In

¹ For more complete accounts see E. W. Lane, *The Thousand and One Nights*, London, 1838-41, note 21, l. 29 ff.; J. Wellhausen, *Reise arabischen Heidentums*, p. 148 ff.; and W. E. Smith, *Rel. Sem.*, p. 119 ff.

² Cf. D. B. Macdonald, *The Religious Attitude and Life in Islam*, p. 18 ff.

³ *Ib.* p. 24.

⁴ *Ib.* p. 19.

Arabian thought only the Prophet experienced angelic possession.

Beside the poet (*shā'ir*), and below him, was the *kāhin*, or soothsayer, and below him the *arrāf*, a kind of diviner. These, too, were under the influence of the *jinn*, but in a less exalted way. The *kāhins* were soothsayers connected with a sanctuary, while the *arrāfs*, like Samuel, told where lost articles might be found. Nevertheless the *kāhins* usually cast their oracles in verse. Their inspiration came, however, in the sanctuary, while that of the poet came as freely as the air of heaven. The ecstatic inspiration of the *kāhin* is interestingly set forth in the following account from the *Kitāb al-Aghānī*, viii. 66, of the approach of the Banu Asad to Imrūl-Qais.¹

'Then the Banū Asad advanced until, when they were a day's journey from Tihāma, their *Kāhin*, who was 'Awf ibn Rabi'a, prophesied [a prophetic fit came upon him] and said unto them, "O my servants!" They said, "With Thee! O our Lord!" He said, "Who is the king, the ruddy one, the all-conqueror, the unconquered, among camels as if they were a herd of gazelles, with no clamor by his head? He! his blood is scattered wide! He, tomorrow, is the first of the stripped and spoiled!" They said, "Who is it, O our Lord?" He said, "If my heaving soul were not disquieted, I would tell you that he is Hujr openly." Then they mounted all, every beast broken and unbroken, and the day had not risen upon them when they came upon the army of Hujr, and charged upon his tent.'

This passage describes the oncoming of the prophetic fit, which closely resembled those of which we know in Phœnicia and in Israel; it proceeds to tell us graphically what the *kāhin* uttered and how it was fulfilled. It reveals clearly to us the Arabian notions of possession. The speaker bears witness to the fact that his soul was disquieted by a power not its own.

Muhammad, when first his ecstatic revelations came to him, believed that he was possessed by a *jinni*, and only gradually came to the conviction that it was a divine revelation. He seems to have been subject to ecstatic disturbances, and began his career as a prophet in this way. Later he was compelled to simulate such states in order to keep up the illusion of his followers. It was accordingly natural that, when he began to preach, the Meccans should class him with the *kāhins* and attribute his inspiration to a *jinni*.²

There is an interesting story of a Jewish boy at Medina, in the time of Muhammad's residence there, who was subject to epileptic or cataleptic fits. His name was Ibn Sa'yyād. When in his fits, he would lie wrapped up in a rough mantle, muttering to himself, as Muhammad himself had done at the first.³ The Jews regarded him as a prophet, and Muhammad appears to have been puzzled whether to regard the boy as a prophet or as the Jewish Antichrist.⁴ In the one case his possession would be that of angels; in the other of *jinn*.

The adoption by Islām of the Jewish-Christian conception of angels tended to make demons of the *jinn*, but the movement was never completely successful. Though they are sometimes called satans (*shaitans*), they still maintain on the whole their impersonal character, and draw the satans into it. On the whole Islām took over the *jinn* in their original form, and in this form believes in them to this day. Their legal status and their relations to mankind, such as marriage and property, were discussed by Muslim jurists, and, so far as possible, fixed. They were divided into two classes, good and bad, and Muslim saints, such as al-Ghazālī, are said to have had relations with them. The *jinn* were believed to be of a lower order than men, and the saints are frequently said to have preached to them and to have taught them.⁵

5. Egypt.—The conceptions concerning possession in Egypt were more nearly parallel to those in Babylonia than to those in Israel and Arabia. In Egypt and Babylonia the spirits were differentiated into good and bad at a much earlier period,

and in Egypt, as in Babylonia, the conception that a person might be possessed by supernatural powers was confined largely to belief in demoniacal possession. All disease was accounted for in this way, and, although a kind of medical science developed in Egypt to a higher degree of excellence than in many countries, not only did this conception of demoniacal possession lie behind it, but the administration of purely medical remedies was, to the latest time, accompanied by the recitation of formulae that were supposed to have power over the disease-giving spirit.

One of the clearest expressions of this view is found in a tale¹ invented at the end of the XXth dynasty of some fictitious events that are said to have transpired in the reign of Ramses II.

That king is said to have married, among others, a princess of Bakhtan. Afterwards the king of Bakhtan sent to Ramses, saying that Bentresht, another daughter of his, was very ill, and begged that an Egyptian physician might be sent to heal her. The most skillful physician went, but found her possessed of a spirit, and could do nothing. Evidently he laboured in vain for a long time, for nine years later the father sent again for aid. This time a charmed statue of the god Khons, called Khons-who-executes-plans-and-drives-out-rebels, was sent. The spirit went out of her. Like some of those in the Gospels, he did not depart in silence. He said: 'Welcome, thou great god who drivest out rebels; the city of Bakhtan is thine, its people are thy slaves, I am thy slave. I will go to the place whence I came, to satisfy thy heart concerning the matter of thy journey. Let thy majesty be pleased to command that a festival be celebrated in my honour by the prince of Bakhtan.' The god then nodded to his priest saying: 'It beoves that the prince of Bakhtan make a rich offering to this spirit.'

As Naville has pointed out, this story was intended as an advertisement of the god Khons to the Egyptians. It reflects Egyptian ideas, setting forth in a detailed way their conceptions of possession. A god who advertised such cures hoped to have an opportunity to treat many similar patients in Egypt.

That similar ideas of possession underlay the Egyptian conception of disease is shown by the incantations that were to be spoken at the administration of certain prescriptions.

With a fermentation of honey and other ingredients, e.g., one was to say: 'It has discharged and departed, that which has no fruit. It has gone away, that which has no arms. Turn back (O *mšpn-t*) for I am Horus. Yield (O *mšpn-t*) (for) I am the son of Osiris. The magic of my mother is the protection of my members. Thy evil shall not arise in my body nor any *mšpn-t* in thy members. It has been discharged seven times.' The words were to be spoken over *ink-w* herbs. They were to be cooked, mashed, and applied thereto. In like manner, when a kind of beer² called *dšr-t*-beer was administered, the *sem*-priest was to be present with his implements—statue, bird-catcher's net, oil, some kind of a flower, etc.—and say: 'Drink the beer. I have brought it to drive out the *tšt-c*-god, the male death, the female death, which is in my body,' etc.

The demons of disease were supposed to be always lurking about, watching for an opportunity to attack. This belief made life a constant terror. No mother could lay a child to rest without invoking unseen powers to spare the little one from malice and disease that lurked in every dark corner or slipped through the open door as the gloom of night gathered, to prostrate the little ones with sickness. One can almost hear the voice of the mother as she said: '4

'Run out, thou who comest in the darkness, who enterest in stealth, his nose behind him, his face turned backward, who loses that for which he came.

Run out, thou who comest in darkness, who enterest in stealth, her nose behind her, her face turned backward, who loses that for which she came.'

The demons might come under the guise of friends in order to gain access to the child. Hence the mother continues:

'Comest thou to kiss the child? I will not let thee kiss him. Comest thou to soothe (him)? I will not let thee soothe him.

¹ See E. Naville, *The Old Egyptian Faith*, pp. 250-258.

³ *Ib.* p. 7.

⁴ See Breasted, *Development of Religion and Thought in Ancient Egypt*, p. 291.

¹ Tr. Macdonald, p. 31 f.

² *Ib.* pp. 33, 37.

³ Qur'an, lxxiv.

⁴ See Macdonald, p. 34 f.

⁵ *Ib.* p. 144 f.

Comest thou to harm him? I will not let thee harm him.
Comest thou to take him away? I will not let thee take him away.'

The danger from demons not only accompanied one throughout this life, but also followed one into the hereafter. Hence the charms that had been potent to protect one here were applied to the life beyond. In the time of the empire the folk-charm invaded the *Book of the Dead*, where it forms the 'Chapter of not Permitting a Man's Heart to be Taken Away from Him in the Nether World.'¹

While belief in possession by demons developed to an elaborate system in Egypt, belief in possession by gods left little trace. In one of the Pyramid Texts of the Old Kingdom King Unis is represented as practising on the gods a kind of cannibalism, in order to possess himself of their powers. The passage reads:²

'King Unis is one who eats men and lives on gods,
Lord of messengers, who [dispatches] his messages;
It is "Grasper-of-Forelocks" living in Keheh
Who binds them for king Unis.
It is the serpent "Splendid-Head"
Who watches them for him and repels them for him.
It is "He-who-is-upon-the-Willows"
Who lassoes them for him.
It is "Punisher-of-all-Evil-doers"
Who stabs them for king Unis.
He takes out for him their entrails,
He is a messenger whom he (king Unis) sends to [punish].
Shesmu cuts them up for king Unis
And cooks for him a portion of them
In his evening kettles (or "as his evening kettles=meal").
King Unis is he who eats their charms,
And devours their glorious ones (souls).

He has taken the hearts of the gods;
He has eaten the Red,
He has swallowed the Green.
King Unis is nourished on satisfied organs,
He is satisfied, living on their hearts and their charms.

Their charms are in his belly.
The dignities of king Unis are not taken away from him;
He hath swallowed the knowledge of every god.

Lo, their (the gods') soul is in the belly of king Unis,

Lo, their soul is with king Unis.'

This text, which incidentally reveals the cannibalism that lay behind Egyptian civilization, was written to account for the intelligence, power, and divine qualities of King Unis. It reverses the usual idea of possession, however. The gods did not possess him, but he possessed them. How all Egyptian kings came to be regarded as gods we can now only conjecture, but evidently one pathway by which it came was this cannibalistic conception of possession.

In the Egyptian priesthood there was an order of prophets, but their particular functions are obscure. They appear to have differed little from the other priests in character. So far as appears, their functions did not depend, like those of the prophets of early Israel, upon ecstatic experiences.

6. Possession in the Gospels.—There is considerable evidence in the Gospels that, in spite of the silence of the later pre-Christian literature on the subject, belief in the possession of demons survived among the peasantry of Palestine, and was often supposed to be the cause of disease. Thus it is regarded as the cause of dumbness (Mt 9³², Lk 11¹⁴), of deafness, dumbness, and epilepsy (Mk 9²⁵), of dumbness and blindness (Mt 12²²), of curvature of the spine (Lk 13¹¹), and epilepsy (Mk 1³⁰). Ascription of these diseases to unclean spirits is not uniformly made; they are sometimes spoken of merely as disease (Mt 15²⁰, Mk 7²⁵, Lk 18³⁵). In some passages possession and these diseases are enumerated as separate things (Mt 10⁸, Mk 1³², Lk 6¹⁷, 7²¹ 13³²). It would seem that, among some,

knowledge of the nature of physical disease had progressed far enough to be distinguished from possession, though this was not universal. Once, at least, the old Hebrew and Arabic idea of the multitude and impersonality of the demons comes to the front in the Gospels. The Gerasene demoniac, when asked his name, replied: 'My name is Legion; for we are many' (Mk 5⁹). This narrative and those in Mk 1 and 9 indicate that insanity and epilepsy were the ills most commonly attributed to demoniac possession. This belief still prevails in Palestine.

The present writer once came upon a group of men near Beitin (Bethel) who were surrounding another, waving sticks at him and shouting. At an opportune moment one behind him dropped his club and caught the hands of the man in the centre, pinioning them behind him. When the writer asked the cause, he was informed that the man was *majnun*, 'possessed of a *jinn*.'

It is indicated in the Gospels that in the time of Christ there were professional exorcists who cast out demons (Mt 12²⁷). Jesus, too, cast them out. Some of His most marvellous cures were of this nature. Attempts have been made by some theologians to prove that Jesus did not Himself believe in possession, but accommodated Himself to the views of His patients and their friends. There is no evidence for this view and much against it. He made the validity of the belief the basis of argument with others, assumed that certain Pharisees could exorcize the demons, and that He, too, could do so (Mt 12²⁷, Lk 11¹⁶). He also assumed that, after expulsion, the existence of the demons was real, and that they could still do harm (Mk 5¹²). His humanity was real, and He fully shared the beliefs of His contemporaries upon this point.

7. The Apostolic Age.—In the Gospels possession appears to be confined to demons; in the rest of the NT we hear mainly of being possessed of the Spirit, though references to demoniacal possession are not wanting. This change was wrought by the experience of the day of Pentecost (Ac 2) when the disciples were so possessed of the Spirit that they spoke ecstatically and the beholders thought them drunken. A later historian understood that this speaking, which was called *glossolalia*, 'speaking-tongues,' was the ability to speak foreign languages (v. 8), but the narrative nevertheless contains evidence that this was a misunderstanding (v. 13). The disciples were thrown into an ecstasy; they were exalted in mood; they were taken out of themselves. We learn from St. Paul (1 Co 12 and 14) that this type of public utterance was in his time exalted above all other types. His discussion of the subject also makes the nature of the phenomenon quite clear. One who 'spoke in a tongue' spoke with his spirit, but his understanding was unfruitful (1 Co 14¹⁴); the hearers did not understand (14²); those out of sympathy, when they witnessed such utterances, naturally called the speakers mad (14²³). Paul, with his sound common sense, rated intelligent speaking more highly than this speaking in a tongue, but so popular was this type of possession that even he could not but treat it with great consideration. 'Be not drunken with wine, wherein is riot but be filled with the Spirit' (Eph 5¹⁸) could have been written only in an age when complete fullness of the Spirit was supposed to produce effects similar to the drinking of wine. The greatest enemies of the Christians were still thought to be demons and their chief, the 'prince of the power of the air' (2²). The militant disciple wrestled 'against . . . the spiritual hosts of wickedness in the heavenly places' (6¹²). It is implied that these controlled, if they did not possess, men. One instance of such possession is presented in the Philippian slave-girl who possessed 'a spirit of Python' (Ac 16¹⁶).

¹ See Breasted, *Development of Religion and Thought in Ancient Egypt*, p. 291 ff.

² *Ib.* p. 127 ff.

Not only did the Philippians believe her possessed, but St. Paul did also, for he addressed the spirit in exorcising it (16¹⁸).

8. The Montanists.—In the 2nd cent. the ecstatic type of prophecy was revived by Montanus in Phrygia, who became the champion of the prophetic ministry. Eusebius, quoting an unnamed informant, says:

'He was carried away in spirit, and wrought up into a certain kind of frenzy and irregular ecstasy, raving, and speaking and uttering strange things, and proclaiming what was contrary to the institutions that had prevailed in the Church.'¹

This is the report of an unsympathetic critic, but among the few sayings of Montanus that have come down to us is one that confirms the view that he was subject to the phenomenon of possession. It runs:

'Man is like a lyre, and I [the Holy Spirit] play him like a plectrum. Man sleeps; I [the Holy Spirit] am awake.'²

The Church had lost the fire of enthusiasm that made such possession possible, and cast out Montanus and his followers as heretics; nevertheless they lingered in Phrygia until in the 6th cent. they were forcibly exterminated. To what extent the ecstatic experiences were repeated by the followers of Montanus after the 2nd cent. we do not know.³

9. The Church and possession.—The condemnation of Montanus registered the belief of the Church that possession of the Holy Spirit in this extraordinary way was no longer possible—a view that was maintained by all the Church until the Reformation and is still maintained by all except some smaller sections of Protestantism. Belief in the possession of demons was still maintained and, as time passed, was intensified. The presence of this belief in the early centuries clearly moulded certain features of the ritual of the Church. Thus, according to the Roman usage, a catechumen, preparatory to baptism, first presented himself to the priest, who breathed upon him (i.e. performed the act of insufflation) and recited a prayer of exorcism with his hand extended over the candidate's head. A part of the petition was: 'Break all the snares of Satan by which he has been bound.'⁴ The insufflation typified the reception of the Holy Spirit whereby the evil spirit was driven out. In the Gallican ritual the exorcism came first, then unction, and the insufflation last.⁵ One curious sentence of this ritual reads: 'I approach thee, thou most unclean, damned spirit.' The liturgy of the East contains similar ceremonies of exorcism and insufflation.⁶ The insufflation was a symbolic repetition of the act of Jesus when He breathed on His disciples and said: 'Receive ye the Holy Spirit' (Jn 20²²). Apparently it was believed that the candidate, who as a sinner had been possessed of Satan before, now became possessed of the Holy Spirit. Such possession was but an attenuated form, so far as outward manifestations were concerned, of that of earlier time. The belief that insufflation imparted such possession extended to oil and water, for, in the consecration of these, the priest breathed on them.⁷

While the belief in possession of the Spirit took this symbolic form, belief in demoniacal possession continued in its original vigour. In W. Europe it was gradually intensified by the survival of pagan beliefs, stories, and practices. Many of these the Church took over and consecrated, but all those not so consecrated were regarded as of the devil. He was supposed to possess those who practised arts that had been banned by the Church. Witches who practised them were in league with him or possessed of him. When in the 13th cent.

sects began to spring up, it was natural for ecclesiastics to regard them as in league with the evil one. Thus in 1223 Gregory IX. promulgated a letter exhorting a crusade against the Stedingers, a sect in Friesland and Lower Saxony, in which he accused them of worshipping and having secret communion with the prince of darkness. In 1303 John XXII. complained, in two letters, that both he and many members of his flock were in danger of their lives by reason of the arts of sorcerers. Finally Innocent VIII. in 1484 promulgated his famous bull 'Ad forturan rei memoriam,' in which he accused many persons of both sexes of mixing with devils and injuring by their conjurations unborn children, young animals, all sorts of crops, inflicting all kinds of pains and sickness on people and animals, preventing men from procreation and women from conception, and making them recant their Christian faith. He appointed Heinrich Krämer (Institor) and Jakob Sprenger to be prime inquisitors to rid the land of such. Sprenger had composed his *Malleus Maleficarum* ('Witch-Hammer,' 1489, Cologne, 1520) which, with the papal bull, precipitated a long drawn battle against witches, who were believed to be in league with Satan or possessed of him.¹ The movement spread to England, where in the reigns of Henry VIII. and Elizabeth laws were enacted against witches. It called forth Reginald Scot's noted work, *The Discoverie of Witchcraft* (London, 1584). The war against witches and the devil spread to the New World; in Salem, Massachusetts, a number of people were executed at the end of the 17th cent. on suspicion of exercising demoniacal powers. Of course the clergy supported the crusade on both sides of the Atlantic. How many lost their lives in consequence of this dread belief cannot now be ascertained.

Although the increase of scientific knowledge has stopped the execution of people on such charges, the belief in demoniacal possession dies hard. Several cases were reported among the peasantry of Germany in the early part of the 19th cent., vouched for by accredited doctors and clergymen.²

10. Possession and revivals.—With the spread of experimental religion as distinguished from ecclesiastical religion since the Reformation there has been a recrudescence of the ancient belief that ecstatic experiences are the work of the Holy Spirit—a kind of possession. Such ecstasies occurred at times under the preaching of the early Friends in the 17th cent. in England, and were interpreted as manifestations of the power of God.³ They manifested themselves again in the 18th cent. in England under the preaching of Wesley,⁴ and in Massachusetts under the ministry of Jonathan Edwards.⁵ They accompanied the Scottish-Irish revival in Kentucky in 1800-03⁶ and the revival in Ulster in 1859.⁷ They may still sometimes be seen in the meetings of the American Negroes.⁸ Enthusiastic revivalists have down to recent times regarded them as striking evidences of divine visitation, though the wisest of them, such as Jonathan Edwards, lost faith in them, and Wesley's judgment finally tended in the same direction. Under Finney and Moody common sense asserted itself and evangelism rose to a more healthy plane, though such phenomena still sometimes appear. Science has taught us that they are due to disordered nerves, and the primitive belief in possession that has survived so long is fading away.

POTTAWATOMIES.—See **ALGONQUINS** (Prairie Tribes), vol. i. p. 325.

POVERTY.—I. Definition.—In the Poor Law Commissioners' Report of 1834 poverty is defined as the state of one who, in order to obtain mere subsistence, is forced to have recourse to labour. This the Commissioners distinguish from indigence, by which they understand the state of a person unable to labour, or unable to obtain, in return for his labour, the means of subsistence. Probably B. Seeböhm Rowntree's definition (*Poverty: A Study of Town Life*) is more satisfactory: families whose total earnings are insufficient to obtain the minimum necessities for the maintenance of mere physical efficiency may be described as living in 'primary' poverty. This he distinguishes from 'secondary' poverty, under which come those families whose earnings would be sufficient for the maintenance of mere physical efficiency, were it not that some portion of it is absorbed by other expenditure, either useful or wasteful. If this definition of poverty is accepted, indigence or destitution is included under 'primary' poverty.

2. History.—This is of a very restricted nature, and is practically limited to the history of destitution, or extreme poverty. Even at the present day the information available concerning poverty is very slight, as scientific investigations have been made in only very few towns, and the results vary so much that it is impossible to generalize.

The only attempt to compare conditions in this country at two different periods is that of Robert Giffen. We give his conclusions, whilst bringing the figures rather more up to date.

For 1843, the first year for which we have income-tax returns, Giffen estimated the income of the country to be £515,000,000, of which £280,000,000 belonged to persons with over £150 per annum and £235,000,000 to persons with under £150 per annum. The £280,000,000 was shared by 200,000 to 250,000 persons, or, including their families, by 1,000,000 to 1,250,000 persons. The £235,000,000 was shared by about 25,500,000 persons. The

income-tax paying class had about £250 per head, while the rest of the population had something under £10 per head.

For 1908 Leo G. Chiozza Money estimated the income of the country to be £1,344,000,000, of which £909,000,000 belonged to persons with over £160 per annum and £930,000,000 to persons with under £160 per annum. The £909,000,000 was shared by 1,100,000 persons, or, including their families, by 5,500,000 persons. The £930,000,000 was shared by 39,000,000 persons. The income-tax paying class had about £165 per head as compared with £250 in 1843, whilst the rest of the population had about £24 per head, as compared with under £10 in 1843.

Other figures which bear out the contention that the income-tax paying class has increased much more rapidly than the non-income-tax paying class are those relating to the value of estates passing at death.

In 1838, 25,368 probates were granted, the average amount per estate being £2160. In 1908, 67,524 probates were granted, the average amount per estate being £4000. The increase in the number of estates (165 per cent) was much greater than the increase in the population (70 per cent), so that the wealth of the country was becoming more diffused, or, in other words, a growing proportion of the population was leaving estates.

The figures relating to the consumption of comforts and conventional necessities consumed by the masses confirm the improved conditions of the bulk of the population. The following table gives the quantities of the principal imported and excisable articles retained for home consumption per head of the population of the United Kingdom in the years 1840 and 1911.

	1840.	1911.
Currants and raisins	1.45 lbs.	4.89 lbs.
Rice	0.90 "	15.08 "
Sugar	15.20 "	92.07 "
Tea	1.22 "	6.43 "
Tobacco	0.36 "	2.05 "

The great increase in the consumption of currants, raisins, rice, sugar, tea, and tobacco can be accounted for only by the much greater use that is made of them by the bulk of the population; and such greater use would not be possible but for the increased incomes at the disposal of the masses. Figures showing the growing incomes of the non-income-tax paying classes have already been quoted and these may be supported by the Board of Trade index numbers of wages.

If the general level of wages in 1850 be taken as 100, then the figure for 1907 was 181.7, showing an increase of 81.7 per cent in 57 years (Cd. 4671, p. 44).

From the early part of the 19th cent. until 1896 prices fell very considerably, and, though they have risen since, they were much lower shortly before the war than they were during most years of the 19th century. A few figures from Sauerbeck's average prices of all commodities may be quoted:

Average of 1867-77=100	1873=111
1820=112	1880=88
1830=91	1890=72
1840=103	1896=61
1850=77	1900=75
1860=99	1910=78
1870=96	1911=80

With the rise in incomes and the fall in prices, there can be little doubt that the masses were much better off in the early 20th cent. than they were 50 or 100 years previously. The growth of Savings Banks deposits (£29,000,000 in 1850 to £257,000,000 in 1911), of the accumulated funds of Friendly Societies (£14,000,000 in 1877 to £50,500,000 in 1905), and of the loan and share capital of Co-operative Societies (£8,500,000 in 1883 to £45,250,000 in 1909) are other indications of greater general prosperity.

3. Extent.—(a) The earliest investigation is that of Charles Booth, who conducted an inquiry into the extent of poverty in London in 1886-88. By 'poor' he understood those who had a sufficiently regular, though bare, income, such as 18s.

to 21s. per week for a 'moderate family,' and by 'very poor,' those who from any cause fell much below this standard. Booth obtained his information from the London School Board visitors, who were in daily contact with the people and had considerable knowledge of the parents of the school children. He then assumed that the whole population was the same as the tested part, *i.e.* families with school children. When it is remembered that the part of the population which was not investigated included all the families with children above school age, and with no children, it will be realized that the condition of the bulk was better than the part tested, so that Booth's figures, in so far as they err, err on the dark side. In other words, conditions were probably not so bad as Booth's figures would suggest.

Booth divided the population into 8 classes :

- A. The lowest class of occasional labourers, loafers, and semi-criminals.
- B. Casual earnings—'very poor.'
- C. Intermittent earnings
- D. Small regular earnings } together the 'poor.'
- E. Regular standard earnings—above the poverty line.
- F. Higher class labour.
- G. Lower middle class.
- H. Upper middle class.

As the result of his investigations he divides the population among these classes as follows :

A. (lowest)	37,610	or 0.9 per cent
B. (very poor)	316,834	7.5 "
C. and D. (poor)	938,293	22.3 "
E. and F. (working class, comfortable)	2,166,503	51.5 "
G. and H. (middle class and above)	749,930	17.8 "
	4,209,170	100.0 "
Inmates of institutions	99,830	
	4,309,000	

According to Booth's inquiry, 30.7 per cent of the population of London were living in poverty in 1887. This may be taken to include what Rowntree calls 'secondary' as well as 'primary' poverty. That nearly one-third of the inhabitants of London were living in poverty appears very startling, yet the investigations in other towns seem to bear out the probable accuracy of this figure.

(b) Seebohm Rowntree conducted his investigations into the extent of poverty in York in 1899. As the population at that time was about 75,000, it was possible to make a house to house investigation in respect of every wage-earning family. Particulars were obtained concerning 11,560 families consisting of 46,754 persons. The population was divided into 7 classes :

- A. Total family income under 18s. for a moderate family.
- B. Total family income 18s. and under 21s. for a moderate family.
- C. Total family income 21s. and under 30s. for a moderate family.
- D. Total family income over 30s.
- E. Domestic servants.
- F. Servant-keeping class.
- G. Persons in institutions.

By moderate family was meant a family consisting of father, mother, and from two to four children. In classifying, allowance was made for families which were smaller or larger.

On this basis Rowntree divided the population as follows :

A.	1,957	or 2.6 per cent
B.	4,492	5.9 "
C.	15,710	20.7 "
D.	24,595	32.4 "
E.	4,296	5.7 "
F.	21,830	28.8 "
G.	2,932	3.9 "
	75,812	100.0

Rowntree, instead of adopting Booth's somewhat rough and ready method of saying that all families with less than a certain weekly income were living in poverty, sought to establish a scientific poverty line. He estimated the minimum necessary

expenditure for the maintenance of mere physical health and then ascertained whether each family had sufficient earnings to pay for the requisite food, housing accommodation, and household sundries.

With regard to food, he took as the basis of his calculations the diet adopted at the York Workhouse, but excluded butcher meat, as this diminished the cost without reducing the allowance of protein, fats, and carbo-hydrates below the minimum requisite for physical efficiency. The weekly cost of this diet in 1899 was as follows :

Men.	Women.	Child. 8-16.	Child. 3-8.	Child. under 3.
3s. 3d.	2s. 9d.	2s. 7d.	2s. 1d.	2s. 1d.
Average for adults, 3s. ; average for children, 2s. 3d.				

With regard to rent, the actual sums paid for rent were taken as the necessary minimum rent expenditure.

With regard to household sundries, Rowntree allowed 1s. 10d. (=1½ bags [140 lbs.] at 1s. 3d.) for coal, 6d. for adults and 5d. for children for clothing, and 2d. per head for all other sundries.

Thus a table was established showing the minimum necessary expenditure per week for families of various sizes ; *e.g.*, a family of father, mother, and three children would require 21s. 8d. made up as below :

Food : 2 at 3s. and 3 at 2s. 3d.	s. d.
Rent	12 9
Household sundries : coal	4 0
clothing : 2 at 6d. and 3 at 5d.	1 10
other sundries 5 at 2d.	2 8
	21 8

When the earnings of every family were examined by this table, it was ascertained that 1465 families, comprising 7230 persons, were living in 'primary' poverty. This was equal to 9.91 per cent of the whole population of the city and to 15.46 per cent of the working-class population. The number of persons living in 'secondary' poverty was ascertained by deducting the numbers of persons living in 'primary' poverty from the total number of persons living in poverty, the latter number being an estimate of the investigator, formed by his noting down evidences of poverty during his house to house investigation. By this method it was found that families comprising 20,302 persons, equal to 27.84 per cent of the population of the city, were living in poverty. Of these 7230 persons, or 9.91 per cent of the population, were living in 'primary' poverty and 13,072, or 17.93 per cent of the population, in 'secondary' poverty. According to this inquiry, the percentage of the population of York living in poverty (27.84) was only a little less than that in London (30.7). In the case of the towns mentioned below a similar comparison cannot be made, as the extent of 'primary' poverty alone has been investigated.

(c) An investigation at Northampton was made by A. R. Burnett-Hurst in July 1913. There, as also at Warrington, Stanley, and Reading, the system adopted was to investigate the conditions prevailing in some 5 per cent of the households and to generalize from these. Further, in each of these cases it was necessary to make allowance for the rise in the general level of prices between 1899 and 1913 before using Rowntree's poverty line figures. Thus the York food allowance of 3s. for adults and 2s. 3d. for children became 3s. 6d. and 2s. 7d. respectively. Fourpence was added for State insurance, and the expenditure on coal was adjusted to meet local conditions.

In Northampton, of the 693 working-class families investigated 57 were below the poverty line. These were equivalent to 8·2 per cent of the working-class households of the town and to 6·4 per cent of all households. These 57 families contained 9 per cent of the working-class population which fell within the scope of the inquiry. In York 15·46 per cent of the working-class population was living below the poverty line in 1899.

(d) Burnett-Hurst's inquiry at Warrington was conducted in the early autumn of 1913. Of the 640 working-class families investigated 78 were below the poverty line. These were equivalent to 12·2 per cent of the working-class households and to 11·5 per cent of all households. These 78 families contained 14·7 per cent of the working-class population which fell within the scope of the inquiry.

(e) The mining village of Stanley, in the Durham coalfield, was investigated by Burnett-Hurst in July 1913. Of the 203 working-class families whose circumstances were inquired into 12, containing 6 per cent of the working-class population investigated, were below the poverty line.

(f) A. L. Bowley conducted an investigation in Reading in the autumn of 1912. 128 families of the 622 investigated were below the poverty line. This is equivalent to 20·6 per cent of the working-class households and to 15·3 per cent of all households. The 128 households below the poverty line contained 29 per cent of the population which fell within the scope of the inquiry.

(g) An investigation of quite a different character into the extent of poverty in the United Kingdom has been made on two occasions by Leo G. Chiozza Money. His first inquiry related to 1903 and his second to 1908. As the income-tax returns constituted the basis of his inquiry, he divides the population into three groups, with £160 and £700 as the dividing lines :

	1903.		1908.	
	Number.	Income £ mil.	Number.	Income £ mil.
RICHES.				
Persons with incomes of £700 per annum and upwards and their families . . .	1,250,000	570	1,400,000	634
COMFORT.				
Persons with incomes between £160 and £700 per annum and their families . . .	4,000,000	280	4,100,000	275
POVERTY.				
Persons with incomes of less than £160 per annum and their families	37,250,000	880	39,100,000	935
	43,000,000	1,710	44,500,000	1,844

(h) The statistics relating to pauperism enable us to gauge destitution or extreme poverty, which must not be confused with poverty as defined by Rowntree. The average daily number of paupers in receipt of relief in the United Kingdom at the beginning of 1914 was 933,163, or 20·3 per 1000 of the population.

(i) On 26th Dec. 1913 there were 982,292 old age pensions payable in the United Kingdom. Of these, 685,288 were payable in England and Wales, 97,702 in Scotland, and 199,302 in Ireland. Of the total number of persons in England and Wales

who are over 70 years of age three-fifths are old age pensioners, i.e. persons whose incomes are less than £31 10s. per annum.

4. Causes.—All these investigators of poverty have analyzed its immediate causes, and their conclusions are given below.

(a) Booth analyzed 4076 cases of the poor and very poor in London, known to selected School Board visitors, and summarized the results as follows :

Loafers	60 or 1·5 per cent
Questions of employment—	
Casual work, low pay, irregular earnings	2546 62·4
Questions of habit—	
Drunkenness and thriftlessness	533 13·6
Questions of circumstances—	
Large families and illness	917 22·5
	4076 100·0

(b) Rowntree analyzed the causes of 'primary' poverty under somewhat different headings.

Immediate cause of 'primary' poverty.	No. of households affected.	No. of persons affected.	Percentage of total population living in 'primary' poverty.
Death of chief wage-earner	408	1,130	15·68
Illness or old age of chief wage-earner	146	370	5·11
Chief wage-earner out of work	38	167	2·31
Irregularity of work	51	205	2·83
Largeness of family, i.e. more than 4 children	187	1,602	22·16
In regular work but low wages	640	3,756	51·96
	1,465	7,230	100·00

(c) The information collected by Bowley and Burnett-Hurst in Northampton, Warrington, and Reading may be summarized in one table; the figures for Stanley are omitted, being too small to express in percentages.

Immediate cause of poverty.	Percentage of households below the Rowntree standard.		
	Northampton.	Warrington.	Reading.
Chief wage-earner dead	21	6	14
do. ill or old	14	1	11
do. out of work	..	3	2
do. irregularly employed	..	3	6
do. regularly employed:			
Wage insufficient for 3 children	21	22	33
3 children or less	9	33	15
Wage sufficient for 3 but family more than 3	35	27	21
	100	100	100

In the case of each of the five towns where the immediate causes of poverty have been analyzed the predominant cause is the same, viz. low wages, frequently in conjunction with large families. In York (1899) 10 per cent of the adult males earned under 20s. a week and 26 per cent earned between 20s. and 24s. In Northampton (1913) 13 per cent of the adult males earned under 20s. a week and 14 per cent earned between 20s. and 24s. In Warrington (1913) 3·5 per cent of the adult males earned under 20s. a week and 28·5 per cent earned between 20s. and 24s. In Reading (1912) 15 per

cent of the adult male population earned under 20s. a week and 35.5 per cent earned between 20s. and 24s. When from one quarter to one half of the adult male populations of these towns was earning less than 24s. a week, it is not astonishing that poverty should be very prevalent.

The growth of population has undoubtedly a serious influence on the general extent of poverty in old countries. Sooner or later increasing supplies of food and minerals can be obtained only at increasing cost. As the population of an old country grows and the supply of labour as a consequence increases, the productive capacity of the country grows, but not in the same proportion as the population. For a time this tendency may be overcome by new inventions, the accumulation of more capital, and the greater efficiency of the workers; under these circumstances an advance in the general welfare of the community may be achieved, in spite of the increase of population. This has probably been the case in this country during the past hundred years or so, but we cannot look to similar conditions continuing indefinitely in the future.

5. Present system of dealing with poverty.—At the present time in this country there are various methods, public and private, but not too well co-ordinated, for dealing with poverty. Most are palliative in character and only too few are remedial. This, however, is hardly astonishing, seeing how difficult the problem is.

(a) *Public methods.*—(1) The poor relief granted by Boards of Guardians or Poor Law Boards must be mentioned first. Nearly £18,000,000 per annum are being spent by these bodies in the United Kingdom, but they assist no one unless he or she is absolutely destitute, so that their help is accorded only to a small proportion of the poor. Out-relief, which with certain exceptions is not granted to able-bodied persons, is generally very inadequate. Indoor relief, on the other hand, is very costly, and not infrequently has the effect of making persons relieved into more or less permanent paupers, by bringing them into contact with some of the least desirable guests of the Guardians. Undoubtedly, the most satisfactory work done by the Guardians is that done in their children's homes and in their hospitals.

(2) Under the Old Age Pension Act, 1908, every person of British nationality and twelve years' residence within the United Kingdom whose income is below £31 10s. per annum becomes entitled, subject to certain small exceptions, on attaining the age of 70 to a pension of 5s. a week from the Exchequer. At the present time about a million persons benefit by this Act at a cost to the community of some £13,000,000. As the result of the passing of this Act, the number of paupers in England and Wales over 70 years of age has greatly diminished. It was 229,474 on 31st March 1906, whereas it had fallen to 57,948 on 1st Jan. 1914.

(3) The Unemployed Workmen Act, 1905, provides for the establishment of Distress Committees which, if satisfied that an applicant is a person honestly desirous of obtaining work, but unable to do so from exceptional causes over which he has no control, and that his case is capable of more suitable treatment under the Act than under the Poor Law, can endeavour to obtain work for him or themselves undertake to assist him. This assistance may take the form of (a) aiding emigration, (b) aiding migration to another area, or (c) providing or contributing towards the provision of temporary work. The Distress Committees have dealt with only a very limited number of the unemployed: in 1912-13 the applicants for relief in England and Wales numbered 43,381, and of

these 30,662 were found qualified for assistance. The majority of the applicants were general or casual labourers.

(4) A far greater number of unemployed are dealt with by Labour Exchanges, established under the Labour Exchanges Act, 1909. On 16th Jan. 1914 423 Exchanges were open. During 1913 the total number of individuals who applied to the Exchanges for employment was 1,871,871, the total number of registrations being 2,965,893. During the year 652,306 individuals were given work, the number of vacancies filled being 921,853.

(5) Another attempt to minimize the consequences of unemployment, and indirectly of poverty, has been the introduction of compulsory insurance against unemployment in certain trades, under pt. II. of the National Insurance Act, 1911, since amended by the National Insurance Act, 1914. The principal industries concerned are building, shipbuilding, works of construction, engineering, iron-founding, and the construction of vehicles. On 17th Jan. 1914 the number of workpeople insured was 2,282,324. The total amount of unemployment benefit paid to workpeople during 1913 was £497,725.

(6) The compulsory health insurance established by pt. I. of the National Insurance Act, 1911, since amended by the National Insurance Act, 1913, should ultimately have a considerable effect in increasing the welfare of the population, as ill-health undoubtedly lies at the bottom of a good deal of inefficiency, and the consequent low wages. A return made in February 1914 stated that there were 13,759,400 insured persons in the United Kingdom, of whom 360,000 were deposit contributors.

(7) The most direct effort to raise the low level of wages which is at the bottom of so much poverty was made when the Trade Boards Act, 1909, was passed. The Act applied at first only to the four trades specified in the schedule—tailoring, cardboard box-making, machine-made lace, and chain-making—but the list may be extended by Provisional Order, confirmed by Act of Parliament. In 1913 the Act was applied to four new trades—shirt-making, sugar confectionery and food-preserving, hollow-ware, and linen and cotton embroidery. For each trade or branch of a trade one or more Trade Boards are to be established. The duties of a Trade Board include the fixing of minimum time and piece rates.

Investigations into the working of the Act have been made in the chain-making and tailoring trades by R. H. Tawney, and in the box-making trade by Miss M. E. Bulkeley, under the auspices of the Ratan Tata Foundation of which Tawney is director. The following table relating to the wages earned by mastermen and journeymen chain-makers, before and after the establishment of minimum rates, gives some indication of the work of a Trade Board:

Weekly wages.	Mastermen.		Journeymen.	
	1911.	1913.	1911.	1913.
Under 15s.	56.7 %	1.3 %	61.3 %	0.7 %
15s. and under 20s.	33.7 "	20.2 "	37.2 "	14.6 "
20s. and under 25s.	9.4 "	60.8 "	1.4 "	48.1 "
25s. and under 30s.	"	17.5 "	"	30.6 "
30s. and over	"	"	"	5.8 "

(8) Of the persons who fall below the poverty line there can be little doubt that the school children and infants constitute the majority and that they are the worst sufferers. As a result of their investigations Bowley and Burnett-Hurst

inform us that in Northampton just under one-sixth of the school children and just over one-sixth of the infants, in Warrington a quarter of the school children and almost a quarter of the infants, in Reading nearly half the school children and 45 per cent of the infants belonging to working-class families are living in households in 'primary' poverty.

The direct efforts of the State to remedy these conditions in England and Wales are connected with the feeding and the medical inspection of school children.

(a) The Education (Provision of Meals) Act, 1906, which permits rates to be spent on the provision of food, is optional, and its adoption by Local Education Authorities is by no means universal. In many cases the authorities have contented themselves with making arrangements with voluntary agencies. In 1911-12, out of 322 Local Education Authorities in England and Wales, 131 were making some provision for feeding school children. Of these, 95 were spending rates on the provision of food. In 1908-09, £67,524 from the rates, and £85,690 in all, were spent in the provision of meals by Local Education Authorities. In 1911-12 the corresponding figures were £151,763 and £157,127. The total number of meals provided in 1911 was 8,487,824 in London and 7,634,395 in the rest of England and Wales. Both these figures show a small decrease on the previous year. The total number of children fed is given in the returns for 1911 as 124,685. The number is apparently too low; and Miss Bulkley, in her investigation under the Ratan Tata Foundation, estimates that the total number of children who were fed at some time or other during the year was about 230,000 out of a total school population of 5,357,567. The Education (Provision of Meals) Act, 1914, has removed the chief financial restrictions imposed by the earlier Act, and provides for an Exchequer grant which may amount to half the local authority's expenditure. It is hoped that this grant will prove a stimulus to increased provision of school meals and a means by which the Board of Education can level up the conditions under which the provision is made.

(b) The School Medical Service was set up under the Education (Administrative Provisions) Act, 1907. The medical inspection of all children attending public elementary schools is obligatory, but their treatment is optional. In 1913-14 there were 841 school medical officers in England and Wales, and in addition there were 578 officers appointed for special work, especially dentistry. In 277 out of the 317 Elementary Education Areas in England and Wales school nurses had been appointed. Medical treatment was provided by 241 out of the 317 authorities. The treatment is generally limited to minor ailments, uncleanliness, ring-worm, and other common skin-diseases of children, defective eyesight or hearing, some external affections of the eyes and ears, and various temporary conditions of the mouth (including teeth), nose, and throat.

(c) *Private methods.*—These vary greatly in character. There is much individual charity, people who are well-to-do helping those who are less fortunate. In many cases it is the poor who help the very poor, whether they be relatives or merely neighbours. Further, there are many charitable foundations and institutions whose funds are obtained from endowments or subscriptions, or from both these sources, such as Dr. Barnardo's Homes and the Church Army. Other types of organization are the Charity Organization Society and the Guilds of Help that exist in several towns; these organizations exist with the special object of investigating cases of poverty and helping

them or bringing them into touch with some means of help. At times of unusual distress, such as is caused by a famine or a coal-mine disaster, a special fund is often raised to meet the emergency. Many trade unions, although not charitable organizations, relieve distress by the payment of out-of-work benefits.

How many people in the grip of poverty are helped by private efforts, and how much money is spent in this way, it is impossible to say. Definite information with regard to public efforts to alleviate poverty is also very difficult to obtain. The ideal of public and private methods should undoubtedly be gradually to reduce the amount of poverty by abolishing the ultimate causes of poverty. That many of the efforts are not remedial, but merely palliative, must be admitted. Further, no expenditure of money, however lavish, no raising of wages, no bettering of urban and rural housing accommodation, no improving of sanitary conditions, in fact, no material improvements alone, can hope to achieve permanent results, unless they are accompanied by certain moral changes in the character of the people. Thrift, sobriety, tidiness, and cleanliness—these and other virtues must be developed, if people are to reap the full benefits of any material changes which are likely to be effected. Much, in fact, could be achieved by moral development alone, and it is of the greatest importance to realize this, as material improvements at a time of high prices and great national impoverishment due to the war are hardly likely to be forthcoming in any large measure in the immediate future.

DOUGLAS KNOOP.

POWER.—The definition of power, or potency, and the distinction of power into active and passive are most clearly given by Aristotle. In this respect later writers, as Hobbes and Locke, have done little more than repeat Aristotle.

In *Met.* (iv.) v. 12 Aristotle distinguishes three senses of the term:

"Potency" means (1) a source of movement or change, which is in another thing than the thing moved or in the same thing *qua* other, e.g. the art of building is a potency which is not in the thing built, while the art of healing, which is a potency, might be in the man healed, but not in him *qua* healed. "Potency" then means the source, in general, of change or movement in another thing or in the same thing *qua* other, and also the source of a thing's being moved by another thing or by itself *qua* other. For in virtue of that principle, in virtue of which the patient suffers anything, we call it "capable" of suffering; and this we do sometimes if it suffers anything at all, sometimes not in respect of everything it suffers, but only if it suffers a change for the better.—(2) The capacity of performing this well or according to intention; for sometimes we say of those who merely can walk or speak but not well or not as they intend, that they cannot speak or walk. The case of passivity is similar.—(3) The states in virtue of which things are absolutely impassive or unchangeable, or not easily changed for the worse, are called potencies; for things are broken and crushed and bent and in general destroyed not by having a potency but by not having one and by lacking something, and things are impassive with respect to such processes if they are scarcely and slightly affected by them, because of a "potency" and because they "can" do something and are in some positive state' (*Metaphysica*, tr. W. D. Ross, in *Works of Aristotle*, tr. J. A. Smith and W. D. Ross, vol. viii. Oxford, 1908).

In *Met.* (viii.) ix. 1, having mentioned these different kinds of potency, Aristotle says:

'Obviously, then, in a sense the potency of acting and of being acted on is one (for a thing may be "capable" either because it can be acted on or because something else can be acted on by it), but in a sense the potencies are different. For the one is in the thing acted on; it is because it contains a certain motive principle, and because even the matter is a motive principle, that the thing acted on is acted on, one thing by one, another by another; for that which is oily is inflammable, and that which yields in a particular way can be crushed; and similarly in all other cases. But the other potency is in the agent, e.g. heat and the art of building are present, one in that which can produce heat and the other in the man who can build. And so in so far as a thing is an organic unity, it cannot be acted on by itself; for it is one and not two different things' (tr. Ross; cf. Reid's *Works*², ed. Hamilton, p. 519, note).

Aristotle also refers to the use of the term in geometry, and says that it is due to analogy.

The foregoing quotations contain not only the germ of all that has been subsequently written, but also anticipations of what is suggested by the most recent results of science.

The language of Hobbes is not essentially different from that of Aristotle. Hobbes reduces all change to motion. Hence power is confined by Hobbes to what Aristotle regards as only one sense of the word 'power.'

'All mutation,' says Hobbes, 'consists in motion only'; 'there can be no cause of motion, except in a body contiguous and moved'; 'motion is not resisted by rest, but by contrary motion' (*English Works*, ed. Molesworth, i. 123-125).

Hobbes continues:

'Whosoever any agent has all those accidents which are necessarily requisite for the production of some effect in the patient, then we say that agent has power to produce that effect, if it be applied to a patient. . . . The same accidents, which constitute the efficient cause, constitute also the power of the agent. Wherefore the power of the agent and the efficient cause are the same thing. But they are considered with this difference, that cause is so called in respect of the effect already produced, and power in respect of the same effect to be produced hereafter; so that cause respects the past, power the future time. Also the power of the agent is that which is commonly called active power.' Power of the patient, passive power, material cause are, he says, the same thing, 'but with this different consideration, that in cause the past time, and in power the future, is respected.' The power of the agent and patient together he styles 'entire or plenary power.' It is the same thing with entire cause—'the aggregate of all the accidents, as well in the agent as in the patient, which are requisite for the production of the effect' (ib. i. 127 f.).

The language of Hobbes reminds us of J. S. Mill, who regards the cause as the sum total of conditions, positive and negative taken together, which being realized, the consequent invariably follows. To Mill, however, the distinction of agent and patient is illusory, whereas Hobbes follows closely the Aristotelian analysis given above. They are two aspects necessarily united.

'These powers . . . are but conditional, namely, the agent has power, if it be applied to a patient; and the patient has power, if it be applied to an agent; otherwise neither of them have power, nor can the accidents, which are in them severally, be properly called powers; nor any action be said to be possible for the power of the agent alone or of the patient alone' (ib. i. 129).

Neither in Hobbes nor in Mill do we find any satisfactory account of power as a subjective phenomenon. This question was first raised by Locke, who uses language, in some respects, similar to that of Hobbes, but not so objective. He says:

'Power also is another of those simple ideas which we receive from sensation and reflection: for, observing in ourselves that we can at pleasure move several parts of our bodies which were at rest; the effects, also, that natural bodies are able to produce in one another, occurring every moment to our senses, we both these ways get the idea of power' (*Essay*, II. vii. 8).

'This Idea how got.—The mind being every day informed by the senses of the alteration of those simple ideas it observes in things without, and taking notice how one comes to an end, and ceases to be, and another begins to exist which was not before; reflecting also on what passes within itself, and observing a constant change of its ideas, sometimes by the impression of outward objects on the senses, and sometimes by the determination of its own choice; and concluding from what it has so constantly observed to have been, that the like changes will for the future be made in the same things, by like agents, and by the like ways; considers in one thing the possibility of having

any of its simple ideas changed, and in another the possibility of making that change: and so comes by that idea which we call power. . . . The power we consider is in reference to the change of perceivable ideas; for we cannot observe any alteration to be made in, or operation upon, anything, but by the observable change of its sensible ideas; nor conceive any alteration to be made, but by conceiving a change of some of its ideas' (ib. II. xxi. 1).

In these sentences we come face to face with the psychological and epistemological problems which, in modern times, circle round the meaning of the term. Apart from these questions, power is to Locke, as to Aristotle and Hobbes, active and passive.

'Power, thus considered, is two-fold; viz., as able to make, or able to receive, any change: the one may be called active, and the other passive power' (ib. II. xxi. 2).

He suggests that matter may be wholly destitute of active power, as its author, God, is truly above all passive power, and that created spirits alone are capable of both active and passive power. He also suggests that the clearest idea of active power is got from spirit, from reflexion on the operations of our minds, from which only we have the ideas of thinking and of the beginning of motion. These ideas of Locke lead inevitably to the question as to the relation that the power of which we seem to be conscious to control our own thoughts and actions has to power considered as existing in the external world.

It is not unusual to evade the problems thus raised by Locke by distinguishing different senses of the word 'power'; by saying that, when we use 'power' in the psychological sense, as an apparent phenomenon of our inner consciousness, the sense is quite different from and unrelated to such uses of 'power' as are exemplified when the 'mechanical powers' are spoken of, or 'power' as the rate of doing work per unit of time, or, again, as implied in the phrase 'potential energy'; or in the theory of potential introduced into electrical science by G. Green in 1828. The question as to the total discrimination of these different senses from the psychological cannot be determined *a priori*, by mere introspection. We, therefore, propose to consider: (1) the psychological data from which the concept of power is derived; (2) the scientific uses of the term; (3) the metaphysical connexion (if any) which exists between the psychological concept and the scientific use; and (4) the epistemological value of the concept.

I. The psychological origin.—The passage quoted above from Locke was early taken exception to by Hume.

'I believe,' says Hume, 'the most general and most popular explication of this matter, is to say, that finding from experience, that there are several new productions in matter, such as the motions and variations of body, and concluding that there must somewhere be a power capable of producing them, we arrive at last by this reasoning at the idea of power and efficacy. But to be convinc'd that this explication is more popular than philosophical, we need but reflect on two very obvious principles. First, That reason alone can never give rise to any original idea, and secondly, that reason, as distinguish'd from experience, can never make us conclude, that a cause or productive quality is absolutely requisite to every beginning of existence' (*A Treatise of Human Nature*, ed. T. H. Green and T. H. Grose, new ed., London, 1909, i. 452).

In the *Inquiry concerning Human Understanding*, he says:

'From the first appearance of an object, we never can conjecture what effect will result from it. But were the power or energy of any cause discoverable by the mind, we could foresee the effect, even without experience; and might, at first, pronounce with certainty concerning it, by mere dint of thought and reasoning' (sect. vii. pt. 1).

Hume then inquires whether this idea is derived from reflexion on the operations of our minds, and is copied from any internal impression—e.g., an act of volition. His conclusion is:

'The motion of our body follows upon the command of our will. Of this we are every moment conscious. But the means, by which this is effected; the energy, by which the will performs so extraordinary an operation; of this we are so far from being

immediately conscious, that it must for ever escape our most diligent enquiry' (ib.). His general conclusion is: 'All events seem entirely loose and separate. One event follows another; but we never can observe any tie between them. They seem *conjoined*, but never *connected*. And as we can have no idea of anything which never appeared to our outward sense or inward sentiment, the necessary conclusion *seems* to be that we have no idea of connexion or power at all, and that these words are absolutely without any meaning, when employed either in philosophical reasonings or common life' (ib. sect. vii. pt. 2).

These views regarding power were accepted and repeated by Thomas Brown.

'We give the name of *cause* to the object which we believe to be the invariable antecedent of a particular change; we give the name of *effect*, reciprocally to that invariable consequent; and the relation itself, when considered abstractly, we denominate *power* in the object that is the invariable antecedent,—*susceptibility* in the object that exhibits, in its change, the invariable consequent. We say of fire, that it has the *power* of melting metals, and of metals that they are *susceptible* of fusion by fire,—but, in all this variety of words, we mean nothing more than our belief, that when a solid metal is subjected for a certain time to the application of a strong heat, it will begin afterwards to exist in that different state which is termed liquidity,—that, in all past time, in the same circumstances, it would have exhibited the same change,—and that it will continue to do so in the same circumstances in all future time' (*Inquiry into the Relation of Cause and Effect*³, p. 15 f.).

The analysis of Hume and Brown reduces the idea of power, efficiency, necessary connexion, considered as a subjective phenomenon, to an illusion.

'In the sequence of events called Cause and Effect,' says James Mill, 'men were not contented with the Cause and the Effect; they imagined a third thing, called Force or Power, which was not the cause, but something emanating from the Cause, and the true and immediate cause of the Effect' (*Analysis of the Phenomena of the Human Mind*, new ed., London, 1869, ii. 328).

In opposition to Hume's opinion, Reid held that reason might give rise to a new original idea; in what way it is difficult to say.

'It is not easy to say in what way we first get the notion or idea of *power*. It is neither an object of sense nor of consciousness. We see events, one succeeding another; but we see not the power by which they are produced. We are conscious of the operations of our minds; but power is not an operation of mind. If we had no notions but such as are furnished by the external senses, and by consciousness, it seems to be impossible that we should ever have any conception of power' (*Works*², ed. Hamilton, p. 446). 'Our conception of power is relative to its exertions or effects' (p. 514). From the consciousness of our own activity, seems to be derived not only the clearest, but the only conception we can form of activity, or the exertion of active power' (p. 523).

The view expressed in these and other passages, and already suggested by Locke, that the conception of active power is derived solely from the consciousness of our own exertions, occurs frequently in subsequent philosophy. In its most significant form it seeks to derive the notion of power from the consciousness of our voluntary activities and, in particular, our motor energies. This view had been already combated by Hume (*Inquiry*, sect. vii.), and his arguments are repeated by Hamilton (*Lectures on Metaphysics*, Edinburgh and London, 1859, ii. 391 f., Reid's *Works*², p. 866 f.). To escape the force of Hume's arguments, H. L. Mansel (*Prolegomena Logica*², Oxford, 1860, p. 151, *Metaphysics*², Edinburgh, 1875, p. 269) and V. Cousin (*Fragments philosophiques*, Paris, 1826, preface) were led to seek an immediate intuition of power in mind as determining its own modifications—in Cousin's language, in a causation wholly spiritual. Quite recently an attempt has been made to prove experimentally such purely mental determination. Such mental determination seems equivalent to the fiat of William James (*Principles of Psychology*, London, 1905, ii. 561). But, just in so far as the element of effort is eliminated, the experience becomes correspondingly unfruitful as the source of the origin of our notion of power.

If, however, the sense of effort, and in particular of muscular effort, is retained as an integral part of our volitional consciousness, we encounter a grave difficulty. The experiment of D. Ferrier

(*Functions of the Brain*², London, 1886, p. 386) seems to show that the consciousness of effort is an afferent, not an efferent, sensation, and dependent in every case upon some muscular contraction. Ferrier's argument was powerfully pressed by Hugo Münsterberg, in *Die Willenshandlung* (Freiburg, 1888, pp. 73, 82, quoted by James, ii. 505); nor does it seem possible now to maintain the view formerly held by Hamilton, Bain, and Wundt, that we have a direct consciousness of effort, or energy expended, accompanying the innervation of the motor nerves. Muscular afferent sensations are as subjective as those of brightness, noise, and smell. Thus P. G. Tait (*Dynamics*, London, 1885, p. 354) regards the idea of force as corresponding to some process going on outside us, but quite different from the sensation which suggests it. If this view is sustained, a philosophy like that of Maine de Biran or Schopenhauer, which seeks to interpret the universe in analogy with will force, is excluded.

In his *Metaphysic* Lotze says:

'These effects or actions [of things], which proceed from them and are sense-stimuli to us, are no doubt only motions and themselves neither red nor sweet; but what is there to prevent our supposing that, by acting through our nerves, they make that same redness or sweetness arise, as our sensation, in our souls, which also attaches as a quality to the things themselves? Such a process would be no more wonderful than the performances of the telephone, which receives waves of sound, propagates them in a form of motion quite different, and in the end conducts them to the ear retransformed into waves of sound' (Eng. tr.², Oxford, 1887, ii. 204 f.).

The objectivity of the qualities of sensation has been maintained by J. H. von Kirchmann (*Katechismus der Philosophie*, Leipzig, 1877, p. 103), H. Schwarz (*Das Wahrnehmungsproblem*, Leipzig, 1892, p. 76), and apparently by Bergson (*Matter and Memory*, Eng. tr., London, 1911, p. 49 ff.). Wundt long ago recognized that his argument against the specific energies of the nerves, according to which the quality of sensation does not belong originally to the nerves, but is due to the action upon them of the normal stimulus, involves as a consequence that the sensation is brought nearer to the stimulus and made dependent upon it. These tendencies in modern writers show that it may still be possible to interpret the feeling of effort or force objectively, even though it be mediated by a sensory, not a motor, nerve. The objectivity of our perception of force does not really depend upon whether the nerve is incoming or outgoing, but depends upon the nature of the impression which is thereby conveyed. Here a difference presents itself. In the case of other impressions the phenomenon disclosed to consciousness seems purely subjective. In the perception of force we are confronted with a transeunt phenomenon. At whatever point the transition into sensuous consciousness takes place, the nature of force is to exist and to be perceived only as coming from without, just as we feel at the point of the pen the resistance of the paper over which it moves. This is what Hamilton means by the 'quasi-primary phasis' of the secundo-primary qualities (Reid's *Works*², note D, §2). His analysis of the apprehension is correct, even if he be wrong in assigning it to a locomotive faculty instead of to the muscular sense. It is also implied in Reid's 'relative' notion.

2. The scientific use of 'power.'—If a force is applied to overcome a resistance, no matter at what time-rate the force acts, the force so applied has been called the 'power,' and that independently of any mechanical advantage gained. Power in this sense is now called the effort.

When, by use of a simple machine, mechanical advantage is gained, the instrumentality through which this advantage is obtained has been called a 'power,' as in the phrase 'the mechanical powers,'

applied to the lever, the wheel and axle, the inclined plane, the wedge, the movable pulley, and the screw. Such a machine is not a force or power in itself, but only a contrivance for concentrating force on a particular resistance. Since the work done by a simple machine may be taken as equal to that done upon it, it is not itself a power in the sense of doing work.

Power is the rate of doing work, or the quantity of work the agent can perform in a given time.

If it can be shown that the power, or *actio agentis*, of a material agent stands to the object upon which it acts in a relation analogous to that which governs the relations of the material and spiritual generally, we shall have a confirmation of the foregoing theory of the perception of force.

3. **Metaphysical connexion of the subjective and objective aspects of power.**—The well-known law of Fechner, that the increase of sensation is as the logarithm of the stimulus, is commonly discussed as a purely phenomenal law—a formula to which the facts of our sensitive consciousness rather curiously happen to conform. As such it has been regarded rather contemptuously by James. In recent years attempts have been made to extend it not only to the organic, but also to the inorganic, world. To Fechner himself it was something infinitely more than such a mere phenomenal rule. It was no less than a fundamental law, governing the relations of the physical to the psychical, and, conversely, of the psychical to the physical. It was closely connected with Fechner's psycho-physical parallelism. Fechner's doctrine was quite different from ordinary psycho-physical parallelism. The latter endeavours to find for each mental state, and each fragment thereof, its underlying physical equivalent (e.g., Münsterberg, *Aufgaben und Methoden der Psychologie*, Leipzig, 1891). Fechner, on the other hand, saw clearly that to a single mental unity a distinguishable material multiplicity may correspond (*Zend-Avesta*², Hamburg, 1906, ii. 141). This is quite in accordance with his law. Here it is only necessary to call attention to the fact that, if in the physical world energy increases as the square of the velocity, in the psychic world the resistance to the stimulus increases by a similar law.

4. **Epistemological conclusion.**—If there is thus in the relations of the spiritual and physical something like that which holds between potential energy, depending upon configuration, and movement, something analogous to the strain implied in that which on other grounds has been called 'potential' (J. Clerk Maxwell, *Theory of Heat*, new ed., London, 1894, p. 91), it is a reasonable inference to say that it is just the very nature of this power which as 'quasi-primary phasis' we experience in our muscular activities, and that the secundo-primary qualities are experienced in an objective sense.

GEORGE J. STOKES.

POWER OF THE KEYS.—This term is derived from the promise of our Lord to St. Peter: 'I will give unto thee the keys of the kingdom of heaven' (Mt 16¹⁹). In Jewish literature the key is symbolical of authority (cf. Is 22²², Rev 1⁸ 3⁷; G. Dalman, *Words of Jesus*, Eng. tr., Edinburgh, 1902, p. 213). Here the expression contains a manifest reference to Is 22²². In that passage the prophet announces that 'the key of the house of David' is to be taken from the unworthy Shebna

and given to Eliakim; in other words, the latter is to be appointed the king's minister, and to govern the kingdom in his name. 'The Kingdom of Heaven' is the term ordinarily employed by our Lord to signify the Church which He had come on earth to found—the organized, theocratic society of those who accepted His claims. Thus the promise, it would seem, can have but one meaning: Peter is to be Christ's vicegerent to rule the Church on His behalf. It is true that a few recent writers have sought to give another sense to the passage by connecting it with our Lord's words to the scribes: 'Ye have taken away the key of knowledge' (Lk 11⁵²). They suppose that scribes were instituted to office by the ceremonial delivery of a key, and conclude that the words addressed to Peter signify no more than that he is a scribe fully instructed unto the Kingdom of Heaven. The contention is devoid of all probability, for there is no evidence for any such ceremony of institution. The natural interpretation of the expression as employed in Lk 11 is simply that the scribes had prevented all access to the knowledge of the way of salvation (cf. A. Plummer, 'St. Luke'², in *ICC*, Edinburgh, 1898, p. 314).

The nature of the power conferred on St. Peter is indicated by what follows: 'Whatsoever thou shalt bind on earth shall be bound in heaven; and whatsoever thou shalt loose on earth shall be loosed in heaven.' It seems generally admitted that the power of binding and loosing (*q.v.*) signifies primarily the gift of legislative authority. In theological literature, however, from Patristic times to the present day, the term has commonly been employed to denote the judicial power exercised by the Church in regard to the forgiveness of sins. This use is not without justification. In every State supreme legislative authority carries with it supreme judicial authority; the one is the corollary of the other. Hence, when Christ constituted St. Peter and subsequently (Mt 18¹⁸) the whole apostolic college legislators of His kingdom, He thereby made them likewise its judges. But the judicial power which is proper to the Church must in the nature of things differ very greatly from that exercised by a civil government. The function of the State is simply to secure the temporal welfare of its citizens; hence it takes cognizance only of external acts and not of the internal motive ('De internis non judicat prætor'). The Church, on the other hand, exists for the salvation of souls. From this it may be concluded that in her judicial capacity she must deal with sin as such, and must be authorized to remit it or refuse remission as the case may demand. This power, as the traditional theology of the Church has always taught, was granted in express terms on a subsequent occasion (Jn 20²³).

In Patristic literature we find two interpretations of the promise of the keys. Neither of the two, however, gives us quite the full force of the Hebrew metaphor. Thus several of the fathers, while recognizing that St. Peter is the recipient of an exceptional favour marking him out as the chief of the Twelve, understand the privilege as having reference not to the Church militant but to the celestial Kingdom. Our Lord, they hold, foretold that it should be Peter's office to receive the souls of the just into beatitude and exclude the unworthy, and by this prerogative constituted him the prince of the apostles. St. Asterius of Amasea writes as follows:

'He receives by this promise the keys of the kingdom, and becomes lord of the gates thereof, so as to open them to whom he will, and to close them to those against whom they should justly be shut' (*Hom. viii. in SS. Pet. et Paul.* [PG xl. 280]).

St. Cyril of Jerusalem speaks of 'the Prince of the Apostles, the key-bearer of the kingdom of heaven'

(*Cat. xvii., de Spiritu Sancto*, ii. [PG xxxiii. 997]; cf. Basil, *de Iudicio Dei*, 7 [PG xxxi. 671]; Chrysostom, *Hom. in St. Ignat.* n. 4 [PG I. 591]; Eph. Syrus, *Serm. Syr.* lvi. [tom. ii. p. 559]).

In another and much the most frequent class of passages the promise is understood of the power of absolution alone. To men thoroughly familiar with the institution of penance the metaphor of the keys seemed intended to signify that to Peter was granted authority to forgive sins and thereby to open or bar the road which alone gives access to heaven. This application, as we have explained above, is admissible, though it is far from exhausting the full significance of Christ's words. But some at least of those who adopted it failed to see that the metaphor implied the gift of supreme authority in general, and restricted its meaning entirely to the sacrament of penance. Thus we find Augustine so completely identifying the keys with the power of absolution that he expressly denies that the gift was personal to Peter. It was bestowed, he says, no less on all the Twelve, and it is in virtue of this gift that the Church, wherever it is found, exercises the right to forgive sins (*Serm.* cxlix. 7 [PL xxxviii. 802]; for other examples see Ambros. *de Pen.* i. 33 [PL xvi. 496]; August. *Serm.* cccxii. 3 [PL xxxix. 1711]; Hilary, in *Matt.* xvi. 7 [PL ix. 1010]; Origen, in *Matt.* xii. 14 [PG xiii. 1014]; *Conc. Eccl. Eph.* Act iii. [Hardouin, i. 1477]). This explanation of the passage leads naturally to the question why, if the power conferred belonged to all the apostles, the keys were committed to Peter alone. To this it is replied that thereby is signalized Peter's pre-eminence among the apostles (Origen, in *Matt.* xiii. 31 [PG xiii. 1179]; Hilary, *loc. cit.*; August. *Serm.* cccxv. 2 [PL xxxviii. 1349]). Stress is further laid on the consideration that in giving the keys to the chief apostle alone Christ designed to make it clear that the Church is in her essence one (August. *loc. cit.*; Optatus, *de Schismate Donat.* vii. 3 [PL xi. 1087]).

The Scholastic theologians of the 12th and 13th centuries, when they treat of the sacrament of penance, devote a special section to 'de Clavibus,' in which they examine the nature of the power of absolution (Hugo Victorinus, *Summa Sententiarum*, vi. 14 [PL clxxvi. 152]; Rolandus, *Sententia*, p. 264 [ed. A. M. Gietl, Freiburg im Br., 1891]; Petrus Lombardus, *Lib. Sent.* iv. 18 [PL xcii. 885]; Petrus Pictaviensis, *Sent.* iii. 16 [PL cxi. 1073], etc.). There are, they say, two keys, viz. *discretio* and *potestas*—the *clavis scientiæ* and the *clavis potentiæ*. The original source of this curious distinction is apparently the *Glossa interlinearis* of Anselm of Laon, where it occurs in the comment on Mt 16 (PL clxii. 1396). The idea of a *clavis scientiæ* was most probably connected with Lk 11³². To the objection that many who are not priests possess *scientia* Thomas Aquinas replies that the *clavis scientiæ* is not knowledge as such, but the authority to inquire judicially previously to pronouncing judgment (*Summa Theol.* Suppl. qu. 17, art. 3, ad 2). It appears, however, from a passage in a decree of John XXII. which deals incidentally with this point that some theologians at least rejected this distinction of the *clavis scientiæ* and *clavis potentiæ* as an artificial refinement (*Corpus Iuris Canonici: Extravagantes*, xiv. 5, 'Quia Quorundam').

Towards the end of the 13th cent. a new interpretation makes its appearance. At this period the struggle between the empire and the papacy was at its height, and on either side the pen was hardly less active than the sword. The imperial legists claimed for the emperor complete supremacy over the ecclesiastical order; and the canonists replied by maintaining that the pope as Christ's

vicar possessed direct authority over secular princes, that it lay with him to appoint them, and, if need be, to depose them. Christ's gift of the keys to Peter was employed to support this contention. It was urged that the gift was not of one key alone, but of two; and that this symbolized Peter's supremacy alike over spirituals and over temporals. The first, it would seem, to employ this argument was the famous canonist Henry of Segusio (Hostiensis) († 1274), who writes:

'Ideo etiam Dominus dominorum non sine causa dixit Petro: Et tibi dabo claves regni coelorum. Et nota, non dixit clavem sed claves, scilicet duas, unam quae claudat et aperiat, liget et solvat quoad spiritualia; aliam quae utatur quoad temporalia' (*Summa Aurea*, lib. iv. tit. 'Qui filii sint legitimi,' n. 10).

The same claim was made in the following century by Augustinus Triumphus († 1328) and Alvarus Pelagius († 1352) (*de Planctu Ecclesie*, 13). It is perhaps not to be wondered at that, at a period when Marsiglio of Padua and John of Jandun were advocating their revolutionary theories, the controversialists of the opposite school should have fallen into exaggerations on their side. On the other hand, the theologians who denied that the pope possessed direct authority over secular princes called attention to the fact that it was the keys of the Kingdom of heaven, not those of an earthly kingdom, that Christ gave to His apostle (cf. Cornelius a Lapide, in *loc.*).

Since the 16th cent. Roman Catholic theologians appear to be practically unanimous in their understanding of the passage. By the gift of the keys, they hold, is signified ecclesiastical authority in its widest scope. This authority is multiple, and embraces (1) the power of order, exercised in regard to sacrifice and sacrament, (2) the power to teach authoritatively the revealed word of God, and (3) the power of jurisdiction, in virtue of which the Church rules and legislates for the faithful. This authority was conferred in its fullness on Peter and his successors. It was, however, to be shared by others in due measure, though always in dependence on the chief pastor. Thus the pope is the supreme ruler and teacher of the Church. Yet all bishops and priests possess the power of order; and they receive in due degree authority to teach, and in most cases some measure of jurisdiction. In absolving from sin the Church is exercising the powers of order and of jurisdiction. This is, however, but one aspect of the gift signified under the metaphor of the keys of the Kingdom of heaven.

PRADHĀNA.—Pradhāna, properly 'fundamental substance,' is a Sanskrit term employed in the Sāṅkhya (q.v.) philosophy as a synonym for *prakṛti*, to denote the primeval substance. Since in all material developments this primeval substance retains a place though transformed, and the doctrine of the Sāṅkhya expressly asserts the identity of the material cause and the product, the words *pradhāna* and *prakṛti* in the Sāṅkhya texts not seldom denote also the matter which is the result of evolution, i.e. the material universe in general.

R. GARBE.

PRAGMATISM.—Pragmatism has come into use since 1898, when the word first occurred in William James's pamphlet on *Philosophical Conceptions and Practical Results*, as the technical name for a tendency which can be traced throughout the history of philosophy, but has only of late grown self-conscious, systematic, and general. The term had been coined twenty years before by

C. S. Peirce (without regard to the existing, but obsolescent, word 'pragmatic') in order to express the scientific need of testing the meaning and value of our conceptions and terms by their use, i.e. by applying them to the things which they were supposed to stand for, instead of allowing their own apparent self-evidence or intuitive certainty to attest their truth without more ado. He insisted, therefore, that the truth (and indeed the meaning) of every conception depended on the difference which it made in a scientific situation and on the 'consequences' to which its assumption led, and systematically denied that it could be determined in any *a priori* way. Thus every 'truth' became a question of empirical observation and scientific experiment. This critical method was, however, widely understood to mean practical consequences in the way of action alone, and so pragmatism was regarded as a sort of 'practicalism,' and as a disparagement of 'theoretic' truth which was a direct insult to all who cultivated the latter. But, though many pragmatists emphasized the importance of bringing fine-spun theorizing to some sort of definite test, and showed that in point of fact practical consequences frequently formed such a test, this interpretation of pragmatism is untenable. It is not correct etymologically, for the word is derived from *πράγματα* ('things') not from *πράξις* ('action'). It is seriously misleading scientifically, unless it is fully understood that 'practical' is taken by pragmatism in a very wide sense, which includes what is ordinarily called the 'theoretic,' for which 'in practice' means 'in use for any purpose,' for which every thought is essentially an act, and the test of a thought may be another thought to which it leads in some psychological connexion. Pragmatism is really a denial of the absoluteness or ultimateness of the traditional antithesis between 'theory' and 'practice,' and relies for its justification on the fact that everything that we think and do has first to be willed, and has ultimately some biological value as a vital adaptation, successful or the reverse. The controversial significance of this critical and empirical attitude towards doctrines and beliefs lies, of course, in the wide prevalence of credulity and dogmatism, which cannot bear questioning. It is evident, moreover, that this pragmatist questioning may arise in various contexts and in various ways, each of which will constitute an approach to pragmatism which can be used independently of the rest. Hence what is really a very simple method is apt to assume the appearance of a perplexing complexity of doctrines. It will be best, therefore, first to survey the problems that most obviously demand pragmatic treatment in ordinary life and in the various sciences, in order to appreciate the solutions which pragmatism offers, remembering always that this treatment is ultimately logical, i.e. if 'logic' be taken in a sufficiently wide sense.

1. The problems leading to pragmatism.—(1) Common sense is quite aware that the world is full of deceptive appearances, that things are not all what they seem, that not everything is real or true that claims to be, that not all 'facts' are facts, that not every form of words has a meaning, that much which passes for profundity is unmeaning nonsense, that, though all things are real in some sense (seeing that they can be talked about), they are very frequently not so in the sense in which they profess to be; in short, that the intellectual world is pervaded and perverted by errors, lies, fictions, and illusions. It is recognized, therefore, on quite a simple level of reflexion that precautions must be taken, and the needs of (a) determining the meaning, and (b) testing the truth, of assertions make themselves felt. A method is

demanded for distinguishing the meaningful from the meaningless, the true from the false, the real from the unreal. It is also extensively known that our ability to form conceptions and to lay down definitions is not decisive of their real value and in no way ensures that they will apply to reality in a successful and fruitful way or that reality will conform to them.

(2) The everyday problems of practical knowing reappear in logic and the theory of knowledge as 'the problem of error' and the questions about the definition and 'criterion' of truth, the 'import' of propositions, the 'reference to reality' of judgments, the formal 'validity' of proof, and the absoluteness or relativity of knowledge. But their treatment has always been vague and inadequate, because it has not been perceived that they are all concerned with one and the same central difficulty of knowledge and with the problem of logical values.

(3) Similarly, logic has never succeeded in determining its relations to psychology in a comprehensive and consistent way. It has professed to be somehow 'independent' of psychology and to be entitled to regulate the course of actual thought; yet it could never quite deny that all logical processes occur in a psychological setting, and are derived from the cognitive operations of human minds. These, however, are found to differ widely from the ideas of pure thought which logic constructs and contemplates. It appears that all actual thought is full of 'non-intellectual' factors; it is active, volitional, emotional, purposive, selective, and its understanding presupposes a study of the effects of interest, attention, desire, bias, satisfaction. But, while the actual thought is thus dependent on, and expressive of, its thinker's total personality, its logical representative has hitherto been permitted to abstract from personality. Hence there arises an acute problem of how to correlate the theories of logic with the facts of human psychology, and to determine what effect the actual nature of thought should have on its 'ideal.' For, even though this effect may be considered wholly deleterious, it is ineradicable; all truths are, and must be, on one side matters of belief. Moreover, the discrepancy between the facts and the theories of knowing is hardly less marked within the field of psychology proper. Nearly all psychological theories still abstract from the biological and functional import of the psychic processes which they describe and classify; their descriptions are in terms of 'faculties' and 'elements,' which are creatures of abstract analysis and not objects of immediate experience. They consequently overlook that all mental functioning must be understood as a reaction of the total organism, that beliefs are essentially rules for action, and that valuations occur as the stimuli to thought as well as to action.

(4) This occurrence of valuations connects pragmatism with the one science that has hitherto professed concern with value, judgments, viz. ethics. Pragmatism notices (a) that all the different kinds of value, ethical, æsthetic, logical, and economic, have in common a relativity, to their several purposes in the first place, and ultimately to the final end of action, 'the good.' They are all means to intrinsically valuable ends ('goods'), and as such valuable or 'useful.' It notices (b) that any 'truth' asserted about any 'real' is a latent value—both because it is the achievement of a purpose and because it is selected from a number of competitors and preferred as the *best* of them. Similarly, whatever is recognized as 'real' is logically in a position of superiority to other claimants to reality. Thus the 'true' and the 'real' have to be viewed as forms of the 'good,' and as satisfactions of desire. It is evident, however, that goods,

ends, and values may come into conflict with one another, and that intricate problems arise when we ask how much beauty or moral goodness will make up for lack of scientific evidence for a belief, or how intolerable a 'truth' may be before it is rejected as incredible.

(5) Such problems have long agitated the philosophy of religion and familiarized it with the antithesis of 'knowledge' and 'faith.' Pragmatism notes, indeed, that most men, especially when excited, regard the unsupported satisfactoriness of a belief, and their mere 'will to believe' it, as sufficient proof of its truth; but it is not true that it approves of this; for it dispenses with verification no more here than elsewhere, and observes that religious beliefs also are in fact tested, though not perhaps as systematically as they might be, by their 'working.' Still it does not simply dismiss 'faith' as a source of error alone, with the traditional rationalism. For the faith-attitude or 'will to believe' appears to it to have important cognitive functions. It may be, psychologically, a necessary condition of the discovery, not only of religious, but also of scientific, truth. It is, moreover, latent in the very notion of 'knowledge.' For the 'principles' which every system of knowledge assumes are not to be understood either as mere generalizations from experience or as sheer necessities of thought; they seem to be intelligible only as 'postulates' which are adopted by an act of faith, before they are 'proved' by the subsequent working of the science. Nor, on the other hand, does it seem proper to regard a belief as established merely because it evokes a strong will to believe. The truth is that the religious questions as to the sort and amount of evidence required by a postulate of faith are peculiarly difficult.

2. The pragmatist handling of these problems.

—(1) *The problem of meaning.*—Pragmatism contends that alleged meanings, to be tested, must be applied or used, and thereupon valued or revalued according as they work well or ill. Of all the formulæ for defining pragmatism none is better than 'meaning depends on application,' which condemns the absolute distinction between theory and practice and the entire separation between 'pure' and 'applied' science (e.g. in mathematics). Thus inapplicable notions (like unknowable and absolute truths and realities) are declared to be unmeaning. Moreover, if two notions do not differ in their application, the distinction between them is said to be unmeaning; they are really identical and differ only in words—differences that make no difference are not worth making.

(2) *The problem of truth.*—Applying the same principle to alleged truths ('truth-claims'), we see that, since all assertions formally claim to be true, and mostly are not, truth-claim or formal truth is not what common sense and science mean by 'truth,' and that all claims have to be tested by their applications or 'consequences.' If they work well, their claim to truth-value is confirmed; if ill, it is doubted or rejected as false or erroneous. Hence the pragmatist formulæ, 'All truths are useful' and 'Genuine truth must work,' are corollaries from this method of testing truth-claims. But it should be observed that these formulæ are not formal definitions and so must not be treated as convertible; pragmatism does not affirm that whatever is useful or works is true. To assert this would be to ignore the existence of lies, fictions, errors, methodological assumptions, and other varieties of truth-claim, which are not generally called truths, and are the very things which pragmatism prides itself on distinguishing from genuine truths. It should be noted, further, that the question what sort of 'working' is relevant to the truth of a claim is relative to the inquiry, and is

often disputable. In general it must be left to the experts in the various subjects concerned. But in all subjects truth always remains relative to the state of knowledge, because only the consequences known up to date can be used to test a truth-claim. Hence no amount of successful working ever leads to the complete verification of any truth, or renders it 'absolute'; further confirmation is always possible and conceivable. But this denial that any truths are absolute and immutable is quite in accord with the practice of the sciences; it leaves room for literally infinite improvement in the reigning 'truths,' and explains their continual changes. For a truth remains true only so long as it is the best to be had; it becomes false as soon as it can be bettered.

(3) *The problem of truth and error* is solved by regarding both as values, positive and negative, i.e. as success and failure relatively to a cognitive purpose. A *bona fide* truth-claim is always supposed by its maker to be as true as he can make it at the time; but it may nevertheless fail subsequently and be declared false, nor is its formal truth-claim any protection against this fate. Consequently there can be (4) *no criterion of truth* which is formal or absolute, nor (5) *any formally valid proof* which renders its conclusion certain as a fact, in advance of observation. Successful verification never amounts to 'valid proof,' because it involves the formal defect of 'affirming the consequent.' The same conclusion follows from the formal defects of syllogistic reasoning. It is impossible to get any guarantee of the absolute truth of the premisses used, because these cannot be truer than the sciences can make them, and because 'self-evident' intuitions have always to be tested. Moreover, as Alfred Sidgwick was the first to point out, the 'truth' of a premiss is ambiguous. A premiss may be true in general and yet false for the special purpose in hand. When, therefore, it is used, a false conclusion is deduced. After the event this failure may be described as a 'fallacy of accident,' or as an 'ambiguity in the middle term'; but the potential flaw was imperceptible before, and could not be guarded against. Hence we can never know whether a formally valid deduction will be true in fact, nor can we be absolutely assured in advance that an apparent 'case' of a rule, 'law,' or 'universal' will turn out to be one in actual fact.

As regards the psychological aspects of logic, pragmatism demands especially a recognition of *the relation of thinking (6) to personality and (7) to doubt.* Emphasis on the former has led to the systematic extension of pragmatism called humanism (q.v.), but it is evident that in logical theory also the traditional abstraction from the personal context and particular occasion of assertions must be called in question. In particular, the relation of meaning to purpose and context, the psychological impossibility of asserting truths which are thought to be useless, the selectiveness of human thought, the importance of interest in starting and of attention and relevance in conducting reasoning, and the massive, and still more the subtle, effects of bias and passion in distorting it, may be mentioned as implications of personality which have far-reaching (and unexplored) logical effects. The dependence of thought upon the stimulus of doubt has been specially elaborated by John Dewey, who has emphasized the need of a continual reconstruction of beliefs and the experimental nature of all judgment. (8) Dewey also emphasizes *the biological function of thinking* as an instrument of vital adaptation, and his name for pragmatism, 'instrumentalism,' conceives it as a radical application of Darwinism to psychology. But, though it is clear that pragmatism entails a

reform of psychology as well as of logic, and that it has had a certain effect in promoting psychological explanation in terms of 'function' rather than of structure; it cannot as yet claim to have led to the working out systematically of a non-intellectualistic and biological psychology.

Much the same may be said about the bearing of pragmatism on the ethical and religious values. It is certainly important, for pragmatism cannot but affect the factitious value which they have derived from their acceptance as absolute, immutable, and infallible. Actually, however, they do not seem to be able to substantiate these claims, which are contradicted by the facts of their history, and they probably stand to gain more than they could lose by being humanized and brought into closer relation with the needs of life. It is also evident that, whereas the belief that truth, reality, and good are each one, absolute, immutable, and infallible was in principle bound to lead to dissensions between men each of whom believed that because he was right the others must be wrong, the pragmatist doctrine that truth, right, and good, being relative to circumstances though not less precious on this account, may be different for different persons, and must, moreover, be developed by the continuous correction of errors and the substitution of better and more satisfactory views for worse, is highly conducive to toleration and social harmony. Even so, it does not seem probable that on questions which affect different temperaments so differently anything like universal agreement will ever be reached; but a convergence of opinion sufficient for social purposes is far more likely, if greater freedom to experiment in ways of living were granted and if men were allowed to see for themselves which methods are successful and satisfactory and which are practically sure to fail.

3. Pragmatism and absolutism.—It was natural that so distinctive and comprehensive an attitude as the pragmatic should be highly controversial, especially as it was diametrically antithetical to the intellectualistic 'idealism' which conceived the essential function of intelligence as a static contemplation of 'eternal' truths and possessed great academic vogue. The ensuing controversy has chiefly raged round the conceptions of truth and its absoluteness. The pragmatists have accused the traditional accounts of truth of being unduly intellectualistic and ultimately devoid of meaning. Thus the realistic 'correspondence' theory, which makes truth depend on an agreement with a reality which transcends the process of knowing, has no means of establishing or testing the correspondence which it alleges between the object as it is known and the object as it is *per se*. Its rival, the (idealistic) 'coherence' theory, not only has to postulate an absolutely coherent system of truth on the (inadequate) evidence of the relatively coherent systems of the sciences, and so (inadvertently) requires a voluntaristic logic to justify it, but leads to a conclusion which confutes this same premiss. For it finds that the absolutely coherent truth which it demands cannot be possessed by any human mind; it has, therefore, to allege an Absolute to be the receptacle of such absolute truth. But this is equivalent to scepticism as regards human knowledge, while it relapses into a 'correspondence' theory as regards the relation of human truth to absolute. Pragmatism, therefore, rejects both these absolutist metaphysics and the absoluteness of the truths known to man. They are all regarded as relative to man and to the condition of human knowledge for the time being, as the history of the sciences exemplifies. From this point of view also, humanism becomes an appropriate description of pragmatism.

LITERATURE.—The literature of pragmatism is still largely scattered in the philosophic periodicals, especially in *Mind* and the *Journal of Philosophy*. Its history as an avowed doctrine begins in America, with William James's lecture on *Philosophical Conceptions and Practical Results* at Berkeley, Cal., 1898. James acknowledged that he had taken the name from his friend C. S. Peirce, who had written on 'How to make our Ideas clear,' in *Popular Science Monthly*, xii. [1878] 287 ff., without using the word; but James himself had long been teaching pragmatism in everything but the name. His *Will to Believe*, New York and London, 1897, states (p. 124) the pragmatic test of truth, in a paper dating from 1881. His epoch-making *Principles of Psychology*, 2 vols., do. 1890, also is full of pragmatism, and was admittedly the chief source from which the other leaders derived it. After the movement had been baptized, James devoted himself to its popularization, in his *Pragmatism*, do. 1907, *The Meaning of Truth*, do. 1909, *A Pluralistic Universe*, do. 1909, the unfinished *Some Problems of Philosophy*, do. 1911, and the posthumous collection of *Essays in Radical Empiricism*, do. 1912. The applications of pragmatism to logic were made in America by John Dewey and his pupils, who studied especially the dependence of knowledge on doubt and on the need of reconstructing beliefs (*Studies in Logical Theory*, Chicago, 1908, *How we Think*, Boston, 1910, *The Influence of Darwin on Philosophy*, New York, 1910, *Essays in Experimental Logic*, Chicago, 1916, *Creative Intelligence*, New York, 1917). In England Alfred Sidgwick had worked out a pragmatic logic independently (*Distinction and the Criticism of Beliefs*, London, 1892, *The Use of Words in Reasoning*, do. 1901, *The Application of Logic*, do. 1910, *Elementary Logic*, Cambridge, 1914). F. C. S. Schiller's writings elaborate chiefly the epistemological, logical, and polemical sides of pragmatism, in 'Axioms as Postulates' (in *Personal Idealism*, ed. H. Sturt, London, 1902), *Humanism*, do. 1903, 1912, *Studies in Humanism*, do. 1907, 1912, the new ed. of *Riddles of the Sphinx*, do. 1910, and *Formal Logic*, do. 1912. As simple introductions, D. L. Murray, *Pragmatism*, London, 1912, and H. V. Knox, *William James*, do. 1914, may be recommended; the full history of the movement has been written in Dutch in T. B. Muller, *De Kennisleer van het Anglo-Amerikaansche Pragmatisme*, The Hague, 1913. The validity of the pragmatic argument from consequences and the connexion of truth with what 'works' was upheld (a *propos* of A. J. Ballou's *Foundations of Belief*) by A. Seth (Pringle-Pattison), *Man's Place in the Cosmos*, Edinburgh, 1897. Other pragmatist books of value are A. W. Moore, *Pragmatism and its Critics*, Chicago, 1910; I. E. Miller, *Psychology of Thinking*, New York, 1909; J. E. Boodin, *Truth and Reality*, do. 1911. For the religious applications of pragmatism cf. James, *Varieties of Religious Experience*, London and New York, 1902; G. Tyrrell, *Lex Orandi*, London, 1904, *Lex Credendi*, do. 1906; I. King, *The Development of Religion*, do. 1910.

Abroad pragmatism has great affinities with the French anti-intellectualism of Henri Bergson and his school (especially Le Roy and Wilbois) and the criticism of scientific procedure by H. Poincaré, E. Boutroux, G. Milhaud, P. Duham, etc. In Germany the same may be said of the theories of knowledge of F. W. Nietzsche (*The Will to Power*, Eng. tr., 2 vols., Edinburgh, 1907-10), H. Vaihinger (*Die Philosophie des Als Ob*, Berlin, 1911), E. Mach (*Zur Analyse der Empfindungen*, Jena, 1911), W. Ostwald, W. Jerusalem, and G. Simmel.

In the way of criticism of pragmatism nothing systematic has yet been accomplished, but the best materials may be found in B. A. W. Russell, *Philosophical Essays*, London, 1910; L. J. Walker, *Stonyhurst manual on Theories of Knowledge*, do. 1910; W. M. Keane, *Pragmatism and the Scholastic Synthesis*, Dublin, 1910; J. B. Pratt, *What is Pragmatism?*, New York, 1909; R. B. Perry, *Present Philosophical Tendencies*, do. 1912; W. Caldwell, *Pragmatism and Idealism*, London, 1913. A. Schinz, *Antipragmatism*, do. 1910, is of value as a display of the emotional reaction elicited by pragmatism, and F. H. Bradley, *Essays in Truth and Reality*, Oxford, 1914, as a record of the reluctant, but in the end decisive, concessions to which idealistic absolutism has been driven (cf. Schiller's art. in *Mind*, no. 95 [1915]). F. C. S. SCHILLER.

PRAISE.—See HYMNS, WORSHIP.

PRAKRITI.—See PRADHĀNA, SĀṆHYA, NATURE (Hindu).

PRĀNNĀTHIS.—This is the name of an Indian sect founded by Prānnāth, or Prāna-nātha, in the early part of the 18th century. He was a Kṣatriya by caste, and came from Kāthiāwār. After long wanderings over W. India he reached Bundelkhand, and settled near Pannā with a large following of disciples. During his stay there he indicated the Pannā diamond-mines to Chhatrasāla Bundelā († 1732), the local Rājā, who became his disciple.

Prānnāth founded an eclectic religion combining the best elements of Islām and Hinduism. He was the author of at least sixteen works written in a strange jargon, a mixture of Hindī, Sindhi,

Gujarātī, Arabic, and Sanskrit, by no means easy to understand. Growse ('The Sect of the Prānāthīs,' *JASB* xlviii. pt. i.) has edited and translated one of these—the *Qiyāmat-nāma*, or 'Account of the Day of Judgment.' Verses 23 ff. of this give a good idea of the attitude taken by the teacher:

'(According to the Hindūs) the Kalki (Incarnation of Viṣṇu) will make an end of the Kali Yuga. The Gospel says that Christ is the head of all, and that He will come and do justice. The Jews say that Moses is the greatest, and that all will be saved through him. All follow different customs, and each proclaims the greatness of his own master. Thus idly quarrelling they fix upon different names; but the end of all is the same, the Supreme God.'

One of the names of this Supreme God is Dhām, and hence the Prānāthīs also call themselves 'Dhāmīs.'

Prānāth disallowed the use of intoxicating drugs, tobacco, wine, meat, and unlawful visits to women, and preached peace and charity. He prohibited idolatry, but at the present day one of his books, called the *Qulzum*, is worshipped at the temple at Pannā. All else that is seen at his shrines here and elsewhere is a small bed with a turban on it, called Prānāth's seat. In 1764 Murtaza Husain saw the bed with a stool on each side of it. On one was a copy of the Qur'ān, and on the other a copy of the *Hindū Purāṇas*, with learned men of both religions in attendance ready to give profitable answers to all inquirers. Most of the replies made to him involved the unity of God.

There are only a few hundred followers of this cult in modern times. Most of them live at Pannā, and others are found in small numbers in the United Provinces and in Nēpāl. Those of Bundēlkhāṇḍ bury their dead at Pannā. Elsewhere they burn them, and carry the relics thither.

LITERATURE.—H. H. Wilson, *Sketch of the Religious Sects of the Hindūs*, in *Works*, ed. R. Rost, London, 1861-77, i. 361; F. S. Growse, 'The Sect of the Prānāthīs,' *JASB* xlviii. [1879] pt. i. p. 171, reprinted in *Mathura, a District Memoir*, Allahābād, 1880, p. 212; [Jagēshar Prasād Tiwārī], *Juvenile Hist. of Charkhātī, by a Native Servant of the State*, Benares, 1886, p. 12 ff.; C. E. Luard, *Gazetteer of Bundelkhand*, Lucknow, 1907, p. 199. Lāl Kavi, *Chhatra Prakāśa*, Calcutta, 1829, and Benares, 1903, chs. 133 ff., contains a contemporary account of Prānāth's dealings with Chhatrasāla. Murtaza Husain, Allahyār, wrote the *Hadīqat-ul-aqālim* about 1782. In this is described the author's visit to Pannā about the year 1764, with a full description of the Prānāthīs and their temple (p. 669 of the lithographed ed., Lucknow, n.d.).

G. A. GRIERSON.

PRAPATTI-MĀRGA.—*Prapatti-mārga* was a development of the Indian *Bhakti-mārga* (q.v.) which took its rise in S. India in the 13th cent. A.D. *Bhakti* connotes active love and devotion to the adorable, while *prapatti* is simply passive surrender. There are two schools of Vaiṣṇava thought in S. India. The Vadagalai, of the country north of, say, Conjeeveram, lays stress on *bhakti*, and the Tēngalai, of the country south of that town, on *prapatti*. The attitude of a follower of the Vadagalai school is compared to that of a baby monkey, which is carried about and protected by its mother, but nevertheless has to cling to her, while that of a follower of the Tēngalai school is compared to the passive surrender of a kitten carried about in its mother's mouth. They are hence nicknamed the 'monkey-school' (*markaṭa-nyāya*) and 'cat-school' (*mārjāra-nyāya*) respectively. The corresponding attitudes of the deity in these two cases are, respectively, *sa-hētuka-kṛpā*, or 'grace sought,' and *nir-hētuka-kṛpā*, or 'grace unsought,' which may be compared with the 'co-operative grace' and 'irresistible grace' of Western theologians.

A man who has adopted the *prapatti-mārga* is called a *prapanna*, 'refugee,' or 'suppliant,' and he may be either *drpṭa*, 'patient,' or *ārta*, 'impatient.' A patient suppliant is one who lives an ordinary life, straight in thought, speech, and

deed. An impatient suppliant is one whom *prapatti* has caused to loathe the ordinary life and everything connecting him with this world, and who, impatient of salvation, beseeches and besieges God to bring him to Himself.

The argument of the teachers of the *prapatti-mārga* is that the active concentration upon and adoration of God demanded by the *bhakti-mārga* is a means of salvation that tries the utmost strength and capacity of mortals, and is beyond the powers of most. Hence God in His mercy has opened the way of *prapatti*, which demands merely unconditional self-surrender, and is accessible to all, irrespective of caste, colour, or creed.

Although essentially a creed of S. India, the *prapatti-mārga* in later times found its way to the Ganges Valley in the north, and gave consolation to many pious souls afflicted by the tragedies that overwhelmed Hindostān in the 17th and 18th centuries (cf. art. CHARAN DĀSIS).

A further development of the ideas contained in this doctrine is called *āchāryābhīmāna*, 'resort to a teacher or mediator.' In this a mediator, tangibly present and accessible, conducts the soul to a God, who is to many beyond the reach of human thought. The mediator is represented as possessing two arms. With one he reaches downwards and rescues the proselyte soul from the world of sin, and with the other he reaches upwards and presents the soul, purified from earthly taint, before the throne of the Adorable.

PRĀRTHANĀ SAMĀJ.—The Prārthanā Samāj is the Brāhma Samāj (q.v.) of the Bombay Presidency, but it has noteworthy characteristics of its own.

Through the final defeat of the Marāṭhas in 1818 the Bombay Presidency, almost to its present extent, came under direct British rule, and Mountstuart Elphinstone was the first governor. Under settled government things began to improve; Western education was introduced; with John Wilson missions took a fresh start, employing new methods; and, in consequence, the Indian mind showed signs of awaking. About 1845 discussions on religious and social questions began to agitate both the Hindu and the Parsi communities in Bombay. The Hindus took action first. The earliest organization was a secret society, called the Gupta Sabhā, for the discussion of religious questions. This was followed in 1849 by a larger secret society, called the Paramahansa Sabhā, which was meant to advance liberal ideas, both social and religious, and above all to break down caste. But in 1860 the matter was made public, and the society broke up.

Yet liberal ideas were not thereby crushed, and the movement was quickened by a visit which Keshab Chandra Sen (see art. BRĀHMA SAMĀJ) paid to Bombay in 1864. Finally, in 1867, the Prārthanā Samāj (i.e. 'Prayer Society') was organized. There was no man of genius among those who founded the society, but three strong men, the brothers Pandurang and N. M. Paramanand, stood out as leaders. The chief interests of the Samāj were theistic worship and social reform; and a simple congregational organization was adopted. In 1870 two young men of character and capacity joined the movement, M. G. Ranade (later Justice Ranade) and R. G. Bhandarkar (now Sir R. G. Bhandarkar), the well-known scholar. Ranade was the most influential leader the Samāj has had, and to this day its teaching and activity bear the impress of his

spirit. The Samāj building was erected in Girgaum, Bombay, in 1874, and since then has been the chief centre of theism in the West. In 1882 another young man, now Sir N. G. Chandavarkar, became a member of the Samāj. Bhandarkar and Chandavarkar, the former in Poona, the latter in Bombay, have been by far the most prominent men in the movement since Ranade's death in 1901. There have been no groups of vigorous missionaries connected with the Samāj such as built up Brāhmaism in Bengal, but there have been individual workers who have done faithful service, notably S. P. Kelkar and V. R. Shinde; but something hinders; for no one remains long in the work. There are also a number of cultured laymen whose assistance must be valuable—K. Natarajan, V. A. Sukhtankar, N. G. Velinkar, and others.

There is also a strong Samāj in Ahmadābād in the Gujarātī country, the first leader of which was Bholanath Sarabhai. Poona, Kirkee, Kolhapur, and Sātara, all in the Marāṭha-speaking portion of the Presidency, have each a Samāj. Of the twenty-nine theistic societies in the Madras Presidency eighteen bear the name Prārthanā Samāj.

The beliefs and teaching of the Samāj are very similar to those of the Sādhārana Brāhma Samāj of Calcutta. They are theists and opposed to idolatry with all its accompaniments. The inspiration of the Vedas and the doctrine of transmigration and *karma* have been surrendered. While the thought and life of the Samāj are largely fed from Hindu theology and literature—the hymns of Tukārām, Nāmdev, and other leaders of the *bhakti* school of Marāṭha-land being much used—yet the teaching of Christianity, religious, moral, and social, has had quite as much influence as in the Brāhma Samāj. One striking difference, however, has to be noted: in the Sādhārana Brāhma Samāj and also in the New Dispensation section vows are taken by every full member whereby he promises to give up both caste and idolatry absolutely, while in the Prārthanā Samāj no such promises are made; and, though the leading members are as strict in these matters as any Brāhma could possibly be, there are others who belong to the Samāj and yet have banished neither idolatry nor caste from their homes. Thus the Bombay society stands nearer Hinduism and has closer relations with the Hindu community.

The religious services of the Samāj are very similar to those of the Brāhma Samāj, the language being Marāṭhī in Bombay, Poona, and the other southern centres, but Gujarātī in Ahmadābād. Passages are read from the Hindu Scriptures, and hymns are sung. There are prayers and a sermon.

The literature of the Samāj is partly in English, partly in the vernacular. Sermons and hymn-books are in the vernacular, and have a fair circulation. The literature in English is very scanty. Indeed, the weakness of the Samāj in theology is very notable, and was fully recognized by Ranade. Attempts are being made to produce books to enrich the teaching and the thought of the community, but the results are meagre.

Apart from the regular Sunday services, the religious activities of the Samāj are the Young Theists' Union, the Sunday School, the Postal Mission, and the *Subodh Patrika*, an Anglo-Marāṭhī journal. The Students' Brotherhood, a sort of theistic Y.M.C.A., whose active workers belong to several communities, owes much to the Samāj.

A good deal of educational and charitable work is carried on. In Bombay schools are maintained for children and for women, night-schools are conducted for working men, and there is a Home for the Homeless; there is also an Orphanage, with

a Foundling Asylum, and Distressed Widows' Refuge, at Pandharpur.

It is a very remarkable fact that, although the organization of the Prārthanā Samāj with reference to social questions is lax as compared with the Brāhma Samāj, yet its services to the cause of social reform, to philanthropy, and to social service have been very great. It was Ranade who organized the friends of social reform and started the National Social Conference, which meets annually. The first Conference was held in 1888, and ever since that day members of the Prārthanā Samāj have taken a very large part in its activities. Similarly, the rise of the Depressed Classes' Mission, a society organized in 1906 to help and uplift the out-castes, which draws its support from various communities, is due almost entirely to V. R. Shinde and other Samājists. A third instance is the Social Service League recently founded in Bombay under Sir N. G. Chandavarkar.

Like the sister organization in Bengal, the Prārthanā Samāj remains weak in numbers but strong in influence.

J. N. FARQUHAR.

PRATYKABUDDHA.—I. Introduction and definition.—In the course of ages the Law (*dharma*) has been successively taught by a long line of saviours or perfect Buddhas (*samyaksambuddha*). They are not only Buddhas, i.e. in possession of the knowledge (*bodhi*) that works out *arhat*-ship or liberation (*nirvāṇa*); they are perfect Buddhas—omniscient, omnipotent, and very compassionate. These qualities they owe to the long practice of the 'perfect virtues' (*pāramitās*) as *bodhisattvas* (see artt. *BODHISATTVA*, *MAHAYANA*).

The seed of the Law bears different fruit according to the dispositions of the disciples. A threefold distinction must be made. (1) Some disciples (mediate or immediate) of a perfect Buddha resolve to imitate him; they follow the practice of the *bodhisattvas*, and finally become perfect Buddhas, revealing the Truth and establishing the Church. For, after a few centuries, the visible work of a perfect Buddha perishes, the very name of Buddha and the path to *nirvāṇa* die away. It is the lot of the *bodhisattva* to build the path again and again. (2) Some disciples realize the fruit of the religious life, and become *arhats* or Buddhas and reach *nirvāṇa* while the Law is yet living; the (later) technical name for such disciples, taught by Buddha or the Church, is *śrāvaka*. This word is commonly translated 'auditor,' 'disciple,' but it also means 'preacher,' and this meaning (supported by *Saddharmapuṇḍarīka*, iv. 53, with the commentary of Chandrakīrti thereon) points out one of the features of these saints: they are preachers. They are the fathers and the doctors of the Church together with the *bodhisattvas*. (3) But not every disciple, either monk or layman, becomes an *arhat* or a Buddha during the short period of the duration of the Church. The consequence is that, during the much longer periods of the disappearance of the Church, these already converted men continue to progress in holiness and wisdom; they develop their old 'roots of merit'; they will finally reach knowledge (*bodhi*), without being actually taught by a perfect Buddha, without being trained under the rule of the Church created by a perfect Buddha; they will, in their last birth, discover the Truth by themselves, as Śākyamuni did and as all perfect Buddhas do. But they will not be perfect Buddhas; they will not move the wheel of

the Law; they will not re-establish the decayed Church. These saints are named *pratyekabuddhas* (*paccekabuddha*, *rañ-saṅs-rgyas*), 'private Buddhas' (Kern), 'Buddhas individuels' (Burnouf); 'they desire their own peace' (*rañ zhi don gñer, svaśāntiyarthaka*); 'they rule themselves, not the others; it is themselves they bring to *nirvāṇa*' (*ekam ātmānaṃ damentī parinirvāpayanti*).

'The name and the nature of a Buddha,' says Chandrakīrti,¹ 'belong to three classes of persons, the *śrāvakas*, the *pratyekabuddhas*, and the incomparable perfect Buddhas. The name of Buddha is therefore suitable for the *pratyekabuddhas*. These, owing to their merits and knowledge, are greater than the *śrāvakas*. But, as they lack the equipment of merit and knowledge [of the perfect Buddhas], the great compassion,² the universal knowledge, they are inferior to the perfect Buddhas. They are intermediary. And as knowledge [i.e. the knowledge that brings *nirvāṇa*] is born in them without a teacher, as they are Buddhas by themselves, isolated and acting for their own sake, they are *pratyekabuddhas*.'

2. *Bodhisattva* and *pratyekabuddha*. — All *pratyekabuddhas* are not *śrāvakas* who have failed to obtain knowledge (*bodhi*, *arhat*-ship) during the duration of the Church. A *bodhisattva* may abandon his career of a *bodhisattva* and become a *pratyekabuddha* in order to obtain *nirvāṇa* sooner. A legend told in the *Kanakavarnāvadāna*³ illustrates the leading motive of the *pratyekabuddha*:

A *bodhisattva* chanced to be aware of a hideous crime (incest); he felt disgusted with the creatures whom he was trying to liberate by becoming a perfect Buddha: 'Beings are corrupt! Nay, they are very corrupt! Who would have the courage to work so long a time for the sake of so wicked beings?' Accordingly, this *bodhisattva* made up his mind to obtain *nirvāṇa* as soon as possible (i.e. the *pratiṣṭhita nirvāṇa*); he sat at the root of a tree, meditated on the origination and passing away of the *skandhas* (elements of the 'self'), and soon realized *bodhi*, the *pratyeka bodhi*.

The *Avadāna* adds that this *bodhisattva*, changed into a *pratyekabuddha*, did not totally lose his previous charity.⁴ He thought that he had not done anything for others, having only provided for himself (*svakārtham*). Being unable to preach, he begged in order that the donors might acquire merit by giving to such a 'holy vessel' as a *pratyekabuddha*. Some *pratyekabuddhas* are known to display miraculous powers—a poor substitute for the Word, but a proof of their altruism.

3. Why *pratyekabuddhas* do not preach.—The *pratyekabuddha* possesses the *bodhi*, or the knowledge necessary to *nirvāṇa*, but he is not a perfect Buddha: he lacks omniscience, omnipotence, supreme compassion; and the reason is clear enough. The *pratyekabuddha* is an *arhat* 'en retard,' who has had to work very hard, in an egotistical way (*svakārtham*), to compensate for the want of actual teaching; he has not followed the practice of the *bodhisattva* which assumes high compassion and creates omniscience and omnipotence. But why does he not preach as *śrāvakas*, as even ordinary monks and laymen do? For he has both compassion and learning. The reason of his silence, of his incapacity for preaching and even speaking, is to be found in the special nature of his training.

The *pratyekabuddhas* have led a lonely life for centuries, as 'solitary contemplative philosophers,' as 'hermits' (Kern); they have not met with laymen, monks, or other *pratyekabuddhas*; they have had neither teacher nor spiritual friends (*kalyāṇamitras*). They have been living 'like a rhinoceros' (*khaḍgaviśāṇakalpa*).⁵ The natural

consequence of this solitary life, of this excessive distaste for 'human contact' (*samsarga*) in order to avoid 'attachment' (*sneha*), is that they are unable to preach the truth that they have discovered.

4. *Rsis* and *pratyekabuddhas*.—There is little doubt that this theory of the *pratyekabuddha*, the hermit saint, arises from actual fact. The *pratyekabuddha* embodies the old ideal of a solitary and silent life—an ideal that was flourishing before Śākyamuni came. Śākyamuni did not favour it; he, indeed, condemned the vow of silence, and did his best to encourage spiritual exercises in common—reading, teaching, and social activities of many kinds. But he was shrewd enough to leave some scope to the more ascetic tendencies of his countrymen. Accordingly, after they had undergone some training (novitiate), monks were allowed to live in the forests, like the *ṛsis* of old.

Hermits are supposed to have great magical power, and to be angry when troubled in their contemplations; the same is true of the *pratyekabuddhas*, and there are some legends to this effect.

5. The vehicle of the *pratyekabuddha*.—Owing to their austerities and long meditations, the *pratyekabuddhas* are superior to the ordinary *śrāvakas* in power and in science. But do they acquire *bodhi* by the same method as the *śrāvakas* or by some other method? Both *Mādhyamikas* and *Vijñānavādins* state that the *śrāvakas* and the *pratyekabuddhas* are 'conveyed' to *bodhi* by the same vehicle.

'The path of the *pratyekabuddha* is of the same nature (*tulya-jātiya*) as the path of the *śrāvaka*. The difference is that in their last birth, owing to their former exercise, they realize without a master the thirty-seven qualities leading to *bodhi* and obtain *arhattva*, the abandonment of all vices' (*Bodhisattva-bhūmi*, I, vi. 6; *Mūṣon*, new ser., xii. [1911] 168).

'All saints are born from the Buddhas. The Buddhas teach dependent origination. By hearing it, pondering over it, meditating on it, the *śrāvakas* and the other saints will obtain, according to their intentions, the perfection of their own state. But some of them [the *pratyekabuddhas*] . . . do not obtain *nirvāṇa* in this life; they therefore will obtain it, without further exertion, in another life' (*Mādhyamakāvatāra*, p. 2; *Mūṣon*, new ser., viii. 252; Chandrakīrti quotes Āryadeva, *Sataka*, viii. 22, and Nāgārjuna, *Mūlamadhyamakaka*, xviii. 12).

On the other hand, Tibetan and Chinese authorities maintain that, while the *śrāvakas* meditate on the Four Truths (*chaturāryasatyā*), the *pratyekabuddhas* obtain their *bodhi* by meditating on 'dependent origination' (*pratitya-samutpāda*). The Chinese translations of the *pratyekabuddha* mean 'alone-Buddha,' '*pratyayabuddha*.' The Tibetan equivalents are 'who meditates on *pratitya*' (*rten ḥbrel bsgom*), 'who understands only the causes' (*rkhyen gcig rtoṅs?*).¹ We are told that the proper way of such meditation is to look at the birth and decay of the leaves.

The present writer believes that this distinction is purely scholastic. Dependent origination is only the commentary of the Second Truth.

6. *Mahāyānist* criticism. — According to the *Saddharmapundarika* (p. 44, and *passim*), there is not a *śrāvaka*-vehicle or a *pratyekabuddha*-vehicle. *Śrāvakas* and *pratyekabuddhas* do not reach *bodhi* or *nirvāṇa*. They have to become *bodhisattvas* to enter into the Great Vehicle, which is the only vehicle.²

The *Prajñāparamitā*, on the contrary, maintains that it is not necessary to become a *bodhisattva* in order to reach *bodhi*. There is a *śrāvaka*-vehicle, a *pratyeka*-vehicle (see *Saddharma*, pp. 79, 260; *Dharma-Saṃgraha*, etc.). But one cannot

804; but it seems that the *Vaiśiṣṭikas* agree), the *pratyekabuddhas* 'who are living together' (*vargachārin*); Kern (*Manual of Indian Buddhism*, p. 62, n. 1) compares *vaggasārīn* in the *Sutta-Nipāta*, 371, 800, 912.

¹ See Wassilief, p. 13; Eitel, *Handbook*, p. 123; Sarat Chandra Das, *Tibetan-English Dictionary*, p. 1166.

² See also the *sūtra* quoted, *Sikṣāsāmauchchaya*, p. 97.

¹ *Mādhyamakāvatāra*, Bibl. Buddhica, ix. 3. 13; tr. in *Mūṣon*, new ser., viii. [1907] 254.

² The 'compassion' (*karuṇā*) is compassion 'consisting in absence of hatred' towards beings of *Kāmadhātu* (see Cosmology (Buddhist)) as far as they are enduring the first kind of suffering (*duḥkha-duḥkhatā*). The 'great compassion' (*mahākaruṇā*) includes all beings and all kinds of suffering.

³ *Dīyāvadāna*, ed. Cowell and Neil, p. 293 ff.; tr. E. Burnouf, *Introduction*, p. 84.

⁴ Cf. *Avadānaśataka*, Bibl. Buddh. iii. [Petrograd, 1906-09], p. 116: the *pratyekabuddhas* are said to be *hinadānānukampaka*.

⁵ Later, it seems, a second category of *pratyekabuddha* was admitted (by the *Sautrāntikas*, says Wassilief (*Buddhismus*, p.

become a *śrāvaka* and *pratyeka* by the mere understanding of the Four Truths or of dependent origination. Understanding of voidness (*śūnyatā*) is necessary.¹

7. Technical details.—Many technical details are to be found in the Abhidharma and Vijñānavādin books—e.g., the theory of the last incarnation of a future *pratyeka*.

The *śakravartin* (sovereign king) is conscious when descending into the maternal womb; then he becomes unconscious and is born unconscious. The future *pratyeka* remains conscious in the womb. The *bodhisattva* at his last birth is conscious.

PRAYER (Introductory and Primitive).—I. Origin and development.—In its simplest and most primitive form prayer is the expression of a desire, cast in the form of a request, to influence some force or power conceived as supernatural. Apart from the modern usage of the term, which connotes spiritual communion, it is usually understood to imply reverent entreaty. It must be said, however, that in the primitive mind reverence is usually obscured by fear—all spirits, whether good or bad, are regarded as dangerous—while the idea of entreaty, though the ostensible influence in determining the form, is largely coloured by a desire to compel or command. Genetically, prayer is related to the spell or charm; and it is frequently a matter of difficulty to determine whether a particular formula should be assigned to one category or to the other. Although the form of the address may be of assistance—some writers have endeavoured to distinguish between spell and prayer by assigning to the latter those formulae which contain a vocative (see W. H. R. Rivers, *The Todas*, London, 1906, p. 272)—in the rudimentary forms the underlying psychological elements are hardly distinguishable. In performing a magical act the performer often supplements the mimetic action by indicating in a phrase or two what it is that he wishes to be done.

The Australian black-fellow who works magic against his enemy by pointing and stabbing with his spear says, 'Strike! Kill!' Here a simple command emphasizes the action. In another and more complex example the Maidu medicine-man inflicts disease on the neighbouring villages by burning certain roots and blowing smoke towards them saying, 'Over there! Over there! Not here! To the other place! Do not come back this way. We are good. Make these people sick. Kill them; they are bad people!' (R. B. Dixon, 'The Northern Maidu,' *Bull. Am. Mus. Nat. Hist.* xvii, pt. 3 [1905] 328f.). In form this is a direct command, but in spirit it differs hardly, if at all, from supplication.

A familiar process of magic is to work evil against an enemy by performing a ceremony over some part of the body, such as hair or a piece of nail, or some object which has been in intimate contact with the body, such as earth impressed with a footprint. The ceremony is accompanied as a rule by some formula.

¹ *Aṣṭasahasrikā*, Bibl. Indica (Calcutta, 1888), p. 379; *Māhyamakāvṛtti*, p. 353 (a different opinion, p. 351).

The Maori priest was believed to be able to 'pray' mother and child to death by using the placenta in this way (G. Bennett, *Wanderings in New South Wales, Batavia, etc.*, London, 1834, I. 128).

The relation between formula and ceremony is shown in a Malay charm in which the nature and meaning of the treatment of the soil from the centre of a footprint were indicated by saying:

'It is not earth that I switch,
But the heart of So-and-so.'

But, while this instance merely illustrates the desire to make clear the intention of the charm (though it must be noted that it is an essential part in securing success), another charm from the same part of the world illustrates by a curious conjunction the primitive attitude of mind towards the powers to whom these invocations are addressed: in one of the ceremonies for bringing sickness, injury, or death upon an enemy by the mutilation or transfixing of a waxen image the operator, in the course of his address to the spirit, says:

'Lo, I am burying the corpse of Somebody,

Do you assist in killing him or making him sick:
If you do not make him sick, if you do not kill him,
You shall be a rebel against God,
A rebel against Muhammad.'

which illustrates at once the request for help, the idea of compulsion involved in the charm, and a threat in case of non-compliance (W. W. Skeat, *Malay Magic*, London, 1900, pp. 569, 571). In some addresses to the dead, especially when the fear of the dead, however well disposed, has been much exaggerated by any peculiar or unusual circumstance, magical ceremony, entreaty, and command combine in much the same way.

The Orāons appear to regard the spirit of a woman who has died in childbirth or while pregnant as specially malignant. Not only is she buried with special precautions (the ankles are broken and the body is laid face downward with the bones of a donkey), but various invocations are addressed to her, such as, 'If you come back, may you turn into a donkey!' The roots of a palm-tree may be burned, while the mourners say, 'May you come home only when the leaves of the palm-tree wither!' (P. Dehon, 'Religion and Customs of the Orāons,' *Mem. As. Soc. Bengal*, I. 9 [1906], p. 139).

On the other hand, the Thonga formula at the *tjeba* ceremony of collective fishing by the community, which takes place when the lakes are

drying up, seems to be passing, if it has not already passed, into the category of prayer.

An offering is made by the descendant of an inhabitant of the country, who, however, does not perform the full sacramental *ritu*, which consists in placing part of the offering in the mouth and then spitting it out, but merely spits without having placed anything in his mouth, and says, 'Let fish abound! Let them not hide in the mud! Let there be enough of them to satisfy everyone!'

Notwithstanding the form of the address and the circumstances of the ceremony, which give it a magical turn, the stress laid upon the ancestral connexion seems to indicate a more definite direction of the supplication than would be expected in an endeavour to compel a successful issue by magic alone (H. A. Junod, *Life of a S. African Tribe*, Neuchâtel, 1912-13, ii. 70). Among the Veddas of Ceylon many of the invocations which form a part of the ceremonial dances by which the favour of the spirits is secured are Sinhalese charms which are meaningless to them and as such are merely the 'word of power.' But in form, whatever may be the spirit in which the invocations as a whole are used, whether merely as spells or as supplications with full appreciation of their purpose and meaning, they belong to the category of prayer. This appears clearly in the following instance of an invocation to the *nae yaku*, the spirits of the dead:

'O father who went to that world, come to this world. Come quickly to place (for us) the sambar deer, the spotted deer. Take this betel leaf. Come very quickly. Come quickly. My mother's people take the rice, take the rock honey, take the betel leaf. To place the sambar, to place the spotted deer, come very quickly' (C. G. and B. Z. Seligmann, *The Veddas*, Cambridge, 1911, p. 277).

Notwithstanding the change in mental attitude involved by the transition from spell to prayer, there is always a tendency for the latter to retain or to revert to the character of the former. The primitive mind clings firmly to the idea of control over power which is involved by the use of name or formula. Among the Todas, with whom ritual has almost overwhelmed religion, prayers are divided into two portions, of which the petition or prayer proper forms the second. The first part consists almost entirely of names known as *kwarzam*; it is made up of a number of clauses, each consisting of the name of an object of reverence followed by *idith*, 'for the sake of.' Much care is taken that this part of the prayer should not be overheard; it is muttered in the throat. It has been conjectured that the *kwarzam* was originally a form of supplication to the gods with which other words have come to be included. The objects of reverence named are of various kinds, including the names of gods, buffaloes, villages, dairies, and parts thereof. As in other cases—e.g., the Vedda prayers, for which there is a special vocabulary—these things are referred to not by their ordinary names, but by special names (Rivers, pp. 216, 229). This formalization of prayer which assimilates it to a spell can be paralleled from the Avesta, in which the conception of the magical power of prayer is such that the mere repetition of the words, if correct, is sufficient for efficacy, and it is commanded that they should be repeated as a sort of preservative at fixed hours of the day (W. Geiger, *Civilization of the Eastern Iranians in Ancient Times*, Eng. tr., London, 1885-86, i. 71)—a use of 'vain repetition as the heathen do' which finds expression in an extreme form in the employment of the Buddhist prayer-wheel (*q.v.*).

2. Occasions on which prayer is offered.—It follows from the close genetic relationship between spell, or charm, and prayer that the latter, when first it begins to modify its magical character of compulsion and to take on the character of an appeal for assistance, is employed intermittently only.

It is said of the Baganda that, when everything goes smoothly and the family is in good health, a man does not trouble to pray or make offerings, but does so only in times of danger or sickness. If a ghost was troubling a family, offerings were made and prayer was addressed to a stronger ghost to secure its assistance. Prayer was offered to Musisi, the god of earthquake, when he exhibited his power; Nagawonyi received offerings when the women desired children (J. Roscoe, *The Baganda*, London, 1911, pp. 286f., 313f.). The Fijian addressed a prayer to his totem when he was in danger; e.g., a man who capsized at sea called on the shark-god, and a shark appeared and towed him ashore (B. Thomson, *The Fijians*, London, 1908, p. 115).

Illness, when recognized as caused by a spirit, was another occasion which called for prayer, either to the spirit responsible, or to a spirit which possessed the power to heal.

Among the Kayans of Borneo the chant of the *dayong* (medicine-man or -woman), before starting on the soul-hunt, is essentially a prayer for assistance addressed to Laki Tenagan, the supreme being of the universe, or in the case of a woman to Doh Tenagan, his wife (C. Hose and W. McDougall, *The Pagan Tribes of Borneo*, London, 1912, ii. 29f.). The Thonga medicine-man, before entering upon the treatment of a case of illness, prays to his ancestors, and in particular to that one of them from whom he holds that his knowledge was acquired, to give their blessing to his treatment (Junod, ii. 362). The oblation which follows the circumcision ceremony performed on the young men to secure the recovery of a Fijian chief is accompanied by prayer to the ancestral spirits (Thomson, p. 157).

Drought is a frequent occasion—especially in Africa—for prayer in connexion with rain-making ceremonies, as, e.g., among the N'yangas and N'goni tribes, when the chief at the head of the whole community offers up prayers as a part of a propitiatory ceremony addressed to his predecessors and ancestors. Every village has its prayer-tree, usually a fig, standing in the open space, under which sacrifices are offered (A. Werner, *Natives of British Central Africa*, London, 1906, pp. 51, 53, 62f.).

A remarkable development of the theory of divine punishment which bears upon the efficacy of prayer as a remedial measure in case of drought is recorded among the Torajas of Central Celebes.

Divine displeasure in cases of incest is marked by torrential falls of rain. In cases of prolonged drought they simulate incest among their animals. A cock and a sow are killed and laid side by side in an intimate embrace. The headman then prays, 'O gods above and gods below, if you have pity on us, and will that we eat this year, give rain. If you will not give rain, we will have here buried a cock and a sow in an intimate embrace,' i.e. show your displeasure by sending storms (A. C. Kruijt, quoted in *GB*, pt. i., *The Magic Art*, ii. 113).

Another occasion when the assistance of super-human powers may be sought is in divination.

The Baganda leather-thrower, when consulted in a case of sickness, or the Thonga diviner, when consulting his bones, usually offered up a prayer to the god or to the ancestors (Roscoe, p. 339; Junod, ii. 363).

Although it cannot be said that among the more primitive races, with certain exceptions, there is any conception of prayer as anything more than a call in the hour of need and as occasion arises, there is an approximation to the idea of an organized ritual in the constant but irregularly recurring crises in which it is thought desirable to petition the spirits or deities for benefit or protection.

One of these is death or burial—a time when evil influences are most potent and are brought more intimately into touch with human life. Among the Igorots after a death an old man relates the story of the first man and woman after the flood. Cabunian taught them to bury the dead, and, after burying the dead, he said, 'You should make prayers and offerings so that you may not be affected by any kind of disease' (A. Robertson, 'The Igorots of Lepanto,' *Philippine Journ. Science*, sect. D. 9 [Manila, 1914], p. 514). Among the Bathonga a burial, a ceremony of which the traditional solemnity is indicated by the exceptional prominence assigned the uterine nephew, was one of the important occasions in the family ceremonial in which prayer was offered. Another was a marriage, when the father of the bride prayed the gods to give children to the union. When a man departed on a journey, the medicine-man prepared drugs, spat on him, and prayed for his protection (Junod, ii. 362). In the Philippines the native tribes spend a great part of their time in collecting animals with which to make feasts. The spirits are invited to these feasts in order to secure their favour. They precede almost every action of any importance, such as the first hair-cutting of a son, harvest, irrigation and other work connected with the crops and, inevitably, are part of the treatment of disease. In a feast preceding a journey to

make a purchase a man will invite the attendance of certain spirits, asking them to put it in the mind of whomsoever he may buy from to sell the animal cheap (R. F. Barton, 'The Harvest Feast of the Kiangnan Itugao,' *Philippine Journ. Science*, sect. D. 6 [1911], p. 88). Among the Igorots the feasts, whether made for a particular object or with the general aim of securing spiritual assistance, are not only the occasions for a petition; the reply is also forthcoming, being furnished by an examination of the liver of the victim (Robertson, p. 472 f.). Among hunting tribes with strongly developed animistic ideas it was usual to address some form of prayer to their prey by way of propitiation, either before or after its death (see HUNTING AND FISHING). The hunter of N. America sometimes thanked the animal for allowing itself to be killed (O. Hill-Tout, *British N. America, i. The Far West*, London, 1907, p. 168). This practice was also extended to the vegetable kingdom, and prayer to vegetation-spirits formed a part of the numerous firstfruit ceremonies which were a prominent feature in the culture of the American Indian. Before young people ate the first raspberry-shoots of the new season they addressed the plant and asked for its favour. Further, in both the raspberry-shoot ceremony and the salmon ceremony of the tribes of the north-west, ceremonies which inaugurated the new season's replenishment of the stock of food, the prayer offered by the medicine-man to the spirits of the raspberry or the salmon was an essential element in the ceremony (*ib.* pp. 168 f., 171 f.). Agricultural ceremonies of all descriptions, and especially those connected with sowing and the harvest, have had a marked influence in the development of regularity in the occasions for prayer. At the time of sowing the Iroquois prayed to the thunder-spirit and at harvest they thanked him for the gift of rain (GB³, pt. 1, *The Magic Art*, ii. 369). In the Malay Peninsula every one who is to take part in the rice cultivation must bring to the mosque half a quart of grain (for 'mother seed') in order that prayers may be read over it. When they are finished, every man goes to the rice-field, if possible on the same day, to begin to plough the nursery plot, and at the various stages of cultivation in the course of the ceremonies appropriate to each—e.g., in the sowing and in the ceremonial reaping by the *parang*—charms or prayers are repeated. In the case of the ceremonial reaping the 'ten prayers,' which are in effect a petition for daily bread never to be lacking on earth or in heaven, have to be repeated in one breath (Skeat, p. 240). If there was danger that the crop might fail from drought or from other causes, offerings were made and magical ceremonies performed which were sometimes accompanied by prayers. The two elements are combined in a rain-making ceremony in Angoni-land when the people repair to the rain-temple and the leader pours beer into a pot, which is buried in the ground, and prays 'Master Chauta, you have hardened your heart towards us, what would you have us do? We must perish indeed. Give your children the rains, there is the beer we have given you.' On their return they find a pot of water set at a doorway by an old woman, in which they dip branches and scatter the water aloft (R. S. Rattray, *Some Folk Stories and Songs in Chinyanja*, London, 1907, p. 118). At the harvest feast of the Kiangnan Itugao prayers were addressed to every class of spirit in whose control lay any kind of influence, for good or ill, on the crop—spirits that make men remember and forget, earth-gods, sky-gods, the spirits that control locusts, wind, rain, and drought. The earth- and sky-gods, who are especially concerned with the growth of plants, are asked to 'speed the harvesters, make the rice grains numerous as the sands, increase the rice' (Barton, p. 89 f.). One of the Igorot feasts was given by a man once every four or five years. To this feast he summoned all the rich men of the neighbouring towns and all the poor of his own. It was accompanied by a dance and a petition was offered up for favour to be shown to the host. The petitioners prayed to the *anitos* (spirits) and the souls of their dead ancestors not to destroy his plants and not to kill his animals, so that he might be able to use these animals to give another feast for the *anitos* (Robertson, p. 513). In the peculiar and exceptional *nanga* rites of Fiji prayers to the ancestors formed part of the ceremony; these rites also appear from the character of the offerings to have been in certain of their aspects a firstfruit ceremony (Thomson, p. 156).

In a few cases peoples of a primitive type have advanced beyond this conception of prayer as intermittent and have incorporated it as a regular function in their life.

Among the Todas, e.g., prayer both morning and evening is a regular part of the ceremonial of the *ti* dairies, while at the village dairies it is offered in the evening only. Each village has its own prayer, which is used in all the dairies of the village (Rivers, p. 213). Among the Masai and peoples of related culture, such as the Gallas, Nandi, and Suk, prayers form a regular part of their life. Not only are they offered on special occasions, such as the appearance of the new moon, a raid (when the warriors after victory give thanks and pray for safe return to their homes, while the women and girls who have been left behind also pray for their safety), the building of a house, etc., but the Nandi, e.g., believe that the deity takes an intimate interest in all affairs of their life and pray to him regularly. Among the Masai the women offer up prayer twice a day, while the men pray with regularity, though less frequently (C. Eliot, in A. C. Hollis, *The Masai*, Oxford, 1906, p. xix, and *The Nandi*, do. 1909, p. xix f.; K. E. Dundas, 'Notes on the Tribes inhabiting the Baringo District, E. Africa Protectorate,' *JRAI* xl. [1910] 61).

It must be admitted, however, that these cases are exceptional and that, generally speaking, prayer is a refuge in time of crisis for purposes of protection or propitiation. The primitive attitude in its crudest form is perhaps best indicated by the Solomon Islands belief that prayer is not available for all and sundry, but, to be acceptable to the power, ghost, or spirit addressed, it should be in a regular form of words known only to the person who has access to the power (R. W. Williamson, *The Ways of the South Sea Savage*, London, 1914, p. 73). The belief is not universally held in the Solomon Islands—natural calls for help are made in time of danger or distress—but in so far as it is held it places prayer on a level with the esoteric magic of the medicine-man, from which the ordinary individual is debarred.

3. Powers to whom prayer is addressed.—It would be impossible to give here a complete account of the powers, spirits, deities, whatever they may be called, to whom prayers are addressed. It will be sufficient to indicate briefly the general principles upon which the primitive mind works in turning to higher powers for assistance. Prayer has been defined as 'the address of personal spirit to personal spirit' (PC⁴ ii. 364). This definition, however, at any rate in regard to the lower culture, by specifying terms of personality, appears to apply too precise a conception to what is in all probability a somewhat vague attitude of mind. The Australian black-fellow's phrase, 'Strike! Kill!' is perfectly definite in its intention of producing a result by setting certain forces into operation, but the attention is focused on power rather than personality, whether that of the speaker or that of something external to himself. Prayer, in fact, develops through the conception of powers, or, as some would prefer to call it, using the Melanesian term, *mana*, rather than by an increasingly precise attribution of personality to the supernatural, a factor which comes into prominence only at a later stage. This is not necessarily inconsistent with the view that bases prayer on the analogy of human intercourse; for, while the form of spell and prayer may well be modelled on command and entreaty, the idea of the relative strength of the powers at the command of different individuals is perfectly familiar to primitive experience. The regular method of combating magic is to control a stronger magic.

The Creek shamans held contests to determine their superiority, and among the Shushwap, if two shamans with equally powerful spirits tried to bewitch one another, both died, one shortly after the other (G. Speck, 'The Creek Indians of Taskigi Town,' *Mem. Amer. Anthropol. Assoc.* ii. [1903] 74; J. Teit, 'The Shushwap,' *Jesup N. Pacific Exped.* ii. 7 [1909], p. 613).

Failure to compel by magical ceremony a power adequate to the purpose would lead naturally to an attempt to secure the services of greater powers either through the expert—the medicine-man—or by propitiation and entreaty.

In Uganda, when a ghost troubles a family, prayers and offerings are made to a stronger ghost to secure its assistance (Roscoe, p. 286).

The extent to which such powers are attributed to the human individual and the relation of the ordinary man to a person endowed with these powers differ in degree and not in kind from the relation to the superhuman spirit world. This in some cases leads to a form of address which to all intents and purposes is a prayer.

It is recorded that the natives of Brazil, when they went to meet the medicine-man, prostrated themselves on the ground before him and said, 'Grant that I be not ill, that I do not die, neither I nor my children' (GB³, pt. 1, *The Magic Art*, i. 858).

It must not be assumed that all objects of veneration, or of fear and awe, are addressed in prayer. Indeed, of some primitive races who recognize the existence of spirits it is not recorded that they made any use of prayer. Further, when

in the lower forms of religion the existence of a supreme spirit is recognized, this spirit is usually looked upon as otiose, propitiatory offerings and prayer being made to the lower spirits, who, if not actually regarded as more powerful, are held to be more actively concerned in human affairs. Even when this extreme view is not taken, the supreme being is often approached by intercession rather than directly.

Among the Philippine tribes to whom reference has been made above prayer is offered to the *anitos* and ancestral spirits in order that they may intercede with the *datala*, the supreme being (Robertson, pp. 472, quoting Loarca [c. 1580], 514, etc.). The *Kayans*, though addressing the gods by name in terms of praise and supplication, appear to believe that the prayers are transmitted to them by the souls of domestic pigs and fowls. One of these animals is always killed and charged to carry the message to the gods. Also a fire is always at hand, the ascending smoke of which seems to establish communication with the god. Oding Lahang, who is regarded by the *Kayans* as a deified chief, is also invoked for his intercession with Laki Tenangan (Hose and McDougall, ii. 6 ff.). On the other hand, the *Masai* group (using the term in the extended sense to cover all the peoples—*Suk*, *Nandi*, etc.—of related culture in N.E. Africa), whose exceptional position in the matter of prayer has already been noted, frequently pray to the supreme deity, the sky-god; e.g., the *Masai* women after childbirth pray for children to the god who thunders and rains, the old men pray for rain to the 'black god,' i.e. the god of the rain-cloud. This god is *Engal*, 'who is prayed to and hears' (Hollis, *Masai*, pp. 345 f., xix). Among the *Galla* the supreme deity to whom prayer is addressed daily is *Wak*; among the *Nandi* *Asis*, the supreme deity, is supposed to take a friendly interest in the details of their daily life, and at such events as, e.g., the building of a house prayer is offered. The potter, when baking pots, prays, 'God give us strength, let us bake them so that men may like them.' It is interesting to note, however, that the medicine-men, who are *Masai*, pray to their ancestors and not to the *Masai* *Engal* (Hollis, *Nandi*, p. xx f.). Among the gods and spirits summoned to the harvest feast of the *Ifugao* are the earth- and sky-gods, while the conception which underlies the *Iroquois* prayer to the thunder-spirit at sowing time and the thanksgiving at harvest is evidently an analogous appeal to the controlling powers of natural phenomena.

Natural objects, or rather the indwelling spirits, are not infrequently addressed in prayer.

When a *Masai* sees a new moon, he throws a twig or stone at it, saying, 'Give me long life,' or 'Give me strength,' and a pregnant woman will make an offering of milk and say, 'Moon, give me my child safely' (Hollis, *Masai*, p. 274). The *Nandi* also pray to the new moon (Hollis, *Nandi*, loc. cit.). In the *Kei Islands*, when the warriors have gone on an expedition, the women bring baskets containing stones and fruit, which they anoint and place on a board murmuring, 'O Lord, Sun, Moon, let the bullets rebound from our husbands, brothers, betrothed and other relations just as the raindrops rebound from these objects which are smeared with oil' (O. M. Pleyte, 'Ethnog. Besch. der Kei Eilanden,' *Tijd. van het Ned. Aard. Genootsch.* ii. x. [1893] 805). The *Baganda*, before crossing any river, take a few coffee-berries and, after asking the spirit for a safe passage, throw them into the water (Roscoe, p. 819).

The magical element in prayer requires that the powers addressed should be adequate to carry out the request of the petitioner.

The *Ifugao* of the township of *Cayan* in cases of sickness summon an old woman, a *baylan* (priestess), who makes an offering and prays to the *anito*; if the prayer has been offered to the right *anito*, the patient recovers; but, if not, another priestess is summoned and a fresh offering is made to another *anito*, and so on until the right one is found.

This principle is still more clearly indicated when departmental spirits and deities are recognized.

In *Uganda*, e.g., there are four principal classes of objects of veneration: the fetiches which, though made by man in many cases, possess ghosts and hear and answer supplications; national gods whose duty is the protection of the king and the State; ghosts; and amulets. Appeals are addressed to the high gods on special occasions. To *Mukasa*, the great god, the king sent an annual offering, when a special appeal was made for the prosperity of the crops; *Musisi*, the father of *Mukasa*, was responsible for earthquakes, and, when an earthquake occurred, he was asked to keep quiet; *Nagawonyi*, the goddess of hunger, was addressed in times of famine; *Mbale* was resorted to by women who desired children; *Nagadya* interceded with the other gods when rain was required, and so forth (Roscoe, pp. 278, 298, 813 ff.).

The reverence for the ghost which forms part of the *Baganda* religion is one phase of the cult of the dead, which in various forms is wide-spread among primitive peoples. The offerings made to the dead either to secure their influence or to ward

off any harm that they might do are usually accompanied by some form of address.

In Central Africa among the *Yaos* the spirit of any deceased person, with the exception of wizards and witches, is regarded as an object of homage. In the prayers for the community on such occasions, e.g., as a petition for rain, the chief addresses his immediate predecessor as the representative of all who have lived in the village in past times and the whole line of his ancestors, and the individual may approach his dead relatives in the same way on his own behalf (Werner, p. 49). In the prayers of the *Igorots* the ancestors are invoked side by side with the *anitos* (Robertson, loc. cit.). The *Bathonga*, as has been mentioned above, pray to their ancestors. The medicine-man, in praying for the sick, will call on the god who caused the illness, asking him to bring with him all the gods who have helped, or he may call his own father, asking him to bring his grandfather and so on until all his ancestors, including collaterals, have been named. On the other hand, the priest, if praying for the country as a whole, will begin with the remotest ancestor and name the successors in order until he reaches his father. An exception is found in the *Maluleke* district, where at the cooking of the new yams an offering and prayer are made to the spirits of the *Ba-Nyai* (a people conquered by the *Maluleke*) as the original owners of the land (Junod, ii. 363, 367). The *Vedda* invocations are also addressed to the spirits of the dead; departmental spirits are invoked for success in hunting, in honey-gathering, and in getting food supply (Seligmann, pp. 133, 166, 272 f.); but the myths which attach to these spirits would suggest that they are a development of the cult of the dead, spirits which in course of time have become individualized as heroic figures.

4. Persons by whom prayer is offered.—The development of prayer is closely connected with the growth of a specialized class of priests. Although it is the case that at all stages of development prayers are offered by individuals on their own behalf, there are two influences which tend to confine the ceremony, or the principal part in the ceremony, to a particular class. One is the special knowledge of the requirements and powers of the spirit whose aid is to be invoked—a knowledge of the special magic for the occasion—and the other is the communal interest of the occasion on which prayer is offered.

(1) An example of the first, of frequent and wide-spread occurrence, is to be found in the treatment of disease, where, the specialist—the medicine-man—having been called in, it is naturally a part of his function that he should utter the invocations, if any should form part of the ceremonies of which his treatment consists. Instances have already been mentioned—e.g., among the *Igorots*, where, if one medicine-woman fails, another must be consulted until the spirit who can deal with the case has been found. On the analogy of other cases it might be assumed that in this case knowledge of the right formula is necessary to success, just as it is believed in the *Solomon Islands* that those who offer prayer must know the form of words acceptable to the power addressed.

In the *Ifugao* harvest feast, the prayers are uttered by the old men, who alone know the words which should be uttered, while the younger men act as acolytes (Barton, p. 83).

This is not an isolated instance, but it states explicitly a reason which may be held to account for the form of solo and chorus often followed in offering prayer.

(2) It is probable that the second influence has grown out of the first, and that magical power or knowledge is the basis of the union of temporal and spiritual which makes the chief the spokesman of the community in those invocations which seek the benefit of the whole community.

In such a ceremony as that of the Central African *Anjanga*, in which the chief utters prayers while alone in a small hut, while the people outside chant accompaniments and clap their hands (Werner, p. 63), the chief as rain-maker has become the chief as priest. In *Fiji*, where the offices of chief and priest were combined, the tribal gods could be approached only through the priests. In *Uganda* the national gods were approached through the intermediacy of their priests; at the sacrifice offered at the building of a temple to the god *Mukasa* it was the chief priest who prayed the god to accept the blood and grant an increase of cattle, children, and food; but the rebuilding of the temple could be undertaken only with the consent of the king; and it was the king who sent offerings

annually to secure prosperity of the crops (Roscoe, pp. 292, 294). In this instance, although the offices of king and priest are fully differentiated, there is a special and significant relation between the king and national religion and prosperity.

On the other hand, the duty of acting as the representative of the community may fall entirely on the medicine-man.

In the ceremonial dances of the Veddas the leader who utters the invocation and takes the chief part is invariably a shaman (Beligmann, *loc. cit.*), and in the firstfruit ceremonies of N. America the shaman utters the prayer, while the members of the community stand round in a circle. In Toda ritual, although the individual may pray for his private ends, the prayers upon which the prosperity of the dairy, the chief matter of tribal concern, depends are part of the duties of the priests or keepers of the dairy (Rivers, p. 229).

The position of a father or head of a family is analogous.

Among the Bathonga in all ceremonies connected with the family on which prayers are offered this is the duty of the father (Junod, ii. 362).

5. Conclusion. — In the preceding analysis of prayer in its development from the spell to an invocation addressed to high gods or to the supreme deity there is one characteristic in which it differs fundamentally from the conception of the higher religions, viz. that prayer is an entering into communion with the deity: the benefit for which petition is made is material and not spiritual, and the ethical note is almost entirely absent. The epithets 'good' and 'bad' in the prayer of the Maidu medicine-men to the spirits of disease have a tribal rather than an ethical significance. In fact, in the lower culture there is expressed neither a desire for moral goodness nor a request for forgiveness for moral sin. On the other hand, an Aztec prayer for the ruler recognizes the ethical principle in the words:

'Make him, Lord, as your true image, and permit him not to be proud and haughty in your throne and court; but vouchsafe, Lord, that he may calmly and carefully rule and govern them whom he has in charge' (Sabagun, quoted in *PC*, ii. 873).

LITERATURE.—L. R. Farnell, *The Evolution of Religion*, London, 1905; *GB*, pt. I, *The Magic Art*, London, 1911; *PC*, do. 1903, ii. 364 ff. E. N. FALLAIZE.

PRAYER (American).—Any ritual observance designed to bring man into nearer relation with the unseen powers of nature is prayer. In this broad sense prayer includes not merely the spoken or chanted word, but also dramatic and symbolic ceremonies, and above all, for the American Indian, the 'dances' in which most of his cults centre. Such ritual prayer has elsewhere been discussed (see esp. COMMUNION WITH DEITY [American], MUSIC [American], SECRET SOCIETIES [American]). But, in a narrower and perhaps finer sense, prayer signifies a personal and intimate expression, non-ritualistic in spirit and commonly in form. The degree in which the native American could possess and consciously prize such expression may appropriately be indicated here.

Half magical spell, half articulation of desperate need, are the crude utterances of the Montagnais which so shocked Le Jeune:

'Their religion, or rather their superstition, consists besides in praying; but, *O mon Dieu!* what prayers they make! In the morning, when the little children come out from their cabins, they shout, "Come, Porcupines; come, Beavers; come, Elk"; and this is all of their prayers' (R. G. Thwaites, *Jesuit Relations*, Cleveland, 1896-1901, vi. [Quebec, 1633-34] 203).

Three centuries later another Jesuit says of the Kansas Indians—a thousand miles away:

'The religious sentiment is deeply implanted in their souls. . . . They never take the calumet, without first rendering some homage to the Great Spirit. In the midst of their infuriate passions they address to him certain prayers, and even in assassinating a defenseless child, or a woman, they invoke the Master of Life. To be enabled to take many a scalp from their enemies, or to rob them of many horses, becomes the object of their most fervid prayers, to which they sometimes add fasts, macerations and sacrifices. What did they not do last spring, to render the heavens propitious? And for what? To obtain the power, in the absence of their warriors, to massacre all the

women and children of the Pawnees!' (*Life, Letters and Travels of Father Pierre-Jean de Smet*, 4 vols., New York, 1905, i. 284 f.).

Yet de Smet could find in these people 'natural Christians':

'When we showed them an "Ecce Homo" and a statue of our Lady of the Seven Dolours . . . we beheld an affecting illustration of the beautiful thought of Tertullian, that the soul of man is naturally Christian' (*ib.* i. 285 f.).

So Ragueneau had said of the Hurons (1647-48):

'Though they were barbarians, there remained in their hearts a secret idea of the Divinity and of a first Principle, the author of all things, whom they invoked without knowing him. In the forests and during the chase, on the waters and in the midst of danger of shipwreck, they name him *Airsekovy Soutanditem*, and call him to their aid. In war, and in the midst of their battles, they give him the name of *Ondoutaeté* and believe that he alone awards the victory. Very frequently, they address themselves to the Sky, paying it homage; and they call upon the Sun to be witness of their courage, of their misery, or of their innocence. But, above all, in the treaties of peace and alliance with foreign nations they invoke, as witnesses of their sincerity, the Sun and the Sky, which see into the depths of their hearts, and will wreak vengeance on the treachery of those who betray their trust and do not keep their word. So true is what Tertullian said of the most infidel nations, that nature in the midst of perils makes them speak with a Christian voice,—*exclamant vocem naturaliter Christianam*,—and have recourse to a God whom they invoke almost without knowing him,—*Ignoto Deo*' (Thwaites, xxxiii. [Lower Canada, Abenakis, 1650-51] 225).

Perhaps more impartial and certainly not less sympathetic accounts of the Indian's attitude towards prayer have come from modern students; and among these none is more illuminating than Alice C. Fletcher's account of the initiation of the Omaha youth to the spiritual life:

'The rite [is] known by the name of Nonzhinzhon. The literal meaning of the word is "to stand sleeping"; it here implies that during the rite the person stands as if oblivious of the outward world and conscious only of what transpires within himself, his own mind.' The rite takes place at puberty, when the mind of the child has 'become white.' 'When the youth is at the verge of his conscious individual life, is "old enough to know sorrow," it was considered time that through the rite Nonzhinzhon he should enter into personal relations with the mysterious power that permeates and controls all nature as well as his own existence.' The history of the rite is given in a legend: 'The people felt themselves weak and poor. Then the old men gathered together and said: "Let us make our children cry to Wakonda that he may give us strength." So all the parents took their children who were old enough to pray in earnest, put soft clay on their faces, and sent them forth to lonely places. The old men said to the youths: "You shall go forth to cry to Wakonda. When on the hills you shall not ask for any particular thing. The answer may not come to you as you expect; whatever is good, that may Wakonda give." Four days upon the hills shall the youths pray, crying. When they stop, they shall wipe their tears with the palms of their hands and lift their wet hands to the sky, then lay them to the earth. This was the people's first appeal to Wakonda' (37 *RBEW* [1911], p. 128 f.).

The youth could repeat this rite from time to time until he came to marry; then, unless he were a priest, he gave it up. The Omaha recognized other powers besides Wakonda, as the Earth, the Sky, the Sun, the Moon, but personal prayers were addressed directly to this higher power, penetrating them all.

'A man would take a pipe and go alone to the hills; there he would silently offer smoke and utter the call, *Wakonda ho!* while the moving cause, the purport of his prayer, would remain unexpressed in words. . . . Women did not use the pipe when praying; their appeals were made directly, without any intermediary' (*ib.* p. 599).

From the illustrations given (and they are only fugitive examples from wide materials) it is obvious that the American Indians have two kinds of prayer: (1) spells and oaths and pleas addressed to the lesser, the environmental, powers of nature, expressed in a magical or hortatory mood; and (2) true spiritual supplications directed to a power variously interpreted as the Great Spirit, the Master of Life, the Heavenly Father. 'Father' is a frequent epithet in their invocations. J. Mooney says of the Arapaho *niga* or *anigu* that it 'is a term of reverential affection, about equivalent to "our father" in the Lord's prayer'; the ordinary word for 'father' is quite different (14 *RBEW* [1896], pt. ii. p. 936). Again it is

Mooney who says of one of the most pathetic of the Arapaho prayer-songs—'sung to a plaintive tune, sometimes with tears rolling down the cheeks'—that 'it may be considered the Indian paraphrase of the Lord's prayer':

'Father, have pity upon me!
I am weeping from hunger;
There is nothing here to satisfy me'

(ib. p. 977).

LITERATURE.—See under artt. referred to.

H. B. ALEXANDER.

PRAYER (Babylonian).—Prayer in the Sumerian-Babylonian religion was almost exclusively confined to the private cults, or services for individuals, and the types of prayer which these peoples evolved may be classified in two distinct groups. These two types of prayer designed for the rituals of atonement for individuals are distinguished by their origin and usage. (1) The public liturgies tended to develop a liturgical type of prayer as the last melody or recessional of the song service, and these final passages of the liturgies were adapted for private penance. Prayers of this type are always liturgical in character, metrical in form, and disconnected with every form of magic. (2) On the other hand, a type of prayer was evolved in connexion with the magic rituals of atonement, and formed part of those mysterious and involved rituals. They are free from liturgical formality and usually inspired with great individuality and spiritual sentiment. Inasmuch as the liturgical type of private prayer was the direct offspring of the public liturgies, we shall introduce their discussion by describing the forms of public prayers which ended the Babylonian liturgies.¹

1. **The recessional of the public liturgies.**—When the Sumerian liturgists of the 24th to the 21st centuries B.C. finally succeeded in the completion of the long and intricate public services, they introduced a new musical and liturgical motive to end the service. These epilogues or recessionals differ both in literary composition and in musical accompaniment from the various passages which compose the main body of the service. They were known as *er-sem-ma*² to the Sumerian liturgists, i.e. 'a song sung to the flute.' The choir appears to have been accompanied through the many choral passages of these public services by the lyre, drum, and cymbals, but in the final passage the instruments were changed to the flute for the prayer of intercession. In the ancient liturgies as well as in the main body of the completed products of the Isin period the element of prayer or intercession was not prominent. But these long and intricate services of the Isin period were completed by attaching the intercessions at the end, for the need of prayer pressed itself increasingly upon the religious consciousness of mankind. These intercessions were at first of a purely public character and in harmony with the communal nature of the whole liturgy. The following extracts from the recessional prayer at the end of an Enlil liturgy will serve as an example of these public intercessions at the origin of their use:

'Oh heart repent, repent; oh heart repose, repose.
Oh heart of Anu repent, repent.
Oh heart of Enlil repent, repent.

"Oh heart of the lord repose," let be spoken unto thee.
Unto thy city hasten in glory like the sun.
Unto Nippur hasten in glory like the sun.

Thy city Nippur be rebuilt.
Thy temple Ekur in Nippur be rebuilt.

¹ The Babylonian liturgies, which are numerous and fundamental to the discussion of Babylonian religion, are treated as a supplement to this article (below, §§ 13-18).

² The Semitic rendering of this term is still unknown. Reissner has suggested *takribti hahhahati*, and this has been adopted by Jensen, but the evidence is not satisfactory.

May one utter petition unto thee.
May one utter intercession unto thee.
Oh heart be reconciled, oh heart repose.³

These Sumerian public services were employed without an interlinear translation by the Semites before 2000 B.C., but at some unknown point in the middle period of the history of Babylonia and Assyria the Semitic liturgists edited these texts with a Semitic version. They continued, however, to the very end of Babylonian civilization, as late as the last century before our era, to conduct the liturgies in Sumerian.

2. **Rise of the penitential prayers.**—Gradually the intercessions of these public services became more individualistic in thought and expression. In due time arose the beautiful responsive intercessions at the end of the liturgies, where the people and choir no longer voice the appeal of the city and nation, but represent themselves as penitents pleading for mercy before the deity to whom they had sung a long series of litanies. With the intercessional *er-sem-ma* of the Sumerian liturgy, quoted above, compare the following epilogue said at the end of a late liturgy to Marduk:

Choir:

'Oh lord, not wilt thou reject me, not, oh lord, wilt thou reject me.
Oh lord, divine ram of heaven and earth, not wilt thou reject me.
Oh lord Marduk, not wilt thou reject me.'

Priest:

'He that renders petition am I, thou wilt not reject me.
One of prayer am I, thou wilt not reject me.
One of intercession am I, thou wilt not reject me.'

Choir:

'A father who has begotten I am, thou wilt not reject me.
Oh soon repose, thou wilt not reject me.
How long, oh lord of righteousness? thou wilt not reject me.'

Priest:

"Turn thy neck unto him in faithfulness," I will say to thee.
"May thy heart repose," I will say to thee.
"May thy soul repose," I will say to thee.
Thy heart like the heart of a child-bearing mother may return to its place.
As a child-bearing mother, as a begetting father, to its place may it return.⁴

We have here a fully developed penitential prayer of the liturgical type, the new element of responses between priest and choir being introduced. The influence of the private confessional is obvious, and this public intercession was probably employed in the service of the confessionals. So arose under the influence of the public recessional the prayers of private penance said in secret with a priest in the seclusion of the temple cloisters and chapels. These penitential prayers were said in Sumerian, but are always provided with an interlinear translation for the more important lines.⁵ They were apparently unknown to the Sumerians; the pure Sumerian prayers of that type were probably composed by Semites. They are the direct offspring of the *er-sem-ma*, but, when employed for private penance, they were known as *er-sag-tug-mal*, 'weeping that appeases the heart.'⁶

3. **The *er-sag-tug-mal*.**—It is obvious that prayers of such formal character, said in the sacred language not understood by laymen and requiring intonation, could not become popular. The ordinary

¹ Taken from the epilogue of the liturgy to Enlil in H. Zimmern, *Sumerische Kultlieder aus altbabylonischer Zeit*, no. 12, restored by the present writer from a Philadelphia text in his *Liturgical Texts from Nippur*.

² The *er-sem-ma* of *en-zu sd-mar-mar* liturgy in S. Langdon, *Babylonian Liturgies*, pp. 114-123.

³ Pure Sumerian penitential prayers without Semitic translations were in use, as is proved by the fragment of one of this type in Langdon, *Bab. Liturgies*, K. 11874=no. 64, and C. D. Gray, *The Shamash Religious Texts*, Chicago, 1901, pl. xiii, K. 4795. See also Langdon, *Sumerian Liturgical Texts*, p. 118 (a penitential psalm to the god Amurru).

⁴ The Semitic rendering was probably *šga*, the *šga* of Hebrew poetry. This identification is based upon a comparison of iv. Ravi.² 64, no. 2, lines 14 and 21, *šga*, with ib. line 17 *er-sag-tug-mal*, and rev. 19, *er-sag-tug-mal*.

Babylonian and Assyrian preferred the services of the magic cults, where he said his prayers in Semitic. Consequently few of the liturgical prayers of penance have been found, whereas a large and increasing number of Semitic prayers of the secret cults are known. Only educated and distinguished laymen employed the liturgical prayers. They are mentioned in connexion with a ritual for the king, where they are intercalated in the service of a magic ritual along with the prayers of 'the lifting of the hand,'¹ which were always accompanied by sacramental ceremonies. We possess many rituals of this kind both for kings and for laymen, but this is the only one which directs the use of the liturgical penitential prayers. The king is directed to recite these prayers, or sometimes the priest recites them for him. In this case the service seems to have been performed on the roof of the palace.²

Another ritual tablet of this class also orders the saying of an *er-sag-tug-mal* to Ishtar.³ So we have substantial evidence that these liturgical prayers could be employed in the magic cults, but perhaps only in the rituals for kings and educated laymen. Asurbanipal employed homage⁴ and liturgical prayers to appease the gods.⁵

Only ten penitential prayers of this kind are known. They may be readily detected by two easy tests even when the literary note is broken from the end of the tablets. Used in the proper sense, an *er-sag-tug-mal*⁶ must be written in Sumerian with interlinear Semitic version and be composed in liturgical style. The penitential psalms are:

- (a) and (b) On a neo-Babylonian tablet in Berlin—one psalm to the god Sakkut and one to Marduk.⁷ The psalm to Sakkut is responsive, but that to Marduk is sung for the penitent by the priest.
- (c) A long psalm to 'any god' and the best example of a deep sense of religious contrition for moral sin;⁸ sung throughout by the penitent.
- (d) Psalm to Aja, consort of the sun-god at Sippar; a fine responsive composition which imitates the public intercessions closely.⁹
- (e) Psalm to Innini-Ishtar in the same style as (d), but sung throughout by the penitent.¹⁰
- (f) Fragment of a beautiful responsive psalm:
He weeps and cannot restrain it.
My deeds I will speak of, my unspeakable deeds.
My words I will rehearse, my word unreliable.
Yes, oh my god, of my deeds I will speak, my needs not to be told.¹¹
- (g) Fragment of a psalm similar to (f).¹²

¹ See below.

² This ritual for the atonement of a king will be found in v. R. 54, no. 2, with additions on pl. 10 at the end.

³ H. Zimmern, *Beiträge zur Kenntnis der babylonischen Religion*, Leipzig, 1900, p. 164, no. 51.

⁴ *Takrittu*, a Semitic word for liturgy in this passage (v. R. iv. 89).

⁵ The Semitic prayers, employed only in the magic cults, by long association in the cults of atonement for royal persons where the liturgical prayers were also permitted, were also erroneously called *er-sag-tug-mal*; e.g., the Semitic prayer addressed to Ishtar in a ritual for a sick man in v. R. 55, no. 2, obv. 25—rev. 5 is called a *su-ii-ia*, which is the proper title, but also an *er-sag-tug-mal*, which is erroneous.

⁶ The reading *er-sag-tug-ga* is also possible.

⁷ Text in Reiser, *Sumerisch-babylonische Hymnen*, no. 80; tr. in Langdon, *Bab. Liturgies*, pp. 124–130.

⁸ Text in v. R. 10. The principal ed. are H. Zimmern, *Babylonische Busspsalmen*, Leipzig, 1885, pp. 61–74, and in *Der alte Orient*, vii. pt. iii. pp. 22–24; A. Ungnad, in H. Gressman's *Altorientalische Texte und Bilder*, Tübingen, 1909, p. 90f. The advanced ethical conception of sin in this text points to a rather late date. The tablet was copied from a Babylonian original for Asurbanipal's library.

⁹ Text in P. Haupt, *Akkadische und sumerische Keilschrifttexte*, Leipzig, 1882, p. 122 f.; ed. Zimmern, *Babylonische Busspsalmen*, pp. 51–61; A. H. Sayce, *Origin and Growth of Religions* (H.L. 1887), London, 1909, p. 528.

¹⁰ Text in Haupt, p. 116 f.; ed. Zimmern, *Bab. Busspsalmen*, pp. 33–51, and *Der alte Orient*, vii. pt. iii. [1905] p. 24; Langdon, *Sumerian and Babylonian Psalms*, pp. 256–258; Sayce, p. 521.

¹¹ Text from two fragmentary duplicates, iv. R. 26, no. 8 and 27, no. 8; ed. Zimmern, *Bab. Busspsalmen*, pp. 85–87, and *Der alte Orient*, vii. pt. iii. p. 25; Sayce, p. 526.

¹² Text in v. R. 29*⁺; ed. Zimmern, *Bab. Busspsalmen*, pp.

(h) Responsive prayer in imitation of a public intercession to Enlil.¹

(i) A liturgical prayer similar to (h) mentioning an historical event; recited by the penitent (or choir?); possibly an *er-sem-ma*; ² intercession to Ishtar.

(j) Fragment of a beautiful prayer to a god.³

4. Semitic private prayers. — Besides these formal penitential prayers, a few Semitic prayers are known which probably represent the work of lay hymnologists, and hence approach more nearly our modern standards of poetry. They do not appear to have had any connexion with official worship. One of the best and longest examples of this type of private prayer is the fine appeal of Ašurnasirpal I. to Ishtar of Nineveh in which he intercedes for help in governing his kingdom and mercy upon himself as a sinner. According to one passage of this prayer, it was made at the time when the king dedicated to Ishtar a bed of ebony in her temple.⁴ Another long Semitic prayer to Marduk, which devotes special attention to this god's mythical deeds, appears to be a real act of private devotion by Asurbanipal in which he asks Zerbanit to intercede for him with Marduk.⁵ On an even more abstract and ceremonially detached plane stands the well-known hymn and prayer to the sun-god in which the best Babylonian ethical wisdom is discussed.⁶ A long but badly damaged secular prayer of this type to Nebo contains some remarkable lines.

'Oh lord open (hearted),
Thou of wide ears,
Oh Nebo open-hearted,
Thou of wide ears,
Oh wise lord, thou hast become angry against thy servant.
Upon him have fallen
In the billows of the flood he is thrown, the deluge [mounts] over him.

The shore is far from him, far away is the dry land.
He has perished in a deep place, upon a reef he has been caught.

He stands in a river of pitch, he is caught in the morass.
Take thou his hand, not shall thy servant be brought to naught.

Cause his sin to go forth, lift him from the river of pitch.
Oh Nebo, take his hand, not shall thy servant be brought to naught.⁷

5. Acrostics. — To this class of secular prayer belongs a group of artificially constructed prayers arranged in sections so that each section has the same number of lines, and each of these lines begins with the same vowel or syllable. These initial syllables of the sections spell out a sentence.

9-33; Sayce, p. 521; Langdon, *Sum. and Bab. Psalms*, pp. 268–271.

¹ Text in iv. R. 21*, no. 2; ed. Zimmern, *Bab. Busspsalmen*, pp. 78–85.

² Text in iv. R. 19, no. 8 and corrections, pl. 4; ed. Zimmern, *ib.* pp. 74–78. The colophon is broken away and hence this intercession may be the epilogue of some liturgy. Other fragments of penitential prayers are published by T. Meek, *BASS* x. pt. i. [1913], nos. 15, 16 (fragments of three different prayers, one of which is also published in Langdon, *Bab. Liturgies*, p. 183, and 17; K. 4645 in the British Museum (unpublished) is also a psalm of this class.

³ Text in v. R. 24, no. 3; cf. Haupt, p. 208; M. Jastrow, *Religion Babylonians und Assyriens*, Giessen, 1905–13, ii. 110. The number of prayers of this class was certainly more numerous than the known examples would lead us to infer. A tablet, Rm. 2220, in the British Museum contains a few titles of such prayers; since it is a fragment of a large tablet, it originally contained a long list of these liturgical psalms.

⁴ Text in ZA v. [1890] 79 f.; tr. in Langdon, *Tammuz and Ishtar*, Oxford, 1914, pp. 65–69.

⁵ Text in J. A. Craig, *Assyrian and Babylonian Religious Texts*, Leipzig, 1895, i. 29–31; ed. J. Hehn, in *BASS* v. [1903] 309–319; P. Jensen, *Texte zur assyrisch-babylonischen Religion*, Berlin, 1915, pp. 108–117. The first letters of the lines are an acrostic and read a-na-ku aš-ur-ba-an-ap-iš-ia il-su-ka bu-ud-lu-ia-ni-ma ma-ru-du-uk da-li-ki-ka bu-ud-lul, 'I am Asurbanipal who pray to thee; grant me life, oh Marduk, and I will sing thy praise.'

⁶ A long text in four columns, published by C. D. Gray, pls. i, ii., ed. *ib.* pp. 12–23; also by A. Jeremias, in Roscher, s.v. 'Shamash'; see also Zimmern, *Der alte Orient*, xiii. pt. i. [1911] p. 23; A. Schollmeyer, *ib.* p. 80 ff., and P. Jensen, *Texte zur assyrisch-babylonischen Religion*, pp. 98–107.

⁷ Text in ZA iv. [1889] 252–255 and 256 f. Similar prayers to Marduk are published, *ib.* pp. 36–40, and ed. Hehn, *ib.* pp. 319–325; by Hehn, *ib.* p. 392 f., and ed. pp. 368–373.

Naturally a composition of that kind was bound to extend to a great length. The best example is the acrostic published by Zimmern¹ and Craig.² The text is badly damaged and only a few words of the acrostic can be read: *a-na-ku . . . ub-bi-ib-ma . . . i-li u šar-ri*, 'I am . . . he has cleansed . . . of god and king.' Naturally the name of some king was spelled out after *a-na-ku*. Each section contains eleven lines, and each line is ruled into four accents, or word-groups. A fragment of an acrostic in sections of four lines has been published by Pinches³ which is obviously a royal prayer. Only one word of the acrostic can be read, viz. *zi-kir-šu*, 'his name.' The best example of an acrostic in sections of four lines is a fragment of which only three sections are preserved.⁴ The lines begin and end with the same syllable.

'He whom thou hast seized	not shall be lifted up [his head]
Of the weak and down-cast	among the gods,
He that is entangled in pit	thou establishest the [founda-
and mire	tion],
May thy good wind blow	looks unto thee.
I have cried unto thee, Oh	
Nebo!	and I be delivered.
I am fallen low among men,	Receive me with favour and I
I am undone like magician	shall rejoice.
	I refuse sleep.
	who knows not what he shall
	pray for.
I cry aloud to the gods,	loudly calling.
The down-cast who puts his	shall be satiated with abun-
trust on thee	dance.
Thou fortifiest the wall of	and establishest the foundation
the faithful,	thereof.
Thou givest goodness	and putt'st far away sin.
The stone wall of the wicked	thou turnest to clay.'

6. Prayers of dedication.—Closely allied to these unceremonial prayers and, like them, written for special occasions are the numerous prayers connected with dedications. The historical inscriptions of Sumerian rulers are usually written upon objects of art dedicated to a deity. At the end stands invariably⁵ the personal petition of the king.

E.g., the deeds of Lugalzaggisi, king of Erech, are written upon a vase dedicated to Enlil in the temple of Nippur and conclude with a prayer in prose. 'May Enlil, king of the lands to Anu his beloved father, repeat my prayer and to my life, life add. May he cause the world to abide in peace.'⁶ A statue of Gudea, patesi of Lagash, dedicated to the goddess Ninharzag to commemorate the building of her temple, ends with a prayer, 'The queen who in heaven and earth decrees fates, Nintud mother of the gods may lengthen the life of Gudea who built this temple.'⁷

The Sumerians no doubt attached a magical influence to these prayers. They produced in a positive sense the intervention of the gods in the same way as the curses which they often attached to monuments were supposed to invoke the wrath of the gods upon those who violated the statue.

The Semites did not imitate the Sumerian prayers at the end of their historical inscriptions⁸ until late in the history of Babylonia. All the historical inscriptions of Assyria from the period of the early rulers of Aššur to the reign of Asurbanipal in the 7th cent. end with a curse. Although

⁵ That is in case of objects dedicated to a god.

⁶ F. Thureau-Dangin, *Die sumerische und akkadische Königs-inschriften*, Leipzig, 1907, p. 155 f.

⁷ Ib. p. 67. For other prayers of this kind in the Sumerian period see ib. p. 83, ix. 1-3, p. 194 (z) 209 (a). Note especially the fine prayer of Arad-Sin, king of Larsa (ib. 215 (d) rev.).

⁸ The *Cruciform Monument of Manishtusu*, e.g., ends with a curse (L. W. King, *RAssyri* ix. [1912] 104) and so does the stele of the Code of Hammurabi. The historical inscriptions of Hammurabi, Samsuiluna, and Ammisaduga do not end with prayers.

in Assyria this Semitic conservatism in regard to ancient canons of historical composition remained to the end, yet we possess some examples of prayers on objects dedicated to deities as early as the 15th cent.,¹ and many other beautiful Assyrian prayers of this kind in later reigns.² These are regularly written in metrical form. The following are the best-known Semitic prayers of this kind:

(a) A hymn and prayer on a gold censer dedicated to Marduk in his temple at Babylon, by Asurbanipal.³

(b) Hymn, prayer, and curse to Nusku written on an image of the storm bird.⁴

A tendency to add prayers to the end of historical inscriptions is found among the Semites only in Babylonia and is probably to be explained as a survival of Sumerian influence. The Babylonian inscriptions of Asurbanipal preface the curse by a prayer,⁵ and one of them ends with a metrical penitential prayer.⁶ The full consequence of this literary movement was realized in the historical inscriptions of the Neo-Babylonian empire. Here from Nabopolassar onwards the records of these kings end with admirable prose prayers, and the curse disappears. From a religious and literary point of view, this represents a great advance on all preceding historical composition. The prayers of this class and period are numerous and should be referred to by the student who wishes to study the secular Semitic prayers at their best. The following prayer of Nebuchadrezzar is intercalated in an unusual manner into the preface of his greatest historical inscription (it is addressed to Marduk):

'Without thee, oh lord, what were the portion of the king whom thou lovest, whose name thou callest as it seemed good to thee? Thou directest his being, and guidest him in a righteous way. I am thine obedient prince, the creation of thy hand. Thou hast created me and hast entrusted me with the rulership of all peoples. According to thy kindness, oh lord, with which thou carest for all of them cause thy majestic rule to be merciful, and fear of thy divinity cause to be in my heart. Grant me what seems good to thee.'⁷

7. Rise of the šu-il-la and its later application to private prayer in incantations.—By far the most important and numerous class of prayers are the so-called 'prayers of the lifting of the hand'⁸ which arose out of the curse in the Sumerian incantations. In the early period the ritual of the incantations consisted in acts of symbolic magic accompanied by an invocation to one of the deities and a curse. The whole was said by the priest. The afflicted person in this period was supposed to have been attacked by the demons. Gradually a more ethical view of sin arose, in which the priests attributed the invasion of the spell (*mamit*) and the flight of the man's protecting deity to the penitent's own immoral deeds.⁹ *Pari passu* with this higher conception of sin increased the tendency to secure divine intervention by prayer and confession of these sins. Hence in the course of time the Babylonians developed a ritual of atonement, which, while preserving the magic acts and

¹ A short Semitic prayer at the end of a memorial tablet of the scribe of Ašuruballit, king of Assyria at the end of the 15th cent., will be found in King, *Annals of the Kings of Assyria*, London, 1902, pp. 388-390. The fine prayer of Ašurnasirpal I. in the 12th cent. cited above is really a dedicatory prayer written on the occasion of presenting a bed to Ishtar.

⁸ Sumerian *šu-il-la*, Semitic *nis kati*.

⁹ On the principles of the Babylonian atonement see art EXPIATION AND ATONEMENT (Babylonian).

the curses, introduces long prayers to the deities by the priest and penitent. Finally, a still higher ritual resulted in banishing the priest's prayers entirely and assigning them all to the sinner. In a ritual of the latter class the priest confined himself to the acts of magic which accompanied the prayers. Usually the directions for the magic ritual are written after each prayer said by the man seeking atonement from sin or healing of disease. Sometimes the prayers of the penitent are written on one set of tablets and the ritual for the priest on another.¹ Prayers said by a penitent are called 'lifting of the hand,' and were always said in the vernacular familiar to laymen. In those rituals where the priest took over a portion of the prayers we find them named by an ancient liturgical term *ki-sub*, 'prostration.' The priests almost invariably employ Sumerian in their prayers of the magic rituals, which were private ceremonies.

Since the ceremonial prayers of private penance were evolved by the Semites directly from the epilogues of the Sumerian liturgies, we should naturally expect that the prayers introduced into the ceremonies of the secret magic cults were modelled upon classic Sumerian incantation rituals. In fact, an Assyrian catalogue of official liturgies and recessional psalms adds also a long list of titles of Sumerian prayers of the 'lifting of the hand' to various gods,² and a small fragment of another catalogue contains several more.³ Since these have Sumerian titles, they perhaps may go back, like the liturgies, to Sumerian times. It will be seen, however, that *su-il-la* in these catalogues designated a liturgical public prayer. Only at a later period did the term apply to the Semitic prayers of penitents in the magic rituals. The present writer does not believe that the incantation ceremonies, as they came into the hands of the Semites in the age of Hammurabi, afforded any opportunity for the prayers of the sinner. They were too ritualistic and priest-ridden to permit of such concessions to laymen. Nor had they risen to the necessary conceptions of sin to produce private prayers as we have them in the later cults. When they passed on their rites of atonement to the Semites, they had probably arrived at the stage in which the priest alone adds prayer to the ban and the magic ritual. These priestly prayers were called *ki-sub* in the Sumerian ceremonies, and, when the Semites introduced their beautiful prayers for the sinner into those ceremonies, they called them *su-il-la*; since they take the place of the ancient 'curse,' they invariably bear also the title 'incantation.'

8. Prayers of the older type in Semitic times; the *ki-sub* of liturgies applied to priests' prayers.—Ceremonies of atonement of the Sumerian type in which the priest said part of the prayers on behalf of the sinner persisted in the Semitic religion of Babylonia. These are of course bilingual, said by the priests in Sumerian and possibly interpreted to the penitent by means of the Semitic interlinear version. The following are the best known examples of this class:

- (a) A long bilingual prayer to the sun-god, followed by a Semitic prayer of the penitent; part of a ritual of atonement for the king.⁴ A portion of the priest's prayer is as follows:

'To free the bound, to heal the sick is in thy power.

The god of this man for his son stands humbly before thee to accomplish faithfully the freeing.

¹ E.g., the rituals for one of the rites of atonement in the 'house of washing' (*bit rimki*) will be found in Zimmern, *Beiträge*, pp. 122-135. The tablets of prayers to be said by the penitent (here the king) are also partially preserved (see L. W. King, *Babylonian Magic and Sorcery*, London, 1896, no. 1).

² Iv. R. 53, iii. 44-iv. 28.

³ No. 103, in Langdon, *Bab. Liturgies*.

⁴ Text iv. R. 17; ed. A. Schollmeyer, *Sumerisch-babylonische Hymnen und Gebete an Samaš*, Paderborn, 1912, no. 2.

The lord has sent me;

Yea, the great lord of Eridu has sent me.

Stand forth and learn his command and render his decision. When thou marchest the dark-headed people, thou directest The light of peace create for him, and so may his trouble be smoothed out.

Punishment for sin has been laid upon a man, son of his god. His limbs are afflicted with pain; he lies suffering with sickness.

Oh sun-god, observe the "lifting of my hand."

Consume his food, receive his drink-offering and his god place at his side.

At thy command may his punishment be forgiven, his condemnation removed.

That which binds him let be undone, from his sickness may he live.

As long as he lives may he speak of thy majesty.

And I the magician, thy servant, will sing thy praise.¹

(b) Part of a similar series containing the priest's prayer to Shamash and the first line of the penitent's Semitic prayer. A portion of the Sumerian has no interlinear version.²

(c) Fragment of a similar series. Only the prayer of the priest to Shamash is preserved. The last lines duplicate no. (b).³

(d) Fragment of a similar series. Only about half of the priest's prayer to Shamash is preserved.⁴

(e) A complete series of prayers in the 'house of washing' for the healing and atonement of a king. The service begins by a long prayer of the priest, after which follows a section from the lower type of incantations, and then a short Semitic prayer of the king; finally a long prayer of the priest. This service is also said to Shamash.⁵

(f) Fragment of an incantation ceremony to Marduk. The end of one of the penitent's prayers in Semitic and most of one of the priest's prayers are preserved.⁶

(g) A complete prayer of a priest addressed to Shamash as an incantation to deliver a woman at childbirth.⁷

(h) Fragment of a ceremony in the house of washing, containing a portion of the priest's prayer and the end of the penitent's prayer.⁸

(i) Fragment of a ceremony addressed to Bau, goddess of healing; portions of the priest's prayer and beginnings of a few lines of the penitent's prayer.⁹

(j) A priest's prayer, called an 'incantation and prayer of prostration to the setting sun,' with catch-line for a succeeding Sumerian prayer.¹⁰

(k) A long and nearly complete bilingual prayer to the moon-god is called a *su-il-la* by the scribe, but it has more similarity to the epilogues (*er-šem-ma*) of liturgies than to the prayers of priests in the magic ceremonies.¹¹ It was followed by a similar Sumerian prayer. This tablet testifies to the existence of a series of liturgical prayers probably written for public services and closely related to the liturgies.¹²

It is evident, therefore, that the Babylonians employed the word *su-il-la* originally for a Sumerian public prayer, and, although we have but one example of these, yet the catalogue shows that they possessed a great number. The titles of prayers in the incantations were, therefore, taken from the musical terminology of the public services. The name of the choral passages in the liturgies (*ki-sub*) was given to the Sumerian prayers of the priests in these magic rituals, and the name of public solo prayers of the temple choristers (*su-il-la*) came to designate the prayers of the

¹ This class of prayer usually has the title, *enim-enim-ma ki-[su-bi-im] dingir X kam*, 'An incantation, prayer of prostration to the god X.' This title was taken from an old liturgical term, *ki-sub*, melody in a public liturgy.

⁹ Text by Craig, pl. 18; ed. Martin, p. 70.

¹⁰ Text by G. Berlin, in *RAssyri* i. [1886] 157-161 with tr.; see also Schollmeyer, no. 7. The purpose of this ceremony remains obscure. It may possibly belong to a series of prayers for the dedication of a temple or some similar service.

¹¹ Text in iv. R. 9; ed. E. G. Perry, *Hymnen und Gebete an Sin*, Leipzig, 1907, no. 1; and E. Combe, *Hist. du culte de Sin*, Paris, 1908, no. 1; Zimmern, *Der alte Orient*, vii. pt. iii. p. 11 f. The title of this prayer was entered in the catalogue (Langdon, *Bab. Liturgies*, no. 103, line 8) and the title of the colophon *etim-ma umun gi-ra* in the same catalogue (line 10).

¹² The bilingual prayer said at the close of the public services of the New Year festival by a priest is also called *su-il-la* (F. H. Weissbach, *Babylonische Miscellen*, Leipzig, 1903, pp. 36-41; Iv. R. 18, no. 2).

laymen in these incantations. Both of these literary terms have, therefore, a double usage in Babylonia and Assyria, which proves clearly enough that the prayers of incantation ceremonies are of much later origin than the liturgies.

9 The *su-il-la* prayers of the magic cult.—From every point of view the prayers of the laymen, said in their own vernacular Semitic, form the largest and most valuable collection of private devotional literature of the Babylonians and Assyrians. The tendency to regard moral transgression as the cause of divine anger resulted in the increasing importance of the prayers of the penitent. Most of their best rituals of atonement have eliminated the prayers of the priests entirely. We possess a large number of these prayers of 'the lifting of the hand' to be used as the books of the various rituals appoint. They follow one another, each to a different deity, while the priest performs the necessary rites of magic. All the known tablets of prayers of this class belong to the late period, as we must expect; for fervent intercession based upon a spiritual consciousness of sin is of slow growth in any religion. It never was attained by the Sumerians, and the Semites themselves advanced to these higher forms of atonement only after 2000 years and more of their consecutive history. These prayers, despite their fine literary composition and lofty sentiment, always bear the title 'incantation and lifting of the hand,' but the former title, implying a low type of religion, appears here only because these prayers belong to the secret rituals of the priests of atonement. It is possible to give only lists of groups of these prayer-tablets, since their number is very great.

The earliest known incantation rituals, in which the prayers are either partly or wholly assigned to the laymen, belong to the city of Assur, capital of the early Assyrian empire, and probably belong to the period of Tiglathpileser I.¹ and his successors. These have been recently excavated by the German Oriental Society on the site of modern Kalah Shergat. The religious texts recovered by the Germans at Assur were not published until late in 1915,² and consequently Assyriologists have not yet been able to make critical editions of them. The following list of tablets in the official publications will contain the more important of the early Assyrian prayers of this class:

No. 23: portions of two prayers to Marduk. Ritual accompanies each prayer.³

No. 25: part of a prayer to Nebo followed by the ritual and beginning of a prayer to Marduk.⁴ The Marduk prayer was employed in many other services and will serve as a good example of these Semitic compositions:

Mighty and glorified one, splendid one of Eridu,
Lofty prince, first born of Nudimmud,
Marduk the terrible one, who maketh Egurra to rejoice,
Lord of Esagila, help of Babylon, who showeth mercy unto
Ezida,
Who giveth peace unto the soul, chieftain of Emahtila, who
reneweth life,
Protecting shadow of the land, sparing the wide-dwelling
peoples,
Regent of the sacred chapels everywhere,
Thy name is good in the mouth of peoples everywhere.
Marduk, great lord, merciful god,
By thy mighty command may I live and prosper and look
upon thy divinity.

¹ 12th century.

² E. Ebeling, *Keilschrifttexte aus Assur Religiösen Inhalts*, Berlin, 1915, pts. I. and II.

³ It is somewhat rare to find these prayers addressed to the same god. A similar service, in which a succession of three prayers to Nebo occurs, will be found in King, *Bab. Magic*, no. 22. The first prayer to Marduk is a duplicate of the one mentioned in the following note.

⁴ The Marduk prayer is known from a service employed at Nineveh, where it occurs as the first prayer on one of the tablets of a series (King, *Bab. Magic*, no. 9). Naturally both copies came from Babylon. It has been ed. by Hehn, *BASS* v. [1906] 847-849. A nearly complete duplicate is the first prayer in Ebeling, no. 59.

Whatsoever I plan may I attain.

Fix justice in my mouth.

Cause to be words of goodness in my heart.

May guard and watchmen speak of (my) good deeds.

May my god stand at my right.

May my goddess stand at my left.

May a saving god be faithful at my side.

Oh grant to speak, and hear and be gracious.

The word which I utter, even as I utter it, may be favourably received.

Oh Marduk, great lord, bestow life.

Command that my soul live.

May I enjoy unto satiety walking in purity before thee.

May Enlil rejoice for thee, and Ea be glad for thee.

May the gods of the universe adore thee,

And the great gods make kind thy heart.

This prayer was followed in the Assur service by another to Marduk, then by one to Sin, the moon-god, and finally by one to Enlil. After each the scribe gives the ritual for the priest.

No. 26: a ceremony in which the priest introduces the penitent to Marduk, explaining his sorrows in Semitic. Then follows a very long prayer to Marduk by the penitent. The service ends with a complicated and long ritual.

No. 32 contains a long prayer to Shamash preceded by a ritual.

No. 55 contains a prayer to Shamash. As no ritual is given, it probably belongs to a series in which prayers and ritual were given on separate tablets.

No. 58 contains a prayer to Shamash and four to Nusku, the fire-god, without ritual.

No. 59 begins with the prayer to Marduk translated above, and is followed by one to Enlil.

No. 68 contains only one long and beautiful prayer to Enlil without ritual.

No. 80 begins with ritualistic directions for the priest, after which follows a long prayer of the penitent to Shamash.

The Asurbanipal library has been up to the present our principal source of information concerning these rituals of atonement. The tablets of prayers and ceremonies belonging to that collection have been published together in King's *Babylonian Magic and Sorcery*, and they have been widely studied in special monographs. These ceremonies, however, have never received a proper scientific treatment, since the various monographs founded upon them, by selecting only prayers for a particular deity, dissect the ceremonies and omit the rituals.¹

Prayers of 'the lifting of the hand' from Babylonia are also well documented. The longest, and in many ways the finest, of all these *su-il-la* prayers is addressed to Ishtar and contains 110 lines.² Several tablets from ceremonies of this kind belong to the collection of the University Museum in Philadelphia and have been published by D. W. Myhrman, *Babylonian Hymns and Prayers*.

No. 12 contains a prayer of 'the lifting of the hand' to Shamash by the king Shamash-shum-ukin. Ordinarily these prayers contain a blank space for the insertion of the name of the layman. This and no. 13, a prayer to Marduk, and Ebeling, no. 55, a prayer to Shamash by Asurbanipal, are the only known instances where the text gives the name of the person who used it. In fact, we have two Assyrian ceremonies which employed Myhrman, no. 12, both with the usual blank space for the name of the layman.³

No. 17: a prayer to Enlil, and first line of the next prayer to Ninlil. This prayer illustrates Babylonian religion at its best:⁴
'Oh lord magnified, fortress of the heaven spirits,
Councillor of the earth spirits, solicitous prince,
Oh Enlil, lord magnified, fortress of the heaven spirits,
Councillor of the earth spirits, solicitous prince,
Self-renewing, the utterance of whose mouth is unalterable,
The word of whose lips no god has put aside,
Lord of lords, king of kings, father who begat the great gods,
Lord of fate and of the designs of things, ordering heaven and earth, lord of the lands.

¹ The various prayers to Sin, Shamash, Marduk, etc., are thus taken out of their connexion in these ceremonies and grouped together for special study. This method is peculiar to the Leipzig school of Assyriologists.

² Text in King, *The Seven Tablets of Creation*, London, 1902, II, appendix 5; ed. in I. 222-237. See R. W. Rogers, *Cuneiform Parallels to the OT*, New York, 1912, pp. 153-161, and literature cited.

³ King, *Bab. Magic*, nos. 6 and 10. This prayer was ed. by Schollmeyer, no. 14. See corrections to this edition in *AJSL* xxix. [1913] 209.

⁴ Ed. S. Langdon, *PSBA* xxxiv. [1912] 152-155; corrections by Zimmern, *ZA* xxviii. [1913] 68. The same prayer was employed in Assyria by the king at the dark of the moon (King, *Bab. Magic*, no. 19).

Who completest judgment, whose commandment changes not.
 Fixing the fates of the gods altogether,
 By thy order humanity has been begotten.
 Of king and prefect, the being thou definest.
 Since to create god and king rests with thee,
 And thou hast caused the weak to attain the measure of the strong,
 Among the multitudinous stars of heaven,
 Oh lord, I put my trust in thee, I adore thee, and my ears
 are unto thee.
 The fate of my life decree,
 Command that my name be created.
 Undo the evil, create for me justice.
 Pour out upon me a form, bestow upon me abundance.
 Put upon me thy vast abundance.
 May god and king hold me in esteem.
 May lord and prince do what I command.
 May there be unto me one that sees me.
 In the assembly of elders may my speech be heard.
 May the protecting spirit, commanding acceptance of prayer
 and mercy,
 Daily walk with me.
 May the gods adore thee, may the goddess seek thee.
 And I thy servant would live, would prosper.
 Thy greatness I would glorify, thy praise I would sing.'

All the prayers discussed in the above section are designated by the literary note *šu-il-la*, but they by no means exhaust the literature of this kind. The incantation rituals of the lower types, such as the *Maḫlū* and *Surpu* series, often contain incantations which are real prayers, and they are often repeated by the laymen. But the scribes do not dignify them by the name *šu-il-la*, and on the whole the distinction which they made, evidently on a ceremonial basis, holds good. In the *šu-il-la* we have a real prayer in which the sinner takes no part in the ritual.¹ In the other ceremonies, where he utters the incantations, he himself takes part in the magic ritual. Consequently the incantations not designated as *šu-il-la* are on the whole of a lower type as literature and from a religious point of view.

10. The *ba-gur-da-kam* prayers.—We possess one tablet of prayers which has the subscription, 'Incantation to cause god and goddess to repent.'² Since all prayers are incantations, we have here in reality evidence that the Babylonians possessed at least some series of private prayers for laymen, absolutely untrammelled by magic rituals. We may perhaps assume too much by this estimate of Babylonian religion, for which this tablet is at present our only evidence. But the three prayers which here follow each other are so lofty and fervent, and the second and third so monotheistic, that we cannot refrain from crediting the Babylonians with having attained this the highest level of all religion—private prayer.

A few lines of the second prayer will confirm this criticism.

'My god, I know not the sins of . . .
 Thy revered name scoffingly have I spoken?
 Thy titles have I forgotten and mightily have I . . .?
 Thy work in time of trouble have I neglected?
 Thy boundaries have I transgressed?

Many are my sins; as I have done, mayest thou not requite.
 Oh, my god, sever and undo, free the toils of my heart.
 Forget my folly, receive my prayer.
 Turn my sins unto favour.'³

¹ In a letter to the king concerning a list of rituals of the *nam-bur-bi* series (see below) the priest of incantation refers to the prayers or incantations in that service as *šu-il-la*, and the letter implies that the priest himself said them. This illustrates the indefinite application of *šu-il-la*. Here it is used for the lower type of prayer allied to the real incantations. See R. F. Harper, *Assyrian and Babylonian Letters*, Chicago, 1892, I. 23; ed. E. Behrens, *Assyrisch-babylonische Briefe*, Leipzig, 1906, no. 7.

² Craig, II. 61., and duplicate in Myhrman, no. 14; ed. Langdon, *PSBA* xxiv. [1912] 75-79; important corrections in *ZA* xxviii. [1913] 71, and *AJSL* xxx. [1914] 228.

³ In Craig, p. 131., will be found a tablet with prayers which probably belong to this type of service. Here even the superscription, *šiptu*, which precedes all prayers, is omitted. To an advanced type of ritual belongs the tablet in Craig, pp. 15-18, restored by Langdon, *RAssy* xiii. [1916] 105-117, from Ebeling, no. 57. The prayers are addressed to Tammuz and Ishtar and are neither prefaced nor ended by a literary note to designate them as incantations.

11. The prayers of the *nam-bur-bi* series.—A much more extensive series of atonement rituals existed, apparently designed for the use of those upon whom had fallen some misfortune, by which the Babylonians inferred that the gods were turned against a man, and that atonement was necessary. This series, which aimed at providing for all sorts of emergencies, bore the title *nam-bur-bi*, 'the redemption.' An event of evil augury having occurred, the priests selected for the person concerned that part of the series which applied to his case. Much magic was employed, and the unfortunate man repeated a Semitic prayer provided by these books for the occasion.

E.g., the 135th tablet provided for the event, 'If a man has lost or [dropped] into the river a cylinder seal or a stone pestle (?). After an elaborate ritual to cleanse that man's house by the priest, the man himself prays to Ishtar. The ritual closes with other complicated magical acts.² Another tablet of this series provides for, 'If evil signs and omens come upon a king and his land.'³ The ritual seems to have preserved parts of two prayers said by the king or his delegate.⁴

Prayers and rituals from this series are frequently prescribed by astrologers at times of unfavourable omens.⁵ A letter from one of the priests of atonement to the king refers to the *nam-bur-bi*, 'If the moon and Saturn stand together in a misty ring,' which was taken as an evil omen.⁶ In the same letter the priest speaks of having read 21 tablets (!) of this series to avoid the ominous events. Another letter to the king informs him of a *nam-bur-bi* at the time of an earthquake.⁷ Another letter mentions an astrological event for which the series provided no prayers and rituals.⁸

Most of the great rituals of atonement contain prayers employed as incantations; consequently the number of these compositions is well-nigh unlimited. A ritual for purifying a newly-built house to prepare it for the owner's occupation contains two prayers intercalated with the ritual.⁹ The prayers of the priests in the rituals of the New Year celebrations during the first eleven days of Nisan belong to the public ceremonies and are said in a mixture of Sumerian and Semitic. These bear the title *šub*,¹⁰ always employed for the Sumerian prayers in distinction from the *šu-il-la*, or Semitic prayers,¹¹ and were probably accompanied by music.¹²

12. Prayers of preparation (*ikrib*).—The intricate and comprehensive religious literature of the Babylonians provided rituals and prayers for every conceivable necessity, and one of the most important.

¹ The Semitic loan-word was probably *nam-bur-bā* (iv. R. 17b, 15: King, *Bab. Magic*, no. 6212); *nam-bur* means 'freeing,' 'unbinding,' and *bi* means 'to speak.' The same element *bi* is found in *sag-bi* = *mānitu*, 'curse.' For *nam-bur-bā* see Behrens, pp. 95-97.

² Text in Craig, p. 66 f.; ed. Martin, pp. 242-247.

⁶ *Summa Sin u Samas ana tarbaši zinnatu iḫḫā isinnī* (Harper, *Letters*, I. 23, 15).

⁷ Harper, *Letters*, no. 355, 11.

⁸ A partial eclipse of the rising sun (ib. no. 470).

⁹ Text in Craig, p. 75 f., and Zimmern, *ZA* xxiii. [1909] 369. See also Langdon, 'Babylonian Magic,' in *Scientia*, xv. [1914] 239, and Jensen, p. 54.

¹⁰ An abbreviation of *kišub*.

¹¹ The *šu-il-la* designated also Sumerian prayers of the priests, as already stated. When employed in this sense, they are related to the *kišub* or *šub*, the difference consisting probably in the use of a musical accompaniment for the *kišub* or *šub* prayers.

¹² The text of the New Year rituals will be found in iv. R. 40, and *RAssy* viii. [1911] 42 (by P. Dhorme). These texts preserve most of the prayers and rituals for the days 2nd-6th Nisan. An unplaced fragment was published by Hehn, pp. 398-400, and ed. pp. 375-380. The final prayer of this service on 11th Nisan is called a *šu-il-la* (see above). Some of these public prayers were translated by Langdon in *Exp* vii. viii. [1909] 168-168.

ant parts of a priest's duties was to prepare himself properly for his sacred services. Undoubtedly the prayers provided for such preparation were extensive, but our sources supply us with adequate information upon only one point. The diviners (*barā*) invariably prepared themselves for consulting the omens revealed on sheep's livers by performing long purificatory rites interspersed with prayers to the deities Shamash and Adad, who presided over the art of augury. These prayers are not called incantations, nor do they bear any of the Sumerian literary indices so common to the prayers of the official cults. This points to their Semitic and comparatively late origin. They were classified as *ikrib* prayers—a pure Semitic expression.¹ These prayers all end with a formula which is practically unvaried:

'In all that I offer to you, oh Shamash and Adad, stand by; in my discourse, my prayer, in whatsoever I do, in the inquiry which I present let there be trustworthiness.'

13. *Liturgies or public prayers.*—For their public worship the Babylonians and Assyrians adopted that of the Sumerians, without any appreciable change. And they continued to use in the daily liturgies of that vanished people the language in which they were originally written. Semitic Babylonia and Assyria presented a close parallel to the Roman Catholic Church, which still conducts most of its formal public service in the sacred language in which it was originally written. An investigation of the liturgies must concern itself primarily with the origin, evolution, and use of Sumerian public worship. When the liturgists of the late Sumerian period finally constructed the long public services, the Semites adopted them as sacred books, and in many cases we can trace the use of these litanies from Sumerian days to the 2nd century B.C. Many of the late Assyrian and Babylonian editions are edited with partial interlinear versions; sometimes musical (to us unintelligible) notes are added; comments and variant readings² often encumber the text, but the faithful adherence to the ancient Sumerian original is remarkable. Perhaps a few of the epilogues which were later adopted as psalms of private penance (*er-sag-tug-mal*) arose in Semitic times, but even this is uncertain.

14. *Public prayer older than private prayer.*—We have already seen that in the complicated rituals of the Semites the prayers of private devotion are the product of the Semitic mind. Even the formal prayers in which the priests took part, although composed in Sumerian, were probably the work of Semites. There is no proof that Sumerian worship possessed any of these private or public solo chants of the priests. It is of course possible that they originated the Sumerian *šu-il-la* prayers which, as we have seen, existed alongside of the Semitic *šu-il-la* prayers. But these were public prayers, chanted by a priest and closely related to the choral liturgies. On the other hand, the Sumerian people, apparently incapable of individualism in worship, found the full expression of their religious psychology in common devotion. And devotion *en masse*, public songs participated in by the whole people, arose at an extremely early period. The Sumerian cared only to lose himself in the fellowship of religious experience.

15. *Origin of liturgies.*—It is difficult for moderns to understand the problems that confronted mankind in constructing religious services.

¹ Most of the *ikrib* prayers and rituals will be found in Zimmern, *Beiträge*, pp. 190–219. A ritual of *barā* preparations containing *ikrib* prayers to Adad and Sin will be found in Perry, *Hymnen und Gebete an Sin*, pp. 24–28. Another fragment of the same ritual with prayers to the astral deities, moon, Jupiter, and Venus is published by Langdon in *RAssyr* xii. [1915] 189–192.

² E.g., see the much glossed text iv R. 30, no. 1; ed. in Langdon, *Sum. and Bab. Psalms*, pp. 247–255.

In Sumer they began by using short chants based upon some calamity which had befallen the city. From the beginning music was essential to these public choral threnodies, and the earliest known compositions are characterized by refrains. In the early period anterior to the last dynasty of Ur each Sumerian city seems to have possessed its own corpus of sorrowful litanies based upon local calamities in its long history. At present Sumerian antiquities have produced only fragmentary examples of the public services of the early period.¹ But a few of these short threnodies survived and were current in the Ur and Isin periods, when the complicated liturgies were being worked out. The following public choral service of Lagash will illustrate the origin of these compositions (here the words are supposed to be uttered by Bau, the mother-goddess of Lagash):

'Oh city, alas the treasures! my soul sighs for thee.
My city Girsu, alas the treasures! my soul sighs for thee.
Oh brick-walls of Lagash, alas the treasures! my soul sighs for thee.
Oh abode of temple Ninnū, alas the treasures! my soul sighs for thee.
Oh my high altar of Ninā, alas the treasures! my soul sighs for thee.
Oh brick-walls of my Sirar, alas the treasures! my soul sighs for thee.
Oh ye highlands(?) of Lagash, alas the treasures! my soul sighs for thee.
Of my city the treasures are scattered.
In shining Girsu the children are distressed.
Unto the interior of the city, oh day of woe!
Unto the exterior of Girsu, oh sorrow, my holy place.
Within the splendid sanctuary the transgressor came.
Unto my abode the transgressor came.
Unto joyful . . . the transgressor came.
Unto the consort of the great hero the transgressor came.²
From their queen he caused him to go forth.
From their temple the august queen he caused to go forth.
The queen of my city with misery [is afflicted]
The mother, the wild cow queen, with misery [is afflicted]

My city my father gave as a gift.
Girsu Enlil cared for faithfully.
In my city which he³ ruined altogether,
In Lagash which he ruined altogether,
In Sirar which he ruined altogether,
In Ninā which he ruined altogether,
Oh afflicting shepherd, I will appease thee.
Oh afflicting shepherd, let me appease thee.
Oh lord of lamentation, by the woe of my city, by the woe of my temple, accept repose(?).⁴

These early single song compositions were probably named after the musical instruments chiefly employed in their composition. The liturgy translated above was called an *er-sem-ma*, 'lament on the double flute.' All the known early liturgies are of this class. It is, however, probable that other song services were accompanied by stringed instruments, particularly the lyre, and were called 'lament on the lyre.'⁵ Choral passages of this kind were always known as *sir*, 'song,' to designate them as liturgical in character. A pronounced tendency to enlarge these single song services until they became of considerable length manifested itself at all the great temple schools. Some of them extend to nearly 100 lines.

16. *Rise of a standard breviary.*—As a national consciousness slowly permeated the disunited Sumerian communities, and the national myths and epics became common property, the various liturgical schools began to borrow from each other. If, e.g., a choral song of Nippur possessed attractive words and a successful melody, the liturgists of other cities adopted it into their own breviary, inserting a line or lines to mention their own

¹ They are cited in Langdon, *Bab. Liturgies*, p. i, note 3, and one is partially tr. in *PSBA* xxxiv. [1912] 156.

² Note how the people inadvertently forget the situation and reveal the real fact that they themselves are wailing.

³ The pronoun refers to Enlil; all calamity was attributed to the anger of the gods.

⁴ Text in *Cun. Texts*, xv. 22, London, 1902; variant in Zimmern, *Sumerische Kultlieder aus altbabylonischer Zeit*, no. 2, rev. ii. 10–42; ed. in Langdon, *Sum. and Bab. Psalms*, pp. 284–287.

⁵ See Langdon, *Bab. Liturgies*, p. xxxviii, and p. xlv, note 1.

temples and city.¹ The various lamentations to the weeping mother tended to produce catholicity, for she was a common possession of all Sumerian worshippers. Thus the growth of a standard breviary received on all sides a powerful impetus. And the priests of the prosperous and cosmopolitan age of Ur and Isin were not satisfied with these short songs. They desired longer services, more variety in melody, and more dogmatic theology. They began to evolve longer liturgies by the somewhat crude process of compiling a few old songs without regard to their content.² But such uncertain procedure was not tolerated to any great extent. The hymnologists naturally insisted upon working out a single religious idea and upon designing each liturgy for the worship of a single deity. They chose some ancient single song service for the first melody, reducing it to moderate length. The second melody was made by an extract from some old song. In this way the liturgists obtained the long services of 20 to 30 melodies, all selected from songs addressed to the same deity. Finally, the rule obtained that the next to the last melody should be a special theological litaney, in which the names of all the gods are sung to a refrain peculiar to that service. This 'titular melody' is followed by the liturgical prayer, *er-sem-ma*, which gave rise to the *er-sag-tug-mal*, as explained above.

17. The word.—In most of these long liturgies we find at least one song to the 'word,' always described as the cause of all calamities. In the case of those liturgies sung to the great gods the word is described as going forth from the mouth of God to execute His judgment upon sinful mankind. In the weeping mother litanies the word seizes upon this mother-goddess, causing her to wail with her people. For all the liturgies addressed to the mother-goddess (Bau, Gula, Innini) represent her not as angered against humanity, but as sharing their sorrows and wailing with them in their lamentations.

18. The canon of liturgical literature.—Although we now know a very large number of these liturgies either complete or, as is generally the case, in fragmentary condition, we are far from possessing the whole number of the series of songs which formed the canon of sacred literature. The scribes of the Isin period probably drew up a list of the first lines of all liturgies that had received ecclesiastical sanction. Their number must have been large, possibly 600 or 700. At any rate, the canon was closed by the Sumerian liturgists themselves. Even in Assyria, which adopted the entire Sumerian canon of sacred liturgy, we find no mention of any Assyrian city or temple. The local cults of these northern Semites came too late to be entered into the songs of the public services, and they present the curious spectacle of a great people who said their public prayers in liturgies which never made any reference to themselves.

LITERATURE.—For the prayers of the private cults and the public solo prayers of priests the entire literature is cited in the notes. The subject of liturgies, which is much more extensive and difficult, may be studied in the following works:

I. TEXTS.—G. Reisner, *Sumerisch-babylonische Hymnen*, Berlin, 1896; H. Zimmern, *Sumerische Kultlieder aus altbabylonischer Zeit*, Leipzig, 1912-13; S. Langdon, *Babylonian Liturgies*, Paris, 1913; H. S. LANGDON.

PRAYER (Buddhist).—I. General.—Buddhism teaches that there is no personal creator or ruler of the world, and that the perfection of religious and moral ideals rests solely on one's own self-perfection. Thus in the Buddhist religion there is no room for prayer, in the sense of a petition or solicitation addressed to a god. This was the reason why Buddha so carefully guarded against the use of prayer (*manta*, Skr. *mantra*) addressed to a god for the purpose of securing a certain benefit through his special favour.¹ But, when prayer is understood in a broader way, there is the Buddhist prayer as an expression of earnest faith, determined intention, as a means of self-perfection in Buddhist ideals. Moreover, the Buddhist religion developed, after the death of its founder, in the direction of adoring him not only as a perfect human personality but as an embodiment of universal truth, i.e. in the conception of the *dharma-kāya*. In this developed form an individual striving for the attainment of *bodhi* ('enlightenment') stands to Buddha in the relation of the disciple to the Master, and of the saved to the Saviour. Here the practice of expressing the earnest intention of realizing Buddhahood gradually took the form of solemn vows taken to commit oneself to practise Buddhist morality, assisted by encouraging assurance given by Buddha, in his actual presence or in spiritual manifestation. Many of these vows are in reality prayers, addressed to Buddha as well as to the universal truth revealed by him. These vows, or prayers, are called *pariṇidhāna* in Sanskrit (Pāli *pariṇidhāna*).

Now, in the Pāli books, *pariṇidhāna* means concentration of mind upon a certain idea or object, which helps in tranquillizing the mind.

'That disciple should concentrate (*pariṇidhāna*) his mind upon a certain thing (*attha*) as the condition of tranquillizing; when the mind is concentrated upon that tranquillizing condition, cheer arises and from cheer joy arises . . . (Then he should think) I shall concentrate mind upon this thing and this thing being realized I shall now dwell on that.'²

In this sense *pariṇidhāna* is a general name for various endeavours to calm and concentrate mind, such as *pasāḍha*, repose or faith in the Three Treasures and Buddhist morality; *chhanda*, earnest desire for realizing supernatural powers (*iddhi*); *sati*, thought intently fixed on Buddha and his teachings, etc.³ Indeed, Buddhism is exceedingly rich in these terms, ideas, and practices of mental concentration and spiritual drill, and they all play the part of prayer or orison, with a special emphasis laid on the concentration of mind on a certain point of Buddhist truths. These experiences are described by similes which enable us only to guess what were the effects of the mental concentration; and the total result of the spiritual exercise may be formulated as a direct assurance and personal experience of the unity of existence, which may be expressed as an expansion of self or an absorption of the cosmos into self. There are prescribed formulæ for these practices of meditation and for their results, and these capital passages in the scriptures served as manuals of practice as well as a kind of prayer, in the sense of inspiration and assurance. E.g., the fourfold faith (*pasāḍha*) mentioned above and the seven stages of enlightenment (*bojjhaṅga*) were used for expelling the pain of disease, though the real import of these meditations consisted in something more and deeper than mere guards against ills.

¹ For the use of *mantra* in later forms of Buddhism see art. TANTRA.

² *Sāmyutta*, xlvii. 10 (PTS ed. v. 156).

³ Similar terms are *vipassanā*, *samātha*, *pariyesanā*, *cheto vimutti*, *jhāna*, etc.; cf. art. ETHICS AND MORALITY (Buddhist).

It was the same with the fourfold infinite expansion of mind (*appamāna-cheto-vimutti*) against hatred and ill-will and for realization of love, compassion, etc.¹

Buddhist ethics emphasizes the importance of thought and intention as the source of bodily acts and utterances of speech. It is on this ground that the concentration of thought is so persistently insisted on in the various methods of meditation and carefully formulated in their descriptions. Thought may be expressed in utterance, whether in reciting the holy texts or in confessing one's faith, and these expressions naturally take the form of prayer as found in any other religion. Prayer in this sense is not a petition, but an utterance of devotion to the Buddhist cause, of determination to accomplish Buddhist ideals, of conviction in the final destiny of mankind to reach Buddhist perfection.

Thus, Buddhist prayer is an expression as well as an inspiration—an expression of belief and intention and an inspiration of ideal and zeal. As an expression of faith, Buddhist prayer pays homage to Buddha, to his truth and community, mostly in adoration and exaltation, which serve at the same time as a confession of faith.² As an inspiration of ideal aspiration, it takes the form of a solemn vow to commit oneself to efforts in moral perfection, equally on the part of Buddha himself and on that of his followers. The latter aspect had an important bearing on the significance and development of Buddhist prayer, because it was this aspect that stimulated the Buddhists not only to follow the Master's steps but to emulate his work. The ideal perfection of Buddhist morality consists in the attainment of the *tathāgata*-ship, on the part of every Buddhist, and, just as Buddha Gotama is said to have passed a long training of the *bodhisattva*-ship, every Buddhist is expected, in Mahāyāna Buddhism, to be a *bodhisattva* (cf. art. ETHICS AND MORALITY [Buddhist]). The essential condition in starting for the *bodhisattva* training is regarded as an earnest determination (*chitta-utpāda*) to go through the severe discipline of *bodhisattva* morality, and the determination is expressed in the vow or prayer (*praṇidhāna*). The vows are addressed to a certain Buddha, who testifies the oaths and gives assurance for their fulfilment. This act of Buddha is called *vyākaraṇa*, 'encouraging assurance,' and is the necessary counterpart of the vow. After the address of the vow to Buddha and its acceptance by him, a *bodhisattva* is expected to do the works of self-perfection with the wish to dedicate all the merits of his works to the Buddhist cause, i.e. for the sake of all fellow-beings, that they may participate in the joint stock of merits (*punya-kṣetra*) and proceed on the all-embracing sole road of Buddhist perfection.

2. **Buddha's own prayer.**—This model of taking vows is narrated in the introduction (*Nidāna-kathā*) to the *Jātaka* stories,³ where Buddha's first start on his long training is told in the adoration of his enthusiasm. It was in a remote past that a Brāhman Sumedha took vows before the Buddha Dīpaṅkara to march on the way to Buddhahood; and indeed this Sumedha proved, in the course of time, to be worthy of his determina-

tion and finally became Buddha Gotama, or Śākyamuni. The vows say:

'Since now I make this earnest wish [*adhikāra*],
In presence of this Best of Men,
Omniscience sometime I'll achieve,
And multitudes convey across.

I'll rebirth's circling stream arrest,
Destroy existence's three modes;
I'll climb the sides of Doctrine's ship [*dharmma-nava*],
And men and gods convey across'

(verses 67 and 68, Warren's tr.).

Then Buddha Dīpaṅkara gives assurance of the fulfilment of the vows (verses 71–80), and Sumedha further commits himself to the practice of the ten methods of perfection (*pārami*). When he concludes his solemn pledge, the whole universe gives response to the vows.

'Now pondering these conditions ten,
Their nature [*sabhava*], essence [*sarasa*], character [*lak-khana*],
Such fiery vigor had they all,
That all the worlds ten thousand quaked' (verse 176).

This corresponds to something like a voice from heaven—the prayer is accepted and will be fulfilled. This is a metaphor, and behind it lies the metaphysical idea of the oneness of existence, the unity of *dharmatā* (the fundamental nature of things). All existences are one in their basic nature; therefore the vows taken and prayers expressed are addressed to a certain Buddha as well as to one's own self and to the whole existence, while the acceptance of the prayer is expressed in Buddha's *vyākaraṇa*, whose consequences are the cosmic response and the *bodhisattva*'s practice of the ten *pārami*.

Now, the same thing is told about the preliminary training of Buddha, in the Mahāsaṅghika book *Mahāvastu*.¹ There the deeds (*chāryā*) of the *bodhisattva* are classified in four stages: (1) deeds in accordance with his inherent good nature (*prakṛti*), (2) deeds in accordance with his vows (*praṇidhāna*), (3) deeds in accordance with his ideals (*anuloma*), i.e. the practice of the six *pāramitās*, (4) deeds in accordance with the indefatigable virtues (*anivartana*).² Then the story of Buddha's conversion is told. Buddha, when he was a Brāhman, determined to perfect himself, and expressed his desire and determination in presence of the Buddha Dīpaṅkara and his congregation. The prayer says:

'Indeed, let it be so, that I could be born as one who, having overcome the world, would work in the world for the benefit of the world and should live for the weal of this world,' etc.

Dīpaṅkara, knowing that the vow-taker would surely attain the supreme enlightenment, gives him the assurance:

'Thou shalt at a certain future time become a Buddha, being born as a son to the Śākya clan, and work for the benefit of men and gods.'³

3. In Mahāyāna Buddhism.—Now, this idea of *praṇidhāna* and of its associate conditions was developed in Mahāyāna and applied to all Buddhists, who were, therefore, called *bodhisattvas*. The underlying idea was the same, yet the significance of *praṇidhāna* was interpreted metaphysically by the doctrine of the basic unity of existence (*tathatā*) and its application made wider by the extension of the *bodhisattva* ideal. The metaphysical conception of oneness was identified with the ultimate entity of Buddha's personality (*dharma-kāya*), and the person of Buddha, who testified the vows, was conceived to be his blissful manifestation (*sambhoga-kāya*) or one of his earthly condescensions (*nirmāṇa-kāya*). Thus, the theory of the threefold personality (*tri-kāya*) of Buddha

¹ *Mahāvastu*, ed. E. Senart, Paris, 1882, Introd. p. xxi, and I. 1. The Chinese version of the same book (B. Nanjio, *Catalogue of Chinese Buddhist Tripiṭaka*, Oxford, 1883, no. 587) gives the story in more detail.

² The Chinese version omits the negative *a* and interprets this to mean the 'consummating transformation,' i.e. the transformation of human nature to Buddhahood.

³ *Mahāvastu*, I. 3.

¹ Recitation of holy texts plays a very important part in the Buddhist religion and serves as credo, prayer, hymn, ritual, and inculcation at the same time. A collection of the sacred texts, called the *Parittam*, is most widely used among the Buddhists of the south. In the north and east the text used varies according to sects, but the most widely used one is the *Lotus* (*Saddharmapūṇḍarīka*).

² See, e.g., *Ratana-sutta in Sutta-nipāta* (SBE x. [1898] pt. II, pp. 36–39).

³ *Jātaka*, ed. V. Fausbøll (I. 11–28), tr. T. W. Rhys Davids, *Buddhist Birth Stories*, London, 1880, pp. 10–18; H. C. Warren, *Buddhism in Translation*, Cambridge, Mass., 1900, pp. 14–18.

was brought closer to the life of the *bodhisattva* and made the object to which the vows were addressed. Thus, every prayer addressed to Buddha is at the same time a vow by which the vow-taker commits himself to the practice of the ideas expressed therein. Vows are taken by a Buddhist and assurance is given by a Buddha, but the two parties are one in the basic entity, and the response given to a prayer is a necessary consequence of this oneness of existence. Yet, quite naturally, the vow and the response will remain void, unless the vow-taker practises his determination and dedicates all his goods to the broad cause of realizing the all-embracing Buddhist communion. This is the working out of the thought expressed in the vow, the practice of moral life with the intention of dedicating all goods to the Buddhist ideal, and is called *pariṇāmanā*, 'dedication.' The efficacy of dedication is guaranteed by the Buddha, who is a pioneer in the realization of the one road. In this way the Buddhist conception of prayer emphasizes the unity of its three phases, *pranidhāna*, *vyākaraṇa*, and *pariṇāmanā*.

After all, the Buddhist religion conceives the world as the stage of spiritual development in which all beings participate in, and contribute to, the realization of the truth of oneness (*eka-yāna* or *ekavāṇa*) or of the cosmic enlightenment (*bodhi-chitta*).¹ A prayer addressed to a Buddha, an enlightened soul, is meant and destined to awaken in one's own mind or soul (*chitta*) the same *chitta* as the Buddha's own. To worship a deity—which is admitted by Mahāyāna Buddhism—means, not to adore it as a being external to oneself, but to realize the excellent qualities found in the deity. Likewise, to pray may be understood to mean asking something of a deity, but the truth is that the one who is asked and the one who asks are one in the fundamental nature, and, therefore, the prayer is in its ultimate significance a self-incultation, a self-committal to the moral ideals of Buddhism. Although the Mahāyāna practice of offering prayer differs much, in its appearance, from the practice of primitive Buddhism, the final goal and the conception underlying the practice are the same—mental training for the attainment of Buddhahood.

Mahāyāna books are full of the stories of how a certain Buddha, in the preparatory stage, or a *bodhisattva*, started on his life of *bodhisattva*-ship, by taking vows in presence of his predecessor and master. All those narratives are modelled on the story of Sumedha, and the vows are essentially the same, consisting in an expression of the determination to save self together with others. As the typical representative of the Mahāyāna vows we take here the 'four great vows of the *bodhisattva*.' They say:

- 'There are beings without limit,
Let us take the vow to convey them all across.
- There are depravities in us without number,
Let us take the vow to extinguish them all.
- There are truths without end,
Let us take the vow to comprehend them all.
- There is the Way of Buddha without comparison,
Let us take the vow to accomplish it perfectly.'

Here it is emphasized that, without striving to fulfil the first vow, of saving others, the following three are vain, even if they could be executed. Another prayer, more frequently recited, is taken from the *Lotus*,² and says:

¹ See art. ETHICS AND MORALITY (Buddhist); D. T. Suzuki, *Outline of Mahāyāna Buddhism*, p. 294 f.

² *Saddharma-puṇḍarīka*, tr. H. Kern, in *SBE* xxi. (1884). The quotation here given is a translation from the Chinese version of Kumārajīva, which is used as authoritative by the Eastern Buddhists. The extant original differs from this a little (cf. p. 171 of the Eng. tr. and p. 177 of the original, ed. Kern and Nanjio, Petrograd, 1912).

'Let these merits (now performed) universally pervade all!
And let us, together with them, soon realize the life of Buddhahood.'

Another point to be noted in the Mahāyāna notion of prayer is that great stress is laid on the *vyākaraṇa* given by the presiding Buddha, and the assurance takes the form of prophecy. A prophecy of this kind is an encouragement given to the *bodhisattva* as well as an exaltation of his future achievements. Glorifications in the prophecy are always proportional to the enthusiasm of the vows, and these together served to impress the believers with the grandeur of the start, the magnitude of the merits accumulated by the *bodhisattva*, and to stimulate the followers to the similar practice of *pranidhāna* and *pariṇāmanā*. The effects of these inspirations were great, and in many cases they gave an impetus to enthusiasts, who thereby became great teachers or reformers.

The greatest document of Mahāyāna Buddhism in this respect is the *Lotus of Truth*.¹ Besides various points of Buddhist doctrines expounded in it, the main topic of the book is the continuity of the vows taken, merits accomplished, and results attained, through the Buddhas of the past, Buddha Śākyamuni, and the future Buddhas.

The second chapter, entitled 'Tactfulness,' emphasizes the unity of all Buddhas in the purpose, methods, and goal of their long training.

'There shall be no one of beings, who, having heard the Truth, will not become Buddhas.'²

This is the earnest desire, vow, and prayer of all Buddhas. The discourse then proceeds to give *vyākaraṇa* to many disciples of Śākyamuni, by assuring them of Buddha's love of all beings and his power to lead them to the highest goal. Then, in ch. xii., entitled 'Perseverance,' Buddha's disciples are encouraged to emulate their predecessors' zeal and effort and to endure hardships in working among the perverted people of the latter days of degeneration. The disciples, in response, utter a prayer for endurance, pledging themselves to stand through all kinds of persecution and perils. After enumerating the perils, the prayer concludes with the following words:

'They will scold us and scorn and ridicule us. And thus we shall be repeatedly and repeatedly driven out of our own monasteries and sanctuaries. All this, hatred and persecutions, shall we bear in forbearance and perseverance, because we are mindful of our Lord's command. In whichever cities or villages, where there may be any one who would listen to us, we shall surely go there and preach as has been commissioned by Buddha. We are thy messengers, O Lord of the World, we have nothing to fear, in proclaiming thy truth. Now we take these vows in thy presence and in presence of all Buddhas, who have come here from the ten quarters. Mayst thou, O Buddha, know our intention and determination!'³

This prayer was not only an expression of ardent desire for the Buddhist cause cherished by many Buddhists, but was also a source of fiery inspiration given to many others who really lived their lives according to the dictates of the vows.

4. 'Adoration to the Lotus of the Perfect Truth.'—The *Lotus* played in Mahāyāna Buddhism a rôle similar to the Johannine literature in Christianity. Highest tributes were paid to the book by most Mahāyānists, from various points of view, doctrinal, ethical, apocalyptic. The final result was the formulation of a prayer to the book itself, as the embodiment of the whole content of Buddhist and cosmic truths. The man who standardized this formula was Nichiren (1222-82), a man of prophetic zeal who was intensely inspired by the 'Prayer of Perseverance,' cited above, and lived his life in perils and hardships. His formula was '*Namu Myō-Hōrengē-kyō*,' which

¹ Cited above, usually called *Lotus of the True Law* (q.v.), *SBE* xxi.

² Il. 99 (*SBE* xxi. 53).

³ This passage is in verse and is here taken from the Chinese version (cf. *SBE* xxi. 261).

was the Sino-Japanese form of '*Namh Sad-dharma-puṇḍarika-sūtrāya*,' 'Adoration be to the Lotus of the Perfect Truth.'¹ We shall give a brief account of his theory and practice.

Worship, according to the Mahāyāna theory, amounts to the elevation of self to Buddhahood and the discovery of *bodhi* in self. This doctrine was formulated by the Chinese philosopher Chi-i (531-597) on the authority of the *Lotus*, as the truth of 'mutual participation' or interdependence of all existences. All existences are interrelated; therefore Buddhahood is found in every being, as demonic nature is not lacking but subdued even in Buddha. The universe consisting of these interrelated existences is the stage on which the truth of interdependence manifests itself, on which universal truths realize themselves in particular existences. Nichiren adopted this theory and represented it in a palpable way. His representation of the universe was to have the 'sacred title' (of the *Lotus of Truth*) written down in the centre, and the names of Buddhas, sages, gods and men, spirits and demons, represented round the central truth. This symbolic visualization of the universe, or of the supreme being together with all beings, is, according to Nichiren, the best means of realizing the cosmic truth in every worshipper's soul. The adoration of the book *Lotus* in this way is not a mere bibliolatry, but the worship of the universal truth, as revealed in the book. Now, this adoration is uttered in speech, i.e. in the formula as shown above, and the oral utterance is prayer, hymn, confession, and oath of fidelity all at once. Although the utterance is an act of an individual, it is destined, by the very nature of cosmic structure, to awaken in one's self, together with all others, enlightenment in the quintessence of cosmic truths, and thus to accelerate the full bloom of the cosmic lotus-flower in every existence.²

This thought about the adoration is expressed by Nichiren as follows: 'The letters which open every chapter [of the Scripture] are five [in Chinese ideograms denoting the *Lotus of the Perfect Truth*] and the same conclude each one of the chapters. Thus, the beginning and the consummation, as well as the whole between them, amount to the seven letters [denoting] the Adoration of the Truth. To utter this Adoration is the sole clue to the propagation of the Truth in the latter days of degeneration. Any one who does not see the spirit of the Adoration and therefore fails to grasp the key to the essential principle [of the truth and its propagation] is not worthy of a teacher in the latter ages, but moreover misses the real spirit of Nichiren's teaching. For my, Nichiren's, disciples and followers there is no need of any other device than the sole practice [of the Adoration].' In short, the adoration is the means of realizing the truth of the mutual participation in every one's life, and the formula is a prayer addressed to Buddha and to the truths revealed by him, as well as to all beings and to one's own deeper self.

5. 'Homage to the Buddha of infinite light.'—As we have seen, the stories of various Buddhas and *bodhisattvas* are told in Mahāyāna books, with their respective vows of salvation. These stories and vows became sources of inspiration and stimulants to emulation for the respective believers in the superhuman beings.³ Among the objects of adoration and devotion in this sense Amitābha, the Buddha of infinite light, played the most significant part, and his worship formed a distinct

stream of Buddhist pietism.¹ This form of Buddhism lays more emphasis on devotion than on emulation, in spite of the fact that the vows taken by Amitābha, while he was still a monk Dharmakara, are a specimen of the grand prayer for the salvation of all beings. In any case, the faith in Amitābha's all-embracing compassion and all-saving device caused many prayers of devotion to be uttered or written down, and the final result was a formulation of the prayer in a simple form, '*Namu Amida-butsu*,' which is the Sino-Japanese form of '*Namo 'mitābhāya Buddhāya*,' 'Homage be to the Buddha of infinite light.'

Before considering this simple prayer to Amitābha, we shall give a specimen of the prayers addressed to him. Vasubandhu opens his commentary on the *Sukhāvati-vyūha* (Nanjio, no. 1204) with a prayer:

'O Exalted One! I trust myself whole-heartedly
To the Tathāgata whose light pervades,
Without any impediment, the regions in the ten quarters,
And express my earnest desire to be born in Thy Land.

In realizing in vision the appearance of Thy Land,
I know that it surpasses all realms in the threefold existence,
That it is like sky, embracing all,
Vast and spacious without boundaries.
Thy mercy and compassion in accordance with the righteous
way

Is an outgrowth of the stock of merits (accumulated by Thee),
which are beyond all worldly good;

And Thy light permeates everywhere,
Like the mirrors of the Sun and the Moon.

[Further description of the excellence of the Paradise.]

Let me pray that all beings, having been born there,
Shall proclaim the Truth, like Buddha Thyself.

Herewith I write down this essay and utter these verses,
And pray that I could see Thee, O Buddha, face to face,
And that I could, together with all my fellow-beings,
Attain the birth in the Land of Bliss.

(In this prose translation, the lines of the original verse are kept.)

Vasubandhu further prescribes the five methods of worship to those who desire the communion of the land of bliss: (1) reverence shown by bodily acts of worship; (2) adoration expressed in oral utterance; (3) earnest thought and prayer carried out by the fixation of mind; (4) intent thought to visualize the Buddha and his land; (5) dedication of all good will and works to the welfare of fellow-beings.

Among these five methods adoration by oral utterance, especially in calling the Buddha's name (*nāmadheya*), became an important factor in the worship, and the final result was the formula cited above. This kind of prayer tends very naturally to become a mechanical repetition of the name, and there were and are many Buddhists practising the method in that way. Yet we must know that devotional piety and earnest thought are kept and stimulated even by the repetition of the Buddha's name, and also that the leaders of this Buddhist pietism were always keen on emphasizing faith and moral life as manifestations of piety.²

Moreover, there is another interesting phase in the development of Amita-Buddhism, viz. that a special theory of prayer was propounded by one of its leaders, Shinran (1173-1262), a Japanese reformer. He explains the faithful thought to mean, not only a thought, but also reverence shown towards the Buddha, through one's moral life, as well as the adoration of his grace by oral utterance of his name. This adoration, the repeti-

¹ This kind of adoration paid to a sacred book is as old as the origin of Mahāyāna, and every Mahāyāna book opens with a homage paid to the book. In some cases the homage is extended to Buddha and his community, and the adoration takes the form of a prayer. This practice may be traced back to the Pāli books, in which the formula '*Namo tassa Bhagavato Arahato Sammā-Sambuddhassa*' precedes the text. An introductory prayer of this kind is found in nearly every treatise on doctrines, one of which is cited below.

² Cf. M. Anesaki, *Nichiren, the Buddhist Prophet*, Cambridge, Mass., 1916.

³ One of those deities whose vows are adored and to whom many prayers are addressed is Avalokiteśvara, the chief figure of ch. xxiv. (xxv. in Chinese) of the *Lotus*. For one of the prayers addressed to him see J. Estlin Carpenter, *Comparative Religion* (Home University Library), London [1913], p. 163 f.

¹ The story of Amitābha's conversion and vows is told in the *Sukhāvati-vyūha* (SBE xlix, pt. ii.). The scenes are depicted in a highly imaginative way and the vows taken are elaborate and high-sounding, yet all after the model of the story of Sumedha. This link of affinity between the two stories is a strong point against the theory that the belief in this Buddha was a product of Christian influence. Another point to the same effect is the development of the faith, which can be traced step by step in India, China, and Japan.

² The threefold thought in devotion is faithful thought, profound thought, and the thought to attain the final bliss by dedicating all good to that end (cf. SBE xlix, pt. ii, p. 188).

tion of the Buddha's name, ought to be uttered, never with any idea of petition, but always as an expression of absolute dependence on, and of gratitude towards, the Buddha's grace. Shinran taught this doctrine of prayer because he believed in the infinite strength of the Buddha's saving power, which reduces any idea of exertion or self-reliance, not only to useless redundancy, but to a harmful impediment to the true devotion. Thus, prayer is regarded by Shinran as an expression of absolute dependence, on our part, on the Buddha's compassion and redeeming plan.

Shinran's religion was, in this way, the antipodes of the religion of self-perfection, as we see it in the original tenet of Buddhism; yet, in strictly excluding the idea of petition from prayer, he returned to the original standpoint of Buddhism, in contrast to some of the prevailing forms of the Buddhism of his time.

PRAYER (Chinese).—The idea of prayer has permeated the whole religious life of China, under whatever form that life has manifested itself from the earliest ages of which we have any knowledge down to the present time. The Chinese had 'in everything by prayer and supplication' made known their requests long before St. Paul wrote those words.¹

The present writer has heard extempore prayer in a temple,² but set forms are very largely used. Supplications are prepared to meet different circumstances with blanks to fill in personal particulars of names, etc. These are burned, this process, it is believed, ensuring their passage to the other world. Among such are prayers after bad dreams,³ and when some untoward event has been seen, as a crowing hen, a dog digging a hole, etc.

When Confucius was ill, one of his disciples wished prayer to be offered to the spirits for his master.⁴ The duke of Chow prayed for King Wu, his brother, to their great-grandfather, grandfather, and father.⁵ The famous general Chu Koliang in ancient times prayed for restoration to health.⁶ Sons pray for long life for their parents,⁷ and petitions are offered for offspring (the goddess of mercy is much sought after for that purpose). Confucius was born after prayer by his mother.⁸

Almost as varied as the objects of prayer are the deities to whom prayers are made, the first and highest being Shang Ti, the Supreme Ruler. From ancient times this worship of God has been regularly kept up by the sovereign.⁹ As one instance of it, the emperor Kien Lung 'in times of scarcity . . . begged grain from the Ruler above.'¹⁰

With this basis of monotheism there was also worship of the spirits presiding over rivers and hills of note, 'the mounds, dykes, plains, forests, and the spirits of sages and worthies of ancient times' who were subordinate to the Supreme Ruler.¹¹ The prayers to these were in the character of announcements, thanksgivings, petitions,

or adoration. Those of adoration are the only kind used in the worship to Confucius.

Heaven and earth, as the manifestations and revelations of the Supreme Being, were the objects of imperial worship¹ and also at times of that of the common people.

The present writer will never forget a most impressive instance of it during a terrific typhoon. Amidst the howling tempest, with many drowning, the Chinese nurse knelt down on the breaking verandah and poured forth an earnest and impassioned prayer.

Ancestor-worship is regularly engaged in by every family which is not Christian. Numerous gods and goddesses, deified heroes, sacred trees, smooth stones from the brook, bridges, etc., or their spirits, are worshipped with prayer and offerings.

Buddhist and Taoist monks and priests read liturgies and *sutras* in the temples and monasteries. There is no suggestion of prayer in the *Tao Teh King* of Lao-tzu,² though it soon appears in Taoism.

Buddhist gods are ideas personified, mostly 'fictitious personations,' so that Buddhist worship, except among the simple-minded in China, is but 'a homage rendered to ideas and is only supposed to be reflex in its effects. Their worship is useful as a discipline, but not effectual as prayer.' Prayer is not absolutely necessary to the Buddhist.³ But the common man or woman in China, like the rest of the human race, feels the need of prayer and is not concerned with this esoteric view.

The following prayer was used by the Ming emperors at the solstice worship of Shang Ti:

'All the numerous tribes of animated beings are indebted to Thy favour for their beginning. Men and creatures are emparadised, O Ti (Lord), in Thy love. All living things are indebted to Thy goodness, but who knows whence his blessing comes to him? It is Thou alone, O Lord, who art the true parent of all things. . . . The Service of Song is completed but our poor sincerity cannot be fully expressed. Sovereign goodness is infinite. As a potter Thou hast made all living things. Great and small are circumscribed round. As engraven on the heart of Thy poor servant is the sense of Thy goodness, but my feeling cannot be fully displayed. With great kindness Thou dost bear with us, and notwithstanding our demerits dost grant us life and prosperity.'⁴

This very high level of spirituality is not reached in many of the ritual prayers.

Though a tablet to the emperor appeared in the larger temples, it is only recently that prayer for the government and those in authority has been desired, and the Chinese turned to the Christians for it, the emperor having been dethroned with his State worship.

One of the most eminent Chinese philosophers, a great Confucian commentator, said:

'Prayer is the expression of repentance and promise of amendment, to supplicate the help of the spirits. If there may not be those things, then there is no need for praying. In the case of the Sage (Confucius), he had committed no errors, and admitted of no amendment. In all his conduct he had been in harmony with the spiritual intelligences, and therefore he said: "My praying has been for a long time."⁵

The spirit in which prayer is offered is considered by the Chinese to be of the utmost importance. The Master (Confucius) said: 'Hold faithfulness and sincerity as first principles,'⁶ and the spirit in which prayer is offered must be a sincere one. Some amount of ceremony is generally observed with prayer. Offerings of meat and vegetables are often presented and cups of wine; wax candles are lighted and incense-sticks and mock paper money burned.

The attitude taken in prayer is typical of reverence. Kneeling mats are provided in temples for

the worshippers, who not only kneel but often touch the ground with their foreheads and perform the kowtow. If weak and unable to kneel, the worshipper is told in pious books that he may stand. In prayer the hands are laid palm to palm with extended fingers and raised up and down several times.

J. DYER BALL.

PRAYER (Christian, Theological).—The fact of prayer is the supreme proof of the importance of religion as an element in human life. Face to face with vast and mysterious forces, beset by dangers, urged on by unceasing needs, man turns instinctively for help to powers other and greater than himself. Prayer is wide as the world and older than history. The animistic savage and the polytheist, as well as the Christian, practise it. Even the Buddhist, though in strictness his creed should find no place for it, seeks solace in prayer. In the presence of such facts, it is not wrong to speak of prayer as an instinct of the human heart. It is an instinct springing from man's sense of his own weakness and limitations and from his recognition of the greatness of the universe in which he dwells. Prayer may truly be said to be prior to all definite creeds, to be indeed the expression of the need which all creeds seek to satisfy. 'He that cometh to God must believe that he is' (He 11⁶), we are taught, and the saying is true; but the belief is often implicit rather than explicit.

With the advent of monotheism, prayer reaches a new dignity and power. Belief in the one Deity, sovereign in the universe, carries with it a sense of security and of elevation which has an ennobling influence on thought and life. It makes men strong and free in the world. Here is the secret of the transformation which Islām effects for the African animist. Christianity offers better gifts, but the gifts of Islām are not to be despised. The monotheist, set free from the terrors of the animistic demon-world, or from the uncertainties and confusions of the polytheistic pantheon, lifts his face to heaven and gives his worship to the Supreme alone, and asks help from a Power which, he is assured, has no rival.

1. **Definition.**—Prayer is not necessarily petition, the asking for benefits. Any intercourse of a human soul with higher powers may rightly be termed prayer. For the monotheist prayer is intercourse with God. Prayer, says Jeremy Taylor, is 'an ascent of the mind to God.'¹ All forms of such ascent—adoration, confession, thanksgiving, as well as petitions seeking for definite gifts—may be included in the generic term 'prayer.' Prayer is, in general, the communion of the human soul with God.

This communion is not necessarily an inward consciousness of spiritual relationship with God. There is a tendency in modern writings on this subject to regard prayer as necessarily involving an apprehension of the Divine Presence in an essentially inward manner. But there is no proof of this. The inward apprehension of God is the soul of all mysticism; and it would be going too far to claim mystical experience for every prayer. Such experience is a mark of a somewhat advanced stage of religion. The child, the uneducated, and the simple unreflecting mind, as a rule, seek God above, not within. Hence the tendency of all such to speak prayers aloud, no matter how private and personal the prayers may be. The prayer of Solomon, 'Hear thou in heaven, thy dwelling-place' (1 K 8³⁰), expresses the natural thought of the simple mind.

2. **OT.**—Monotheistic prayer in its pre-Christian form reaches its greatest elevation in the OT. All the forms which the intercourse of the human soul with God is able to assume will be found there in unexampled nobility and splendour. The cry of the soul for God, as in Ps 42; confession of sin, as in Ps 51; intercession, thanksgiving, petition—all these are found in the OT, and especially in the Psalms and the Prophets, in forms which stand to-day as the most perfect utterances of spiritual devotion.

The principal elements which distinguish the prayers of the OT are: (1) a vivid consciousness of God as a living personal Presence and as possessing supreme power, and (2) an unflinching realization of His holiness, involving the conviction that only through moral goodness can men become acceptable in His sight. Ps 139 affords a striking instance of both these elements; but they are to be found everywhere. God as the living God, and righteousness of life as that which alone can bring man into harmony with Him—these are the essentials of the monotheism of the OT and they are the distinguishing marks of its prayers.

3. **NT.**—Christian prayer demands more detailed consideration. The NT is full of exhortations to prayer and promises of blessing to those who pray aright. It also contains many examples of prayer. So important a place does prayer occupy in its teachings that it may be affirmed positively that to doubt the efficacy of prayer is to shake the very foundations of Christianity. To determine the essential elements of Christian prayer, we must go to the teachings of Christ Himself. The fullest and most characteristic is contained in Mt 6⁹⁻¹⁶. A brief analysis of this passage will exhibit the principles of Christian prayer.

(1) Prayer must have spiritual reality. This truth is enforced by means of a warning against hypocrisy, i.e. against unreality. The warning is twofold: (a) against that unreality which uses the observances of prayer for outward show, in order to gain credit in the world, and (b) against vain repetitions, i.e. against using the forms of prayer as incantations or magical formulæ, the mere repetition of which will, it is imagined, avert some evil or effect some good. Prayer is to be real spiritual intercourse between the soul and God: 'When thou hast shut thy door, pray to thy Father which is in secret' (Mt 6⁶).

(2) In prayer the soul is to approach God as a child drawing near to a father, with perfect simplicity and directness, in confidence and love. 'Pray to thy Father'; and remember that 'your Father knoweth what things ye have need of, before ye ask him' (Mt 6⁸). He is a Father whose knowledge of your needs is infinitely greater than your own.

(3) Christ gives a form of prayer which is to serve as a pattern. 'The Lord's Prayer' teaches us what to pray for. It also teaches us how to pray. In it we are taught to pray for the supreme end which God Himself seeks, and also for temporal and spiritual good for ourselves. Most remarkable is the order in which the petitions are arranged. The prayers for God's glory and Kingdom come before the prayers for personal blessing. From this we gather that all private and personal ends must be subordinated to the higher purposes of the Divine Will. All our prayers must be offered up with the condition that the supreme end, which is the universal good, must overrule all particular ends. There must be no selfishness in prayer. The greatest instance of the application of this principle is to be found in the life of Christ Himself. When confronted with the last great sacrifice, He prayed that He might be delivered, but added, 'nevertheless not my will, but thine, be done' (Lk 22⁴²).

¹ *The Rule and Exercises of Holy Living*, London, 1693, ch. iv. § 7, identical with Aquinas's 'ascensus intellectus in Deum' (*Summa Theol.* 1. ii. qu. lxxxiii. art. 13, 'de Oratione').

This is the same principle as that which Christ sets forth as the supreme rule of all true living: 'Seek ye first the kingdom of God, and his righteousness' (Mt 6³³). In this principle also we find the significance of the characteristic law of Christian prayer that it is offered 'in the name of Christ.' The mission, sacrifice, life, death, and resurrection of Jesus Christ form the means by which the Kingdom is established through the overcoming of evil and the perfecting of humanity. In and through Him human wills become identified with the supreme Divine purpose. 'If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you' (Jn 15⁷). Prayer which is truly 'in Christ' can never be in vain.

It is not going too far to say that, when these principles are grasped firmly, the difficulties which have so frequently troubled the minds of thoughtful people on the subject of prayer will be found capable of solution. Our purpose here is to exhibit this fact as clearly and simply as possible and to deal briefly with the deeper scientific and philosophical problems which are involved.

4. Two main difficulties.—Two great objections have been made against the efficacy of petitionary prayer.

(a) *The moral, or theological, objection.*—This difficulty has troubled devout minds in all ages. It assumes many forms, but, in its commonest shape, may be presented thus: God knows, better than we do, all that is good for us. Trusting in His supreme wisdom and power, we may rely upon Him to do what is best without any request on our part. To ask Him for gifts is really an effort to get Him to do something for us which we fear He may not do. Instead of being an exercise of faith, it is in truth a manifestation of doubt, perhaps even of selfishness. It is, in effect, an attempt to induce God to change His mind. Hence it is concluded that the only justifiable prayer is the prayer for resignation or, more properly, for submission of the will to God. The intercourse of the soul with God, it is said, should never be the asking for definite gifts, but always the bringing of the human will into harmony with the Divine.

In all this there would seem to be an element of truth and an element of error. The element of truth will be found in the final words in which the objection has just been stated: true prayer must always involve the bringing of the mind and will of man into harmony with the mind and will of God. This is another way of expressing the third condition of Christian prayer as given above: all private and personal aims must be subordinated to the higher purposes of the Divine Will. The element of error will be found in the supposition that this bringing of the human will into harmony with the Divine renders impossible the asking and the receiving of special benefits. The true inference is quite opposite. When the will has been brought into harmony with the great universal purpose of God, the soul becomes capable of benefits which were before impossible. To regard the Will of God as determining a fixed unalterable arrangement of events is inconsistent with that spiritual view of the universe which is the basis of the whole argument: it is to leave out of account the incessant action and reaction of the spiritual world. The unchangeableness of God does not mean that the universe is a perfectly articulated mechanical system in which everything is given from the beginning. It means, rather, that the principles and purposes of the Divine Providence are eternal and unchangeable. If God be a living God—a personal Life with whom our souls are in relationship—it follows that to every movement of

the human will there is some corresponding Divine reaction. When, therefore, the will of man is brought into harmony with the Will of God, the soul is rendered capable of blessings which were before impossible. The moral condition on which those blessings depend has been fulfilled. Now, prayer is essentially the fulfilment of this moral condition. True prayer is the movement of the human soul into a new relationship with God. Every true prayer, therefore, renders some blessing possible. An illustration will make this statement clearer. The forgiveness of sins is granted in response to the prayer which expresses true repentance. Confession of sin which has no spiritual reality behind it, which is a mere form of words, cannot call down pardon. Only when the soul moves into harmony with the Divine Will—a movement which finds its inevitable expression in the prayer of contrition—is the blessing bestowed. This instance is that selected by Christ Himself. Commenting on the petition, 'Forgive us our debts as we also have forgiven our debtors,' He says: 'If ye forgive men their trespasses, your heavenly Father will also forgive you: but if ye forgive not men their trespasses, neither will your Father forgive your trespasses' (Mt 6¹⁴). Here the condition of the great gift of pardon is the bringing of the mind and will of man into harmony with the mind and will of God. When that movement of the soul has taken place, the gift becomes possible. True prayer is the expression of a spiritual change which brings a new capacity to receive blessing from God. Nor is there any reason why this capacity should be relative only to spiritual gifts. The principle involved applies to the whole range of blessing, temporal as well as spiritual. In a moral and spiritual universe all the possessions and capacities of moral and spiritual beings must be morally and spiritually conditioned.

The whole force, then, of the moral, or theological, difficulty in relation to prayer is derived from an erroneous—indeed impossible—view of the nature of the spiritual universe. This view attributes to the spiritual a mechanical rigidity which is altogether alien from its true nature.

(b) *The scientific objection.*—This difficulty is one which has pressed with great weight upon the modern mind, for it derives its force from modern scientific conceptions of the universe. It depends upon the scientific principle of natural law. The advance of science, so wonderful in the modern world, has been secured by the progressive discovery of what are termed 'laws of nature,' i.e. a great order according to which events happen. Cause and effect are linked together in the natural world by certain unvarying uniformities of sequence. When one of these uniformities has been determined, it is found to be constant and unchangeable. And, the further science advances, the more fully does it appear that things and events in nature are subject to the sway of such uniformity. From this it seems to follow that the whole course of nature is a perfectly determined system. Everything that happens is the result of the previous state of things, in a relationship which is absolutely necessary.

The effect of all this on many devout minds has been such that prayer for benefits involving material elements has been regarded as meaningless. How can we pray for fair weather if we believe that the weather is determined by natural causes in a necessary order? How can we pray for recovery from sickness if we believe that sickness and health depend on the physical condition of the organism, and that that condition arises from certain antecedent causes in accordance with unvarying laws? Some of those who have been

influenced by this reasoning divide the world of human experience into two parts, spiritual and material. In the former, they think, prayer is efficacious; spiritual blessings may be obtained by it; in the latter they believe prayer to be wholly unreasonable and ineffective. Such thinkers, regarding the laws of nature as the expression of the Divine Will, hold that, when we pray for material results, we are guilty of the folly of asking God to abrogate His own laws.

It is not surprising that a conception of natural law which has had so great an effect upon sincerely religious minds should have been even more influential in relation to the common opinion of the modern world. Materialism and naturalism have become popular doctrines. They hold (the former more crudely, the latter in a more subtle manner) that the universe is a continuous development, necessarily ordered from beginning to end in accordance with natural law. In such a system there can be no place for Divine intervention; prayer is meaningless.

It is true that these doctrines find no place for God in the scheme of their thought, and therefore they are bound to deny altogether the value of prayer; but it must be remembered that many who hold these views as working hypotheses for scientific purposes are not prepared to go so far as this. Like the devout minds already mentioned, they are apt to think in water-tight compartments. They are materialists; or naturalists, while dealing with the physical world, but are inclined to admit the existence of a spiritual realm in which events occur which are not subject to the laws of physical causation. To such, an answer to prayer involving change in the physical order seems impossible, but in the spiritual realm the intercourse of a soul with God may well be a means of great and varied blessing.

In considering this mode of thought, it is necessary first to take account of the sharp distinction which is so frequently made between the material and the spiritual. In regard to the latter, it is admitted that prayer may have results; its efficacy in relation to the former is denied. And here again a distinction must be made. There are some who believe in a real response of God to the cry of the human soul seeking for spiritual blessing; there are others who think that the spiritual value of prayer is to be accounted for only by its subjective influence upon the devout mind: prayer attunes the soul to higher things; it brings peace, resignation, trust; these are its real benefits. None can deny these subjective effects; but, if prayer be no more, it loses even this value; for it becomes an impossibility for the enlightened. Who could seek peace in prayer, knowing all the time that his cry for help could bring no real response? This doctrine is but another form of the cynical view which regards religion as a useful superstition—an illusion which gives comfort to those whose ignorance permits them to enjoy it. More important is the view of those who hold that there is a real Divine response in the spiritual sphere, as distinguished from the physical. Many great religious thinkers of the 19th cent. made this distinction. Their reason for doing so has already been explained. It was a mode of thought characteristic of the time. More recent movements of science and philosophy have been showing that this sharp division between the two realms of being cannot be maintained. Psychology has been proving the greatness of the influence of mind upon matter, and physiology has been revealing the fact that the brain is an organ which subserves the directing agency of intelligence (see W. McDougall, *Body and Mind*, London, 1911; and H. Bergson, *Matter and Memory*, Eng. tr., do. 1911).

The brain has been compared by Bergson to a telephone exchange. It is the instrument by which the response of the organism to a stimulus from without is controlled.

In relation to all such forms of thinking, however, our common sense supplies a ready solution of the problem which we are now considering. And here common sense is most perfectly expressed in the simple words of Christ: 'Pray to thy Father.' When a child asks for some gift, he never pauses to think whether the gift is material or spiritual. His prayer expresses his need with the utmost simplicity and directness. As to material benefits, he knows perfectly well that his father can bestow them. Human beings can intervene to help one another. A man drowning in deep water cries out for help because he knows that human power may be able to save him. A sick man calls in a doctor because he knows that his medical skill is often able to arrest the progress of disease. We are all aware that there are limits to human power in its intervention in the course of natural events; but that, within those limits, its ability to produce changes in that course are infinite, we are assured by our commonest experiences. The mind and will of man can subordinate the course of nature to human purposes.

Further, this power is not inconsistent with the perfect fulfilment of the laws of nature. Man is able to use natural forces, and combine them in multitudes of ways, for his own ends; but every force so employed operates in accordance with its proper laws. Thus it is that all human works are accomplished. Thus almost the whole surface of the globe has been altered, the seas covered with fleets, the earth penetrated in pursuit of its hidden wealth. So it is that man can rise high in air in opposition to the force of gravitation, speak to a friend miles away, and send his messages round the world.

And not only is all this done in accordance with the laws of nature, but its very possibility is dependent upon the existence of natural law. The laws of nature are only another name for the trustworthiness of natural forces. When we find that nature is not capricious, but trustworthy, we are able to use physical forces to effect the purposes which we have in view. It is the knowledge of natural law as unfailing that gives man his power in dealing with nature. When man has grasped these unfailing laws, he finds the material world plastic in his hands.

Now, it is absurd to suppose that this characteristic of natural law, which gives to man all his power over nature, creates an obstacle in the way of Divine activity. Are we to suppose that the Supreme Spirit labours under a disability from which His creature, man, is free; that He is so shackled by His own laws that He is unable to respond to the changing needs of His creation? Surely it must be true that, if the uniformity of nature is the means by which human liberty, in dealing with the forces of nature, is secured, that uniformity must in some far higher way subserve the Divine freedom.

It is not difficult to discover the source of the confusion of mind which is so common on this question. We forget to take account of the practical side of science. When applying scientific principles, we think only of theoretical science. Theoretical science discovers the uniformities of nature; practical science makes use of those uniformities for the effecting of human purposes. But the history of discovery shows that the practical aim is really dominant throughout. Man has learned to master natural forces for his own benefit by finding out how they work. The one supreme lesson is that nature is thus mastered.

Forgetting to consider this, and regarding nature in an abstract theoretical way as a system of laws, we form a purely factitious conception of it from which all spiritual initiative is excluded. We then apply this conception to God's relation to the universe, and forget that the impotence which we thus ascribe to God should first be ascribed to ourselves. Thus arises the illusion which has darkened so many souls.

Far clearer in thought and truer in principle is the faith which passes with simplicity from the common earthly experience to God in relation to human need. The earthly father can and does help his child; how much more must the Heavenly Father be able and willing to answer the prayers of His children!

It may be urged as an objection against all this that, in the case of man, we can trace his intervention in the succession of natural causes; we see him at work, selecting and combining the elements with which he deals, and so bringing about the results which he has in view. The drowning man cries for help; his shout is heard; and, by means of a rope or a boat, he is pulled out of danger. But we see no sign of similar interventions by Divine agency in response to prayer. When devout souls believe that their prayers are answered, it will be found that the desired results have come about by means of the apparently undisturbed operation of natural causes. If this be, in truth, God's work in answer to prayer, His method must be very different from that employed by man when he controls the succession of events. This is an important objection, and, up to a certain point, perfectly sound. It is not to be supposed that God's response to prayer takes place in the superficial way characteristic of man's work. Whatever conception we may form of the Divine relation to the forces and laws of nature, we cannot believe that the Almighty works as man works. Man by constant and painful trial has burrowed a little beneath the surface of things and so made useful discoveries which enable him, in a manner which is marvellous for him, to guide the course of nature for his own purposes. But God's control of natural forces must be very different. Man works upon the surface; God directs things from the centre. What we call forces and laws of nature are but fragments abstracted from the whole and presented in forms which have been shaped by our human needs and methods. It is absurd to suppose that the Supreme Spirit must approach the material universe in the same limited way. But the objection assumes that there can be no other way in which to approach it—an absurd supposition. The whole meaning of the argument which has been presented above is just this: if man with his very limited knowledge and power is able to control natural forces for the satisfaction of human needs, how much more must the Eternal God, with His infinitely larger and deeper grasp of the material universe, be able to use the laws and processes of nature for the realization of the ends demanded by the spiritual relationships into which He enters with His human children! Neither in the human sphere nor in the divine is it necessary to suppose any violation or suspension of natural law.

5. *Some minor objections.*—The two difficulties which so far have occupied our attention are by far the greatest and most formidable of all in connexion with the subject of prayer. Some minor objections deserve a brief consideration.

(a) *The littleness of man.*—It is urged that man is too small a being to claim the interest and attention of the Almighty. The vastness of the physical universe as revealed by astronomy, and its immeasurable history as disclosed by geology and biology, teach us that man is of very little

account in the whole scheme. It is sheer presumption on his part to ask God to attend to his petitions. And how much more does this apply to the individual human being, who is but one out of many hundreds of millions of beings of the same sort?

In a similar spirit, it has been said that it is inconceivable that God can 'give serious ear and individual consideration to each and all' of the multitude of petitions, 'wise and unwise, selfish and unselfish,' which are addressed to Him 'daily and hourly by hundreds of millions of human beings' (C. Stewart, in *HJ* ix. 386).

In answer to such objections, it must be observed (a) that, no matter how small and weak man may be, he is yet a spiritual being, capable of knowledge, goodness, and love, able to enter into communion with God; and (b) that such arguments, instead of attributing greatness to God, really detract from His greatness. A worthy conception of God's greatness will discern that nothing is little, nothing insignificant, in His sight. He is not like a collector who prizes a thing because it is rare, nor like a megalomaniac who admires only the gigantic, nor like a tired official who finds details wearisome and settles every question by red tape. In God's universe the midge is as perfectly formed as the whale, the snowflake as harmonious as the solar system. But, above all, God's supreme greatness is His spiritual perfection. To Him spiritual ends are supremely important. Therefore the perfecting of every human being possessed of personality must be a matter outweighing all material considerations.

(b) *The inconsistency of human prayers.*—It is often said that petitions addressed to God are so conflicting, owing to the diversity of human interests, that it is impossible to suppose that they can be rightly offered, or can call down an answer. One farmer prays for rain, another for fair weather. In every war both sides pray for victory.

It is indeed astonishing that this objection has been seriously entertained by some reasonable people. Every true prayer must be offered up, as we have seen, with the condition that the granting of it is not inconsistent with the higher purposes of the Divine Will. 'Not my will, but thine, be done' must express the spirit of every prayer. Further, every true prayer, recognizing the fact of human ignorance, must involve the 'if it be possible,' which even Christ Himself uttered. And it is surely true that no Christian soul ever expects the answer to his prayer to take precisely the shape fashioned by his own desires and imagination. On the contrary, he is convinced that, whatever the appearance may be, the God who knows 'our necessities before we ask, and our ignorance in asking,' will always give to His children more and better than they can ever 'ask or think' in response to their petitions.

(c) *Prayer inconsistent with self-reliance.*—The habit of prayer, it has been thought, tends to weaken character. Men should learn to exert themselves, and so win, by their own efforts, what they require, and not look continually to some great power above them for help. The records of Christianity afford a sufficient answer. St. Paul, Athanasius, Augustine, Luther, Cromwell, Wesley, Gordon, were not moral weaklings. Christianity is the religion of the most vigorous races. The fact is that a true dependence upon God cannot weaken any character, because the true life of every soul is to be found in God. The identification of mind and will with God brings with it the consciousness of a new strength. It is also to be observed that many prayers are answered through the normal exercise of human powers. Thus the

prayer, 'Give us this day our daily bread' (Mt 6¹¹), finds its usual response in the reward which comes to man when he exerts himself in taking advantage of the opportunities presented to him. No religious mind regards this response as the less providential on that account. On the contrary, the offering of the prayer involves the recognition that we are to expect a blessing upon our work, and is therefore a stimulus to exertion. 'Work out your own salvation . . . for it is God which worketh in you' (Ph 2¹²⁻¹³), is a principle which pervades all Christian devotion and life.

(d) *Experimental test.*—It has been urged that the effects of prayer, if it has any, must be of such a nature as to be open to proof by ordinary scientific methods. Tyndall proposed that two wards in a hospital should be selected; in one the patients should be treated by medical science, in the other they should be made the subjects of prayer only (*CR* xx. [1872] 210). Others suggested tests by observation. Sovereigns and royal princes are prayed for more constantly than other people; can we see, in the records of such persons, that they have enjoyed longer life and been endowed with greater blessings, spiritual and temporal, than those who have not been so much prayed for? (F. Galton, *Fortnightly Review*, new ser., xii. [1872] 125).

The crudeness of these suggestions is perhaps more obvious now than at the time when they were made.

(1) It is now known that the influence of suggestion upon both mind and body is very great, and there is clear evidence that suggestion can act subconsciously. Also there is good evidence for telepathy, i.e. the influence of mind upon mind at a distance and independently of material and sensational methods of communication.

(2) It would therefore be impossible to determine the real conditions of such an experiment as Tyndall proposed. It is obvious also that royal princes, in their relation to their mental and moral environment, are in a position very different from that of ordinary men. Further, it is impossible to isolate any human soul from the influence of prayer.

In addition to these considerations, it should be remembered that Tyndall's proposed experiment would violate the very first principle of true prayer. It would be altogether lacking in spiritual reality. It would be an exhibition of doubt rather than of faith. It would be treating the Almighty as if He were a chemical reaction.

(e) *Intercessory prayer.*—There is a peculiar difficulty involved in prayer of this kind. We have seen that, when a soul turns to God in sincere prayer, the spiritual movement which the prayer expresses establishes a new relation of the soul to God which makes possible blessings that would otherwise be impossible. Thus the prayer of contrition fits a soul to receive the Divine pardon. This consideration enabled us to perceive that true prayer is not inconsistent with a perfect submission to the unchanging purposes of the Divine Will. But how, it will be asked, can the movement of a soul towards God be efficacious for the benefit of another?

The problems involved in this question are very profound, and to consider them with any fullness would lead us very far. Two principles may be laid down which will be found to give help. (1) Modern psychology has shown that one mind can influence another in other ways than by speech and sight, and therefore can alter to some degree the moral relationship in which the other mind stands to God. (2) A soul which yields itself to God in prayer may become the channel through which Divine influences can flow to others as well as to

itself. As the influence of goodness in a human being can spread from soul to soul, so surely, only in a far greater degree, can the influence of Divine goodness pass through one human soul to another.

6. *Deeper problems.*—(a) *Conception of God.*—Prayer assumes the being of God. But in what sense? We are now concerned only with Christian monotheism. The essence of this doctrine is that God is one, holy, supreme in the universe, and standing in a moral relationship with His creatures. All our arguments so far have gone upon this postulate. But this doctrine is capable of several interpretations.

(1) God is sometimes conceived as altogether transcendent. He is a creator who called the world into being, giving it a certain definite constitution. This thought of God is founded on an analogy from human work. An engineer makes a machine, fitting its parts together, so constructing an instrument by means of which certain desired results can be accomplished. So God, having a great purpose in view, created the universe. Out of this conception a very great difficulty is apt to arise. It is only a very imperfect machine which requires to be continually set right. If the universe needs constant interference in the shape of answers to prayer, or miracles, it must be a very imperfect construction. On the other hand, if God foresaw and ordered everything from the beginning, what place can there be for changes in answer to the petitions of men? To this question there can be only one possible answer. It is an answer which some theologians have not hesitated to give: both the prayer and its answer must be parts of the original Divine plan (*J. McCosh, CR* xx. 777).

It must be confessed that this solution seems to make prayer unreal; the spontaneity of human initiative has disappeared; everything is settled beforehand. The truth is that it is the conception with which we started that is at fault. We have pushed a useful analogy too far.

(2) Our thoughts on this subject can be to a great degree corrected by introducing another conception. We can think of God as the immanent Life of the universe. This conception brings our thoughts into very suggestive relationship with modern ideas of evolution. It also enables us to think of God as one with whom we ourselves and every other living being, and every element in nature, are in continual intercourse and contact. We are thus lifted out of those purely mechanical ideas within which the former conception confined us. At the same time, the idea of immanence is in constant danger of drifting into pantheism, and therefore of losing belief in that moral relationship between God and man which is the very life of a monotheistic creed, and the foundation of all faith in the efficacy of prayer.

(3) There is a higher conception of Divine transcendence which is not inconsistent with belief in the immanence of God. This conception is founded on a full recognition of all the data of experience. Discerning in the principle of personality our surest guide to the nature of the ultimate reality, it takes account of the moral freedom of the human individual. It therefore thinks of God as the supreme personal Life, within the sphere of whose being there is room for the free interaction of the whole multitude of finite persons. He is at once the Infinite in whom we live and move and have our being, and the Father of spirits on whose love and providence we depend. The difficulty of making this conception perfectly consistent is simply due to the difficulty of reconciling in one scheme of thought the diverse elements of the world of our experience. The true value of this view of God, as at the same time immanent and

transcendent in this higher sense, is that it takes account of all the facts and holds fast to that fundamental monotheism which is the ultimate justification of the conviction that the moral aim is supreme in the universe.

(b) *The unchangeableness of God.*—The conception of God which has just been set forth gives us the true solution of this problem. When we speak of God as unchangeable, we do not mean that the whole universe is fixed by His fiat in a complete rigidity. That is the mechanical conception which, as we have seen, is wholly inconsistent with the facts of life and morality. God is unchangeable in the sense of being absolutely trustworthy. His purpose cannot be altered. That purpose is the realization of the moral ideal. It is the good of all and the good of each. It is the Kingdom of God, or Kingdom of Love. In its application to the infinite variety of human and moral situations, this unchangeable purpose must take the form of an unfailing Divine response to every element and tendency of good in the character and life of finite personalities.

(c) *Conception of law.*—Much confusion has been caused by the failure to distinguish between the various meanings of the word 'law.' We speak of the laws of nature, and also of the moral law. It has sometimes been asked, Are we to pray to God to abrogate His own laws? The reference is to the laws of nature which have been ascertained by science; but the whole force of the question resides in the connexion of the word 'law' with God, and our reverence for the great moral laws which we have been taught to trace to Him. A law of nature is merely an observed uniformity, a sequence of physical cause and effect, a certain order in the way in which events follow one another. Such a law is not, in itself, capable of effecting anything. It is even wrong therefore to speak of nature as being governed by laws. A law of nature is, in fact, simply our way of grouping our observations. It is a description and nothing more. Nor are we at all sure that such descriptions of grouped natural processes as have been so far ascertained, and labelled laws, are anything but provisional statements. There are indications that even such vast generalizations as the law of gravitation or the law of the conservation of energy may some day be merged in larger descriptions of the sequences which they include.

A deeper philosophy is now showing good reason to believe that these laws of nature, which are essentially the description of natural processes in terms of human intelligence, are relative to our mode of grasping our experience of the physical world with a view to the satisfaction of our needs (see Bergson, *Creative Evolution*, Eng. tr., London, 1911, ch. ii.). They have, that is, been shaped by the practical aims of human life. It is altogether in harmony with this doctrine that the knowledge of these laws is the very means which man employs in order to control natural processes for his own purposes. His amazing success in this work is revealed at every turn in our wonderful modern world. The absurdity of supposing that the discovery of these laws makes it improper for us to pray to God for benefits which involve changes in the physical sphere is therefore manifest.

The most notable expression of the doctrine that the laws of nature forbid prayer is Tyndall's famous attempt to show that the principle of the conservation of energy rules out all possibility of Divine intervention in the physical world.

'The principle,' he writes, 'teaches us that the Italian wind gliding over the crest of the Matterhorn is as firmly ruled as the earth in its orbital revolution round the sun; and that the fall of its vapour into clouds is exactly as much a matter of necessity as the return of the seasons. . . . Without a disturbance of natural law, quite as serious as the stoppage of an

eclipse, or the rolling of the St. Lawrence up the Falls of Niagara, no act of humiliation, individual or national, could call one shower from heaven, or deflect towards us a single beam of the sun' (*Fragments of Science*, p. 351, 'Prayer and Natural Law').

This argument, enforced as it was by the authority of a distinguished man of science, had an enormous effect at the time when it was first presented (see Stopford Brooke, *Christ in Modern Life*, p. 132) and is not without influence even now. But, as Oliver Lodge points out, it is open to objection—

'Even from the strictly scientific point of view: the law of the conservation of energy is needlessly dragged in when it has nothing really to do with it. We ourselves, for instance, though we have no power, nor hint of any power, to override the conservation of energy, are yet readily able, by a simple physical experiment, or by an engineering operation, to deflect a ray of light, or to dissipate a mist, or divert a wind, or pump water uphill' (*Man and the Universe*, p. 7; see also chs. I–III, and *Life and Matter*).

George Stokes deals with objections of this kind in a similar manner and with equal clearness and decision (*Natural Theology*, p. 220). These utterances of competent scientific authorities are in perfect accord with what has been said above on this subject. The principle which they express is just this: natural law is indeed unfailing, but all experience proves that this constancy does not prevent human intelligence and skill from making use of physical forces and so effecting results which the natural course of things, left to itself, could never bring about. If human power can do so much, why should Divine power be helpless? As we have seen, the existence of those constant uniformities which we call the laws of nature is the very foundation of all human power in dealing with the forces of nature. Therefore we have reason to believe that, in a far profounder way, the order of nature subserves the operations of Divine Providence.

(d) *Prayer and miracle.*—Objection is sometimes made that prayer is in essence the request that God should interfere miraculously for our benefit. Fundamentally, it is said, answers to prayer and miracles, if such things happen, are indistinguishable. This is not the place to discuss the great and intricate question of the miraculous (see art. MIRACLE). Let it suffice to say that those who believe in miracles do not, in our time, suppose that a miracle is a violation of law. It is usually held to be the manifestation of forces, and possibly of laws, which do not enter into our ordinary experiences. But, while all this is admitted, it must be remembered, as shown above, that natural laws, as we apprehend them, belong to abstract realms of experience and are probably relative to our mode of apprehension. There is a sense also in which it must be said that the miraculous is relative to our mode of apprehension. As the control which civilized men exercise over natural forces appears, or might appear, miraculous to the intelligent savage, so a superhuman control of natural forces may well be the true nature of what we call miracle. There is therefore no objection to miracle on the ground of scientific principle. But this is not a sufficient account of the matter. The Christian miracles, as recorded in the NT, are not mere wonders. They are not even mere displays of superhuman power. Their distinctive quality is to be found in the fact that, while exhibiting superhuman power, they also reveal Divine character. They might be described as 'acts of revelation.' Here is the force of the term 'signs' (σημεία) by which they are designated. This consideration at once makes clear the distinction between a miracle and an answer to prayer. It may well be that, so far as the method of their performance goes, there is no difference between them. But the former is intended to reveal the operation

of One who is able to exert superhuman power and, in exerting that power, to manifest His character. The latter is for the simple bestowing of a benefit. In the former the Divine element is made startlingly manifest in order to attract attention. In the latter we must expect that the Divine direction of events takes place secretly, in the inmost heart of things, producing results which are as obviously natural as the falling of a leaf or the flowing of a river. The difference between the two is to be found rather in the purpose which guides the operations of Divine Providence than in the nature of the method by which the results are effected. Miracles are therefore exceptional. They 'do not happen,' to quote a famous phrase, in our ordinary experience. Answers to prayer occur every day.

7. Summary.—The result of our whole investigation is this: to a believer in a living God the efficacy of prayer is capable of ample justification. None of the objections which have been made against it on scientific or philosophical grounds can be sustained.

C. F. D'ARCY.

PRAYER (Christian, Liturgical).—If prayer is the natural and necessary outcome of belief in God, it is most natural and most necessary to the Christian believer. Before the Christian dispensation God was far off from man, unapproachable, unknowable, far above man and the needs of man. The incarnation of the Son of God brought man as it were into touch with God. God revealed Himself to man in the Incarnate Christ, and the Son of God, by taking our nature upon Him, lifts humanity into close communion with God. God was no longer far away, beyond the ken of mankind, no longer so far beyond man as to seem unable to condescend to the needs, the longings, and the understanding of His creature. The Son of God reigning in highest heaven is also Son of Man, understanding and knowing by virtue of His incarnation

man's needs and man's weaknesses, loving man not only with a love divine, but with a perfect sympathy inasmuch as in virtue of His manhood He is of the same substance as man. Prayer then, since the Incarnation, became something infinitely more real than ever it could be before—a real and intimate connexion between heaven and earth, between God and man. Our spiritual aspirations and worldly needs can be brought before the Eternal Father by the mediation of Him who lived and prayed and died among us, and ascended to the right hand of the Father to be our Mediator and Saviour.

Our Lord bade us pray, and Himself in this as in all things sets us an example. First there is individual prayer, which concerns the needs of the individual, whether spiritual or temporal. But there is another aspect of prayer. Our Lord teaches us above all things the brotherhood of man, that the whole race of humanity is one great family with a common Father. So prayer must also be collective, consisting of worship which is due from the whole family alike to God their Father, and supplication for those many necessities both of body and of soul which are common to all men. Our Lord has therefore taught us to pray in common, and indeed His own model prayer, 'Our Father,' is a common prayer.

Individual prayer is essentially private, bearing on personal and private needs. Such a prayer as 'O God of the crosses that are laid upon us, help thy servant Apphous,' which has survived in a 4th cent. fragment (*Ox. Pap.* vii. [1910] no. 1058), may be taken as an example of prayer to God in time of intense personal need—such a prayer as has been prayed millions of times.

Collective prayer is public, the common prayers used when the family of God gather together to give Him the worship due from all. The history of common prayer is to be found in the liturgical service of the Church. Christ came to fulfil the law, not to destroy it. The Christian Church regarded itself as the fulfilment and the perfection of the Jewish Church. Christ Himself taught in the synagogues and took part in the synagogue worship. He went up to Jerusalem and took part in the Temple worship at the great feasts. The Eucharist was instituted by Him at the Passover Supper, and is the Christian Passover, the memorial of our redemption. So we find the Apostles in Jerusalem after the Ascension still frequenting the Temple and taking part in its worship. The Eucharist only seems to have been their own distinctive act of worship. St. James the Lord's brother frequented the Temple till the day of his death. Even St. Paul used the synagogue worship as long as he could, and it was not the Church that cut the connexion with Judaism, but Judaism that cast off the Church.

Thus, when we come to consider Christian prayer in its public forms, we should naturally expect to find that it is a Christian development of Jewish forms of worship. Unfortunately there exists very little Jewish liturgical material of the time of Christ, but none the less it seems, from that which is extant and from what we know from other sources, that Christian worship is based upon the worship so familiar to the majority of the first generation of Christians before they came to the faith of Christ.

Jewish public worship consisted of the synagogue worship and the Temple worship. The synagogue services were held every Sabbath day, and there were also services on the third and fifth days of the week, Tuesday and Thursday. The synagogue service was definite and fixed, and we know from the Mishnâh of what it consisted. It began with the Shema ('Hear, O Israel'); then came a lection

from the Law and a lection from the Prophets; then came the blessing, followed by the Targum, an explanation in the vernacular of the Hebrew lections, and a discourse or sermon on what had been read. Such a service our Lord, as we know from the Gospels, was not only present at on Sabbath days, but frequently took part in as reader and preacher.

The Temple service existed of course only in Jerusalem. Here day by day there was the morning and the evening sacrifice. In connexion with these was the singing of psalms, and the eighteen benedictions or ascriptions of praise to God were made daily. Then there were the great annual festivals, at the chief of which, the Passover, many thousands of Jews gathered together from all parts of the world. The ritual of the Passover Supper we know partly at least from the Mishnâh, which probably represents the use of our Lord's time. The liturgy of the Paschal Supper begins with ritual question and answer, and then the celebrant recites the Haggādâh, the story of God's mercies to Israel, speaking of the bitter treatment of the people in Egypt, and of their wonderful redemption from slavery, and closing with a burst of worship and praise.

1. The Eucharist.—It is almost a certainty that the Eucharist was instituted by our Lord at this Passover Supper. The Haggādâh is doubtless represented by the expression, 'when he had given thanks'; then followed the giving of the Bread and the Cup to the disciples, with the charge that they should always do this in remembrance of Him. Thus we see how closely Christian worship is bound up with the older worship, how true was the feeling that there was an unbroken continuity between the old and the new dispensations, and how the new dispensation of Christ was but the fulfilment and perfecting of the old. For the Eucharist was the central act of Christian worship from the very first.

Of the early ritual of the Eucharist we know very little. In the Acts the Sunday reunions of Christians for 'the breaking of bread' doubtless imply the Eucharist, whether in connexion with the Agape or not. Elsewhere of course the expression 'breaking of bread,' as, e.g., at Emmaus, simply implies an ordinary meal. In St. Paul's references to the Eucharist in connexion with the abuses at Corinth (1 Co 11) we are told nothing definite; but the words that he uses—'For I have received of the Lord that which also I delivered unto you' (v. 23)—seem to imply some recognized outline, at least, in the form of thanksgiving used, which would apparently include some reference to, or perhaps recitation of, the account of the institution. The *Didache* gives forms which are most certainly Eucharistic prayers, but the date of the *Didache* is so uncertain, and the authority of the work so doubtful, that it is not safe to build too much on these forms. They seem to be a form of the grace before and after meals specially adapted to the Eucharist. These forms of grace are found again in the tract of St. Athanasius *On Virginity*, but simply as graces.

The first actual description of the Eucharist is found in St. Justin Martyr (c. A.D. 150) in his *First Apology* (63), and there are several references to it in his *Dialogue*. According to the description in his *Apology*, the Eucharist begins with the kiss of peace, then the offering of bread and the mixed cup is made, and the celebrant proceeds to offer praise and worship and thanksgiving, to which the people answer, 'Amen,' and then follows the communion. Elsewhere he speaks of the *εὐχαριστία*, or thanksgiving prayer, as including thanksgiving for the creation of the world and all that is in it, for our redemption, and for the breaking of the power

of evil (*Dial.* 41). His reference to the words of institution perhaps imply that they were included in the thanksgiving. But there were as yet no forms fixed except in outline. Justin's description implies that everywhere the Eucharist would be celebrated in the same way, but, on the other hand, he states definitely that the actual wording of the prayers was left to the celebrant.

But, according to Justin, the Eucharist proper was preceded by another service in close connexion with it (*Apol.* i. 67). This consisted in lections from the Gospels or Prophets or both, then a sermon by the bishop or celebrant, and this was followed by prayers. Closely on this followed the Eucharist. One is struck at once by the similarity between this service, which is the later *Præanaphora* of the liturgy, and the synagogue Sunday service, and we are drawn to the conclusion that this first part of the Eucharistic liturgy is based upon the synagogue worship just as the anaphora, or Eucharist proper, is based upon the ritual of the Passover Supper.

St. Clement of Rome, St. Irenæus, Tertullian, and St. Cyprian also refer occasionally to the Eucharist. In Cyprian the beginning of the Eucharistic prayer already has a technical name, the 'Preface' (*præfatio*). Also in certain non-orthodox works of the end of the 2nd cent. or the beginning of the 3rd, the *Acts of John* and the *Acts of Thomas*, we are given partial descriptions of the celebration of the Eucharist.

It is when we reach the era of the Church Orders, however, that we first come to definite accounts of the actual Eucharistic ritual. The Church Orders seem to have been almost authoritative, or certainly of very wide vogue, and are certainly based on the writings of Hippolytus. There seem to be two recensions of the Church Order, the first about A.D. 250, existing now in various versions, Latin, Coptic, Ethiopic, Arabic (including the so-called *Canons of Hippolytus*), and Syriac (embedded in a work called *The Testament of our Lord*, and in its present form of about A.D. 350). The second recension seems to have been made in the 4th cent., and in this the original Greek survives, with versions in Coptic and Ethiopic.

In addition to these there is what is known as the *Didascalia*, a work which forms the basis of the first six books of the *Apostolic Constitutions*, the 8th book of which is the latest recension of the Church Orders. The 7th book of the *Apostolic Constitutions* is based on the *Didache*, the whole work belonging to the second half of the 4th century. In this extremely valuable collection of documents we have a detailed description of the Eucharistic liturgy of the 3rd and 4th centuries.

The two divisions of the Eucharistic liturgy are still clearly marked. First comes the *Præanaphora*, consisting of a series of lections from Law, Prophets, Gospels, Acts, and Epistles, apparently unfixed in number, interspersed with psalms which survive in the introit, gradual offertory, and communion of the Latin Church. These are followed by the sermon, and then, as in Justin, comes the prayer for all estates, after which catechumens and those under penitence depart. Then follows the anaphora introduced with the kiss of peace. The anaphora begins with the 'Sursum corda' and Preface. The Preface, or thanksgiving, contains thanksgiving for all God's mercies to mankind, leading up to the Passion and an account of the institution, and ending with the anamnesis, or formal act of remembrance, and the invocation of the Holy Spirit, the whole concluding with the Lord's Prayer. After the communion come the act of thanksgiving and the dismissal.

This construction of the liturgy appears in all these documents, the later recensions already show

ing developments. Thus in the earlier Church Order it is still definitely left to the celebrant to use his own words, the forms provided being apparently a model, or for the use of those who had not a ready flow of words. It is in the invocation of the Holy Spirit that the most interesting development took place. The invocation was originally an invocation of the Holy Spirit on the act of communion, a prayer that those receiving might receive the full virtue of the sacrament. This idea extended gradually to the idea of the invocation of the Holy Spirit on the elements that He might make them the Body and Blood of the Lord. The invocation of the *Apostolic Constitutions* is half-way between the two; that of St. Cyril is definitely on the elements, as is the invocation in all later Eastern liturgies, which, however, retain some signs of the earlier idea. In the liturgy of Sarapion, bishop of Thmuis in Egypt (c. A.D. 360), we have perhaps the first example of a liturgy used as it was written. This liturgy consists of the anaphora only, and is interesting, moreover, in the fact that the invocation is of the Word and not of the Holy Spirit. The liturgy generally tended to become definitely a fixed and written service about the end of the 4th century.

In the East the extant liturgies are all of the same structure as that of the *Apostolic Constitutions*, and have developed only in length.

In the West the history of the liturgy is not so clear. In the work once attributed to St. Ambrose, the *de Sacramentis* of c. A.D. 400, there is an account given of the liturgy. This liturgy is apparently that underlying the later Roman Mass, and already contains the chief prayers of the latter. The later history in the West is obscure. In Charlemagne's time there were two types of liturgy extant in the West, the Roman and that called the Gallican. The latter type, less formal and much more verbose than the Roman, was displaced by it, and survives only in the Mozarabic rite and in the Ambrosian Liturgy of Milan, though the latter has been very much Romanized.

It is from the Roman that all other Western liturgies are derived. Thus the uses of England—the Sarum, York, Hereford, and Bangor—are all Roman, with the exception of certain prayers peculiar to the use added. And this is true of very many Continental uses, all of which had their own peculiarities, and of which those of France survived till the middle of the 19th cent., when they were displaced by the Roman rite. All alike are fundamentally Roman. The English Prayer Book is based on the older pre-Reformation uses, and is thus Roman in type. See also art. LITANY.

2. The daily offices.—The Eucharist was from the first the central act of Christian worship, but alongside of this other forms of additional worship very soon sprang into being. We have seen, e.g., that the liturgy is formed of two parts, the *Præanaphora* and the *Anaphora*, and that the union of these two was at first very loose. In fact, it seems that the former could be and was used separately with a sermon. So it was used, in certain places—e.g., Alexandria—on the station days, Wednesday and Friday. But the growth of other services was very early, and this too seems to have been a Christian development of Jewish devotion. In the book of Daniel there is a reference to three set hours of prayer, and perhaps the same is implied in Ps 55¹⁷: 'Evening, and morning, and at noon-day, will I pray.' Again in the Acts we find the three hours—the third, sixth, and ninth—observed as times of prayer. In the *Didache* the Lord's Prayer is ordered to be said three times a day. Tertullian and the Church Orders refer to prayer at the third, sixth, and ninth hours, but these were private devotions only and said at home.

There were, however, apparently, when it was possible, morning and evening prayers said publicly, and forms of these prayers are given in the *Testament of our Lord* and the *Apostolic Constitutions*, consisting of psalms and prayers. Gradually the three hours began to become times of public service, and this was perhaps largely due to the rise of monasticism, by which these hours tended to become common services in the case of men and women living in communities. In addition to these there was the night office, which originated apparently from the vigil of Easter, which in early days was strictly kept, and was extended to the eves of local saints and thence became a definite night service. The night service seems to have originated as a regular observance in Syria, and it was introduced into the West by Cassian—the mattins of the Breviary. In the *Peregrinatio of Etheria (Silvia)* we are told that the hours observed at Jerusalem were mattins, the sixth hour, the ninth, and vespers, and to these in Lent was added the observance of the third hour. Eventually the offices in the Breviary amounted to eight—mattins, lauds, prime, terce, sext, none, vespers, and compline. Originally monastic, they were enjoined on all clergy, and the laity were expected to (and did) attend at least some of them.

3. Popular devotions.—But the hours tended to become more and more a clerical office, and the devotional book of the laity from the 10th or 11th cent. is the *Little Hours* or the *Primer*. The 'little hours' were originally additional devotions in honour of the Blessed Virgin, and were generally called 'the Hours of the Virgin.' But they speedily became the popular devotion of the laity, and as such tended to develop so as to meet the needs of lay folk. Thus the 'little hours' contained a series of hours of prayer, sometimes several such series—e.g., 'the Hours of the Virgin,' 'the Hours of the Cross,' 'the Hours of the Holy Ghost.' To these were appended the gradual psalms, the penitential psalms, sometimes the whole Psalter; also the offices of the dead, the commendation, generally a litany, and various prayers for various purposes. These *Horæ* were very popular and very common, both in Latin and in the vernacular. They are frequently mentioned in wills, and a considerable number of them survive to the present day. Other popular works there were, such, e.g., as the *Layfolks' Mass Book*, instructing folk how to occupy their time devoutly at the Mass. But the *Primer* remained the book of the laity.

The Reformation of course made a great difference. The fact of the Reformed service-books being in English tended rather to obviate the need of such books as the *Primer*. But for some time after the Reformation editions of the *Primer* continued to be issued. Three primers were issued in several editions in the reign of Henry VIII. Of these the first, Marshall's *Primer*, contained a good deal of novelty. It contains the hours of prayer, dirge, and the commendations, but with an admonition against praying for the dead. It also contains a good deal of instruction and exposition of a reforming type. This book appeared in 1534, and was denounced in Convocation, but was re-issued at least twice. In 1539 the *Primer* of John Hilsey, bishop of Rochester, appeared. This contains the hours and dirge, but many of the lessons are changed to new ones, the litany with many of the saints omitted, and an instruction on hearing Mass, and other matter of a devotional and instructive kind. Both these primers were superseded by *The King's Primer* in 1545 and its Latin form, the *Orarium* (1546). These were much less pronounced than the former books, and contained the hours, penitential psalms, litany, dirge, and commendations, the psalms and devotions of the

Passion, and a few private prayers. *The King's Primer* was reprinted in the reign of Edward VI., and again in 1551 with some omissions—e.g., the 'Hail, Mary,' and the names of the saints in the litany—and again in Mary's reign. In 1553 appeared the *Primer* of Thomas Cottesford. It is of an entirely different character from the preceding books, and is simply a book of private prayer for each day of the week, followed by the collects and 'sundry godly prayers,' omitting entirely the hours, etc.

In Elizabeth's reign the *Primer* of 1551 was reprinted in 1559 and a very similar edition in 1566. The *Primer* of 1553 was reprinted in 1560 and 1568. Also in 1560 she published a Latin form of her primer, the *Orarium*, differing, however, in some respects from the English book. In 1564 appeared her *Preces Private*, containing a Latin order for mattins and evensong similar to but not the same as that of the Prayer Book, with hymns, and a large collection of various forms of devotion. This was republished with some additions in 1573. A *Book of Christian Prayers* appeared in 1569, and was several times republished (with some alterations from the original edition) in Elizabeth's reign and in the reign of James I. This consists of many devotions for various occasions, and has the litany as an appendix.

By this time the English *Book of Common Prayer* seems to have become to lay people what the *Primer* was to them in the days of the old Latin services. Devotional books henceforth were put forth only by private enterprise, and were simply intended to be used with the Prayer Book. One exception perhaps may be instanced, and that is Cosin's *Collection of Private Devotions*, which he published in 1627, and which is based on the *Primer* of Elizabeth of 1560 and follows the old arrangement of hours. Later devotional books which had a great vogue may be instanced, such as Bishop Andrewes' *Preces Private* (Oxford, 1675), Jeremy Taylor's *Holy Living and Holy Dying* (London, 1686), Bishop Wilson's *Sacra Privata* (London, 1900), and through the 18th cent. the Prayer Book was commonly bound up with a *Companion to the Altar*, containing devotions for preparation for communion and for communion, and forms of thanksgiving. In the 19th cent. an immense number of devotional books has been issued—too many to deal with here.

R. M. WOOLLEY.

PRAYER (Egyptian).—Of forms of prayer in Egyptian ritual little is known. Among the magical formulæ, addresses, statements, and adorations in the daily ritual of the temples there are few, if any, words of request; in one passage, when the officiant in the temple of Amen-re exclaims, 'Come unto me, Amen-re, open for me the gates of heaven, throw open for me the gates of earth,' etc., the demand seems directed to carrying out the immediate objects of the ritual on behalf of the deity rather than the direct benefit of any one (cf. A. Moret, *Le Rituel du culte divin journalier en Egypte*, Paris, 1902, p. 81 [several prayers in this tr. would be better interpreted as direct statements]). The funerary ritual is similar,

but late copies contain a short prayer to all the gods for the welfare of the dead (E. Schiaparelli, *Il Libro dei Funerali*, Rome, 1882-90, ii. 108).

While attitudes of adoration, submission, etc., are represented frequently on the monuments, there seems to be none which is distinctive of prayer. Of times and places for prayer also little can be said; sunrise and sunset appear to have been the special hours for adoration of the forms of Re, the sun-god; the graffiti on temples and sacred places belonging chiefly to the late ages of paganism show that prayers were offered in and about them.

From the Old Kingdom very little is preserved in the nature of prayers beyond the funerary formula (see below); this applies even to the enormous body of the Pyramid Texts in which ritual charms and hymns are brought together for the welfare of the dead king. The texts of the Middle Kingdom are more productive in this respect. In the New Kingdom, especially after the days of Akhenaton (the enthusiastic monotheist and heretic at the end of the XVIIIth dynasty), an age of personal piety began in which the worshipper turned naturally to his god for protection, help, and comfort. This spirit, finding utterance in combined hymns and prayers, was never lost, though formalism and magic reasserted their sway with greater strength than ever in the lives and writings of the ultra-religious Egyptians.

The funerary formula.—A form of prayer for the comfort of the dead, beginning with an obscure phrase, 'Grace that the king grants, grace that Anubis (or other gods) grants,' is seen everywhere from the Old Kingdom onwards, and continues almost to the end of paganism. In the Old Kingdom the prayer, as prescribed on the great tombs, usually for a good burial after a good old age, for food, etc., daily and on the feast days, and 'to travel on the roads on which worthy veterans travel,' etc., is addressed to the funerary gods; later it was addressed also to local and other deities and often greatly developed according to individual taste. Tombstones request the passer-by to repeat it, adjuring him by his love of life, hatred of death, and devotion to his local god, and by his desire to bequeath his office to his children, and remind him that it will cost him no more than a little breath.

Salutations.—In speech and in writing these were prayers. After the name of royalty or a superior it was proper to add, '(May he continue) living prosperous and in health.' Letters of the Middle Kingdom end, 'May your hearing (of this) be fortunate.' In the New Kingdom a letter addressed to a king begins with prayers for his prosperity and long life (Griffith, *Hieratic Papyri from Kahûn and Gurob*, London, 1898, pp. 67 ff. and 91). In later times a petition or letter to a great man commences, 'May Ammon cause his life to be long.'

In early times to 'lift up the voice' (probably wanton shouting) in the tomb chapel was considered a gross offence, and doubtless both tomb and temple were places of solemn silence during the greater part of the day; hence religion tended to be associated with silence. On the vivid realization in the New Kingdom of personal relationship between the individual worshipper, however humble, and his protecting deity, we find insistence laid upon the value of secret prayer and contemplation.

'Thoth is as a sweet well to him who thirsts in the desert, closed to him who finds utterance, open to him who is silent' (*Papyrus Saltier*, l. 8, 5-7); 'Be not of many words, for in silence thou shalt gain good. . . . As for the precinct of God, his abomination is crying out; pray thou with a desiring heart whose every word is hidden, and he will supply thy need and

hear thy speech and receive thy offering' (*Maximes d'Ani*, 3, 1-4; see J. H. Breasted, *Development of Religion and Thought in Ancient Egypt*, New York, 1912, p. 355).

At the same period models of human ears and stelæ sculptured with ears were dedicated in the temples to the succouring god or goddess, 'who heard the prayer of the traveller afar off'; and in a group of little shrines in the necropolis of Thebes votive stelæ were set up in honour of various deities, recording the plagues inflicted on the sinner and their goodness to the repentant who sought their aid.

The goddess 'is a lion; she smiteth as a fierce lion smiteth and pursueth him that trespasseth against her. I cried to my mistress and found that she came to me with sweet breath. She was gracious to me after she had caused me to see her hand. She turned again to me in favour, she let me forget the sickness that was on me,' etc. (Erman, 'Denksteine aus der thebanischen Gräberstadt,' in *SBW*, 1911, p. 1036).

LITERATURE.—An elaborate examination of the funerary formula by Gardiner, who explains it as a statement rather than a prayer, is printed in N. de G. Davies and A. H. Gardiner, *The Tomb of Amenemhät*, London, 1915, p. 79 ff. Hymns and prayers prefixed to the *Book of the Dead* are tr. by E. A. Wallis Budge in various edd. of that text.

F. LL. GRIFFITH.

PRAYER (Finns and Lapps).—I. Ancient Finns and Lapps.—The ancient Finns and Lapps attributed to every natural object a living spirit. The Lapps sometimes called these spirits 'men'; water-spirits, e.g., were known as *cacce-olmak*, 'water-men.' Indeed the relations between men and spirits were at first, as Castrén has pointed out,¹ like those between men and men. As a man would naturally call a neighbour to his assistance rather than a stranger, so the ancient Finns and Lapps would pray to familiar spirits, like those of well-known trees and streams, rather than to remote beings, like sky-spirits, whom they did not know and could not expect to control. But spirits came to be thought of as free, personal beings, able to move about and occasionally visible, whose existence was not entirely dependent upon the objects of which they were the spirits and guardians, so that the spirit of one object might guard also other objects. In the course of time (before A.D. 600) they were named *haltiat* (Finnish) or *haldek* (Lappish), a Scandinavian word meaning 'rulers' or 'guardians.' The most important spirits were undoubtedly those of the dead. So awe-inspiring were the spirits of dead men buried in the forest or by the side of lakes and rivers, and so much more full of power than any other spirits of land or water, that they were credited with the guardianship of animals and fish, which could not be taken without their permission. Thus, when the Lapps prayed for help in hunting, as we are told they did every morning and evening,² to Leib-olmai, 'alder-tree-man,' the spirit to which they prayed was a forest-god, who was probably, like Tapio and Hiisi, the forest-gods of the Finns, connected with the cult of the dead, and who was the tutelary spirit of the bear, the most powerful animal that they knew. Again, when they prayed, as they did constantly,³ to 'water-men' to aid their fishing, they were addressing themselves to local spirits of the dead who guarded different fishing-places. Moreover, the spirits of the dead were thought to be still in very close relationship with the living, whom they could either help or injure, so that their favour was in every respect of the utmost importance. There were several methods by which they might be approached, viz. through (1) idolatry, (2) reincarnation, (3) shamanism, and (4) the use of special means and instruments.

³ *Ib.*

(1) Among the ancient Finns spirits were located in pillars of stone or wood, in rocks or trees of peculiar appearance, and in pebbles, twigs, or rude images.¹ All the Finnish tribes seem to have possessed as household gods loose stones or faggots, images, or dolls, which almost certainly embodied the spirits of dead ancestors.² The Lapps too worshipped idols of stone or wood called sometimes by the Scandinavian name *storkunkare*, 'great governors,' sometimes *seitas*, sometimes *passedge*, 'holy stones.'³ Every Lapp family and clan had their *storkunkare* standing near their settlement, and private persons sometimes had one or more of their own. Prayers were offered to these idols with both communal and private oblations.⁴

The Lapp Fjellner described to von Düben a communal sacrifice of which he had been an eye-witness, where the worshippers knelt down and prayed after a sacrificial meal.⁵ A man, before going to hunt or fish, kissed his *seita* three times, and promised it some of his prey.⁶ A Lapp told Fellman that his *seita* helped him as long as he kept it in a good humour.⁷ If *seitas* did not help, they were often whipped or abandoned.⁸

(2) Spirits of the dead might also be embodied in the person of a living man. They then became his guardians, and he could make a bargain with them that they should help him whenever he called upon them. According to the Lappish *saivo*-doctrine, ancestors came to life again in persons named after them; by obtaining the names of several ancestors a Lapp could obtain several guardian-spirits.

(3) Both Finns and Lapps at one time made use of intermediaries between themselves and spirits. These were the shamans (Finnish *noitas*, Lappish *noaides*), men who, owing to their exceptional nature and training, could communicate with the spirits of the dead, and through them learn the wishes of remote gods. The Samoyed shamans sent their spirits up to the sky-god Num to ask his will.⁹ Various Finnish tribes practised divination for a like purpose, and Esthonian and Karelian shamans are sometimes described as 'diviners.' The Lapps divined through their magic drums, but they retained the primitive mysteries of shamanism; for, when their divination failed, as often happened, it was still necessary for the *noaide* to make a journey to the world of the dead, to appease the spirits or to obtain their help.

(4) Distant spirits, like those of the dead, could not hear men's feeble voices. But, if ordinary words and tones could not reach them, they might perhaps hear strange shouts, mysterious whispers, or the noise of a drum. Two special means were used by the Lapps to attract the spirits' attention: (a) *juoigen*, incantation, and (b) *myran*, magic action, especially magic drumming.

(a) *Juoigen*.—This was a sacred chant, 'the tenor of which no Lapp has ever been willing to confess.'¹⁰ It was taught to every Lapp boy, 'so that the boy, before he could speak distinctly, had mastered the elements of this rude melody, or rather, if it pleased better, this howling.'¹¹ Acerbi described it as the most

hideous kind of yelling.¹ In E. Lindahl and J. Ohrling's *Lexicon Lapponicum* (Stockholm, 1780, p. 96) *juoi* is defined as 'Lapponum more canere, tremulo cantu canere.' The words of such incantations are not known.² Fjellner said that some prayers were presented in a whisper with words not used in ordinary speech.³ The omission of one word would render the chant ineffective, and might cause a shaman's death.⁴

(b) *Myran*.—When the help of spirits was sought on important occasions, several *noaides* went into a hut set apart for the purpose, and there shamanized 'per *bu juoigen et myran*,' i.e. by incantations mixed with magic action and especially drumming.⁵ Although the magic drum was adapted by the Lapps and others to divination, its original object was to attract the attention of the spirits of the dead who lived underground out of ordinary ear-shot, and who were thereby summoned to place themselves inside the drum and help the shaman.

The *kamlanie* of the Lapp *noaides* resembles that of Siberian and other shamans, and the best accessible account is that translated from Mikhailovskii in *JAI* xxiv. 146 f.⁶ The *juoigen* which accompanied it was of great importance, and, if the on-lookers ceased singing during the *noaide's* trance, he could never come to life again.⁷ Nevertheless, the main feature of the performance was coercive action. Prayer was in a very rudimentary stage.

2. Finns of Finland.—It seems certain that the Finns of Finland, like other members of the Finno-Ugrian family, anciently used shamanistic methods of coercing spirits similar to those of the Lapps. But they soon left the Lapps far behind, partly because they came under Christian influences some centuries earlier, but chiefly because their higher intelligence led them even before that time to assimilate the culture of more advanced neighbours. The Finns must have reformed their old religion long before the 12th cent., when Christianity was introduced to them. There is evidence of this in their traditional poetry, known chiefly through Lönnrot's compilation, the *Kalevala*⁸ (q.v.), which, though very largely mediæval, is not entirely so, and reflects much of the old life of the Finnish people, but has little or nothing to say of primitive shamanism.⁹ The heroes of Finnish poetry are magicians, but they do not perform any shamanistic actions.¹⁰ Their magic is carried out by the utterance of word-charms. For instance, the rivalry between Finnish and Lapp wizards which is expressed in the strife of Väinämöinen and Joukahainen in *Kalevala*, vi., is a contest not in *kamlanie* but in the singing of spells. Divination is practised by rhabdomancy¹¹ or by the sieve.¹² The magic drum has been forgotten and is never mentioned.¹³ The rude incantations which accompanied the shaman's performances have given place to those magic songs which are so prominent in Finnish poetry. Of the large number of such songs published by Lönnrot in 1880 under the title *Loitsurunot*¹⁴ most seem to be later than the 12th

cent., and few can have come from professional magicians. They are certainly popular products, and presuppose a revolt against the official shamanism which prevailed generally among Finno-Ugrian peoples.¹ As a result of this reformation laymen must have taken to themselves the power of approaching spirits which had been restricted to an initiated class. Personal supplications, and word-charms which were always benevolent and which were gathered mainly from the common stock of European magic, entirely superseded the crude mimetic actions and unintelligible incantations by which the official wizard tried to enforce his will on spiritual powers. Thus the prayers and spells of the Finlanders were not, like the Accadian formulae to which Lenormant compared them,² priestly incantations in a secret tongue, nor, like the Lapp *juoigen* and *myran*, mere mechanical acts of sorcery, but they were aids to popular religion belonging generally to mediæval and comparatively modern times, when a man had learnt to approach the spirit world on his own account either with spells or with genuine prayers.

Lönnrot's collection comprises, besides general formulae of magic, a large number of exorcisms, which are borrowed mainly from Scandinavia, and include some well-known and wide-spread charms, such as the Merseburger Gebet.³ It also contains 'origins,' or 'births' (*synty*),⁴ songs which describe fantastically, and often in a derivative manner, the genesis of animals, diseases, and other things, the aim of the singer being, apparently, to demonstrate the feebleness of the object and induce it to act as he wishes. The remaining 73 songs are called 'prayers,' most of them having several variants, some as many as 80. They are addressed indifferently to old Finnish gods and spirits, such as Ukko, Hiihi, Tapio, Ahti, etc., and to various objects of Christian worship, the most popular of whom is the Virgin Mary. She is addressed sometimes by her own name, but often by beautiful Finnish epithets such as *Suutar*, 'daughter of summer,' *Etelätär*, 'daughter of the south wind,' *Luonnotar*, 'daughter of creation,' *Kivutar*, 'daughter of pain.' A large proportion are hunters' and fishers' prayers. Most of these seem comparatively modern, and so do the agricultural prayers, excepting perhaps those relating to a vegetation-spirit known as *Sämsä Pellervoinen*, which were sung at the spring sowing festivals of 'Ukko's Cup' and 'Ukko's Chests,' vestiges of which have been noted in recent years. These sowing charms may be read, woven together by Lönnrot, in *Kalevala*, li.⁵

The 'prayers' generally bear out Lencqvist's remark that the Finns pray only for material benefits.⁶ Nevertheless, they reveal the kind and simple heart of the Finn, his warm love of nature, and his peculiar but genuine gift of poetic imagination. We may quote a short sailor's prayer:⁷

Io-tintu ihmäinen.

'O bird of joy, bird of the air,
Fly whither I command,
Fly to the infinite East,
Fly to the chambers of the morning Sun!
Puff out your cheeks,
And blow a favouring gale;
That I may have a fair wind,
And may freely pass
Over the wide waters,
Across the far-spread sea.'

LITERATURE.—Most of this is indicated in the notes; other critical literature is published in Finnish.

CHARLES J. BILLSON.

PRAYER (Greek).—1. Expressions used to denote prayer.—The normal expression in Greek for 'prayer' is *εὐχῆ*, for 'to pray,' *εὐχέσθαι*, with

¹³ The only allusion to it known to the present writer is in *Loitsurunot*, p. 29, where *käiskannus*, 'hand-drum,' is used as a synonym of the Laplander. Friis's view (pp. 147, 199) that *sampo* was a magic drum is quite untenable.

¹⁴ A good deal of this material had been used in the *Kalevala*, and some had been published by earlier collectors; e.g., see

compounds *προεύχεται*, *ἐπεύχεται*. Another word, used chiefly by the poets, is *λιτή*, or rather *λιταί*, with its corresponding verb *λίσσεται*.

In Homer the regular verb of prayer addressed by men to the gods is *εὐχόμεαι*. Only in one passage (*Il.* ix. 501) does he use *λίσσεται* in this way. On the other hand, Homer has *εὐχῆ* (in plur.) only in *Od.* x. 526; *λιτή* (in plur.) in *Od.* xi. 84, *Il.* ix. 502.

Although, naturally enough, these expressions tend to get confused, it seems to the present writer that there is a fundamental distinction between them. *Εὐχόμεαι* corresponds very closely to the Latin *voveo* in its double sense of 'vow' and 'wish' and hence is the regular word for a prayer to the gods for future blessing. On the other hand, *λιταί* are not properly prayers for future blessing, but are in the nature of prayers for forgiveness, prayers of atonement. This is borne out by the use of the corresponding Latin verb *lītare*, which is not 'to pray,' but 'to propitiate.'

Thus, to take first *Od.* xi. 84 f. (the passage occurs in the *Nekyia*): Odysseus digs a trench into which he pours offerings to all the dead. He then vows to perform certain sacrifices to them on his return to Ithaca. Then the passage proceeds: τοῖς δ' ἐπεὶ εὐχολῆσαι λιτῆσσι τε, ἔθνεα νεκρῶν, ἑλλισάμην, where one may suppose that *εὐχολαί* refers to his vows, *λιταί* to his entreaties or propitiatory prayer.

Turn now to *Il.* ix. 496 ff., which Leaf translates thus: 'Therefore, Achilles, rule thy high spirit; neither beseecheth it thee to have a ruthless heart. Nay, even the very gods can bend (στρατοὶ δὲ τε καὶ θεοὶ αὐτοί), and theirs withal is loftier majesty and honour and might. Their hearts by incense (θύεσσαι), and reverent vows (εὐχολῆσαι ἀγαρήσι) and drink offering (λοιβῆ) and burnt offering (νίσση) men turn with prayer (λίσσόμενοι), so oft as any transgresseth and doeth sin. Moreover, Prayers of penitence (λιταί) are daughters of great Zeus, halting and wrinkled and of eyes askance, that have their task withal to go in the steps of Sin (Ἄρνη). For Sin is strong and fleet of foot, wherefore she far outrunneth all Prayers, and goeth before them over all the earth making men fall (βλάπτουσι ἀνθρώπους), and Prayers follow to heal the harm (αἰ δ' ἐξοκύνται ὀπίσσω). Now whosoever reverenceth Zeus's daughters when they draw near, him they greatly bless and hear his petitions; but when one denieth them and stiffly refuseth, then depart they and make prayer unto Zeus the son of Kronos that Sin may come upon such an one, that he may fall and pay the price. Nay, Achilles, look thou too that there attend upon the daughters of Zeus the reverence that bendeth the heart of all men that be right-minded. For if Atreides brought thee not gifts and foretold thee not more hereafter, but were ever furiously wroth, then I were not he that should bid thee cast aside thine anger . . . but now he both offereth thee forthwith many gifts, and promiset thee more hereafter, and hath sent heroes to beseech thee . . . dishonour not thou their petition.'

An examination of Greek literature confirms this view of *λιταί*.

Hesiod has neither *λιταί* nor *λίσσεται*, and only one case of *λιτανεύει* (*Theog.* 469)—of the prayer of Rhea to Earth and starry Heaven, before the birth of Zeus. On the other hand, *εὐχαί* occurs (*ib.* 419) of prayer to Hecate and (*frag.* 246) in a proverbial line, *ἐργα νέον, βουλαὶ δὲ μέσων, εὐχαὶ δὲ γέροντων*. *Εὐχόμεαι* occurs in *Theog.* 441, *Works and Days*, 466, 788, and *frag.* 81; *εὐχολῆ* in *Sc.* 63. Theognis has neither *λιταί* nor *λίσσεται*, but he has *εὐχῆς* (341) and *εὐχόμεαι* (13, 129, 171, 1141, 1151). In the group of early lyric poets—Archilochus, Simonides, Mimnermus, Solon, Tyrtaeus—there is no case of either *λιταί* or *λίσσεται*, while *εὐχόμεαι* occurs in Simon. *frags.* 7, 84, and Solon, *frag.* 5. In Pindar *λίσσεται* has become practically the same thing as *εὐχόμεαι* (*Pyth.* i. 71, *Ol.* xii. 1, *Nem.* iii. 1, *frag.* 90, *Pyth.* iv. 207), and in *Isth.* v. (vi.) 45 is combined with *εὐχαί* *εὐχαῖς ὑπὸ θεοπεσιῶσι λίσσεται*. But *λιταί* occurs only twice: *Ol.* ii. 88, where Thetis ζῆνός ἑπ' ὅρα λιταῖς ἐπεισε, and got Achilles conveyed to the Islands of the Blessed, and *Ol.* viii. 8. What appears to be an adjectival form occurs twice: *Ol.* vi. 78, *λιταὶ θυσιῖ* (sacrifices of propitiation offered to Hermes, no doubt in his character of *ψυχοπομπός*—the right use of *αἰταί*) and *Pyth.* iv. 217, *λιταὶ ἐπαοιδαί* (propitiatory incantations—again the normal use of *λιταί*). In *frag.* 21, *Λιτὴν* 'Hū, it is, as the scholiast says=*εὐκαταία*. In Bacchylides *λίσσεται* occurs in v. 100, where it is definitely of prayers to appease the anger of Artemis—a chthonian deity—and in x. 69, where it is used in the Homeric sense of an appeal by mortals to mortals. He has no example of *λιταί*.

When we turn to the dramatists, we find that Aeschylus has *λίσσεται* once only (*Suppl.* 748), in an appeal by a mortal to a mortal; *λιταί* he has in *Prom.* 1009, *Sept.* 143, 173, 214, 320, 626, 620, *Pers.* 499, *Ag.* 228, 396, *Eum.* 382, *Suppl.* 173, 378, 521. An examination of these passages confirms our general view. *Εὐχόμεαι* and *εὐχαί* occur in Aeschylus very frequently, and are his normal expressions for 'pray' and 'prayer.' The usage of Sophocles is quite in accordance with our position. He has *εὐχαί* in *Ed.* *Tyr.* 239, *El.* 636, *εὐχῆ* in *Ph.* 771, and *εὐχόμεαι* frequently. *Λίσσεται* as a general term for entreaty occurs some seven or eight times; *λιταί* occurs in *Ph.* 60, 495, *Ed.* *Col.* 435, 1615, 1311, 1654, *El.* 137, *Ant.* 1006—all normal uses. In Aristo-

phanes *εὐχαί* occurs three times, *εὐχῆ* twice, *εὐχόμεαι* twenty times, *εὐχολῆ* once; he has no case of *λιταί*; *λίσσεται* occurs in *Pax.* 382, addressed to Hermes; *λίσσεται* is coupled with *εὐχαί* in *Th.* 313; in *Th.* 1040 *λίσσεται* is definitely 'supplicating.'

Of prose authors Herodotus has *εὐχόμεαι* and *εὐχολῆ*, no case apparently of *λίσσεται*, but *λιταί* (i. 105) of propitiatory prayer. Thucydides has no example of *λίσσεται* or *λιταί*, nor do the words occur in any of the orators.

Εὐχαί, then, is the normal Greek word for prayer; *λιταί* are in the nature of penitential or propitiatory prayer; *προεὐχόμεαι* is normally 'thanksgiving' (e.g., Aristoph. *Plut.* 841, 958, *Ran.* 891, *Pax.* 560), though also used (e.g., Plato, *Crit.* 106 A) as practically equivalent to *εὐχόμεαι*.

Other expressions for 'prayer' and 'pray' are *ἀρή* (*ἀρά*) and *ἀράομαι*.

There is no clear distinction in Homer between *ἀράομαι* (occurring some 39 times) and *εὐχόμεαι*, with which, indeed, it is frequently expressly equated, as, e.g., *Il.* v. 114, 121, x. 295 f.; and the same is true of *ἀρή* (occurring six times)—e.g., *Il.* xv. 377, *εὐχόμενος* followed by *ἀράων* (378). The fact is that 'prayer' and 'curse' are essentially undifferentiated. Thus it happens that Althaea's prayer (*Il.* ix. 565 ff.) is a prayer for death to her son Melaeus, and is therefore a 'curse,' just as it happens that *ἀρήσας* 'Erinyes' (*Od.* ii. 135) is a summoning of the Erinyes to exact vengeance and so amounts to a curse. The notion that it could mean 'curse the Erinyes' is utterly wrong, being consonant neither with the Homeric use of *ἀράομαι* nor with Greek syntax. It is noticeable that Homer has *ἀρήσας* 'priest' (*Il.* i. 11, 94, v. 78). In Hesiod *ἀράομαι* does not occur and *ἀραί* in the one example of it (*Works and Days*, 726) = 'prayers.' Pindar has *ἀραί* once only (never *ἀράομαι*) in *Isth.* v. (vi.) 43, where it = 'prayers.' But in the dramatists 'curse' is the normal, or even the invariable, sense of *ἀρά* (*ἀραί*)—e.g., *Each.* *Sept.* 70, 695, 833, 894, 954, *Eum.* 417, *Ch.* 406, 593; Sophocles, *Ed.* *Tyr.* 295, 744, 820, *Ed.* *Col.* 152, 956, 1377, 1386, *Ant.* 423, etc. So *ἀράομαι* is 'curse' in Aesch. *Prom.* 912, *Sept.* 633 (the only examples); Soph. *Ed.* *Tyr.* 251, 1291, etc. Yet Sophocles has the verb in the sense of 'pray' three times (*Aj.* 504, *Ed.* *Col.* 1447, *Tr.* 48). In later Greek the sense of 'curse' prevails completely.

2. Attitude in prayer.—The most striking characteristic of the Greek attitude in prayer is directness of address. The worshipper endeavours to be, so far as possible, literally in touch with his god.

Thus, in Pindar, *Ol.* vi. 58, when Iamus prayed to Poseidon, 'he went down into the midst of Alpheus [Poseidon being a river-god as well as a sea-god] and called on wide-ruling Poseidon his grandsire . . . and he stood beneath the heavens, and it was night.' So, in *Ol.* i. 71, Pelops 'came and stood on the margin of the grey sea, alone in the darkness of the night and called on the deep-voiced Lord of the Trident.' So, too, in Hom. *Il.* i. 348-351, 'Achilles wept and sat down apart . . . on the beach of the grey sea, gazing over the boundless deep: he stretched forth his hands and prayed instantly to his dear mother,' i.e. to Thetis, a sea-deity.

Typically, when Zeus or any other of the Olympians was invoked, the worshipper turned his face to the heavens (e.g., Hom. *Il.* iii. 364 f.; 'Thereat Atreides groaned, looking up to the wide heaven: "Father Zeus," etc.), the hands uplifted palms upwards (*χεῖρες ὕψι* [Philostr. *Imag.* 341; Plutarch, *Compar. Philopoe.* et *Tit.* 2: τοῦ Τίτου τὰς χεῖρας εἰς τὸν οὐρανὸν ὕψις ἀνατείνωντος, ἐστῶτος καὶ προσευχομένου]; cf. the *manus supinae* of the Roman prayer [Verg. *Æn.* iii. 176, Ovid, *Met.* viii. 681; Hor. *Carm.* iii. 23. 1]). Of the veiled head (*caput velatum*) of the Roman worshipper (Verg. *Æn.* iii. 545; Cic. *de Nat. Deor.* ii. 3. 10, etc.) there is no trace in Greek, nor of the turning to the right (east) so typical of Roman prayer (Pliny, *HN* xi. 45, 251; Plut. *Marcell.* 6; Plaut. *Curc.* i. 69; Val. Flacc. viii. 246; Sueton. *Vitell.* 2; Stat. *Theb.* vi. 215; Livy, v. 21). Prostration was regarded as Oriental and un-Greek. Normally the Greek prayed standing upright. Yet a fragment of a bas-relief from the Asklepieion shows Asklepios standing upright and a woman on her knees before him, touching his ὑπότιον with her right hand (*REG* xxix. [1916] 131, p. 78).

If a sea-deity were invoked, the worshipper stretched his hands towards the sea (Hom. *Il.* i. 351), though Polyphenus, praying to Poseidon (*Od.* ix. 527), raises his hands to the starry heaven. In prayer to river nymphs the worshipper fixed his eyes on the water (Hesiod, *Works and Days*, 737 f.). Achilles in Troad, addressing his home

river Spercheios, looks over the sea (*Il.* xxiii. 143 f.). In prayer to a chthonian deity the hands were held downwards or placed on the ground:

'Come now swear to me by the inviolable water of Styx, and with one of thy hands grasp the fertile earth, and with the other the shining sea, that all may be witnesses to us, even all the gods below that are with Kronos,' etc. (*Hom. Il.* xiv. 271 ff.; cf. *Bacchyl.* v. 42, vii. 41).

Sometimes, to reinforce his prayer to a chthonian deity, the worshipper would beat the ground with his hands:

Althea, 'grieved for her brethren's death, prayed instantly to the gods, and with her hands she beat upon the fertile earth, calling on Hades and dread Persephone, while she knelt upon her knees and made her bosom wet with tears, to bring her son (Meleager) to death; and Erinnyes that walketh in darkness, whose heart knoweth not compassion, heard her from Erebus' (*Hom. Il.* ix. 565 ff.). 'Straightway the ox-eyed lady Hera prayed, striking the earth with the flat of her hand, and spake saying, "Hearken to me now, O Earth and the wide Heavens above, and ye gods called Titans, dwelling beneath earth in great Tartaros,"' (*Hom. Hymn. Apoll.* 332 f.). 'So spake she and lashed the earth with her stout hand; and earth, giver of livelihood, was stirred, and Hera, beholding it, was glad at heart, for she deemed that her prayer would be fulfilled' (*ib.* 340 ff.); cf. *Paus.* viii. 15.3: 'I know too that on the most important affairs most of the Pheneatians swear by the Petroma. There is a round cover on it, which contains a mask of Demeter Cidaria: this mask the priest puts on his face at the greater mysteries, and smites the Underground Folks with rods—I imagine, in conformity with some legend.' On Theocritus, vii. 106, 'And if, dear Pan, thou dost those things, may the Arcadian boys not smite thee on sides and shoulders with squills, when there is little meat,' the schol. remarks: *Μουσάτης φησιν ἑορτῇ Ἀρκαδίων εἶναι ἐν, ἣ οἱ παῖδες τὸν Πάνα σκίλλας βάλλουσι γίνεσθαι δὲ τοῦτο ὅταν οἱ χορηγοὶ λεπτὸν ἱερεῖον θύσωσι καὶ μὴ ἱκανὸν ᾖ τοῖς ἐσθίουσι.* Similarly, in *Colluthus, Rape of Helen*, 46 ff., Strife, who had not been invited to the marriage of Peleus and Thetis, 'rose often from her stony seat and again sat down: and with her hand she smote the broad bosom of earth and heeded not the rock. She would fain have burst the bars of the darksome hollows and roused the Titans from their pits beneath the earth and laid waste the heavens, the seat of Zeus who rules on high.'

3. The utterance of prayer.—Normally prayer was not merely thought, but uttered aloud. The same was the case among the Jews, as is well illustrated by the prayer of Hannah (*1 S* 1¹²):

'And it came to pass, as she continued praying before the Lord, that Eli marked her mouth. Now Hannah, she spake in her heart (על־לבָּהּ; כְּדַבֵּר בָּלֵב; *LXX*, ἐλάλει ἐν τῇ καρδίᾳ αὐτῆς); only her lips moved, but her voice was not heard: therefore Eli thought she had been drunken.'

It would be easy to illustrate this practice from all periods of Greek literature:

Hom. Il. i. 450, iii. 275: *μεγάλ' εὐχέρο*, 'prayed loudly'; so *μέγα εὐχάρο* in *Od.* xvii. 239. Prayer is overheard (*Il.* xix. 255 f., *Od.* xvii. 248. *Sympos.* iv. 55: καὶ πρῆν ἐγὼ σου ἤκουον ἐυχόμενον πρὸς τοὺς θεούς).

The loudness of the voice increased with the fervour of the prayer. It may rise to a *βοή*, or loud cry:

ἐγὼ δὲ θεούς ἐπιβώσωμαι αἰὲν ὄντας (*Hom. Od.* i. 378, ii. 143), precisely as, in a moment of great peril, Nestor *βόασε παῖδά Φῶν* (*Pind. Pyth.* vi. 36).

Similarly, among the Romans, the mother prays more loudly for beauty in the case of her daughters than in the case of her boys, according to Juvenal, x. 289 f.:

'Fornam optat modico pueris, maiore puellis
Murmure, cum Veneris fanum videt anxia mater.'

When prayer is not uttered or is uttered in a low voice, the motive is generally expressed or implied. And the motives are several.

(a) In *Hom. Il.* vii. 194 ff., the motive is apparently the fear that the knowledge of the prayer might enable the enemy to counteract it by some more potent spell; it might in fact 'give useful information to the enemy.'

Ajax is about to fight with Hector in single combat, and he asks the Greeks, while he is putting on his armour, to pray to Zeus 'in silence by yourselves that the Trojans may not know, or even openly, since we fear no one' (σιγῇ ἐφ' ἑμῶν, ἵνα μὴ Τρῶες γὰρ σίθωνται, | ἥ δὲ καὶ ἀμφαδίην, ἐπειοῦν τινα δεῖδιμεν ἐμπής).

(b) External circumstances might make a spoken prayer impossible.

Thus Odysseus, swimming for his life, 'prayed in his heart' (εὐχάτο ἐν καρδίᾳ θυμῷ) (*Od.* v. 444); and this may be the motive of *Il.* xxiii. 789, where Odysseus in the crisis of the footrace 'prayed to grey-eyed Athene in his heart.'

(c) Again, the motive might be a natural desire for privacy—a desire, as we say, to be alone with God.

Thus, in *Od.* xii. 333 ff., Odysseus says: 'Then I went away through the island that I might pray to the gods, if haply some one should show me the way to go. And when on my way through the island I had avoided my comrades, I washed my hands where was a shelter from the wind, and prayed to all the gods who keep Olympus.' So *Pind. Ol.* i. 71 f.: Pelops 'went nigh unto the gray sea alone in the darkness' (ὁλὸς ἐν ὀρφνῇ) to pray to Poseidon. So 'going apart' (ἀπάνευθε κίων) is said of one who prays (*Il.* i. 35, *Od.* ii. 260).

(d) The motive is obvious which makes Orestes pray silently or rather in a low voice in presence of Aigisthos:

δεσπότης δ' ἐμὸς
τάναντ' ἤχετ', οὐ γεγονάσκων λόγους (*Eur. El.* 808 f.).

(e) Another motive is modesty. This is especially the case with the prayer of the lover.

Thus *Pind. Pyth.* ix. 97 ff., of the successful athlete: 'Full many times at the yearly festival of Pallas the maidens have seen thee victorious and mystically prayed each for herself that such an one as thou, O Telesikrates, might be her beloved husband or her son' (ἀφονοί θ' ὡς ἐκάστα φίλτατον παρθενικαὶ πόσιν ἢ υἱὸν εὐχόντ', ὧ Τελεσίκρατες, ἔμμεν).

The opposite of *μέγα φθέγγεσθαι* is *ψιθυρίζειν*, 'whisper,' and doubtless this explains the cult-title of Ἀφροδίτῃ ψιθυρος, to whom prayers were whispered (cf. *Tibull.* ii. i. 83; *Catull.* lxiv. 104).

(f) A leading motive is that the prayer is a shameful prayer.

Pythagoras (*Clem. Alex. Strom.* iv. 26, § 173) enjoined *μετὰ φωνῆς εὐχέσθαι*. Seneca, *Ep.* x. 5, quotes from Athenodorus: 'Know that you are free from all desires when you reach a stage where you ask nothing from God except what you can ask openly,' and he goes on to say that 'men now whisper the most shameful prayers to the gods; if any one hearkens, they become silent, and they tell to God what they do not want man to hear'; cf. *Hor. Ep.* i. 16, 59 f.; *Pers.* ii. 3-75; Mayor, on *Juv.* x. 289 f. Cf. the 'loud voice' of the Prayer Book.

(g) The prayers or incantations of the magician are naturally spoken in a low voice.

So in the *OT* is *gû*: 'Seek unto them that have familiar spirits and unto the wizards, that chirp and that mutter' (*LXX* ζητήσατε τοὺς ἐγγαστριμύδους . . . οἱ ἐκ τῆς κοιλίας φωνοῦσιν).

4. The relation of the suppliant to his god.—In the earliest times the suppliant compelled his god to do his will—traces of which may be found in the beating of the ground and the flagellation of Pan mentioned above, and the smiting of the *ὑποχθόνιοι* in *Paus. loc. cit.*

The next stage is one of bargain, which is the typical form of prayer in Homer. This bargain-theory of prayer may assume different forms.

(a) If ever I did that for thee, so do thou this for me.

Thus *Hom. Il.* i. 35 ff. of the priest Chryses: 'Then went that old man apart and prayed aloud to King Apollo, whom Leto of the fair locks bare: "Hear me, lord of the silver bow, that standest about Chryse and holy Killa, and rulest Tenedos by thy might, O Smintheus! if ever I built a temple pleasant in thine eyes, or if I ever burnt to thee fat flesh of the thighs of bulls or of goats, fulfil thou this my desire." So *Od.* iv. 763 ff., *Il.* xv. 372 ff.

(b) If thou do this for me, I will do that for thee.

A typical example is *Hom. Od.* iii. 880 ff., where Nestor prays to Athene: 'Be gracious, O gracious, and give me fair fame—for myself and my children and gracious wife; and I in turn will sacrifice to thee a heifer,' etc.; cf. *Il.* vi. 115.

One form of this is the explicit assertion that it is for the advantage of the gods to protect their worshippers.

Thus *Theognis*, 773 f.: 'O Lord Phœbus, thyself didst build the High City, doing a favour to Alcaethous son of Pelops; thyself keep from this city the froward host of the Medes, that with joy the people may send thee glorious hecatombs when spring comes round, rejoicing in cithara and delectable mirth, in psan choir and song around thy altar.' Similarly and still more frankly, *Æschylus*, in *Sept.* 76 f., makes Eteocles pray to the gods to save Thebes: 'Be our refuge. And I think I speak for our common interest: for a prosperous city honours the gods.'

(c) The third type is that which J. Adam (*The Religious Teachers of Greece*, Edinburgh, 1908, p. 46) has compared to our

'God of our fathers, be the God
Of their succeeding race,'

i.e., even as thou didst of old, so do also now.

Thus Hom. *Il.* i. 450 ff.: 'Then Chryses lifted up his hands and prayed aloud for them: "Hearken to me, god of the silver bow, . . . even as erst thou didst hear my prayer and didst me honour and greatly afflictest the people of the Danaans, even so now fulfil me this my desire."' Cf. *Il.* i. 453 ff., v. 118 ff., x. 278 ff.; Pind. *Isth.* vi. 42 f. In *Il.* x. 284 ff. this type is combined with type (b).

(d) There is the type in which man makes no bargain, the normal type from the 5th cent. B.C.—e.g., Pind. *Ol.* xiv. 5, *Pyth.* v. 124; Aesch. *Ag.* 946 f.; Soph. *Æd. Tyr.* 187 f.; Demosth. *de Cor.* i., and *passim*.

It is to be noted that the personal piety of the worshipper—*εὐσέβεια*—was considered by the Greeks to make his prayer more likely to be answered.

Thus Hom. *Il.* i. 218: *ὅς τε θεοὺς ἐπιπείθειται, μάλα τ' ἔκλυον αὐτοῦ*, 'if a man obeys the gods, they surely hearken to him,' and Pind. *Ol.* viii. 3: *ἀνέται δὲ πρὸς χάριν εὐσεβίας ἀνδρῶν λαοῖς*, 'fulfilment is granted to the prayers of men for the sake of their piety.' Cf. Xen. *Mem.* i. 3. 3; Eur. frag. 946. Contrast the case of the wicked man: 'No god hears his prayers' (Aesch. *Ag.* 887; cf. Hor. *Carm.* iii. xxiii. 17; Pers. *Sat.* ii. 73).

5. The ritual of prayer.—The simplest form of prayer is little more than an ejaculation, and is typically expressed in Greek by the name of the god in the vocative case, followed by an infinitive (dependent on some word for 'give' or 'grant' understood) expressing the request.

Thus Hom. *Il.* vii. 175 ff.: 'So he spake and each marked his lot, and they cast them into the helmet of Agamemnon, son of Atreus; and the people prayed and lifted up their hands to the gods; and thus would one say as he looked unto the wide heaven:

Ζεῦ ἄνα ἢ Δίαττα λαχέιν, ἦ Τυδεὺς νιόν,
ἦ αὐτὸν βασιλῆα πολυχρύσοιο Μυκηνῆς!

Cf. Herod. v. 105, where Darius, hearing that Sardis had been burnt by the Athenians, 'called for a bow, and, having received one, he put an arrow into it and shot it into the air, with these words: *ὦ Ζεῦ, ἐκγενέσθαι μοι Ἀθηναίους τίσασθαι*.'

A still shorter form of the ejaculatory prayer is the use of the vocative alone—e.g., *Ἀπόλλων ἱποτρόπαιε* (Aristoph. *Av.* 61, etc.); Herondas, vii. 74: *Ἑρμῇ τε κερδέων καὶ σὺ κερδῇ Πεισῖ*; cf. such expressions as 'Hercle,' 'mehercule,' 'medius fidius,' in Latin. The ejaculatory prayer is commended by Marcus Aurelius, v. 7.

The more elaborate ritual will be best explained by definite examples.

(a) The account of the Argonauts starting on their voyage in quest of the Golden Fleece:

'Now when that goodly crew were come to Iolkos, Jason mustered them with thanks to each, and the seer Mopsos prophesied by omens and by sacred lots, and with good will sped the host on board. And when they had hung the anchors over the prow, then their chief, taking in his hands a golden goblet, stood upon the stern and called on Zeus whose spear is the lightning, and on the tides of waves and winds and the nights, and the paths of the sea, to speed them quickly over, and for kindly days and the friendly fortune of return. And from the clouds a favourable voice of thunder pealed in answer; and there came bright lightning flashes bursting through.

Then the heroes took heart in obedience to the heavenly signs; and the seer bade them strike into the water with their oars, while he spake to them of happy hopes; and in their rapid hands the rowing sped untiringly' (Pind. *Pyth.* iv. 188 ff.).

(b) Compare with this the famous passage in which Thucydides tells of the start of the Athenian expedition to Sicily in 415 B.C.:

'Now when the ships were manned and everything with which they were to be put to sea was on board, the signal for silence was given by the trumpet and they made the customary prayers before putting to sea, not ship by ship but all together, led by a herald (*κρυς*) throughout all the army, marines and generals alike making libation with cups (*ἐκπόματα*) of gold and silver. And in their prayers joined also the general crowd on shore, not only Athenians but any other friendly person who was present. And when they had sung the psalm and finished their libations (*παιωνισάντες δὲ καὶ τελεώσαντες τὰς σπονδὰς*) they put to sea' (vi. 32).

(c) Or, again, take what is really a Greek view, though it refers to a Carthaginian—the story of the conduct of Hamilkar during the battle of Himera:

'The following story is related by the Carthaginians with great probability, that whilst the barbarians were engaged with Greeks of Sicily in that battle, which began early in the morning and lasted to the twilight of the evening, Hamilkar, continuing in the camp, sacrificed entire victims upon a large pile: and

when he saw his army flying, as he happened to be pouring libations on the victims, he threw himself into the flames, and thus, being burnt up, disappeared' (Herod. vii. 167).

(d) Precisely the same ritual meets us in the account given by Herodotus vii. 54 of the prayer of Xerxes as he was about to cross the Hellespont for the invasion of Greece:

'The rest of the day was spent in disposing all things in order to their passage; and on the next day they waited for the sun, as they wished to see it rising, and in the meantime burnt all sorts of perfumes upon the bridges, and strewed the way with myrtle branches. When the sun was risen, Xerxes, pouring a libation into the sea out of a golden cup (*σπένδων ἐκ χρυσοῦς φιάλης ἐς τὴν θάλασσαν*), addressed a prayer to the sun, that he might not meet with any impediment so great as to prevent him from subduing Europe.' Then follows a less Greek incident: 'After which he threw the cup into the Hellespont with a bowl of gold and a Persian scimitar. But I cannot determine whether he wished by throwing them into the sea to consecrate these things to the sun, or whether he repented of having scourged the Hellespont (vii. 36), and as a compensation made that gift to it.'

The normal ritual of prayer is: (1) the hands are washed (if this were omitted, libation and prayer are vain [Hes. *Works and Days*, 724 ff., 740 f.; Hom. *Il.* vi. 266 ff.]); (2) prayer is made; (3) after the prayer comes the sacrifice; (4) last of all comes the pouring of libations.

Thus Hom. *Il.* i. 447 ff.: 'They set in order for the god the holy hecatomb about his well-built altar; next washed they their hands (*χερνήσαντο*) and took up the barley corns (*οἰλόχρους*). Then Chryses lifted up his hands and prayed. . . . Now when they had prayed and sprinkled the barley corns, first they drew back the victims' heads and slaughtered them and flayed them, and cut slices from the thighs and wrapped them in fat, making a double fold, and laid raw collops thereon, and the old man burnt them on cleft wood and made libation over them of gleaming wine.' Next they feasted, and then, 'when they had put from them the desire of meat and drink, the young men crowned the bowls with wine, and gave each man his portion after the drink-offering had been poured into the cups. So all day long they worshipped the god with music, singing the beautiful psalm, the sons of the Achaeans making music to the Archer-god; and his heart was glad to hear.'

6. Mode of addressing the deity (*ἐπικλήσις*).—It was a matter of importance that the deity invoked should be addressed by his right cult-titles.

Thus Achilles (*Il.* xvi. 233 f.) at Troy invokes Zeus as *Ζεῦ ἄνα, Δωδωναίε, Πελοποννήσι, τρηβὴν ναίων, Δωδωνῆς μεδών, δυσχερόμερον*. Apollo is invoked by Chryses in *Il.* i. 37 ff. as *ἀργυροτόκος* and *Σμυνθεύς*. Especially noteworthy is Aeschylus, *Ag.* 160 ff., where we find the curious expression 'Zeus whoever he be, if it please him so to be called, by that title I address him,' on which the commentators refer to Plato, *Cratyl.* 400 D: 'One excellent principle which, as sensible men, we should follow: that with regard to the gods we know nothing, either with regard to themselves or the names by which they call themselves; for it is evident that they call themselves by their true names. The second best principle of correctness is, as it is customary, in our prayers to pray, that we ourselves call them by the names and titles, whatever they may be, by which they like to be named (*οἵτινές τε καὶ ὅπῃθεν χαίρουσιν ὀνομαζόμενοι*), since we know no more; for that appears to me a right custom.' The phrase *Ζεὺς ὅστις ἐστίν* (cf. Eur. *Troad.* 885, *Herc.* Eur. 1263, frag. 453 [Melanippe]) carries out this principle (imitated Hor. *Sat.* ii. vi. 20; Milton, *Par. Lost*, iii. 1-7). In the same way Callim. *Hymn to Zeus*, 4: 'How now shall we sing of thee? as Diktaios or Lykaios?'; *Hymn to Apollo*, 69 ff.: 'O Apollo, many call thee Boedromios and many call thee Klarios, . . . but I call thee Karneios'; cf. *ib.* 47: *Φοῖβον καὶ Νόμιον*, and Pind. *Pyth.* ix. 66: 'Agreus and Nomios and by some called Aristaios'; cf. Eur. frag. 781. 111.

7. To whom prayer is addressed.—The general phrase for offering prayer is 'pray to the gods' (*θεοῖς εὔχεσθαι, δαίμοσιν ἀρῆσασθαι* [Hom.]), but the particular deity addressed varies with the situation: the poet prays to Apollo or the Muses, the hunter to Artemis, the farmer to Demeter, and so on. Not an unusual thing is to pray to Zeus and the particular god more especially concerned; e.g., Hesiod (*Works and Days*, 463) bids the farmer pray to Zeus and Demeter. Again, a god may be invoked under a special cult-title in reference to the particular boon desired—e.g., *Ζεὺς Ὀυβριος* for rain, *Ζεὺς Ὀδριος* for a favourable wind, and so on; hence the point of the amusing prayer of the Achaean farmer as he holds up his tattered garment to the light:

ὦ Ζεῦ Διόπτα καὶ Κατόπτα πανταχῇ
ἐνσκοπείσασθαι μ' ὅλον ἀθλιωτάτα

(Aristoph. *Acharn.* 485 f.)—an excellent example of the *Stoosgebet*.

Particularly interesting is the case of prayers made by special classes of people to minor deities or semi-divinities, in whom they have a, so to say, 'superstitious' faith. Thus, e.g., the sailor prays not merely to Poseidon but to the 'Samothracian gods,' i.e. the Cabeiri or the Dioseuri (Callim. *Ep.* 47; Diod. iv. 43; Theophrast. *Char.* xxvii. [xxv.]).

8. The dead and the chthonian gods.—Prayers to the dead and the chthonian gods have certain special characters in common, which cannot be discussed here. The *ἀνάκλησις*, or solemn evocation of the dead, is illustrated by Æschylus's *Persæ* and *Choephoreæ*. The chthonian gods are especially powers of vengeance.

In Hom. *Il.* iii. 278f., they are specially appealed to as punishers of perjury:

καὶ οἱ ὑπέρθεο καμύνας
ἀνθρώπων τίνυσσον, ὅτις κ' ἐπίορκον ἔμωσση

(the dual indicating especially, in all seeming, Ζεὺς καταχθόνιος and Persephone). It is to their ministers, the Erinyes, that Penelope will appeal for vengeance (*Od.* ii. 185). It is to them that people 'devote' enemies by a solemn *devotio* (κατάδεσμος). It need only be said here that the ritual of the curse is so far at least like the prayer that it apparently requires to be spoken (even the κατάδεσμος was in all probability inscribed to the accompaniment of a recital of its contents).

Thus in Æsch. *Ag.* 226 ff. the lips of Iphigenia are gagged to prevent her uttering a curse. Similarly, in the *Choephoreæ* (831.) Electra does not know what words to utter as she makes an offering at her father's tomb, but she feels that she can hardly do it without some prayer spoken; to do so would be just like throwing out refuse:

ἢ σὺν ἁτίμῳ, ὥσπερ σὺν ἀπάλετο
πατρὶ, τὰδ' ἐκχέουσα, γάστορ χύσιν,
στείχω, καθάρμαθ' ὡς τις ἐκπέμψας πάλιν
δικούσα τεύχος ἀσπρόφρονιν ὁμμάσιν (88 ff.).

9. The occasions of prayer.—No business of importance was begun without prayer; indeed, the pious man begins no business of any sort without first praying:

Socr. 'It would be your business, it seems, to speak next, after duly invoking the gods' (καλέσαντα κατὰ νόμον θεούς). *Tim.* 'All men, Socrates, who have even a little portion of right feeling, on starting upon any business, small or great, always call on God. And we who are about to discuss the nature of the Universe—how it was created or exists uncreated—if we are not completely out of our wits, must certainly call upon gods and goddesses and pray that our words may be acceptable to them and consistent with ourselves' (Plato, *Tim.* 27C; cf. Xen. *Cib.* v. 19f.).

Prayer was made on all solemn occasions, at the opening of the ecclesia or the law-courts, on the new moon (Demosth. *Aristop.* 99), etc.; at sunrise and sunset (Hesiod, *Works and Days*, 338 f.).

For prayer at sunrise cf. Plato, *Symp.* 220 D, where Socrates, having stood in a trance from one morning to the next, prayed to the rising sun and went home (ἰστίσκει μέχρι ὅς ἐγένετο καὶ ἥλιος ἀνίσχεν' εἵπειτα ὅχρ' ἄνιον προσευξάμενος τῷ ἡλίῳ).

10. The content of prayer.—It would not be true to say that the Greek prayer was never a prayer of thanksgiving. This conception is more a question of language than anything else, and *προσεύχεσθαι* gives more nearly what we generally include in 'prayer' than *εὐχεσθαι*. But it is undoubtedly true that prayer in general, as we find it in the Greek authors, is essentially a petition for blessings of a utilitarian kind—health and wealth, children, success in business and in battle. The special circumstances of the case make it absurd to quote Simonides, frag. xxii. 17 ff., as an example of the prayer of a contrite heart.

The refinements of the philosophers perhaps hardly concern us here.¹ Socrates emphasizes the efficacy of the prayers (and the curses) of parents in Plato, *Legg.* 931 C.

He himself 'prayed to the gods simply that they would give him good things, believing that the gods know best what sort of things are good. As for those who prayed for gold or silver or a tyranny or such like, he believed that was just as if they prayed for gambling or battle or any thing else the issue of which is uncertain' (Xen. *Mem.* i. 3. 2).

¹ See Max. *Try.* xi. 8 (prayer a ὁμιλία καὶ διάλεκτος πρὸς τοὺς θεοὺς περὶ τῶν παρόντων, not an αἰτήσις τῶν οὐ παρόντων); Marc. Aurel. iv. 23, ix. 40; Philostr. *Apoll.* *Tyan.* iv. 40 (ὁδὲ εὐχόμεαι, ὡ θεοί, δοῦναι μοι τὰ ὀφειλόμενα); Sen. *Ep.* x. 5, xii. 1.

Not altogether unlike is Pindar's

'Some pray for gold and some for limitless land: but mine be it with the favour of my townsmen to hide my limbs in earth, praising what is worthy of praise and sowing rebuke on sinners' (*Nem.* viii. 36 ff.).

In Plato, *Alcib.* ii. 143 A, Socrates is made to say:

'He seems to have been a wise poet, Alcibiades, who, seeing, as I believe, his friends, who were foolish men, praying for and doing things which it was not good for them to do, offered a prayer in behalf of them all to this effect: "King Zeus, what things are good, give us even without asking; but what is evil, keep away from us even if we ask them."'

His prayer in Plato, *Phædr.* 279 B,

'O dear Pan and other gods who are here, grant me to become beautiful within (καλῶ γενέσθαι τάνδονον), and grant that whatever outward possessions I have may be friendly to that which is within. Let me count the wise man a wealthy man. As for gold, give me just so much as none but the prudent man could bear or carry.'

is very close in spirit to the prayer of Pindar just referred to which commences:

'O father Zeus! never may such a character be mine, but let me cleave to simple (i.e. honest, true) paths of life, that when I die I may leave to my children no evil name.'

LITERATURE.—In addition to general works on Greek religion, see L. R. Farnell, *The Evolution of Religion*, London, 1905; C. Ausfeld, *De Græcorum precationibus questiones* (Fleckeisen, *Jahrbücher*, Suppl. xxviii.), Leipzig, 1908; C. Ziegler, *De precationum apud Græcos formis questiones selectæ*, Breslau Dissert., 1905; E. von Lasaulx, *Der Fluch bei den Griechen und Römern*, Würzburg, 1848; S. Sudhaus, 'Lautes und leises Beten,' *ARW* ix. [1906] 185 ff.; L. Radermacher, 'Schelten und Fluchen,' *ARW* xi. [1908] 11 ff.

A. W. MAIR.

PRAYER (Iranian).—Zoroastrianism being essentially a religion of ritual observance and of practical morality, Zoroastrian prayer is bound to be different from that of religions of a more cultural or devotional type. What we call 'prayers' in the Avesta are either mere invocations of gods and celestial powers—a recitation of names in a list of deities, such as often occurs in the *Yasna*—or confessions of a more theoretic or dogmatic character, as the *Ahuna Vairya*, the *Ashem vohu*, and other formulas. We also find—especially in the *Gāthas*—personal petitions, more for instruction and mental enlightenment, however, than for help or direct salvation. A system of prayers for the dead is included in the ritual. Requests for material gifts are far less important in the Avesta than, e.g., in the Vedic ritual.

1. Ritual invocation.—The usual form in the *Yasna* is the following, repeated continually:

'I announce and I (will) complete (my offering) to Ahura Mazda, the Creator, the radiant and glorious, the greatest and the best . . . the most firm, the wisest. . . I announce and complete to Vohu Manō, Asha Vahista, Kshathra-Vairiya, Spenta Armaiti . . . etc. . . Yes, all ye lords, the greatest ones, holy lords of the ritual order, if I have offended you by thought, or word, or deed, whether with my will, or without intending error, I praise you (now the more) for this' (*Ys.* i. 1-22).

Another form (as in *Ys.* xvii. 11 ff.) is:

'We worship thee, the Fire, O Ahura Mazda's son! . . . We worship the good and best waters Mazda-made. . . We worship the Māthra-spenta . . . We worship the good and pious prayer for blessings . . . and all the greatest chieftains, lords of the ritual order.'

Most of the verbs used in these texts are of the ritualistic type: *nivaedhayemi*, *hañkārāyemi*, 'I announce and complete,' *yazamaidē*, 'we worship' (in the sense of performing devotional acts). The verb *stuye*, 'I praise,' in i. 22, means oral praise, as known from the Sanskrit *stotra*, 'hymn'; all these terms convey the idea of glorifying the deities and the religion.

Sometimes, as in *Ys.* xviii. 4, the worshipper may ask for the blessings of religion:

'Grant me, Thou maker of the plants and waters, Immortality, Mazda!';

but ordinarily he expects to possess these prerogatives as a 'righteous' man (i.e. a Zoroastrian) and offers Mazda his praise in return for salvation:

'As to those, Immortality, the Righteous Order, and the Kingdom of Welfare, which Thou, O Mazda! hast given through (holy) deeds, words, and the sacrifice . . . gifts [shall] be offered (by us) in return to Thee, O Ahura!' (*Ys.* xxiv. 1);

and now he begs Mazda to continue to uphold this order of salvation and to keep his followers in the truth :

'We pray for Thy Fire, O Ahura ! strong through Righteousness, most swift, [most] powerful, to the house with joy receiving it, in many wonderful ways our help, but to the hater, O Mazda ! it is a steadfast harm as if with weapons hurled from the hands' (ib. 4).

2. Petitions for personal enlightenment.—Petitions for mental enlightenment take up a great deal of space in the *Gāthas* ; not a few of the holy truths are communicated in the form of questions and requests addressed by the prophet to Ahura Mazda or Vohu Manō. The whole of *Yasna* xliv., dealing with the theory of creation and cosmology, is in this form :

'This I ask Thee, O Ahura ! tell me aright : who, as a skillful artisan, hath made the lights and the darkness ?' (5).

Such questions assume the typical character of prayer when the worshipper asks for special instructions necessary for his own personal salvation :

'(Come Ye) and show me the worthy aims of our faith, so that I may approach and fulfil them with (Thy) Good Mind, the offering, O Mazda ! of the One like You, or the words of praises offered with Righteousness. And give Ye, as Your offering (of grace to me) the abiding gifts of Your Immortality and Welfare !' (*Ys.* xxxiii. 8).

In most of the *Gāthas* the prophet continues in the same idealistic but intellectualistic way. As the Zoroastrian believer must know—and receive—the truth in order to be saved, Zoroaster, as an example to his followers, must pray for his own and for their enlightenment.

3. Prayer for the dying and dead.—Another form of praying for salvation is seen in the prayers for the dying and the dead who belong to the religious community ; unbelievers are excluded from salvation. These prayers, which are still made among the Parsis after the death of a beloved one (see J. H. Moulton, *Early Zoroastrianism*, London, 1913, p. 313, n. 2), are called *āfrīngān* and *srōsh darīn* in Avesta. Their aim is to secure for the dead eternal bliss and happiness in heaven and in the future world, and they consist in sacerdotal ceremonies, celebrated on various occasions, but especially at the time when the dead are expected to visit the earth, and in connexion with funeral festivals. At these ceremonies the priests invoke many gods and genii, especially the angel of death, *Srōsh* (Sraosha), the psychopompos of the Iranians, who carries the dead to heaven and protects them from demons. In this dangerous task Sraosha needs the assistance of the offerings and prayers of the survivors. Yet the ceremonial act is an *opus operatum* of mere invocations, no immediate petitions being made in the ritual. Only the final words (of late date) in *Srōsh Yasht Hādōkat* (*Yast* xi.) express a direct request for bliss for the deceased :

'[Give] unto that man brightness and glory, . . . give him the bright, all-happy, blissful abode of the holy Ones !' (*Yt.* xi. 23).

4. Prayer for material gifts.—Material gifts are desired and asked for in the Avesta as in other religions, particularly as the general aim of the Zoroastrian religion is the conservation and renovation of the material world. Such petitions occur more frequently in the later Avesta than in the *Gāthas*, whose abstract and solemn character forbids them to descend to personal and private desires. The earthly bliss that the *Gāthas*-singer longs for is more the general state of material happiness than any single advantage. A typical strophe in this respect is *Ys.* xxxiii. 10 :

'All prosperous states in being which have been enjoyed in the past, which men are now enjoying, and which shall be known in the future, do Thou grant (me) these in Thy love. (Ye), cause (our) bodily and personal life to be blest with salvation.'

The paraphrases of the commentators are usually far more concerned with concrete and individual

happiness — e.g., Neriosangh comments on this strophe :

'Let them continue to live well, and be prosperous in all things, those females who are born thus,' etc. (*SBE* xxxi. 77, n. 7).

They breathe the spirit of the later Avesta, which is more realistic in tone and is always seeking for the material help of the gods.

An offering is made to Mithra, Ashi Vanguhi, and the other gods of the *Yasts* for bringing 'swiftness to our teams, strength to our own bodies, and that we may watch with full success those who hate us, smite down our foes, and destroy at one stroke our adversaries' (petition to Mithra, *Yt.* x. 94). 'O ye waters, I beseech of you for wealth of many kinds, power, and for an offspring self-dependent whom multitudes will bless' (to Ardi Sūra Anāhita, *Ys.* lxx. 11). In the *Fraavardin Yasht* (xlii.) to the Fravashis such petitions abound ; and the genii bestow wealth and fertility on their own kindred, when they make offerings to them, saying : 'May my country grow and increase !' (68), offering to them 'for a dominion full of splendour, for a long, long life, and for all boons and remedies . . . to withstand the evil done by oppressors' (135).

The piety of the Zoroastrians was more realistic in the later Avesta, but not more personal or devotional than in the times of the *Gāthas*. On the contrary, in these hymns of old we meet with strophes of a very noble tenor, where the prophet tells of his sufferings and hopes and ardently beseeches his Lord and Master for help and consolation in his striving :

'How shall I conciliate Thy (grace) O Lord ! . . . Therefore I cry to Thee ; behold it, Lord ! desiring helpful grace for me, as friend bestows on friend. . . . Thee, for mine exhorter and commander, Living Lord ! I choose' (*Ys.* xlv. 1-3).

LITERATURE.—There is no general discussion of the subject ; for details see the introductions to the ritualistic hymns in J. Darmesteter, *Le Zend Avesta*, 3 vols., Paris, 1892-93, esp. his general introduction to the *Yasna*. K. F. Geldner, *GLAP* ii. (1896-1904) 23, gives a short description of the prayers (§ 20). The ritualistic hymns are translated by L. H. Mills and Darmesteter in *SBE* xxxi. [1887] and xxxiii. [1888].

E. LEHMANN.

PRAYER (Jain).—It is extraordinarily difficult to discover the exact place that prayer holds in the Jain system. Every Jain is on the defensive lest his creed should be considered atheistic, and is unwilling to make any admission that might seem to point in that direction. Again, Jainism, like every other Indian faith, is so influenced by its environment and, in especial, borrows so much from Hinduism that not infrequently orthodox Jains in actual practice do many things not really in harmony with the principles of their religion ; the difficulty is further enhanced for the investigator by the inexplicable ignorance which prevails among many Jains as to the articles of their creed. The most satisfactory way, perhaps, of arriving at any conclusion is to divide the subject of prayer into various elements, such as petition, intercession, adoration, confession, worship, and thanksgiving, and to note under each head the actual practice and the sometimes conflicting opinions of the Jains.

1. Petition.—As the Jain system is based on the root-idea of previously acquired *karma* automatically conditioning every incident of a man's life, past, present, and future, there is no subject which could logically be affected by petition. If a man is strong, happy, and wealthy in this life, it is owing to the merit that he has acquired in previous births ; but no petition can prolong his fortunate condition. Again, if he is ill, unhappy, and poverty-stricken, it is due to his separate sins in a previous existence, and, as long as the accumulated energy of past bad actions lasts, his lot is evil and continues to be so until the moment arrives when the ill-omened energy is expended, the mechanism stops, the clock runs down, and the man, having worked out that particular sentence, passes on to endure the good or evil effects of the succeeding *karma* that he has attracted. But no petition can affect the mechanism of *karma*, no prayer mitigate his sentence of lives-long imprison-

ment to it. The Jains therefore hold that logically it is of no use to pray for health, wealth, or fame, since all are inexorably fixed by *karma*.

Again, not only is there no subject that could be affected by petition, but there is no one to whom prayer could be addressed, since the Jains acknowledge no supreme God, not knowing Him either as Creator, Father, or Friend. Nor would it, logically, be of any avail to pray to the deified men who have passed to the still land of endless inaction; for they take no more interest in worldly affairs. 'Of what use would it be for us to pray to a Siddha?' said a Jain gentleman to the present writer, 'he would no more hear us than would a dead animal.' Consequently, though the Jains perhaps lay greater stress on the duty of forgiving others for all personal slights, injuries, and offences than the followers of any other religion, one great subject of petition—forgiveness for sin—is, they hold, logically excluded, since there is no one to forgive the sin, no one greater than the mechanism of *karma*, no one who has never experienced its sway.

2. **Intercession.**—In the same way there is no room in the Jain system for intercession. As the belief in *karma* dries up all sympathy for the suffering of others, so it impedes any intercession for their deliverance. A child-widow is merely expiating the sin of adultery committed in a previous birth; a leper is only serving his sentence for some former, though unremembered, crime; and no intercession could mitigate or shorten their penal term of suffering.

Indeed, not only is intercession ineffectual, but to Jain ideas it is tainted by actual sin—the sin of spiritual bribery. If (since human need and human longings are greater than any creed) a prayer is wrung from an anguished mother in her extremity as she watches beside the sick-bed of her little child, she is told that she has committed the grave sin of *lokottara mithyātva*,¹ under which would also be included a childless woman's vow that, if a son be born to her, she will offer a cradle at some saint's shrine.

No people in India are prouder than the Jain community of their loyalty to British rule, but it is impossible for them logically to offer up prayers for the success of the Allied cause, as the Muhammadans and Hindus frequently do; all that is permissible for them is to hold meetings to express their ardent good wishes and fervent desires for a victorious peace.

Some well-instructed Jains account for the fact that some of the members of their community do use such phrases as 'O Lord (*Prabhu*), give me wealth,' 'O Lord (*Prabhu*), forgive me my sin,' by saying that the prayer is addressed neither to a supreme God nor to a deified man, but to their own inner consciousness, to stir themselves up to greater efforts; others, again, say that such phrases are metaphorical; a third explanation sometimes given is that they are due to the pervading influence of Hinduism.²

3. **Adoration.**—A Jain said to the writer: 'We are not beggars, and we cannot petition for boons like beggars, but by remembering our Tirthaṅkara, we can cluck up heart to follow their example.' To this extent one element of prayer—adoration—is found in the Jain system. A *Sthānakavāsi* (non-idol-worshipping) Jain will declare that he rises before sunrise and, rosary in hand, adores the great saints and the great principles of the Jain creed; but, when the meaning of his devotion is fully explained, one realizes that the act is salutation rather than adoration. The attitude of the

worshipper seems (to quote an illustration which all the Jain friends consulted by the writer have accepted) nearer to that of a French soldier paying his homage at the tomb of Napoleon and saluting the memory of a great hero than to the warm, personal adoration and loving faith connected with the Hindu idea of *bhakti*. Indeed, a Hindu told the writer that the vital distinction between the two creeds seemed to him to lie in the fact that the Jain system had no room for *bhakti*. The Jain telling his rosary of 108 beads would salute the Five Great Ones (Arihanta, Siddha, Āchārya, Upādhyāya, and Śādhu) and the great principles of knowledge, faith, character, and austerity. Then, repairing to the monastery or to some quiet place in his house, he would perform *sāmāyika*,¹ during which, after begging forgiveness for any injury done to the tiniest insect on his way to his devotions, he would promise to commit no sin for the space of forty-eight minutes, and then praise the twenty-four Tirthaṅkara, saluting each by name in a set form of Māgadhi words, and would conclude by a salutation to a director (*guru*) if present; if not, to the north-east corner of the building.

4. **Confession.**—This is followed by the confession of sin, or *paḍikamanuṃ*, which is an essential part of Jain worship. The object of this confession, the Jain says, is not to obtain forgiveness of sins and removal of the guilt, but, by confessing and carrying out the penance imposed by the director, to perform an austerity, in the fire of which it is hoped to burn up some of the *karma* acquired by sinning. A difficulty has occasionally arisen in the minds of students of Jainism owing to the use of such expressions in Jain prayers as 'I crave forgiveness,' whereas the accepted Gujarāṭi comment or translation of such words appears to be little more than an expression of desire to be free from the fruit of such sin.² In this formal confession, however, the worshipper acknowledges his sins in the most careful way, confessing if he has sinned against knowledge in any of the fourteen special ways, or against faith in five ways, or if he has uttered any of the twenty-five kinds of falsehood, or committed any of the eighteen classes of sin, or in any way sinned against the Five Great Ones of the Jain faith, being specially careful of course to confess any sin against animal life, the taking of which is the most heinous crime to a Jain. This is followed by a repetition of the salutation to the Five Great Ones, and this, in turn, by another form of confession of the sins of that particular day, by a vow to fast in some way or other, if only for an hour (for the Jains lay the greatest stress on fasting), and the whole is concluded by an act of general praise. A devout Jain will repeat these religious exercises (which generally take about forty-eight minutes) in the evening. It is illuminating to notice that the director never seems to pronounce an absolution; he imposes a penance, generally concerned with fasting in some way or other, and the penitent simply goes away and performs it to the satisfaction of his own conscience.

No Jain is content with the austerity of a confession of sin night and morning; it is also incumbent upon him to examine his conscience still more scrupulously every fortnight, even more thoroughly at the four-monthly confession, whilst the most important of all is the great yearly confession at *Saṃvatsarī* (see art. FESTIVALS AND FASTS [Jain]).

After the evening confession the Jain, before sleeping, sings the praises of the Tirthaṅkara, and

¹ M. Stevenson, *Heart of Jainism*, p. 181.

² A Śvētāmbara Jain friend of the writer keeps Hindu gods in his house, that he may address petitions to them.

¹ For further details see Stevenson, *Heart of Jainism*, p. 255 ff.

² Cf. *Sāmāyik* (in Māgadhi, with Gujarāṭi tr.), p. 11: 'May what I have done wrong be without fruit to my *jīva*.'

tells his beads, again making salutation to the Five Great Ones.

5. Temple-worship.—Besides meditation and confession, the daily devotions of a Śvetāmbara Jain include a visit to the temple, which he circumambulates three times before entering (as he crosses the threshold he touches it and utters three times the word '*Nissahi*,' which puts on one side all sins and worldly cares). The morning ritual¹ has eight parts—bathing the idol, marking it with the auspicious mark, offering it flowers and garlands, waving a lighted incense-stick in front of the image, waving a lamp before the shrine, offering rice, offering sweetmeats, and offering nuts. The first part, bathing the idol, can be performed only once, so only one worshipper can do that, but any man who has time to bathe at the temple and to don the special dress may mark the idol, offer flowers to it, and wave the incense-stick, which all involve entering the inner shrine and therefore are forbidden to any not in special clothes and to all women, who, however, may perform the remaining acts of worship. Before leaving the temple, the worshipper may sing the praises of the Tirthāṅkara (this can be done at any time by any one entering the temple), and he then strikes a gong to show that he has finished. As he recrosses the temple threshold, he says, '*Āviṣṣahi*' before resuming his usual vocation. About sunset he would perhaps go to the temple again and perform the evening worship, which consists in waving a lamp before the idol. On great festivals and at pilgrim resorts the worship is of course more elaborate.

6. Thanksgiving.—Just as no Jain can beg boons, so no Jain returns thanks for answered prayers, for sins forgiven, for hopes fulfilled. Every good thing that happens to him in this life is in direct payment for his own good actions in a past existence.

'Certainly,' says a recent writer,² 'the Jaina does not hope to ride into heaven on the "back of another." To him hope has about the same meaning as it has to the scientist who knows that H₂O would never fail to give him a drop of water if he would only take the trouble to work out the formula in practice.'

Perhaps for a European the whole Jain attitude to prayer is best summed up in Henley's words:

'I am the master of my fate:
I am the captain of my soul!'

lines which it is interesting to compare with the *śloka* which many devout Jains repeat at night after they have read their sacred books:

'The soul is the maker and the non-maker, and itself makes happiness and misery, is its own friend and its own foe, decides its own condition good or evil. . . . The soul is the cow from which all desires can be milked, the soul is my heavenly garden.'

LITERATURE.—The information contained in this article has been derived directly from Jain informants. The reader may also consult the present writer's *Notes on Modern Jainism*, Oxford, 1910, *The Heart of Jainism*, do. 1915, and vernacular prayer-books and hymn-books, such as *Śrī Sāmāyaka tathā Suddha Śraiddhā svarūpa*, Ahmadabad, 1899, or *Anupūrvī ane Sādhuvandāna*, do. 1894; and *SBE* xxii. [1884], xlv. [1895].

MARGARET STEVENSON.

PRAYER (Japanese).—The prayers of Shintō, the Japanese national religion, are of a type conforming more to the formulæ of primitive magic than to modern Western prayer (see *MAGIC [Japanese]*, vol. viii. esp. pp. 296^b, 299^b, *in fine*). They can be best understood by analyzing the characteristics of prayer in the earliest times.

1. By whom offered.—Private individual prayer, addressed by the worshipper directly to his god, scarcely ever occurs in the earliest sources. The *Kojiki* and the *Nihongi*, collections of the traditions of the mythology and early history of the empire, are naturally not concerned with the details of

individuals, and merely mention now and then the worship of some legendary hero or important personage in some temple (e.g., *Kojiki*, tr. B. H. Chamberlain², Tōkyō, 1906, pp. 216, 238, 260, etc.). But, when we notice that among the numerous archaic poems preserved in those collections (111 in the *Kojiki*, 132 in the *Nihongi*) there is not a single hymn or other such religious effusion, we are almost forced to the conclusion that prayer must have been of little moment in the everyday life of the primitive Japanese. On the other hand, individual prayers are fairly often mentioned in the poems of the *Manyōshū*, which are not much later in date (9th cent.); but it is often difficult to distinguish the true Shintō element in these from the Buddhist influence already in evidence. In the pre-Buddhist period, then, we have scarcely any evidence of prayer except in its official, public form—offered, i.e., in the name of the whole people first by the Mikado in person, whose office, according to etymology (*matsurigoto*), implied the idea of worship, then, when he delegated his sacerdotal function and retained only his political power, by the priests officiating as his representatives, the *nakatomi*, 'intermediary ministers,' the privileged, hereditary reciters of the *norito* (rituals). Another hereditary corporation, however, the *imibe*, 'abstaining' priests, used to read certain of the *norito* (nos. 8 and 9 in the *Engishiki* collection; see *MAGIC [Japanese]*, vol. viii. p. 297). Apart from the emperor, the heads of noble families had charge of certain forms of cult—which explains the establishment, in 577, of a hereditary corporation for the worship of the sun. Finally, as the priesthood underwent organization, different classes of local priests performed similar functions, from the *kannushi*, chief priests in charge of a temple, down to the *hafuri* or *hōri*, inferior priests who were originally sacrificers but whose name came to be written with the Chinese characters meaning 'prayer-officials,' and the *negi*, also of humble rank, whose name seems simply to come from the verb *negafu*, 'to pray.'

2. To whom offered.—The *norito* were addressed sometimes to one or several individual gods, sometimes to a class of gods (e.g., in 866 to the deities of all the provinces of the Nankaido district), and sometimes to all the gods (see *MAGIC [Japanese]*). An interesting point to notice here is that, with the development of the imperial prestige on the one hand, and ancestor-worship under Chinese influence on the other, the custom arose of addressing prayers to deceased Mikados. These prayers are not mentioned in any of the *norito* of the *Engishiki*, but only in the later *norito* (9th cent. onwards).

Prayers for rain were made in 841 to the emperor Jimmu and the empress Jingō; in 850 Jimmu was again besought to cure an illness of the reigning Mikado; in 864 and 866 prayers were offered to the emperor Ōjin, who, under the name Hachiman, was destined to become one of the favourite figures in the Japanese pantheon.

3. For whom offered.—Prayer was made for the emperor, his court, and his people (see *MAGIC [Japanese]*, vol. viii. esp. p. 296^b, rituals 1–3, p. 297, rituals 4, 8–10, p. 298, rituals 12, 15, p. 299, rituals 25, 27). But it must be observed that in this very simple conception there is none of the moral ideas that lead us at various times to pray specially for the just, or for sinners, or for infidels, and so on. Similarly, there were no prayers for the dead, the idea of the soul's survival and fate in another world being very vague among the primitive Japanese (see *ANCESTOR-WORSHIP [Japanese]*, vol. i. p. 456^b).

4. For what offered.—Prayer was not made for the spiritual blessings that are regarded as the primary object of prayer in the West, but for far more practical and everyday boons. The Christian

¹ For further details see Stevenson, *Notes on Modern Jainism*, p. 102 ff.

² In the *Jaina Gazette*, Lucknow, Aug. 1915, p. 196

prays for whatever will help him to attain his final goal, viz. happiness in the future life; when he asks for grace, virtue, or other spiritual blessings, it is with this ideal in view; and he does not pray for bodily or material blessings, such as health and success, except as means to this end. The primitive Japanese had no such ideas. Their *norito* have no conception of moral progress or eternal salvation; they simply seek for earthly goods—for the emperor health, long life, protection of his palace from all forms of destruction, especially fire, safe journeys for ambassadors to foreign lands, and internal and external peace for his empire (see art. MAGIC [Japanese], vol. viii. p. 297, ritual 8 f., p. 298, rituals 11 f., 14 f., p. 299, rituals 23, 27); for the people a good harvest, protection of the crops from inclement weather or floods, rain in times of drought, safety from epidemics, and general prosperity (*ib.* p. 296^b, ritual 1, p. 297, ritual, 4, p. 298, ritual 13, p. 299, ritual 25). The idea of purification, which often appears in these texts (*ib.* p. 297^b, ritual 10, and *passim*), is confined mainly to ritual purity, though the moral element is not quite excluded. Sometimes the *norito* is meant to appease the anger of the gods, when the care of their temples or the precautions for ritual purity necessary for their worship have been neglected. Finally, besides petitions and expiations, the *norito* is sometimes a means of announcing some important piece of news to the gods—an accession to the throne, the changing of the name of an era, an enemy invasion, the nomination of a prince as heir or of a vestal of imperial blood, and so on. The most interesting among these announcements are unquestionably those advising a deity of his promotion, by the emperor, to a higher rank in the celestial hierarchy (based on the Chinese system of official ranks, in the 7th century).

In 672 three deities supplied some useful military information; as soon as the war was finished, the emperor, upon the report received from his generals, raised these deities to higher rank. In 838 a similar distinction was bestowed on a young god in defiance of seniority, and a jealous goddess showed her anger by pouring a volcanic shower on the eastern provinces. In 840 the great deity of Deha sent a shower of stones, and the emperor conferred the second grade of the fourth rank on her, with congratulations on her marvellous power. In 851 Susa-no-wo and Oho-kuni-nushi (see NATURE [Japanese], vol. ix. p. 235^b, and HEROES AND HERO-GODS [Japanese], vol. vi. p. 602^b) obtained the second grade of the third rank, and, eight years after, the first grade of the same rank, which, however, does not make them higher than an important minister or a successful chamberlain. In 880 a volcano of Satsuma was placed in a lower subdivision of the second grade of the fourth rank. In 988 the gods of Hirota and Ikuta caused seismic shocks, and were immediately presented with a diploma. In 998, 340 gods were promoted by the emperor Daigo as a bounty, at his happy accession. In 1078 and 1172 promotions were made *en masse*.

These examples show the essentially positive character of the *norito* and the distance that separates them from the lyrical outbursts that we think of when we speak of prayer properly so called. Even in those *norito* which approach most nearly to normal prayer the formula is more of the nature of a contract with the gods; gifts and vague praises are offered to them in exchange for their benefits, and they are promised further rewards, if necessary, should their services turn out satisfactory (see MAGIC [Japanese], vol. viii. p. 296^b, rituals, 1-3, p. 297, ritual 4).

5. Nature of prayer.—We must distinguish between the basis and the form, the moral dispositions and the material conditions. As regards the inner feelings, a reading of the *norito* shows that the primitive Japanese, though they felt sincere regard for the beneficent gods (see NATURE [Japanese], vol. ix. p. 233), never had that implicit confidence in addressing them which is generally considered, especially among Christian peoples, an essential quality in prayer. On the contrary, it is clearly seen that they often distrusted their gods, for they sometimes made them conditional offerings

only (e.g., MAGIC [Japanese], vol. viii. p. 296^b, ritual 1, and below, ritual 3). This attitude throws light on the magical rather than religious character of their invocations.

As regards the material conditions, it is not surprising to find that this people, always so polite, maintained a most respectful attitude towards their gods. Sometimes they bowed to the ground (the verb *wogamu*, 'to pray,' comes from *wori-kagamu*, 'to bend,' according to the native philologists); sometimes they bent the knee 'like the stag,' or 'plunged down the root of the neck like the cormorant'; they clapped their hands (*kashi-hade*)—a mark of respect in ancient Japan; they 'humbly presented' or 'raised aloft' in front of them or on their heads (*itadaku*) their offerings, which, they declared, had been 'prepared with profound respect'; and in the same deferential attitude they 'lifted their eyes' (*awogu*) to the heavens (see TASJ vii. [1889], pt. ii. pp. 116 f., 130, pt. iv. pp. 426, 433 f., 444, etc.). But there is no doubt that the essential point was the perfect accuracy of the formula pronounced, for on it depended the magical virtue of the prayer (see, e.g., MAGIC [Japanese], vol. viii. p. 298^a). The Japanese, however, gave the gods the credit of being sensitive to the literary beauty of the text, to the sonorosity of their long, majestically balanced periods; e.g., in one version of the *Nihongi* (i. 46; tr. W. G. Aston, London, 1896, i. 49) the sun-goddess is represented as having been won over by the harmonious language of the ritual composed to persuade her to leave her cavern and light the universe again.

6. Place of prayer.—The place for offering prayers naturally depended on the ceremonies with which they were connected. It was often the palace itself (e.g., to mention only some of the important rituals, nos. 1, 8, 10, 12, etc.), the great temple of Ise (e.g., nos. 16-24), or other sacred places, and sometimes the temple of a local god (e.g., no. 5, at Hirano, a village in the province of Settsu). In many cases the chief ceremony took place at Kyōto and was repeated in the province. There were also domestic celebrations, as at the *Nihiname* (see MAGIC [Japanese], vol. viii. p. 298^b, ritual 14), which, besides its public rites in the temple, was performed privately in the family, and to which no stranger was admitted—for fear of pollution, no doubt. What the texts never mention is the intimate individual prayer in the inner chamber which the gospel recommends (Mt 6⁶). This seems to have had practically no place in the devotions of the primitive Japanese.

7. Times of prayer.—Sometimes prayers were monthly (the title of the 7th ritual, *Tsukinami no Matsuri*, shows that originally at least it was a 'monthly' celebration), sometimes twice a year (e.g., 10th ritual), sometimes annual (e.g., 1st ritual), at certain appointed months and days (e.g., 1st ritual on 4th day of 2nd month; 10th ritual, on last day of 6th and 12th months), and at fixed hours (e.g., 3rd ritual, at sunrise; 10th ritual, at sunset). Others were used only when the occasion for which they were suited arose (e.g., 14th ritual, at the accession of a new emperor). The priestly functionaries, from the Mikado himself, seem to have prayed much more frequently; we know, e.g., that a high official called *haku*, who presided over the Jingikwan ('Department of Religion'), took the emperor's place whenever he was prevented by illness from saying his daily prayers. But here again the texts make no mention of daily prayers, far less of prayers twice or thrice daily, among the people, and it is probable that they were usually content to leave that duty to those whose professional function it was to offer prayers.

8. Typical example of Shintō prayer.—As a

typical example, in which the general features of the rituals are combined under the recognized form, we may quote the 3rd *norito*, which is neither among the finest nor among the poorest, but is a good average, and is short. It is addressed to the goddess of food, one of the great figures in Shinto (see NATURE [Japanese], vol. ix. p. 239^b, last paragraph, and p. 240), and, secondarily, to the gods of ravines who send water to irrigate the imperial farms.

'He [the *nakatomi*, in the name of the Mikado] declares the august name of the sovran god whose praises are fulfilled at Kahahi in Hirose [a village in the district of Hirose, where the goddess has a secondary temple, her chief temple being at Ise]. Declaring her august name at the Young-food-woman's augustness [Waka-uka-no-me no mikoto, one of the alternative names of the goddess], who rules over the august food, he fulfils praises in the august presence of this sovran deity. He says: "Hear all ye *kannushi* and *hafuri* the fulfilling of praises, by sending the princes and councillors to lift up and bring the great august offerings of the sovran august grandchild's augustness." He says: "Deign to declare in the presence of the sovran deity that as to great august offerings which are set up, he deposits in abundance and offers up, as to august clothing, bright cloth, glittering cloth, fine cloth, and coarse cloth, the five kinds of things, a mantle, spear, and august horse; and as to august liquors, raising high the beer [sake]-jars, filling and ranging in rows the bellies of the beer-jars, in soft grain and in coarse grain [i.e. hulled rice and paddy]; as to things which dwell in the mountains, things soft of hair and things rough of hair [birds and beasts]; as to things which grow in the great field plain, sweet herbs and bitter herbs; as to things which dwell in the blue sea plain, things wide of fin and things narrow of fin, down to weeds of the offing and weeds of the shore." He says: "Declare in the presence of the sovran deity that, if the sovran deity with peaceful and tranquil heart accepts as peaceful august offerings and sufficient august offerings the great august offerings thus set up, and if the sovran deity will deign to perfect and bless in many-bundled ears the sovran deity's harvest-fields in the first place and also the late-ripening august harvest which the august children [princes of the blood], princes, councillors and great august people of the region under heaven shall make by dripping the foam from their arms and drawing the mud together between the opposing thighs, in order that it may be taken by the sovran august grandchild's augustness with ruddy countenance as his long august food and distant august food, he will draw hither the firstfruits both in liquor and in husk, even to a thousand plants and many thousands plants, and piling them up like a range of hills, will offer them up at the autumn service." He says: "Hear all ye *kannushi* and *hafuri*." He sets up the great august offerings of the sovran august grandchild's augustness, bright cloth, glittering cloth, soft cloth, and coarse cloth, the five kinds of things, down on the mantle and spear, in the presence of the sovran gods also who dwell in the entrances of mountains of the six august farms of the province of Yamato. As to the setting up of offerings in this way, if the water which the sovran gods deign to send boiling down the ravines from the entrances of the mountains which they rule be received as sweet water, and ye [gods of the mountains] will deign to bless the late-ripening harvest which the great august people of the region under heaven have made, and deign not to inflict on it bad winds and rough waters, the princes, councillors, functionaries, down to the male and female servants of the six august farms of the province of Yamato, will all come forth on the [number] day of the [number] month of this year, to set up the firstfruits in juice and in the husk, raising high the beer-jars, filling and ranging in rows the bellies of the beer-jars, piling up the offerings like a range of hills, and plunging down the root of the neck cormorant-wise in the presence of the sovran gods, will fulfil praises as the morning sun rises in glory' (*Hirose oho-imi no matsuri*, tr. E. Satow, in *TASJ* vii. pt. iv. p. 438).

g. Modern prayer.—Later, when the nationalist scholars tried to revive pure Shinto, in opposition to Buddhism and Confucianism, the most devout of them, Hirata, composed in 1811 a book of prayers called *Tamadasuki*, which, unlike the ancient *norito*, was meant for private worship. It is interesting to see how prayer was conceived by the chief theologian of modern Shintoism. Hirata's views are as follows:

'As the number of the gods who possess different functions is so great, it will be convenient to worship by name only the most important, and to include the rest in a general petition. Those whose daily affairs are so multitudinous that they have no time to go through the whole of the following morning prayers, may content themselves with adoring the residence of the emperor, the domestic *kami-dana* [the shelf on which the household gods are placed], the spirits of their ancestors, their local patron god, and the deity of their particular calling in life. In praying to the gods, the blessings which each has it in his power to bestow are to be mentioned in a few words, and they are not to be annoyed with greedy petitions; for the Mikado in his palace offers up petitions daily on behalf of his people, which are far

more effectual than those of his subjects. Rising early in the morning, wash your face and hands, rinse out the mouth, and cleanse the body. Then turn towards the province of Yamato, strike the palms of the hands together twice, and worship, bowing the head to the ground. The proper posture is that of kneeling on the heels, which is ordinarily assumed in saluting a superior.'

Then follows a specimen prayer: 'From a distance I reverently worship with awe before Ame no Mi-hashira and Kuni no Mi-hashira, also called Shina-tsu-hiko no kami and Shina-tsu hime no kami [the god and goddess of wind; see art. NATURE [Japanese], vol. ix. p. 236^a], to whom is consecrated the palace built with stout pillars at Tatsuta no Tachinu in the department of Heguri in the province of Yamato [cf. art. MAGIO [Japanese], vol. viii. p. 297^a, ritual 4]. I say with awe, deign to bless me by correcting the unwitting faults which, seen and heard by you, I have committed, by blowing off and clearing away the calamities which evil gods might inflict, by causing me to live long like the hard and lasting rock, and by repeating to the gods of heavenly origin and to the gods of earthly origin the petitions which I present every day, along with your breath, that they may hear with the sharp-earedness of the forth-galloping colt.' (Other analogous prayers follow, addressed to other deities, for which see Satow, 'The Revival of pure Shin-tau,' in *TASJ* iii. App., Yokohama, 1883, p. 72 ff.)

Without emphasizing the artificial nature of these prayers, which, in spite of the express aim of their author to the contrary, are patently inspired largely by Buddhist tendencies and especially by Chinese ideas, we may question whether they were ever used by the worshippers for whom they were intended, for the first five volumes of Hirata's book were not printed till 1829, and the following four not till some time after his death, which occurred in 1843.

Official *norito* are composed to this day, for all special occasions (e.g., the conferring of posthumous honours on early Mikados, invocation of the gods of war, etc.). On the other hand, the common people offer informal prayers to various familiar gods—e.g., to Inari, originally the protector of agriculture, then a kind of Japanese Providence, when they are sowing rice or beginning a commercial enterprise, etc. The worshipper who may be seen standing in front of a temple, pulling the white cord that rings a bell to attract the attention of the god, and then praying for a moment with clasped hands, is usually offering a personal petition of the most paltry kind. The more general type of modern prayer asks for 'peace to the land, safety to the household, and abundant harvest.' But modern Shinto prayers, like those of twelve hundred years ago, are always essentially positive, inspired by human wisdom alone; and, whenever a somewhat elevated moral or mystical idea appears in them, it is the result of Buddhist influence.

LITERATURE.—See the sources cited in the article.

MICHEL REYON.

PRAYER (Jewish).—I. **BIBLICAL AND PRE-TALMUDIC.**—As far back as we can trace its history, we find prayer occupying a central position in the Jewish religion. It was an inseparable accompaniment of sacrifice, and its significance in the religious life of the individual and of the nation at large increased in the same degree as the knowledge of the power, justice, and goodness of God advanced. A profound conception of the nature of prayer is betrayed in the designation *tephillah*, which, according to Goldziher, really means 'invocation of God as judge.' In the mouth of almost all the important characters of the OT, from Abraham onwards, we find personal prayers—prayers of thanksgiving and praise, of intercession and confession. A very characteristic example is found in Solomon's prayer at the dedication of the Temple (1 K 8¹²⁻⁵³), which, although undoubtedly of a later date, contains all the four kinds of prayer mentioned above. Down to the last days of the first Temple there were no formal prescribed prayers—not even a general command to pray. Prayer was rather, both in form and in contents, an individual thing, nor was there any kind of precept as to its time or place. In Dt 26⁵⁻¹⁰. 12-15

we meet for the first time with forms of prayer, which are to be uttered on the occasions of offering the firstlings and the tithes. Among the prayers of individuals before the Exile those of the prophet Jeremiah are of the highest order (Smend, *AT Religionsgeschichte*², p. 263 f.).

1. **The prophets.**—The work of the prophets in making religion more of an inward thing, which found expression chiefly in their low estimate of the sacrificial cult, did not have its full effect among the mass of the people till the time of the Exile, when it found its natural expression in the prayers of the Jews. Towards the end of the Exile a prophet (Is 56⁷) describes the temple of the future as a 'house of prayer for all peoples.'

2. **The Psalms.**—At a later date the prayers known to us as 'the Psalms' took their rise, but, owing to a tendency of a still later period, they were referred back to remote antiquity—to the time of David. They are far more probably the fruit of the religion of the prophets, giving in prayer-form the thoughts that had entered into the consciousness of the people from the teaching of the prophets. After the return from the Exile, and when the second Temple had been erected, the Psalms became the Temple liturgy, in spite of the fact that, to a considerable extent, they formed a protest against the sacrificial cult of the Temple. That God desires and needs no sacrifice, but only the pure heart and the good deed, is a constantly recurring theme of the Psalms. Besides the moral teaching of the religion of the prophets, the Psalms deal chiefly with the sufferings of the people—particularly of the righteous—the sins of the nation and of the individual, memories of the nation's past, hopes of the final mercy of God, and His justice and power in nature and in history.

The collecting of the Psalms, which was gradually accomplished between the Exile and the Maccabæan period, was undoubtedly made in the first place for liturgical purposes; still it is very questionable, in the case of many Psalms, whether they were originally composed as songs for the congregation, while, in the case of others, the titles themselves as well as internal evidence point to their liturgical use. In form the Psalms are very varied and differ much in value, but, as far as their contents are concerned, they represent the highest product of the religious poetry of all nations.

'After reading the prayers of other nations, no unprejudiced critic would deny that the Hebrew Psalms stand out unique among the prayers of the whole world, by their simplicity, their power and the majesty of their language, though, like all collections of prayers, the collection of the Psalms also contains some which one would not be sorry to miss' (Max Müller, 'On Ancient Prayers,' in *Semitic Studies in Memory of Rev. Dr. Alexander Kohut*, Berlin, 1897, p. 40).

3. **The synagogue.**—The Psalms, which indeed still presuppose the sacrificial cult, and were sung in connexion with it, symbolize the transition to the new form of worship which we find in the synagogue. The origin of the synagogue is hidden in obscurity, but it is pretty certain that the work of Ezra, in introducing the Tôrâh as the law-book and book of devotion for the whole people, led to the institution of the synagogue (*bêth hahk'nēseth*, 'house of assembling'; then translated Gr. συναγωγή along with προσευχή). The first mention of synagogues seems to occur in a Maccabæan Psalm (74⁸). In the first place the synagogue served the purposes of religious instruction, and was the means by which the Tôrâh entered into the flesh and blood of the people—a result which we see clearly in several Psalms (19⁸⁻¹² 119). In the reading of the Tôrâh, with accompanying translation and explanation in the Aramaic dialect of the people, which took place on all the Sabbaths, feast-

days, and the market-days (Mondays and Thursdays), the people were at first entirely passive, being merely listeners. Gradually prayer was added—at first only in the form of several important sections of the Tôrâh, which bore the character of a devotional or edifying reading, and which were repeated by the people as a sort of confession. This is the so-called *Sh'ma'* (Dt 6⁴⁻⁸ 11¹³⁻²¹, Nu 15³⁷⁻⁴¹). It was regarded by Josephus (*Ant.* iv. viii. 13) as an institution that had long existed. Gradually the *Sh'ma'* was provided with a framework of introductory and concluding pieces, which were no longer taken from the Tôrâh, but were original compositions that, as far as their contents were concerned, were prayers in the real sense of the term.

Besides these, there arose, perhaps at the same time, a quite independent prayer, which was designated as the prayer *kar' êtoxh'n*, as *t'phillâh*. This prayer, which has gone through a considerable historical development and in its later form was called *Sh'mōneh 'Esrêh* (i.e. 'eighteen,' because it contains eighteen benedictions), seems to be influenced in some way by the Hebrew Psalm of Sirach (51¹²). The oldest part of the prayer is composed of the first three and the last three benedictions. The *Sh'mōneh 'Esrêh* remains to the present day the real congregational prayer of Judaism. It is very well suited to this purpose, as it unites in simple speech the four chief kinds of prayer (thanksgiving, praise, petition, and confession), and gives expression to them from the standpoint of the people as a whole.

4. **Family prayer.**—Along with the synagogue the home also became a place of worship. It is doubtful whether the praying three times a day mentioned in Ps 55¹⁷ and Dn 6¹⁰ was a standing institution. In any case it is certain that at an early date family prayer, with a special liturgy for the evening of the Passover and for the beginning and end of the Sabbath (*Qiddush*, *Hahdātâh*), was customary. Then, too, prayer was offered at the beginning and end of every meal; and, later, on the occasion of every enjoyment whatever, at the commencement of every important work, at every outstanding event or experience, a special *brāk'hâh* (blessing) was spoken. Thus in course of time every activity of life, every place, and every portion of time were permeated with thoughts of God. The demand that every action should be *l'shem shāmāyim* ('to the name of God,' 'consecrated to God') was thus literally fulfilled and 'the whole of life became a Divine service with interruptions' (M. Steinschneider).

5. **Rivalry between synagogue and Temple.**—This new form of worship in the synagogue and in the home constitutes perhaps the greatest and most radical reform in the whole history of the Jewish religion. For, although we possess no historical report of any revolt against the introduction of this worship, there naturally existed from the beginning a deep-seated opposition between the ancient Temple cult, which presupposed only one central sanctuary, and the synagogues, which existed in countless numbers and could be erected even beyond the confines of Palestine, wherever Jews were to be found. In the Temple a hereditary priestly aristocracy conducted the service, while the new form of worship was based on a purely democratic foundation, and any one who possessed sufficient knowledge and commanded respect might officiate. In the one case sacrifices, which at least in part were of a sacramental nature (e.g., the sacrifices of atonement and purification), formed the chief part of the service, while the liturgy had only a secondary place. In the synagogue, on the other hand, the model of a purely spiritual service was seen for the first time. Here

there was to be found nothing mystical or symbolical—only prayer and instruction, without any ritual accompaniment. In this respect the synagogue is the most real result of the prophetic religion. It made Judaism entirely independent of the Temple, and prepared men's minds for its overthrow.

6. Use of the popular dialect.—It is also worthy of mention that everywhere the dialect of the people was used in prayer along with Hebrew. In fact, in many important prayers the popular language was prescribed for those who did not know Hebrew. The Egyptian Jews in particular, who used the Septuagint instead of the Hebrew originals in divine service, developed also a Greek prayer-book. The numerous prayers contained in the Apocrypha and the Pseudepigrapha indicate how rich this literature must have been.

The early Christian liturgy is entirely modelled on the Jewish. This is seen not only in the Lord's Prayer, which is entirely composed of parts of Jewish prayer, but also in the other ancient Christian prayers as well as in the whole organization of the service.

7. Consequences of the destruction of the Temple.—After the fall of Jerusalem and the destruction of the Temple the synagogue, which had for long been the most important representative of Jewish religious life, became the only centre uniting the Jews of the Dispersion. From this time onwards the scribes sought more and more to establish, as far as possible, uniformity in the services. With the exception of a few ancient prayers in the Aramaic dialect (e.g., the *Qaddish*), Hebrew alone came to be used in public prayer. The language of the prayers also became more fixed; in particular, the *Shemoneh Esreh* underwent what was for the time at least a final revision; new prayers for the service of the congregation were composed; the time and the outward form of the service as a whole were more and more fixed with painful exactness. While at an earlier date the element of instruction held the chief place, now prayer came to occupy an equally important position. The reading, translation, and explanation of the Scriptures on Sabbaths and feast-days continued to form an integral part of the service. In addition to the reading of the Tōrah, lessons were also read from the Prophets, to which the name *haphṭārāh* (i.e. 'closing') was applied, because they concluded the service, or because they concluded the reading of the Tōrah. The explanation of the sections read from the Tōrah was called the *Midrāsh*, and developed gradually into lectures based on a Scripture text and embracing the whole body of Jewish religious and national ideas. These lectures formed the model for the Christian sermon.

The classical work of Zunz, *Die gottesdienstliche Vorträge der Juden*, gives a critical history of the *Midrāsh* and at the same time of the synagogue service, while it brings out clearly the intimate historical connexion between prayer and sermon, which mutually completed and enriched each other.

The content of the prayers was widened after the destruction of the Temple, when the desire for the restoration of political independence, the rebuilding of the Temple, and the re-introduction of its worship came to occupy an important place. This desire appears, for the most part, in connexion with the Messianic hope, which is found in prayers from the time of Sirach, but first obtained decisive significance in the consciousness of the people after the great national catastrophe. This hope appears now in a gross form in the purely external conception that an earthly saviour would free the people from misery and servitude, now in a deeper and more spiritual form in the vision of the coming of the Kingdom of God (*Malkhūth shāmāyim*), i.e. the time when God shall be acknowledged and worshipped by all peoples, and when righteousness and peace shall reign on the whole earth.

This thought finds full expression in the prayers appointed for the New Year Festival and for the Day of Atonement, partly composed at the beginning of the 3rd century A.D.

As an example we may refer to the prayer ascribed to Rabb (175-247) based on Sirach 36 (33)¹²: 'Lay then Thy fear on all Thy creatures, that all beings may worship, that all whom Thou hast created may fall before Thee, and that all may make one only covenant to do Thy will with all their heart, as we have long known that the power and the might belongeth unto Thee, and that Thy name is exalted over all that Thou hast created.'

In the liturgy associated with these two festivals the creative religious genius of Talmudic Judaism was specially manifested. For the richness of this New Year's liturgy in beautiful and thoughtful prayers was really the first thing to lend a religious significance to this festival, and to give it the place which it has since held in the popular consciousness alongside of the festival of the Day of Atonement as one of the chief festivals of the year. These prayers, in which the national element recedes into the background, ascribe to God the dignity of the world's Judge on the one hand and that of the forgiving Father on the other, and offer us a clear view of the whole Jewish system of doctrine regarding sin, repentance, and forgiveness.

II. TALMUDIC AND MEDIEVAL.—I. Prayer and service in the Talmud.—The predominating place which the synagogue service came to occupy in the religious life finds outward expression in the fact that the *Mishnāh*, the official law-book (closed about A.D. 200), begins with the treatise *Brākhōth*, which deals with prayer in all its aspects. The wealth of material contained in this treatise, as well as in the treatises *M'gillāh* and *Ta'anith* in the *Mishnāh*, and in the contemporaneous but unaccepted collection *Tosephta*, was materially increased in the following three centuries in the high schools of Palestine and Babylon, and its religious and historical significance has never been sufficiently appreciated. In spite of the scruples entertained among Jewish scholars about reducing prayers to a fixed form, and although they even censured those who could not vary them, and opposed the writing down of prayers ('Those who commit prayers to writing burn the Tōrah' [Tos. *Shabbāth*, xiii. 4]), the necessities of life brought about a uniformity in the synagogue service and partially even in family worship. This was the case among the whole people, the individuality of the worshipper being disregarded. It required several centuries, however, before congregational prayer really assumed a fixed form. Within the prescribed prayers room was of course left at various places for the individual needs of the worshipper.

This stated synagogue service was of the greatest importance in the religious training of the people. Prayers were offered three times every day (*shaharīth*, *minhāh*, *ma'aribh*); on Sabbaths and feast-days a fourth supplementary prayer (*mūsāph*) took the place of the earlier sacrifices. By means of these services the most important religious duties, the chief doctrines of Judaism, and the most important hopes of his nation were ever afresh brought home to the consciousness of the worshipper, so that he never was actually freed from the atmosphere of prayer.

On the other hand, there was a danger in these prayers which were fixed and unchangeable as to hour, content, and form. They tended, among the masses of the people, to make prayer a purely external and mechanical affair. Hence the scholars who were the framers of the public liturgy constantly emphasized that prayer was to be regarded not as an obligatory service, but as a 'worship with the heart'—that 'God desires only the heart.'

Accordingly, short prayers were frequently recommended, and as early as the beginning of the 3rd cent. a short extract was taken from the *Shemoneh 'Esreh* (*Häbhinenu*). In this connexion there is a specially significant conception for which we have no term in any other ancient language—not even in the NT—namely, *kawwānāh*, 'devotion' (more exactly *kawwānāth hallēbh*, 'direction of the heart'). The *kawwānāh* is, in numerous passages in the Talmud, demanded as the chief requirement for every prayer. These passages have been collected by Maimonides (12th cent.), who has expressed the demand for contemplative devotion in the following form:

'Prayer without devotion is no prayer at all. The man who has prayed without devotion ought to pray once more. He whose thoughts are wandering or occupied with other things need not pray. . . . What then is devotion? One must free his heart from all other thoughts and regard himself as standing in the presence of God. Therefore, before engaging in prayer, the worshipper ought to go aside for a little in order to bring himself into a devotional frame of mind, and then he must pray quietly and with feeling, not like one who carries a weight and throws it away and goes farther. Then after prayer the worshipper ought to sit quiet for a little and then depart. The pious folk of old waited an hour before prayer and an hour after, and engaged in prayer for a whole hour. . . . One ought not to go to prayer immediately after jest or frivolous talk, or conversation, quarrelling or anger, but only after a discourse of a religious tenor' (*Mishneh Tōrah, Hilekhōth Tephillāh* iv. 15f.).

2. Social significance of the service.—Since in the prayers of the congregation the individual's private interests had to take a second place, the public services constituted an important social factor. In the synagogue there was no room for egoistic prayers, and even in the prayers for the congregation requests for material good were subordinated to petitions for the enlightening of the spirit and for moral power. As these prayers did not satisfy the individual needs of the worshipper, a number of personal prayers were formed for private devotion which differed in outward form from the prayers of the congregation by the use of the singular, while the latter invariably use the plural. These personal prayers were said at the end of the public worship (cf. Elbogen, *Studien*, p. 41). They are characterized by a special tenderness and inwardness and only a few of them have been included in the Jewish Prayer Book. As an example of these private prayers we may quote the prayer of R. Yehuda, the redactor of the *Mishnāh*, which is still preserved in the daily morning prayer:

'May it be Thy will, eternal God, our God, the God of our fathers, to keep us [in the Prayer Book 'me'] from insolence that is foreign to us, or arrogance that is our own, from an evil man, an evil fate, an evil instinct, an evil companion, an evil neighbour, from the tempter who brings destruction, from a cruel judgment-seat and a cruel enemy, be he a son of the covenant [i.e. a Jew] or be he a stranger' (*Berākhoth*, 16b). A number of other private prayers are found translated in the present writer's *Bousset's Rel. des Judentums . . . kritisch untersucht*, p. 99 f.

Beautiful thoughts on prayer are to be found scattered through the whole of the Talmudic literature, and they testify to a sound moral judgment as well as to keenness in psychological insight. We may here quote the most interesting sentence:

'It can be discovered from the prayers of a man, whether he be a *talmid hakham* (i.e. a man of culture in the moral and religious sphere) or a *bōr* [i.e. an uncultured person]' (*Tos. Berākhoth*, i. 6, and parallel passages).

3. External form of the service.—Regarding the external form of the service, we can gather very little from ancient sources. The reason for this silence is, of course, to be found in the absolute simplicity of the service, which was devoid of anything like ceremony. Owing to the lack of any written prayer-book in the age of the Talmud, the prayers had to be spoken by a reciter (*sh'liach gabbār*, lit. 'deputy of the congregation'; later, *hazzān*), and the people took part in them, repeat-

ing in many places 'Amen,' but often expressing their agreement in longer responses. Any full-grown male Jew might act as leader in prayer, but the duty was preferably entrusted to the most learned. The leader went (at least in Babylonia; cf. Elbogen, *Studien*, p. 33) to a lower place in front of the worshippers and prayed standing, with his face turned towards the sacred ark. The congregation, consisting of at least ten male adults, stood during a part of the prayers (particularly during the *Shemoneh 'Esreh*, which thus came to be called '*Amidah*'). At other parts they bent their heads, and at some portions sank down on their knees. During prayer the worshippers covered themselves with the prayer-cloth (*tallith*), which was provided with fringes (*šīṣith*). On week-days the phylacteries (*tephillin*) were also worn on the head and the left arm. The use of these was based on the literal interpretation of the two passages contained in the *Sh'ma* (viz. Dt 6^a and Nu 15^{37a}). The *tallith* and *tephillin* were supposed to serve as memorials (*ōth*), but not as amulets. Neither to any of the customs mentioned nor to prayer at all (contrasting with Christianity) was there any kind of material influence ascribed. Nor, as was expressly emphasized, did the benediction of the priest have any external effect, 'as God but not the priests can grant blessing' (*Siphre*, § 43, on Nu 6^a). Moreover, the strict monotheism of the Jews permitted no kind of mediation in prayer by higher beings. Only in a few places (and in none of the official prayers) do we find the angels called on to intercede, while eminent scholars protested emphatically against the custom. It was not till the Middle Ages, when, owing to external oppression and internal ignorance, a darker spirit took possession of Judaism, that the expression 'the angel of mercy' was introduced into the Prayer Book by the *Kabbālā*. Even the names of the angels invoked in prayer—Sandalphōn and Metatrōn—show that we have here to do with ideas introduced from without.

The close of the Talmud (c. A.D. 500), when all Jewish traditions were reduced to writing, did not by any means give the liturgy a stereotyped form, although prayer-books can be traced back to the 7th century. On the other hand, we have now, much more than formerly, alongside of the statutory prayers, to reckon with the *minhāgh*, i.e. the local usage which not only decided on form and use and created many new prayers, but also often directly opposed the Talmud. In consequence of the dispersion of the Jews in the different lands, climate and external circumstances exerted quite as strong an influence on the *minhāgh* as the language, customs, and civilization of the neighbouring peoples. In order to restrict the variety that thus arose in the ritual, the *G'ōnīm*, or heads of the Babylonian high schools, whose authority was recognized by all Jews, gave reasoned decisions, in answer to questions addressed to them. These decisions were then collected, and are preserved to the present day. We have to thank the *G'ōnīm* for the first ordered form of prayer with reasons for the same, called *Siddūr*, of which the oldest extant is that of *Gāōn 'Amrām* (9th century). Special importance attaches to the *Siddūr* of *Gāōn Saadya* (10th century). The later and more complete collections of this kind were called *Maḥzōr* (lit. 'year-cycle')—an expression which came to be used for prayer-books generally, particularly in connexion with the feast-days.

In spite of all decisions and ordered forms for prayer, in spite also of all endeavours of the great codifiers (among them Maimonides [q.v.]), the attempt to obtain uniformity of service was not successful. In fact, there came to be two groups

of sharply contrasted liturgical services which were further subdivided into many smaller groups: (1) the Palestinian group, which permeated the nations of N. Europe, and thus came to be called the 'German'; and (2) the Arabic group, which drew its adherents from the Jews dwelling round the Mediterranean (with the exception of Greece and Italy), and, as it was in use principally in the Peninsula, was called the 'Spanish' group. These two groups, which still exist alongside of each other, differ particularly with regard to the poetical prayers which, since the 8th cent., it has been customary on the feast-days and on certain Sabbaths to insert in the principal prayers.

4. The synagogue poetry.—Little can be discovered with regard to the origin of the synagogue poetry—*piyyūt*, as it was called.

It is not at all improbable that the Syrian and Greek hymns of the Church had an influence in the matter. The term applied to the poet of the synagogue—*paṭān* or *payyāt* (from *ποιητής*)—points at once to a foreign origin. Zunz rightly emphasizes the fact that the Jews had in their Psalms an ancient foundation, to build on which they required only the fitting materials. Any account of the history of the *piyyūt* must be based on the work of Zunz, *Die synagogale Poesie des Mittelalters*.

The oldest poetical compositions were without rhyme or metre, and for the most part with alphabetical arrangement of the lines and sections. Rhyme is found as early as the 8th cent., while verse measure was introduced by Spanish poets after the second half of the 10th century.

Zunz traces the origin of synagogue poetry to the tendency 'to give to the history and sacred traditions of Israel a form ennobled by art and beautified by song, and (by changing the commanded service into a spontaneous homage) in this way to make the synagogue to the Jew what the Olympic games and tragedies had been to the Greek—a place where the national genius was embodied and spiritualized, where it was seen and felt to be the costliest possession of the community and of every individual' (*Literaturgesch. der synagogalen Poesie*, p. 22 f.).

The authors of the oldest synagogue poems are unknown to us. These were composed, no doubt, for the most part by the leaders in prayer themselves, and were, to begin with, only listened to by the congregation but not repeated. Before long, however, these poems were also sung, so that the voice of song in divine service, which had been silent since the destruction of the Temple, was heard once more, and the leader in prayer became the precentor. Poetical sections were first inserted in the passages preceding and following the *Shema*; hence their names (*yōšēr*, *ōphān*, *zūlāth*). But the main endeavours of the *paṭānīm* were directed towards adorning the first blessings of the *t'phil-lāh*. The compositions belonging to this class were called *q'rōbhāh* (cf. Syr. *kārōbhō*, 'mass'). Further poetical compositions were provided for the Day of Atonement (*ābhōdhāh*, a description of the Temple service at that day in old times), for *shābhūt 6th* ('*azhārōth*, enumerations of the precepts of the Tōrah), for the 9th of Ab (the day of mourning for the destruction of the Temple, called *qindōth*, 'lamentations'), and for the seventh day of the Feast of Tabernacles, called *hōshā nōth*.

In course of time the *piyyūt* found its way into every part of the religious life and every portion of the service. Nor was it confined to the synagogue. It entered into the family, and had its place there at the Sabbath meals, at the close of the Sabbath, in the joys as well as in the sorrows of the house, at births and at funerals (Zunz, *Die synagogale Poesie des Mittelalters*, p. 70).

Material for the *piyyūt* was found in the inexhaustible wealth of ideas contained in the Midrash, whose place was gradually taken in the course of the centuries by the *piyyūt*, as the ever-increasing number of poetical compositions quite displaced the lecture.

A specially important kind of synagogue poetry is the *sl'hāh*, prayer for forgiveness, penitential prayer. The service for the Day of Atonement was the first to be enriched with special prayers, which

belong in part even to the age of the Talmud. The length of the service, which lasted from morning till evening, and the special significance of the day led to the expansion of the liturgy. Thus Bible verses referring to God's forgiveness were collected, and poetical prayers dealing with the same subject were composed. The *q'rōbhāh*, along with these *sl'hōth*, was called *mā'mādh*. The *sl'hōth* became in course of time even more artistic in form and rich in content. Special pieces provided with a refrain were called *pizmōn*. The difference of content between the *piyyūt* and *sl'hāh* is thus stated by Zunz:

'The *piyyūt* gives history and Midrash, the *sl'hāh* feeling and presence; the *piyyūt* tends to become prophecy, the *sl'hāh* a psalm' (ib. p. 83).

While in the *piyyūt* the element of teaching is in the forefront, the *sl'hāh* is in form and content more the expression of the feelings with which the people were filled, and thus more a prayer in the strict sense of the term. The chief theme, which is treated in endless variations, is sin and suffering. The unceasing affliction which a thousand years of persecution brought upon the Jews finds as touching expression as does the believing humility with which they sought the reason of their misery in themselves rather than in the injustice of God. We also find the undying hope that God will finally put an end to their sorrows. Thus the *sl'hōth* are the most valuable testimony to the piety of the Jewish people during the Middle Ages, and must from this point of view be regarded as the continuation of the Psalms.

See, further, for the synagogue poets, LITERATURE (Jewish), III. 5. IBN GABIROL, IBN EZRA, HALEVI.

5. Influence of philosophy.—In spite of the fact that we possess synagogue poems from almost all the Jewish philosophers of the Middle Ages, from Sa'adya onwards, and although the greatest poets were also philosophers, we have comparatively only a few philosophic prayers (e.g., 'the King's Crown' of Gabirol). The reason for this striking phenomenon is probably to be found not so much in the difficulty of clothing philosophic thought in prayer form as in the fact that prayer was an attempt to satisfy the claims of the heart by warm personal outpourings, which the coldness of philosophic rationalism rendered well-nigh impossible.

6. Influence of mysticism.—If there are few traces of philosophy proper in the prayers of the synagogue, mysticism, on the other hand, has exercised a most harmful influence, since the end of the 12th cent., on both the conception and the content of prayer.

'Although the more respectable mystics did something for spiritual religion and for devotion as opposed to thoughtless formalism, yet the liturgy lost more than it gained by their influence' (Zunz, *Die Ritus*, p. 24).

Since the beginning of the 16th cent. the liturgy has hardly been enriched except by additions from the Kabbālā, which only burdened the form and content of the service. On the other hand, the mystical sect of the Ḥasidīm, which arose about the middle of the 18th cent., originated a most important movement among the people. This movement directed itself chiefly against the rigid codification of all matters relating to prayer brought about by Joseph Caro's ritual code, called *Shulḥan 'Arukh* (1565), which had been generally acknowledged since the end of the 16th century. In opposition to it, the Ḥasidīm denied that the traditional form and the appointed times of prayer were binding, and, in place of meaningless habitual repetitions, demanded devotion springing from personal inspiration. Unfortunately this important movement, which at first seemed likely to be so fruitful, soon exhausted itself, owing to the opposition of the rabbis and to internal degeneration.

III. *MODERN CONDITIONS*.—Since the last quarter of the 18th cent., when the Jews, especially in Germany, began to participate in general culture, an important change has gradually come over the Jewish service. It was no real innovation to provide the Prayer Book everywhere with a translation into the language of the country, for, as early as the 16th cent., Italian, Spanish, and Jewish-German translations had appeared. The innovation rather concerned the service itself. Refined taste demanded a corresponding form, and changed circumstances called for a partial change in the contents of the prayers. In particular, the greater part of the poetry of the synagogue no longer suited the needs of modern times. It was only after bitter contests that in the course of the 19th cent. a series of reforms were generally accepted in the whole of W. Europe. In the first place, the sermon in the language of the country, which in Germany and elsewhere for various reasons had wholly fallen into disuse, was reintroduced. Prayers in the popular speech, alongside of those in Hebrew, and the curtailing of the synagogue poetry, have not, however, been so generally accepted. A number of congregations have also introduced choir-singing and even organs to accompany the prayers, as well as a shortening and reformation of the old chief prayers. One congregation in Europe (viz. the reformed congregation in Berlin, founded in 1845) and many American congregations have absolutely broken with tradition, by keeping the Sunday instead of the Jewish Sabbath, by almost entirely abolishing Hebrew as the language of prayer, by creating a completely new liturgy, which omits all the national memories and hopes, by doing away with the separation of men and women in the synagogues, and by praying with the head uncovered. In this way the unity of the liturgy is irrevocably lost. Thus the divine service, which for more than two thousand years had been the chief mark of the unity of Judaism, has become a bone of contention among opposing parties—a circumstance which has not failed to exercise a baneful influence on the whole religious life.

PRAYER (Mexican).—The great repository of Mexican aboriginal prayer is the work of Bernardino de Sahag n, *Historia General de las Cosas de Nueva Espa a* (3 vols., Mexico, 1829), in which

he furnishes us with numerous examples of Aztec devotion, of a public and ritual as well as of a private character. As he lived and worked in the generation immediately succeeding the Spanish conquest of Mexico, and had abundant opportunities of meeting and speaking with natives who well recalled the times of Aztec paganism, there is no reason to believe that these productions are not the genuine outpourings of the Aztec mind or that they have in any manner been sophisticated.

The ritual and public prayers consist for the most part of appeals made to the various gods on the occasion of religious festivals, war, sacrifices, baptisms, funerals, and purifications, or in time of pestilence, and are extremely hortatory in tone, the purpose being the edification of the hearers. Particularly noteworthy are the prayers to Tezcatlipoca on the occasion of confession. These are of the most intense earnestness and lofty in tone and language. Nearly all the ritual prayers are of considerable length, and are obviously the products of a priesthood possessing ample time for pious consideration. It is only occasionally that Mexican prayer throws any light on the theological beliefs of the Aztec people, and, as practically every deity is addressed in the most exalted terms, it is impossible to judge the relative importance of the gods from the prayers offered up to them.

Private prayers, which appear to have been of a ritual character, were offered up to avert poverty, to obtain the necessities of life, for agricultural reasons, and, indeed, for heavenly assistance in every activity of life. The exhortations of parents to children, which have frequently been called prayers and are so characteristic a feature of Mexican life, are, in reality, advisory sermons embracing codes of conduct for young people. The whole body of matter has been brought together in the sixth book of Sahag n's work mentioned above.

LEWIS SPENCE.

PRAYER (Muhammadan).—I. *The ritual of the daily sal t.*—The most important part of the Muslim liturgy was, from the beginnings of Isl m, the ritual prayer, the so-called *sal t*. Muhammad's intention in prescribing this ceremony as a religious duty to his followers was undoubtedly to imitate the ritual prayer of the Christians and Jews in the Orient, at least as far as it was known to him. Like this prayer, the Muslim *sal t* consisted chiefly of prostrations, praises of God, the reciting of formul e, etc. The name *sal t* is not originally Arabic, but borrowed from the language of the Eastern Christians and the Jews (viz. the Aramaic       ).

The Muslim law prescribes in great detail how a Muslim must perform his *sal t*. A considerable proportion of these regulations may really be based upon the old *sunnah* (the common practice) of the Prophet and his contemporaries, but many of the rules concerned with details, as to which there still existed difference of opinion in the first centuries after Muhammad's death, must be of later date.

When performing a *sal t*, a Muslim stands, raises his open hands on either side of his face, and says: '*All hu akbar!*' ('God is most great!'). This ejaculation is called *takbir* (or *takbirah*). Then, still standing, he recites some verses of the Qur n, especially the F ti ah (i.e. the opening chapter, i. 1–7). After this recitation the various inclinations and postures follow (described, e.g., by E. W. Lane, *Manners and Customs of the Modern Egyptians*, London, 1895, ch. iii., with figures in the text): (1) the worshipper first inclines his head and body till his hands reach the height of his knees, and then rises again (this is called the *r k  *, 'inclination'); (2) then he proceeds to the first prostration (*suj d*), dropping gently on his knees, placing his hands on the ground a little in front of his knees, and putting his forehead also to the ground; (3) he raises his head and body (but his knees must remain on the ground) and performs the second *suj d*. This completes a *rak'ah* (i.e. one of the subdivisions of the *sal t*). Having finished one *rak'ah*, the worshipper rises to his feet and goes

through the same again (the recitation of some verses of the Qur'an, the *rukū'* and the two *sujūds*). Before the *rukū'* and before and after each *sujūd* of every *rak'ah* he recites the *takbīr*; and after the last *rak'ah* he recites: (1) the *shahādah* (i.e. the confession of faith); (2) a salutation over the Prophet, and (3) a second salutation (the *taslimah*, i.e. the invoking of a blessing, saying 'al-salām 'alaikum'), which is considered by most Muslims to be addressed to the guardian angels who watch over the worshipper.

At first—at least immediately after the *hijrah*—the Prophet used to turn his face towards Jerusalem during the *ṣalāt*, like the Jews. But in the second year after his arrival at Medina a revelation (Qur'an, ii. 136-145) changed this, Muhammad having quarrelled with the Jews in that town. Ever since that time the Muslim must turn his face towards Allāh's house, the Ka'bah at Mecca, to perform the *ṣalāt*.

While performing the *ṣalāt*, the worshipper is in a state of consecration (*ihrām*) and must observe special prescriptions. According to the primitive conceptions, every worshipper was supposed to be exposed to particular dangers from evil spirits when he was adoring his Lord. Many of the religious observances of the *ṣalāt* may originally have had no other purpose than to protect the worshipper against the maliciousness of the demons.¹ Thus (1) he must take care that his body is sufficiently covered; according to the Muslim lawbooks, a woman must cover her whole body during the *ṣalāt* (except her face and her hands); and a man at least the part of his body between his waist and his knees; the heads of both men and women are also supposed to be covered. (2) He must say before reciting the Qur'an verses: 'I seek my refuge near God from Satan' (cf. Qur'an, xvi. 100), and raise his hands in pronouncing every *takbīr* in order to avert the evil spirits that may be present (or, according to the Hanīfites, he must do so only in pronouncing the first *takbīr*, the *takbīrat al-ihrām*; cf. Goldziher, 'Zauberelemente im islamischen Gebet,' in *Festschrift-Nöldeke*, Giessen, 1906, i. 320-325). (3) Special emphasis is laid on ritual ablution before the *ṣalāt*. It was a general custom of the ancient Arabs to employ water as a charm against demoniacal influences (see Goldziher, 'Wasser als Dämonenabwehrendesmittel,' in *ARW* xiii. [1910] 20-46); some of the earlier Muslim scholars held that an ablution was necessary before every *ṣalāt* (cf. Qur'an, v. 8), but this view was rejected by other *faqīhs* (see Goldziher, *Die Zähriten*, Leipzig, 1884, pp. 48-50). According to the four orthodox *fiqh*-schools, a ritual ablution (*wuḍū'* or *ghusl*) is required before the *ṣalāt* only when the worshipper is in a state of ritual impurity. It must be observed, however, that the ritual ablution is usually considered simply as a purification (see art. PURIFICATION [Muslim]); the original purpose of this ceremony may have been forgotten by the Muslims. (4) Further, it is desirable for a Muslim to recite the formulæ of the *adhān* (i.e. the call to prayer; see below) before beginning a *ṣalāt*—at least when he is not already summoned by the *adhān* that is chanted from the mosque. This usage must also be regarded as a kind of charm; the demons are supposed to flee when they hear the sacred words of the *adhān*.

2. Obligatory and supererogatory daily *ṣalāts*.—Some of the earlier verses of the Qur'an (see xi. 116, xvii. 80 f., xxx. 16 f., lxxiii. 1) require Muslims to perform the *ṣalāt* thrice every day—in the morning before sunrise, at the close of day, and during a part of the night. To these *ṣalāts* another was added after the *hijrah*, the 'middle *ṣalāt*'

¹ See for the following rules especially A. J. Wensinck, 'Animismus und Dämonenglaube im Untergrund des jüdischen und islamischen rituellen Gebets,' *Der Islam*, iv. [1913] 218 ff., and 'Die Entstehung der muslimischen Reinheitsgesetzgebung,' *ib.* v. [1914] 68-80; I. Goldziher, 'Die Entblössung des Raupetes,' *ib.* vi. [1916] 301 ff.

(*ṣalāt al-wustā*), mentioned in Qur'an, ii. 239, probably an imitation of the Jewish mid-day prayer (the *minhah*). Moreover, the Prophet, according to the tradition, used to perform *ṣalāts* on various other occasions. In the first generations after his death it was a subject of discussion which of the daily *ṣalāts* must be regarded as obligatory, and there was also difference of opinion as to the exact times of day at which the Prophet had usually performed his devotions.¹ But gradually it was recognized in the whole Muslim world that the five following *ṣalāts* were obligatory for every Muslim: (1) the *ṣalāt al-subh* (at daybreak); (2) the *ṣalāt al-ẓuhr* (at noon, or rather a little later, when the sun has begun to decline); (3) the *ṣalāt al-'aṣr* (in the afternoon, about half-way between noon and nightfall); (4) the *ṣalāt al-maghrib* (at sunset, or rather about five minutes later, for it is forbidden to perform a *ṣalāt* just at sunrise or sunset, because the heathen Arabs used to do so); and (5) the *ṣalāt al-'ishā'* (at nightfall, when it is quite dark). Each of the five prescribed periods ends when the next commences, except that of the *ṣalāt al-subh*, which ends just before sunrise. The worshipper is recommended, however, to perform every *ṣalāt* as near the beginning of the prescribed period as possible. The *ṣalāt* at daybreak must consist of two *rak'ahs*, that of sunset of three, and each of the others of four; it is meritorious to add some supererogatory *rak'ahs* to each of the five daily *ṣalāts*. The four *fiqh*-schools disagree as to the exact number of these voluntary *rak'ahs*.

The three following daily *ṣalāts*, though not prescribed by the law as obligatory, are regarded as commendable and meritorious:

(1) The *ṣalāt al-tahajjud* (the night-*ṣalāt*) mentioned in some verses of the Qur'an (see above).—This *ṣalāt* had evidently been gradually neglected by most of Muhammad's followers at Medina; not all the members of the continually increasing Muslim community could show so much zeal for the service of their Lord, and Allāh at last yielded to their wishes! (see Qur'an, lxxiii. 20). This *ṣalāt* was no longer to have an obligatory character. Nevertheless it is still regarded as very meritorious by the Muslims. It must consist of an even number of *rak'ahs*—two, four, or more. The middle third of the night is thought to be the best time for this devotion. Hence in many Muslim lands a sign is given in the mosque about midnight to announce the time of the *tahajjud*.

(2) The *ṣalāt al-witr*.—It is meritorious to make odd the even number of *rak'ahs* of the last *ṣalāt* of the night (i.e. the *ṣalāt al-'ishā'* or the *tahajjud*) by adding an odd number of *rak'ahs* or at least one *rak'ah*. Usually the *ṣalāt al-witr* is added to the *ṣalāt al-'ishā'* (since most people neglect the *tahajjud*). A well-known tradition says: 'Allāh is *witr* (odd) and loves the *witr*,' and the Muslims therefore pay a certain respect to every odd number. According to the Hanīfites, the *ṣalāt al-witr* is even obligatory.

(3) The *ṣalāt al-ḡhuḥā* (*ṣalāt* in the morning) at the time between sunrise and noon, consisting of from two to twelve *rak'ahs*.—This ceremony also is not obligatory, though some of the earlier Muslim scholars thought it was. According to some traditionalists, it was a custom of the Prophet to perform this *ṣalāt* every morning, but this is denied in many other traditions.

3. The mosque and the daily public service in the mosque.—The so-called mosque of the Prophet at Medina was only an open enclosure, adjacent to his dwelling. On one side there was a kind of portico, a flat roof supported by wooden pillars. This was where Muhammad usually performed his *ṣalāts*, either alone or with some of his followers. But this *masjid* was used also for various other purposes; it was, e.g., the place where Muhammad received the embassies of Arabian tribes and where he gave banquets to his guests. We may assume that the houses of other men of rank at Medina had also a *masjid* of the same type.² Originally

¹ See, for further details, M. T. Houtsma, 'Iets over den dagelijkse ṣalāt,' *Theolog. Tijdschrift*, xxiv. [1890] 127 ff.; Goldziher, 'Die Bedeutung der Nachmittagszeit im Islam,' *ARW* ix. [1906] 293 ff.; T. Nöldeke and F. Schwally, *Gesch. des Qurāns*, Leipzig, 1909, p. 57, n. 1; E. Mittwoch, 'Zur Entstehungsgesch. des islamischen Gebets und Kultus,' *ABAW*, Phil.-hist. Classe, 1913, p. 111 f.; Wensinck, in *Der Islam*, iv. 232 ff.

² Maqrizi (*Khitāt*, Bāḥāq, 1270, ii. 270. 11) says that there

the mosque in Muslim society took the place of the old heathen *majlis*, the open space near the tent or dwelling of the head of the tribe where all deliberations of the tribesmen took place (see H. Lammens, 'Ziād ibn Abihī,' in *Rivista degli studi orientali*, iv. [1911-12] 240 ff.; L. Caetani, *Annali dell' Islam*, Milan, 1905, i. 432 ff.; C. H. Becker, 'Zur Gesch. des islamischen Kultus,' in *Der Islam*, iii. [1912] 394 f.). Once a week the Muslims were convoked to an assembly in Muhammad's *masjid*—a usage probably originally introduced by the Prophet in imitation of the weekly congregations of the Christians and Jews. But the Muslims assembled on Fridays—at least at Medina, some time after the *hijrah*. One Friday, just before the service, a caravan with merchandise arrived at Medina, and most of the believers forgot their religious duty, being occupied in buying and selling. Then Qur'an, lxii. 9, was revealed:

'When the call to prayer soundeth on Friday (or on the day of the congregation), then go to praise the Lord and abandon business,' etc.

About A.H. 7 or 8 a *minbar*, a sort of wooden throne or raised seat with two steps, was placed in Muhammad's *masjid*, and the Prophet always sat upon this when presiding at the meetings (see Becker, 'Die Kanzel im Kultus des alten Islam,' in *Festschrift-Nöldeke*, pp. 331-351). On special occasions Muhammad and his followers went out of Medina to the *muṣallā* (the place where the *ṣalāt* and other ceremonies were performed in the open field). Later, a lance was carried before the Prophet as an emblem of his authority; on the *muṣallā* this lance was stuck into the ground before him, marking the direction of the Ka'bah.¹

After Muhammad's death the Muslim liturgy remained very simple. In the great encampments of the Arabs in the conquered countries each of the tribes had its own *masjid*, where the tribesmen assembled. There was also a general *masjid* near the dwelling of the *walī*, the head of the place or the governor of the province. Originally this head mosque was very simple, often being only a large open square, surrounded by a ditch or by walls and with an open portico in front facing towards Mecca, supported on stone pillars and covered with a roof (see, e.g., Tabari, i. 2489). It was a general place of meeting, not reserved for the Friday service and other religious purposes. When general deliberation was necessary, the believers were convoked to a public *ṣalāt* before the further transactions, and the *walī*, or, in the residence, the *khalīfah* himself, presided at these meetings (see Goldziher, in *ZDMG* xlix. [1895] 315; Belādī, ed. M. J. de Goeje, Leyden, 1866, p. 229. 3 [*Fragmenta hist. arabic.*, ed. de Goeje and P. de Jong, do. 1869, p. 217. 5]; al-Bayān al-Mughrib, ed. R. Dozy, do. 1848, p. 55. 16; al-Fahri, ed. W. Ahlwardt, Gotha, 1860, p. 95. 11; Becker, in *Der Islam*, iii. 395; and Lammens, in *Rivista degli studi orientali*, iv. 242 ff.). The Umayyad *khalīfahs* and also many of their high functionaries in the provinces used to sit on a *minbar* in these assemblies just as the Prophet had done before them. At first, however, this was regarded by some people as improper for a *walī*; the *khalīfah* 'Umar forbade 'Amr, his governor of Egypt, to sit on a *minbar*.

It was only gradually that the mosque became a place exclusively dedicated to worship; a regular daily service was instituted, and the Muslim

were nine *masjids* at Medina besides that of the Prophet; see also the traditions concerning the *masjid al-qibār* (mentioned in Qur'an, ix. 108).

¹ At a later time it was still a custom in some Muslim countries to indicate the direction towards Mecca by means of a staff or lance, behind which the leader of the *ṣalāt* placed himself. The *ṣalāt* was then performed 'ala 'l-*asā* (i.e. in the direction of this staff).

liturgy began to develop and take fixed forms. The service of the Christian churches and Jewish synagogues may have influenced this development (see esp. Mittwoch, 'Zur Entstehungsgesch. des islam. Gebets und Kultus'; and Becker, 'Zur Gesch. des islam. Kultus'). It became a general custom to announce the times of the daily *ṣalāt* from the minarets of the mosque (the origin of the minaret is discussed in detail by H. Thiersch, *Pharos: Antike, Islam und Occident: Beitrag zur Architekturgeschichte*, Leipzig, 1909). The *adhān*, which is chanted from the minaret by the *muad-dhin*, consists of the following formulæ:

'God is most great' (this is said four times); 'I testify that there is no God but Allāh' (twice); 'I testify that Muhammad is Allāh's apostle' (twice); 'Come to prayer' (twice); 'Come to security' (twice); 'God is most great' (twice); 'There is no God but Allāh.'

The public *ṣalāt* in the mosque requires a leader, since all worshippers must perform the prescribed ceremonies together and at the same moment; every mosque has its own *imām*, who officiates over all who may be present at the times of the daily *ṣalāts*.¹ It must be observed that the position of this *imām* is very different from that of a priest, since he does not perform any sacramental action; he is only the leader of the *ṣalāt*, and, according to the theory of Muslim law, he may even cede his place to any other member of the congregation who is competent for the office. The beginning of the *ṣalāt* is announced in the mosque by a second call to prayer, the *iqāmah*, which consists chiefly of the same formulæ as the *adhān* (most of the formulæ of the *iqāmah*, however, are recited only once, and the words, 'The time of the *ṣalāt* is [now] come,' which are twice repeated, must be inserted after the formula, 'Come to security'). The *imām* then places himself before the *mihrāb*, the niche that indicates the direction to Mecca,² and performs the *ṣalāt* with the congregation. Only the voice of the *imām*, who recites the prescribed formulæ, may be heard during the *ṣalāt*. In the great mosques, however, where the congregation is usually so numerous that the believers cannot all see and hear the leader, the *takbīrs* of the *imām*, marking the various postures of the *ṣalāt* (see above), are repeated loudly by persons especially charged with this office (the *muḥallighs*).

4. The Friday service and the public *ṣalāt* on feast-days and other occasions.—On Friday the *ṣalāt al-jum'ah* (the *ṣalāt* of the Friday) must be substituted for the ordinary noon-prayer. It is a service celebrated by the whole community in the head mosque (*jāmi'*) of the place, consisting chiefly of two parts: the *khutbah* ('sermon') and a *ṣalāt* of two *rak'ahs*. In later times the *khutbah* preceded the *ṣalāt*; but this was not the original usage. According to Muslim tradition, it was an innovation introduced by the first Umayyad *khalīfah*, Mu'awiyah. Before the beginning of the sermon the *adhān*, which has already been chanted from the minarets, is repeated in the mosque. The preacher (*khatīb*) then delivers his sermon, standing on the *minbar*, and holding, as prescribed by ancient custom, a staff or wooden sword (or a bow) in his hands (see PREACHING [Muslim]). When the *khatīb* has finished his *khutbah*, he descends from the *minbar*, then the *iqāmah* is chanted, and the whole congregation performs the two prescribed *rak'ahs* of the *ṣalāt al-jum'ah*. It is considered meritorious to perform, before and after the obligatory Friday *ṣalāt*, the usual supererogatory *rak'ahs* of noon.

The Friday service formerly required a general

¹ Other persons perform the lower offices in the mosque—lighting the lamps, sweeping the mosque, attending to the receptacles for water necessary for the ablutions, etc.

² See further, on the *mihrāb*, N. Rhodokanakis, in *WZKM* xix. [1905] 296 ff., and xxv. [1911] 71 ff.

assembly of the whole community. Muslim law therefore forbids that this service should be celebrated in different mosques of the same town, unless the place is so populous that it would be practically impossible to assemble in one mosque. Moreover, according to the Shāfiites, the *ṣalāt al-jum'ah* is valid only when at least forty persons join in it; the Hanīfites, on the other hand, hold that no fixed number is required, and that the Friday service can be validly celebrated by an *imām* and only three persons.

Twice a year, on the two Muslim feast-days (at the end of the fasting month and on the 10th of the month of Dhu'l-hijjah, in connexion with the sacrificial feast of the pilgrims in the neighbourhood of Mecca) a special service, the *ṣalāt al-'id* ('feast-*ṣalāt*') is celebrated which resembles the Friday service in many respects. There are, however, some points of difference: (1) the time recommended for the *ṣalāt al-'id* is the morning, about half-way between sunrise and noon; (2) it is supposed in the lawbooks that this ceremony should take place not in a mosque but in the open field; (3) the service consists of a *khutbah* and a *ṣalāt* of two *rak'ahs* like the Friday service, but the *ṣalāt* must precede the *khutbah*; and (4) the *adhān* and *iqāmah* are omitted; the *muadhin* before the service only calls: '*Al-ṣalāta jam'iatan!*' ('[Now perform] the *ṣalāt* together!'). We may assume that in all these respects the feast-*ṣalāt* is still more ancient than the Friday service.

Another religious assembly takes place on each evening of the fasting month. It is counted meritorious to perform the *ṣalāt al-tarāwīḥ* ('the *ṣalāt* with pauses') after the daily *ṣalāt al-'aṣr* in this holy month. This ceremony consists of twenty *rak'ahs*, each pair of which is separated from the rest by a *taslimah* (see above). Though this *ṣalāt* is not obligatory, many persons usually take part in it. This great zeal for the *ṣalāt al-tarāwīḥ* can only be explained by its particular connexion with the holy fasting month.

When there was a great drought, the pagan Arabs tried to induce rain by enchantments. These heathen practices were replaced in Islām by the *ṣalāt al-istisqā'* ('the *ṣalāt* for imploring rain'), a public service that differs little from the service on the two feast-days. It is still characterized by the following ceremony: after the *ṣalāt* the *imām* and the other worshippers who are present move about and shake their upper garments; this custom is probably to be regarded as a survival of Arabian heathenism (see Goldziher, 'Zauberelemente im islamischen Gebet,' pp. 308-312). During an eclipse of the sun or moon a public service is celebrated which resembles the feast-*ṣalāt* in most respects. As regards details of the liturgy on these and other occasions, the opinions of the different *fiqh*-schools disagree.

TH. W. JUYNBOLL.

PRAYER (Roman).—As in many other phases of religion, the religious life of the Romans offers an exceptional opportunity for the study of prayer. Between the prayers of Cato and those of Marcus Aurelius we have, as it were, a complete gamut of religious experiences, and, though these two landmarks are less than 400 years apart, Cato represents many centuries before his time, and Marcus Aurelius is the prototype of many centuries to follow. Prayer, as distinguished, on the one hand, from magic and, on the other, from mystical ab-

sorption, is the orthodox communication between man and those powers outside of him which are called God or gods according to circumstances. Upon the orthodoxy of the act depends this distinction, and it is this element of orthodoxy alone that distinguishes primitive prayer from the mazes of magic, and advanced prayer from the formlessness of mystical absorption—so true is it that primitive prayer is closely akin to magic, and advanced prayer to religious absorption.

But, before we begin even this outline study of Roman prayer, we should make ourselves fully aware of three facts: (1) that the actual number of Roman prayers transmitted to us is relatively small; (2) that many prayers, so called, especially those in the poets, do not represent trustworthy evidence, and are apt to be either fanciful or under Greek influence, and therefore not available for our present purpose; and (3) that there is scarcely an operation in the world more delicate, and therefore more difficult, than the attempt to deduce the religious attitude of the individual from the formal experiences handed down to us.

I. Primitive prayer.—Here it should be noted that this title includes not only prayer as practised in the historical period which we call primitive and prayer as practised in later times by persons of primitive intelligence, but also many primitive forms of prayer retained by religious conservatism and practised by all orthodox persons. This observation is very necessary owing to the peculiar conditions under which the religious life of ancient Rome had its development. This development represents a series of accretions—a mechanical rather than a physiological growth. Man's spiritual evolution expressed itself not nearly so much in the transforming of the old formulæ as in their absolute conservation and the adding to them of outer coatings, new tree-rings of more modern thought. This was possible because of the absolutely formal character of all Roman religious concepts; and the only exceptions to it are found in the more spiritual cults of the Orient and in the impotent enthusiasms of a spiritual philosophy. The success of primitive prayer depended principally upon two things—the scrupulous exactness of expression and the correctness of the name and title of the deity addressed. Exactness of expression is an absolute requisite. This idea is, of course, common to both prayer and magic, and the orthodoxy of the one and the illegitimacy of the other form almost the only criterion of distinction. The question whether all primitive prayers were of a rhythmical character—the *carmina*, common to both prayer and magic—is a difficult one to answer,¹ but certainly very many primitive prayers were, for we have instances of them.

Every effort was made to obtain the strictest verbal accuracy, on the theory² that whatever was said had legal validity.³ The formulæ themselves were collected and preserved in the books of the priests.⁴ The formulæ were never changed, even though the language was so archaic that the priests themselves scarcely understood it. This was true, e.g., of the prayers of the Salii, of which Quintilian⁵ says:

'The prayers of the Salii were scarcely understood by the priests themselves, but religious conservatism forbade the changing of them, and the consecrated forms must still be used.'

¹ Cf. R. Westphal, *Theorie der griech. Metrik*, Leipzig, 1887, iii. 1, 67, *Allgemeine Metrik*, Berlin, 1892, p. 223; C. Zander, *Vers. Ital. antiqui*, Lund, 1890, p. 86.

² *Verba certa*; Cic. *de Nat. Deor.* ii. 10, and Paul. p. 88, s.v.

³ *Fanum*.

⁴ Cf. Festus, p. 173: 'As the tongue has spoken, so is the law'; and Cic. *de Orat.* i. 245.

⁵ Gell. xiii. 23. 1.

⁶ *Inst. Or.* i. 6. 40.

In the cult of the Arval Brothers¹ a similar state of affairs existed, and as a safeguard against mistake the priests used prayer-books out of which they sang as they danced. In other cases the worshipper repeated the words of the prayer as they were said by an assistant.² The penalties for an error were indeed great, for a trifling mistake rendered the whole performance null and void. In the year 176 B.C.,³ at the celebration of the Latin Festival, the officiating magistrate from Lanuvium forgot to pray for the Roman people, and, when the matter was discovered, the senate referred it to the pontifical college, who in turn decreed that owing to the omission the festival could not be considered as performed and must be gone through all over again, and, as the magistrate from Lanuvium had made the mistake, Lanuvium must pay the cost of the new performance; and Plutarch remarks:

'In later ages one and the same sacrifice was performed thirty times over because of the occurrence of some defect or mistake or accident in the service—such was the Roman reverence and caution in religious matters.'⁴

In relation to this verbal accuracy, we find ourselves between the realm of magic and that of law. Regarded as a charm, the prayer needed to be absolutely accurate in order to be effective, but in prayer regarded as a legal transaction such accuracy was equally important.

E.g., in the year 200 B.C. we read that 'the Roman people directed the consul to vow games and an offering to Jupiter. But the vow suffered a delay; the Pontifex Maximus Licinius asserted that one could not make a vow of an indefinite sum because this money could not serve for the needs of the war but should be put apart at once and kept apart and not be mixed with any other money, for, if such a mixture took place, the fulfilment of the vow would be irregular. . . . The consul was asked to consult the College of Pontifices to know whether it were possible to vow in regular form an indefinite sum. The Pontifices replied that the vow was possible and entirely regular. The consul, repeating the exact expression of the Pontifex Maximus, pronounced the vow in the form employed previously for five year vows.'⁵

We shall have occasion below to return to the legal aspect of Roman prayer, but, before leaving the interrelation of prayer and magic, it is important to notice that they have one other point in common, namely, that they depend for their effectiveness upon a knowledge of the exact name of the object addressed. In order that a prayer may be effectual, it must be addressed not only to the proper deity, but to some particular phase of that deity's activity as expressed in some adjective or *cognomen*. Hence the development of a great science of nomenclature—lists of gods and lists of *cognomina*.⁶

It is the same line of reasoning that makes it desirable to keep secret the name of one's special deity so that one's enemies may not be able to take advantage of it in prayer and call forth one's gods by the mysterious process of *exauguratio*. Hence Servius⁷ tells us that in pontifical law special precautions were taken that the gods of the Romans should not be called by their right names, in order that they might not be exaugurated. Similarly, Macrobius says:

'It is certain that every city has a god under whose protection it is placed; and the Romans had a mysterious custom, of which many persons are ignorant, that when they were besieging a city and thought they were on the point of capturing it, they worked the deities by means of a certain formula. Without this they did not think the city could be captured, or, at least, they would have considered it a sacrilege to take the gods captive. It was for this reason that the Romans always kept concealed the name of the god who protected Rome, and even the Latin name of the City.'⁸

⁷ *En. ii.* 351.

⁸ *Sat. iii.* 9.

Of course, much nonsense was talked among the antiquarians regarding the secret name of Rome and of the god who protected Rome, and very possibly the secret names were so secret that they never existed, but the principle underlying the whole discussion is a genuine one.

Practically all the writers on Roman religion, with the exception of Warde Fowler,¹ have unduly emphasized the magical and the legal bargaining aspects of Roman prayer. These two aspects were indeed prominent, but alongside of them existed, if only in embryo, the concept of the power and greatness of the deity and the powerlessness of man. 'The language is the language of prayer, not of compulsion or even of bargaining.'² We see this most clearly in the famous four prayers in Cato's 'Farm Almanack'—prayers which are such precious and unique documents that the quoting of them in full is better than many pages of explanations.

Prayer for the cattle at the flowering of the pear-trees (Cato, *de Re Rust.* 131 f.): 'At the flowering of the pear-trees make sacrifice for the cattle. . . . Thus shall the offering be made. Give to Jupiter Dapalis a measure of wine, as much as you see fit. On the day of the sacrifice let there be a holiday for the cattle, the herdsman, and for those who make the sacrifice. When you have to make the offering, you shall do as follows: "O Jupiter Dapalis, in regard to the sacrifice of a measure of wine which I make to thee in my house and in my family, mayst Thou be graciously increased by this sacrifice." Then wash your hands and afterwards take the wine, saying, "O Jupiter Dapalis, mayst Thou be increased by this sacrifice which I make unto Thee, mayst Thou be increased by this wine which I offer Thee."'

Prayer before the harvest (ib. 134): 'Before commencing the harvest, it is necessary to sacrifice a pig in the following manner: The sacrifice of a female pig should be made to Ceres before harvesting the following—spelt, wheat, barley, beans, and turnips. Before sacrificing the pig, invoke with incense and wine Janus, Jupiter and Juno. Present the pig to Janus with this prayer, "O Father Janus, in offering Thee this pig I pray that Thou wouldst be propitious to me, to my sons, to my house, to my family. Be Thou increased by this offering." Then offer the sacred pig to Jupiter, saying, "O Jupiter, in offering Thee this pig, I pray that Thou wouldst be propitious to me, to my sons, to my house, to my family. Be Thou increased by this offering." Afterwards give wine to Janus as follows: "O Father Janus, just as in offering the pig to Thee I prayed good prayer to Thee, for the sake of this thing mayst Thou be increased with the wine which I offer Thee." And thereafter pray to Jupiter as follows: "O Jupiter, mayst Thou be increased with this offering, and mayst Thou also be increased with the wine which I offer Thee." Thereupon slaughter the pig.'

Prayer on making a clearing (ib. 139): 'According to the custom of the Romans, thus should a clearing be made. Make an expiatory sacrifice of a pig and recite the following prayer: "Whether Thou be god or goddess to whom this wood is sacred, be there paid to Thee thy due, the expiatory sacrifice of a pig for the cutting of this sacred wood. For this purpose, whether I perform the sacred act or others do so at my command, may it be well done, even as it has been done. With this intention I sacrifice this pig in expiation, and I turn to Thee my pious prayers that Thou shouldst wish to be kindly disposed toward me, my house, my dependents, my sons. Therefore mayst Thou be increased by this pig of expiation which I am offering to Thee."'

Prayer at the lustration of the farm (ib. 141): 'Thus should the lustration of the fields take place. Thus shall you order the suovetaurilia to be led about them: "With the consent of the gods and with every favourable omen, I commit to you, O Manius, the task of leading the suovetaurilia about my farm, my fields, my land, in whatsoever part you should think best that they should be led about." Then make libation with wine and invoke according to formula Janus and Jupiter, and speak as follows: "O Father Mars, I pray and beseech of Thee that Thou wouldst be well willing and propitious to me, to my house, to my dependents; and for this reason I have ordered that the suovetaurilia should be led around my fields, my land and my farm, that Thou shouldst hold back, hinder and drive away sickness visible and invisible, desolation, ruin, damages and storm; and that Thou shouldst cause to grow and prosper the fruits of the soil, the grain, the vineyards and the thickets; that Thou shouldst keep in safety the shepherds and the sheep; that Thou shouldst give prosperity and health to me, to my house and to my dependents. For these reasons, and because, as I have said, I am lustrating and causing to be lustrated my farm, my lands, and my fields, mayst Thou be increased by this suovetaurilia which is being offered Thee. O Father Mars, mayst Thou be increased by this suovetaurilia which is being offered Thee."'

2. Prayer as a votum.—Prayer in the religion of the Roman State was virtually a bargain

¹ *Rel. Exper. of the Roman People*, p. 182 ff.

² *Id.* p. 189.

between man and god, whereby man, the party of the first part, agreed to pay to the god, the party of the second part, such and such things if the god, the party of the second part, performed certain acts for man, the party of the first part. Such prayer was called a *votum*, a 'vow,' because the important and distinguishing feature was the promise to pay if service was rendered. As a rule, payment was not made until the deity had performed the desired acts. But there was one important exception to this general rule, the *devotio*, in which case payment was made in advance. It is not at all impossible that such payment in advance may have been intended as a means of binding the god and thus exercising a species of compulsory magic. The *devotio* is the vow uttered by a Roman general in the moment of battle whereby he agrees to give up his own life in order that his army may be victorious. If he succeeded in this act of self-destruction, it was felt that the gods had accepted his death, and that, having accepted it, they were compelled to grant the victory to his side. This curious reasoning was carried one step further, and it was thought that the gods were free from any obligation if the enemy succeeded in opening their ranks and letting him pass through unharmed.

The *devotio* may therefore be considered as in a certain sense forming the link between the magical and the legal point of view, for all ordinary *vota* were a strictly legal performance. The favours demanded of the gods were as infinitely various as were the promises to pay in case of fulfilment. These promises included votive offerings, games, sacrifices, the building of an altar or of a temple.

3. **Outward characteristics of Roman prayer.**—The worshipper faced the image of the god, and, as the god usually faced west, so the worshipper usually faced east. His position, as a rule, was standing, though occasionally he walked round the altar.¹ During the actual prayer itself the worshipper often held the altar.² Generally the hands were raised, but sometimes special positions were required; e.g., in a prayer to Neptune the hands were stretched out towards the sea,³ while in praying to Tellus or Ops the suppliant touched the earth.⁴ We also find references to kneeling.⁵ At the end of the prayer there followed the moment of adoration (*adoratio*), when the worshipper put his right hand to his mouth.⁶

Prayers were normally said in a distinct and usually a loud voice. This was the natural method in antiquity, just as all reading was done aloud. This fact makes possible many scenes in the drama when prayers are overheard.⁷ Silent prayer was sometimes motivated by modesty,⁸ and sometimes by shame;⁹ but whispered prayers were not orthodox,¹⁰ and he who indulged in them fell readily under the suspicion of practising magic.

4. **Spiritual prayer.**—Philosophy and the spiritual cults of the Orient, which entered Rome at the beginning of the empire, tended to introduce gradually an entirely new concept of prayer.

It was no longer a formal process by which man obtained physical benefits from the gods either by compulsory magic or by legal bargaining. It became instead an effort of adoration, a communion with God, a moment of spiritual exaltation;¹ and it was into this atmosphere that Christianity came.

JESSE BENEDICT CARTER.

PRAYER (Teutonic).—1. Prayer to the gods.—Our knowledge of heathen prayer among the Teutonic peoples is very scanty, and comes almost entirely from Scandinavian sources. From the prose Edda we learn that prayer was a regular part of the worship of the Aesir and Asynjur. Njorðr is to be invoked for sea-voyages and for hunting (*Gylfaginning*, xxiii. [*Die pros. Edda*, ed. E. Wilken, Paderborn, 1912, p. 32]). Freya is particularly well-disposed towards those who pray to her for help in love affairs (*Gylf.* xxiv. [p. 34]). In the sagas we frequently hear of men who have a special devotion to Thor, whom they invoke in difficulties and whom they consult before any important undertaking. In these cases it is hard to distinguish between prayer and divination.

Thorolf Mostrarskegg made a great sacrifice and went to consult with Thor, his beloved friend (F. Holthausen, *Altisland. Lesebuch*, Weimar, 1896, p. 64). 'Helgi was very mixed in his faith. He put his trust in Christ and named his homestead after him; but yet he would pray to Thor on sea-voyages, and in hard stresses, and in all those things which he thought were of most account to him' (*Landnámabók*, iii. xiv. 3, in G. Vigfusson and F. Y. Powell, *Origines Islandicæ*, Oxford, 1905, i. 149). 'Then Aur-lyg called upon bishop Patrec, but as for Coll he called upon Thor' (ib. i. vi. 2).

In *Vigaglúm's Saga*, 9, there is an interesting example of prayer to Frey:

'Thorkel had been forced to sell his land to Glum. Before he departed from Thverá he went to the temple of Frey, leading thither an ox, and said: "Frey, who long has been my patron, and hast accepted many gifts from me and rewarded me well, now I give this ox to thee, so that Glum may leave Thveráland as much against his will as I do now; let me see some token whether thou acceptest it from me or not." At this the ox bellowed loud and fell dead, which Thorkel liked well, and he was less sad because he thought his prayer was heard' (P. B. du Chailly, *The Viking Age*, London, 1889, i. 352).

There are several stories of Earl Hakon's devotion to Thorgerðr Holgabrúðr (also Hörðabrúðr, Horgabrúðr) and the earnest prayers that he was wont to make to her in moments of crisis. On one occasion Hakon desired her help for his friend Sigmund, whom he led into her temple.

'Hakon and Sigmund with a few others went into this house, where there were many gods; it had also many glass windows so that there was no shadow in it. At the inner end was a woman magnificently dressed. The Earl threw himself down at her feet, and lay there a long time. Then he rose up and told Sigmund that they should make her some offering, laying the money on the seat in front of her, "and we shall have this token," said he, "whether she will accept it or not, that I have wished her to let go the ring that she has on her hand. From that ring you will obtain good luck." The Earl then laid hold of the ring, and it seemed to Sigmund as if she closed her hand, so that he could not get it off. The Earl lay down again before her, and Sigmund noticed that he was in tears. Again he stood up, and laid hold of the ring, and this time it was loose. He gave Sigmund the ring' (*Flateyjarbók*, i. 144, quoted in W. A. Craigie, *Scandinavian Folklore*, London, 1896, p. 33).

An instance of prayer addressed to a stone occurs in *Hörd's Saga*, 37:

'Hörd's brother-in-law Indridi wished to slay the bondi Thorstein Gullknapp (gold-button), and waited for him on the way to his sacrificing house, whither he was wont to go. When Thorstein came, he entered the sacrificing house and fell on his face before the stone he worshipped, which stood there, and then he spoke to it' (du Chailly, i. 353).

2. **Prayer and sacrifice.**—The obscure verse in *Hövmál*, 176 (*Die Lieder der älteren Edda*, ed.

⁷ Cf. Plaut. *Rudens*, 258.

⁸ Cf. Tibull. ii. 1. 83.

⁹ Cf. Hor. *Epist.* i. 16. 60, where a man prays aloud to Janus and Apollo, and whispers a petition to Laverna to give him success in cheating; cf. also Persius, ii. 3 ff.

¹⁰ Cf. Seneca, *Ep.* x. : 'Speak to God as though all men were listening.'

K. Hildebrand, Paderborn, 1912, p. 56), 'Betra's óbeít an sé ofblóit,' may perhaps be translated, 'It is better not to pray at all than to sacrifice overmuch'; but it is not clear whether sacrifice and prayer are here contrasted or considered as practically synonymous. Certainly in Teutonic as in other religions the two modes of worship were closely connected.

'Sacrifice is a prayer offered up with gifts. And wherever there was occasion for prayer, there was also for sacrifice' (Grimm, *Teut. Mythol.* i. 29).

Ibn Fadhlán gives a detailed account of the worship of the Scandinavian Russians:

'As soon as the ship arrives in the haven, each one of them goes ashore, taking with him bread, meat, onions, milk and intoxicating drink, and makes his way to a tall piece of wood set up, which has something resembling a human face and is surrounded by small statues behind which are erected still other tall pieces of wood. He goes up to the great wooden image and throws himself down before it, saying: "O my lord, I am come from distant lands, bringing with me such and such a number of maidens, and such and such a number of sable skins." When he has counted up all his stock, he proceeds: "I have brought this gift to thee," and lays down what he has brought before the wooden statue and says: "I desire that thou wouldst provide me with a merchant who has plenty of gold and silver and will buy from me all that I wish to sell and will challenge nothing that I say." He then goes away. If, however, his trade does not proceed favourably and his stay is too protracted, he comes again, bringing a second or even a third gift. If he still has difficulty in obtaining what he wants, he brings a gift to each of the little images and asks them for their intercession, saying, "These are the wives and daughters of our Lord"' (C. M. Frähn, *Ibn-Fadlan's und anderer Araber Berichte über die Russen älterer Zeit*, Petrograd, 1823, p. 7 ff.).

Prayer was not always accompanied by offerings.

Sigrdrifa, having been roused from a magic sleep by Sigurd Fáfnirbane, makes this invocation: 'Hail day! Hail sons of day! Hail night and her kinswoman! With favourable eyes, look upon us who are sitting here, and grant us victory! Hail asir; hail asynjur! Hail also to the bountiful earth! Give wisdom and eloquence to us two glorious ones, and hands of healing during our lives!' (*Sigrdrifundt*, ii. 3 [Hildebrand, p. 317 l.]).

When Earl Hakon and Gudbrand were pursuing Hrapp, who had plundered the shrine dedicated to Thor, Thorgerðr Holgabrúðr, and Irpa, 'the earl went aside by himself, away from other men, and bade that no man should follow him, and so he stays awhile. He fell down on both his knees, and held his hands before his eyes; after that he went back to them' (*The Story of Burnt Njál*, tr. G. W. Dasent [Everyman's Library], London, 1911, p. 156).

During his fight with the Jomsborg Vikings Hakon prayed to Thorgerðr Hörðabrúðr, but his prayer proved unavailing until he had sacrificed his son Erling (cf. Craigie, p. 33).

3. Manner of prayer.—Little is known of the form and manner of heathen prayer. Tacitus (*Germ.* x.) informs us that among the Teutons divination was practised by a priest or paterfamilias, 'having prayed to the gods and glanced up to heaven.' In the sagas we hear frequently of worshippers prostrating themselves before images of the gods.

'The island was thickly wooded, and Hakon went to a clearing in the forest, where he lay down, looking to the north and prayed in the way he thought best, calling upon her in whom he put all his trust, Thorgerðr Hörðabrúðr' (Craigie, p. 33; for the heathen custom of turning to the north in prayer cf. Grimm, i. 34).

Paul's *Grundriss der germanischen Philologie*, iii. 384 ff.

END WELSFORD.

PRAYER (Tibetan).—Prayer is more prevalent among the people of the Land of the Lāmas than among any other nation perhaps in the world. This is owing partly to the extreme devotion fostered by the hierarchy which wields the temporal rule of the country, and partly to the intense piety engendered by generations of extreme isolation from the rest of the world, amidst environments where Nature in her severest moods tends to inspire a superstitious dread of malignant spirits, who can be appeased or coerced only by prayer and sacrifice. Prayers are thus ever on the lips of the laity in all spare moments, apart from the daily priestly services in the temples, and in the

houses of the well-to-do, which generally possess a small shrine with miniature altar, before which domestic prayer is rendered.

1. General character of the prayers.—The prayers are generally genuine petitions addressed to one or more bountiful Buddhas or Buddhist divinities, whose spiritual or material succour is entreated; or they may be stanzas uttered in praise of the particular deity or deities invoked; and, in nearly all, one or other Buddha, human or celestial, is referred to in addition to the other deity implored. The frequent repetition of such formal prayers tends to degenerate into a mechanical routine. Yet, although the prayers consist usually of formal litanies and other rituals extracted from the Indian and Tibetan Buddhist canonical scriptures, spontaneous private prayers are not uncommon. The present writer has often heard Tibetan votaries, after making an offering of lamps on the altar of wayside temples, address God for spiritual and temporal blessing, for prevention of bodily peril or ailment, and for provision for daily wants, very much after the manner of Christian worshippers at the present day.

2. Buddhist form of Tibetan prayers.—The formal prayers, collected in printed or written manuals, consist mainly of extracts from the Indian Buddhist canon or from the rituals composed by early Indian and Tibetan monks. The class of canonical works furnishing these prayers is generally the same as that employed by the 'Southern' Buddhists of Ceylon, Burma, and Siam for the purpose, under the name of *paritta* or *pirit* (= 'protection'), and are *suttas* from the Pāli canon specially composed and prescribed by Buddha himself¹ to be recited as prayers to avert malign influence, for recovery from disease, to remove physical difficulties, and to procure happiness and a good rebirth. They are addressed to the moon, sun, and various other divinities, especially the *yakṣha*—a general term for the orthodox Buddhist gods on Aśoka's monuments (250 B.C.), though latterly viewed as more or less malignant. While the Tibetans thus use for prayers the corresponding canonical texts to the Hinayāna Pāli canon of the Southern Buddhists,² they have the advantage over the latter in that they have translated these texts into the vernacular so that the people can understand the meaning of the prayer or praise, whereas the Southern Buddhist laity repeat the texts in the foreign and long dead Pāli, which is unintelligible to them, making the 'prayer' an unmeaning mummerly. Even the ingenious Bön religionists in the remoter districts have now generally assimilated their prayers to the type of the dominant Buddhists.

3. Deities and saints invoked.—The gods chiefly invoked by the Tibetans are found by the present writer to be orthodox Buddhist gods. For, contrary to the statements of Western writers on primitive Buddhism,³ he finds that gods enter very largely into the religion of Śākyamuni himself, as evidenced in the earliest Pāli canonical books, and into that of his greatest propagandist, the emperor Aśoka, not only in his inscribed monuments at Bhārhut, but also in his edicts. Thus the latest authoritative reading of the Saḥasrām rock-inscription states:

'Men in Jambu-dvīpa (India) who up till this time had been unassociated with the gods, have (now) been made associated with the gods.'⁴

¹ Cf. D. J. Gogerly, *Ceylon Buddhism*, Colombo and London, 1908, ii. 323; and L. A. Waddell, 'Dhāraṇī Cult in Buddhism,' *Oriental. Zeitschr.* ii. [1913] 155 f.

² For list of the Buddhist canonical texts used as prayers in Pāli, and tr. of several, see Gogerly, ii. 329-393.

³ E.g., T. W. Rhys Davids and H. Oldenberg, *passim*.

⁴ Tr. by E. Hultzsch, *JRAS*, 1911, p. 1115; cf. also Waddell, 'Dhāraṇī Cult,' pp. 155-171.

The first deity or divine saint to be invoked is Buddha himself, though not the most frequently addressed by the Tibetans. This also is paralleled in Southern Buddhism, which is supposed to represent the primitive form of Gotama's religion, wherein Gotama (Sākyamuni), although regarded as having passed away totally from the world, is not regarded as 'extinct,' as in the later mystical Buddhism, but is invoked as a still existing divinity, and not a mere pious memory:

I bow my head to the ground and worship
The sacred dust of his holy feet:
If in aught I have sinned against Buddha
May Buddha forgive me my sin.¹

He is also invoked daily in the refuge-formula: 'We go for refuge to Buddha, to his word or law (*Dharma*), and to his order of monks (*Saṅgha*),' in Tibetan² as in Southern Buddhism, as if he were still existent.

More frequently than the quondam human Buddha are invoked the celestial Buddhas of Indian Mahāyāna Buddhism. They are regarded as everlasting gods, and are reflexes of the Hindu gods to whom the title of 'Buddha,' or Buddha's other favourite title, 'Jina' or 'the Victor,' has been transferred. Of these the primordial self-existent god, corresponding to the late Brāhmanist creator-god Brahmā, is Adibuddha, and he bears various titles according to different sects of Lāmas. Thus he is the 'Thunderbolt-Holder' (rDorje 'chan = Skr. Vajradhara), or the 'Thunderbolt-Souled' (rDorje sems-dpa = Skr. Vajrasattva), or 'Receptacle of Light' or 'Ever-shining' (rNampar snan-mdsad = Skr. Vairocana), presumably a form of the popular solar Buddha, Amitābha, or the 'Boundless Light,' the god of the Western Paradise, though nominally different from the latter. Latterly there was a fivefold division of these celestial Buddhas according to the five directions, namely the four quarters and the zenith.³

Much more frequently implored are the celestial *bodhisattvas*, or nominally potential Buddhas among the gods, most of whom are everlasting gods of an energetic order and invoked for their active aid. One of these, common to Southern Buddhism and Indian Mahāyāna, is the Buddhist Messiah, Maitreya (Tib. Byams-pa), who was placed by Sākyamuni in the heaven of Indra or Sakra. Gotama's (or Sākyamuni's) frequent references to him and to his abode in Indra's heaven offer another confutation of the statement so frequently made by the Pāli school of writers that Buddha was atheistic and did not recognize the Hindu gods in his system. Of this Buddhist Messiah many colossal images are carved on cliffs along roads in Tibet, and are the object of prayer to passers-by. But the most frequently worshipped and invoked of all is the Indian Buddhist goddess the 'Saviouress' (sGrol-ma, pronounced Dō-mā, the Skr. Tārā), who is the primordial Mother-goddess, Māyā, which was also the name of Buddha's mother; and, under the name Māyā, Tārā is worshipped by the Burmese and other Southern Buddhists. She is the special patron of women and children, and succourer in distress on land and sea. She is the Queen of Heaven, independently on her own account as well as in the form of consort to the Indian Avalokita (sPyan-ras-

zigs, pronounced Chā-rā-si), the 'All-seeing One' (lit. 'Clad with Eyes,' according to its Tibetan translation). The latter as the god of transmigration is the special favourite and patron-god of the Tibetans, and is associated with two others, as the defenders of Lāmaism, who also are of Indian origin, namely the 'Thunderbolt-Wielder' (Phyag-rdor, Skr. Vajrapāṇi), the Śaivist Jupiter Pluvius, and the 'Sweet-Voiced' god of wisdom or Buddhist Apollo ('Jam-dbañs, Skr. Mañjuśrī)—all three of whom are in great request, though Avalokita, to whom the *Om maṇipadme Hum* formula is addressed, is the most frequently invoked of all, and by all sects. The other popular *bodhisattva* gods and goddesses are enumerated in the list of their prayer-spells below, § 6.

Of the saints who are specially invoked for aid, each different sect of monks gives pre-eminence to its own particular founder; thus the Yellow-caps invoke Tsongkhapa; the new Red-Cap, Dug-pa, invoke Marpa or Milārpa; and the old Red-cap, the original founder of the order of the Lāmas, Padmasambhava or Padmakara (*q.v.*). The laity, however, of all the sects especially invoke the last-named saint and esteem him to be practically as powerful as their favourite god, and he receives full divine honours—though this is paid covertly in communities where the Yellow-cap priests predominate, by whom he is banned as unorthodox.

'Demons' are not ordinarily invoked as such, or directly, even by the unreformed Red-caps, except on certain rare occasions of 'feeding the devils' and in disease- or death-ritual; and even then the invocation is usually preceded by some Buddhistic ceremony, although embodying aboriginal Bön rites. But the Śaivist forms of the Thunderbolt-Holder as the 'Defender of the Faith,' although not technically regarded by the Tibetans as devils, are really demoniacal and are identical with the demonist forms of the Hindu god Śiva as the spirit of destruction and death. These demonist forms were not inventions of the Tibetans, as generally asserted, but were all borrowed by the Tibetans ready-made from mediæval Indian Buddhism, which, to maintain its popularity, had been forced to adopt these depraved elements from the degenerated Indian Brāhmanism, while the poor deluded Tibetans believed that they were all right, as they imported them from the home of Buddhism at Bodh Gaya. As a result, each Tibetan monk has to select one of these demonist Śivas as his tutelary,¹ and each morning he privately invokes him for his protection throughout the day. But the unsophisticated layman invokes for this purpose the deified saint Padmasambhava, and the women implore Dō-mā, or Tārā, when they proceed beyond the self-sufficient *Om maṇipadme Hum*.

4. Prayers in celebration services.—The priestly arrangement of prayers for the worship of each Buddhist divinity among Tibetans is usually divided into seven stages, and the text is printed or written in separate little pocket manuals or prayer-books for each deity, all in vernacular Tibetan. The stages are:² (1) the invocation—calling to the feast or sacrifice; (2) inviting the deity to be seated on the altar; (3) presentation of sacrificial offerings—sacred cake, rice, water, flowers, incense, lamps, musical instruments; (4) hymns in praise; (5) repetition of the special spell of the deity in Sanskrit; (6) prayers for benefits, present and to come; (7) benediction. When demons have been worshipped, they are 'invited to depart' before the benediction.

5. Specimen of ritualistic prayer.—A good example of the formal prayers is seen in the follow-

¹ See Waddell, *Buddhism of Tibet*, pp. 152, 222 f.

² For details see *ib.* p. 424 f.

¹ Pāli *Paṭimokkha*, Dickson 5; this does not appear in the version translated by Gogerly, i. 160-210, and is therefore presumably not used by all Ceylonese Buddhists; but it is found almost literally in the Tibetan versions—e.g., E. Schlagintweit, *Buddhism in Tibet*, London, 1863, p. 126 f., where the text specially adds: 'I believe that the body of all the Buddhas does not enter into Nirvāṇa (of Extinction),' evidently intended to confute as a heresy the doctrine of total extinction.

² Waddell, 'Lāmaism,' in *Gazetteer of Sikkim*, Calcutta, 1894, p. 308.

³ For details see Waddell, *Buddhism of Tibet*, London, 1895, pp. 346-352.

ing extract from the ritual of Tārā, the Queen of Heaven, which has been translated in full by the present writer.¹ It is composed in metre.

Invocation.

'Hail! O verdant Tārā! The Saviour of all beings!
Descend, we beseech thee, from thy heavenly mansion at
Potala,
With all thy host² of gods, titans, and deliverers.
We humbly prostrate ourselves at thy lotus-feet!
Deliver us from all distress, O holy Mother!'

Presentation of sacrificial offerings.

'We hail thee, O revered and sublime Tārā!
Who art adored by all the kings and princes
Of the ten directions,³ of the present, past and future.
We pray thee to accept these offerings
Of flowers, incense, perfumed lamps, precious food,
The music of cymbals and the other offerings!
We sincerely beg thee in all thy divine forms⁴
To partake of the food now offered.
On confessing to thee penitently their sins
The most sinful hearts, yea, even the committers of
The ten vices and the five boundless sins
Will obtain forgiveness and
Reach perfection of soul, through thee!
If we have amassed any merit in the three states,⁵
We rejoice in this good fortune, when we consider
The unfortunate lot of the poor (lower) animals
Still piteously engulfed in the ocean of misery.
On their behalf, we now turn the wheel of religion!
We implore thee by whatever merit we have accumulated
To kindly regard all the (lower) animals.
And for ourselves, when our merit has reached perfection,
Let us not, we pray thee, linger longer in this world.'

Hymns in Tārā's praise.

(The hymns are in verse, the metre of which is not here reproduced.)

'Hail! exalted Tārā-the-Saviouress!
Heroic mother, the messenger
Of the three-world Lord,
Rich in power and compassion.

Hail to thee whose hand is decked
By the golden lotus,
Eager soother of our woe,
Ever tireless worker, thou!'

(and so on for 21 verses).

Repetition of the spell and prayer of the deity.

Here is repeated 108 times on the rosary, or, if time presses, as often as possible, the special mystic spell of Tārā in Sanskrit, namely:

'Om! Tā-re tu Tā-re tu-re Svā-hā!'

Prayers for blessings.

'We implore thee, O revered Blessed One,⁶ Victorious and Merciful Mother! purify us and all other beings from the two evil thoughts. . . .

Wherever we dwell, we beg thee to soothe there disease and poverty, fighting and disputes, and increase the true religion. . . .

Let us obtain the favourite tutelary angels⁷ of our former lives and entry into the paradise of the Buddhas of the past, present and future.'

Benediction.

'Now, O mighty Worker, speedy Soother and gracious Mother,
Holding the utpal-lotus flower, may thy glory come and all happiness!'

One of the ordinary hymns to Buddha opens as follows:

'Om! Hail to the Omniscient Ones: Buddha, (His) Law, and (His) Order of Monks!

Hail to the blessed Buddha, the victorious and all-wise
Tathā-gata Arhat, who has gone to happiness!
He is the guide of gods and men.

He is the root of virtue and fountain of treasure.
He is adorned with perfect endurance and all beauty.
He is the greatest flower of all the race.

He is admirable in all his actions, in the eyes of all.

He delights in the faithful ones.

He is the Almighty Power, the Universal Guide.

He is the father of all the Bodhisats,

¹ See Waddell, *Buddhism of Tibet*, p. 435.

² 'khor = 'circle.'

³ That is the four cardinal points, the intermediate half-points, the zenith and nadir.

⁴ This goddess has different forms and names as incorporating all aspects of the primordial divine mother; see Waddell's tr. of Tibetan *Dhāraṇīs*, in *IA* xliii. [1914] 37-95.

⁵ The three mystic worlds of Brāhmanism: desire, form, and formlessness (*kāma*, *rūpa*, and *a-rūpa*).

⁶ *Bhagavatī*, the feminine of *bhagavat*, the ordinary title for Buddha in the Pāli and often in the Sanskrit.

⁷ Lit. 'spirit' or 'gods' (*īha*).

The king of the revered ones and leader of all the dead.
He owns infinite knowledge, immeasurable fortitude.
His commands are all-perfect, his voice all-pleasing.
He is without equal, without desires, without evil.
He delivers all from sorrow, from sin, from worldliness.
His senses are the sharpest. He bravely cuts all knots.
He delivers all from deepest misery, from earthly woes.
He has crossed the ocean of misery.
He is perfect in foreknowledge.
He knows the past, present and future.
He lives far from death.
He lives in the pure land of bliss, whence enthroned he sees all beings!'

6. Rosaries. — The supposed efficacy of the mechanical repetition of prayers as devotional exercises has led in Tibet, as in the Roman Church, to the extensive use of the rosary; and nearly every layman and woman in Tibet carries a rosary to register the performance of these pious tasks. The rosaries are formed of various materials of mystical significance,¹ and the beads reach the mystic number of 108. The leading prayer-spell formulæ recited on these beads are of a Sanskrit character, and are shown in the following table along with the deity or saint to whom they are addressed and the kind of rosary employed.

Deity.	The prayer-spell.	Kind of rosary.
1. Chā-rā-si, Skr. Avalokita.	Om! maṇipadme Huḥ.	Conch-shell or crystal.
2. Dorje jik-je, Skr. Vajrabhairava.	Om! Yamāntaka Huḥ phat.	Human skull or 'stomach'-stone.
3. Chā-na dorje, Skr. Vajrapāṇi.	Om! Vajrapāṇi Huḥ phat.	Raksha-seed.
4. Dō-mā (green), Skr. Tārā.	Om! Tāre tut Tāre ture Svā-hā.	Bodhi - tree wood or turquoise.
5. Dō-kar (white), Skr. Sitā-Tārā.	Om! Tāre tut Tāre mama āyur pun- yedsanyana push- pita kuru Svā-hā.	Bodhi - tree wood.
6. Dorje p'agmo, Skr. Vajravaraṇi.	Om! Sarva Buddha dakkini Huḥ, phat.	do.
7. 'Ozer chān-ma, Skr. Marichi.	Om! Marichyē math Svā-hā.	do.
8. Gon-po nagpo, Skr. Kālanātha.	Om! Śrē Mahākāla Huḥ phat Svā-hā.	Raksha-seed.
9. Nam - se, Skr. Vajravāṇa.	Om! Vajravāṇa-ye Svā-hā.	Nanga - pāni-seed.
10. Dsambha-la, Skr. Jambhala.	Om! Jambhala dsa- endra-ye Svā-hā.	do.
11. Sen-ge-da, Skr. Sinhanāda.	Om! Āhrīh Sinhanā- da Huḥ phat.	Conch-shell or crystal.
12. Jam-yang, Skr. Mañjughoṣha.	Om! Ara-paca-na- dhi.	Yellow.
13. Demchog, Skr. Samvara.	Om! Hrih ha-ha Huḥ Huḥ phat.	Bodhi-tree.
14. Padma - jungnā, Skr. Padmasambhava.	Om! Vajra Guru Padma Siddhi Huḥ.	Coral or bodhi-tree.

7. Graces before meat. — Before drinking tea, the usual beverage, the Lāmas, like the Romans in regard to wine, pour out a little as a libation to the *lares* and other gods. A usual grace for tea is:

'We humbly beseech thee that we and our relatives throughout our life-cycles may never be separated from the Three Holy Ones! May the blessing of the Trinity enter into this drink!'

Then, before drinking, they sprinkle a few drops with the tips of the fingers on the floor or ground, and continue the grace:

'To all the dread local demons of this country we offer this good Chinese tea! Let us obtain our wishes, and may the doctrines of Buddha be extended!'

When any flesh-meat is in the diet, 'Om abhira khecchara, Huṃ!' is repeated to counteract the sin of slaughter and of eating flesh, and by the efficacy of this prayer-spell the animal whose flesh is eaten is supposed to be reborn in a higher state of existence, and even in heaven.

8. Prayer-wheels and prayer-flags. — With the laity the panacea prayer-formula is the ubiquitous

¹ For details see Waddell, *Buddhism of Tibet*, pp. 202-210.

Om manipadme Hum, which is the Pater Noster of Tibetans, though it is of Indian origin. In virtue of the supposed efficacy of its mechanical repetition, it is printed thousands of times on long strips of paper which are coiled inside revolving metal cylinders to form the so-called hand-‘prayer-wheels’ which are the most conspicuous part of the pious outfit of the Tibetans, laity and lamas, and are carried spinning in their hands, in the belief that each revolution of the printed sentences is equivalent to uttering the formula an equal number of times (cf. art. PRAYER-WHEELS). On the ‘prayer-flags,’ which are erected on tall masts in the neighbourhood of temples and wayside shrines, and, fluttering in the breeze, form a very artistic and picturesque feature of the landscape, are inscribed various prayers of an astrological kind, especially for the good fortune of the person erecting these flags, which are really ‘luck-flags.’ Their name *lung-rta* has been shown by the present writer¹ to incorporate the Chinese *long-ma*, ‘horse-dragon,’ which has an analogous ritual. After several spells in Sanskrit we find written in Tibetan:

‘May all the above deities [Avalokita and others] prosper the year [here is inserted the year of birth of the individual votary] and prosper the body, speech, and mind of this year-holder and may the true religion [of Buddha] prosper!’

Analogous paper banners, in the shape of dragons and other animals, are offered also by the Southern Buddhists of Burma at temples and other shrines inscribed with similar sentences in Pali and the vernacular, such as:

‘May the man born on Friday gain reward by this pious offering.’ ‘May the man born on Monday be freed from sickness and the three calamities.’ ‘By the merit of this may Wednesday’s children be blessed by spirits and men.’²

These Tibetan luck-flags are also tied to certain bushes over dangerous parts of streams and near cairns, like the rag-bushes in Muhammadan and other Eastern countries.

LITERATURE.—See the works quoted throughout.

L. A. WADDELL.

PRAYER, BOOK OF COMMON.—I. Introduction.—(a) The English Prayer Book, as we now have it, is a very composite production. A study of the title-page alone is sufficient indication of this. It runs thus:

‘The Book of Common Prayer and Administration of the Sacraments, and other Rites and Ceremonies of the Church according to the Use of the Church of England; together with the Psalter or Psalms of David, pointed as they are to be sung or said in Churches; and the Form and Manner of Making, Ordaining, and Consecrating of Bishops, Priests, and Deacons.’

The cumbrousness of this title is not merely a relic of the days when such prolix titles to books were in fashion, but is also due to the fact that by the middle of the 16th cent. the still recent invention of printing and the constant improvements in it enabled our Reformers to begin to bring together into a single volume all the more necessary services and other materials for public worship, which had as a rule hitherto been copied out with much labour in several separate tomes.⁴ Thus ‘the Common Prayer’ represents the former Breviary (and perhaps we may add the Primer); ‘the Administration of the Sacraments,’ etc., represents the Missal and the Manual; the ‘Psalter’ speaks for itself; and the ‘Form of Making,’ etc., stands for the old Pontifical. This, of course, is far from exhausting the books in use before the Reformation, such as the Hymnary (of which we now have

no authorized representative), the Antiphoner, Lectionary, etc. Some of these (e.g., the Antiphoner) have been almost entirely removed from the services in the present book, the reason being thus stated in the Preface of 1549:

‘For this cause be cut off Anthems, Responsa, Invitatories and such like things as did break the continual course of the reading of the Scripture.’¹

Others are either provided for as by the references in the Table of Lessons or printed in full as in the Epistles and Gospels of the Day, etc., while the use of hymns in numerous unauthorized collections has taken the place of the ancient Hymnary.² The musical notes, however, which the old books often supplied are now wholly wanting,³ except by prescriptive use, though the rubrics in various places contain references to the clerks and their singing, which obviously recognize the place of music in public worship as legitimate; and the Psalter is specially said to be ‘pointed’ for singing or saying⁴ in churches.

In the Ordinal, which was first issued separately in March 1549–50, the most notable omission, when we compare it with the ancient Pontificals, is of any provision for the consecration of churches and for the coronation of the sovereign. It is not easy now to account for this serious oversight, which, at least in the case of opening new churches for public use, has been a great drawback ever since. We have no exact guide as to what was the mind of the Church at that period, and the celebration of the divine mysteries as an essential of the rite has usually been almost entirely lost sight of.⁵

(b) We may now proceed briefly to review the reasons and principles which guided the first compilers of the new book, and which have been accepted in the bulk by all subsequent revisers.

(1) One main reason for the fundamental change of substituting English for Latin throughout is the obvious one and is thus stated in the Preface of 1549: ‘that the people might understand and have profit by hearing the same.’ But it is a mistake to suppose that this was an entirely unheard-of innovation in the reign of Henry VIII. Apart from the fact that it was after all only a return to primitive practice,⁶ it is worth noting that in the marriage service of the unreformed rite the betrothal had from of old taken place in the mother tongue, though the rest of the ceremony was conducted in Latin, while for at least 150 years the private devotions of the laity had been provided for in English by the Primers, which were put forth by authority from time to time.⁷ These contained some of the more important prayers, canticles, etc., from the Breviary offices,

¹ A few traces, however, are left: (1) the reference to the Advent antiphon ‘O Sapientia’ (16th Dec.); (2) the mention of the anthem ‘in Quires and Places where they sing’ at Mattins and Evensong; this rubric, however, dates from 1662; (3) old antiphons have been introduced into (a) the Litany (‘O God,’ etc.), (b) the Burial Service (‘Man that is born,’ etc., and ‘I heard a voice,’ etc.), and (c) the Visitation of the Sick (‘O Saviour,’ etc.), and (d) the collect for the Sunday after Ascension day is an adaptation of an old antiphon.

² Only one metrical hymn is now contained in the Prayer Book, viz. ‘Veni Creator’ (in two versions) in the Ordinal.

³ Merbeck’s notation (1550) was apparently to be the norm at one time; but see Procter and Frere, *New Hist. of the Book of Common Prayer*, p. 421.

⁴ ‘Sing’=recite with musical inflexions; ‘say’=recite in monotone.

⁵ Obviously, if this contention is correct, the usual method of a priest celebrating the Holy Communion before the consecration by the bishop is uncanonical and reduces the Episcopal service almost to a farce. In the order of consecration provided in the American Prayer Book, Holy Communion does form an integral part, though it is rather spoilt by too much attention being directed to Mattins which precede it.

⁶ Cf. A. Fortescue, *The Mass*, new ed., London, 1914, p. 126:

‘There was no idea of a special liturgical language at that time [for the first 2 centuries]; people said their prayers in the vulgar tongue.’

⁷ For the Reformed Primers of Henry VIII.’s reign see Procter and Frere, p. 431.

¹ Waddell, *Buddhism of Tibet*, p. 4121.

² Shway Yoe (J. G. Scott), *The Burman, his Life and Notions*, London, 1882, i. 225.

³ The title originally ended here; until 1662 the Psalter had its own separate title-page and the Ordinal still has, though since 1662 it has also been printed on the front page (see below).

⁴ Cf. the Preface of 1549: ‘by this order the curates shall need none other books . . . but this book and the Bible and . . . the people shall not be at so great charge for books as in time past they have been’ (these words are now omitted).

and thus for a considerable period the more thoughtful and religious lay-folk had become familiarized with a certain portion of the Church services. Still the restoration of the use of the vernacular into public worship—a use which had ceased for many centuries—was a new departure of the very highest importance and was under God due to Henry VIII. and his advisers.¹

The first step taken in that direction was in 1543, when the Canterbury Convocation ordered Lessons from the English Bible to be read at Mattins and Vespers. But the first service proper to be published in English was the Litany in the year following (1544). It is interesting to note that the reason which suggested this was very similar to that which originated litanies in the West in the 5th and 6th centuries, viz. the prevalence of bad seasons and other troubles at home and of wars abroad.

The next step in the same direction was at the beginning of Edward VI.'s reign, when—pending the decision as to the use of English in general—an Order of Communion in English was issued in March 1548. This² contained the Exhortation, Confession, Absolution, the 'Comfortable Words,' the Prayer of 'Humble Access,' nearly as we have them now, and was to be inserted in the Latin Mass before the Communion of the people. The Epistle and Gospel were also to be read in English.

Three other principles guided the Reformers in compiling the Prayer Book, as the original Preface makes clear.

(2) They aimed at clearing away that which was only legendary and calculated to foster superstition:

'Here are left out many things, whereof some are untrue, some uncertain, some vain and superstitious,'

and at restoring the continuous and orderly reading of the Holy Scripture day by day together with the monthly recital of the whole Psalter.

(3) They greatly simplified the forms and ceremonies in vogue:

'The number and hardness of the rules . . . and the manifold changes of the service was the cause that . . . many times there was more business to find out what should be read than to read it when it was found out.'

At first this process was much more drastically carried out in the case of the Daily Offices than in that of the Liturgy proper, where in 1549 a very considerable portion of the ancient usages was retained, whilst those in Morning and Evening Prayer were reduced to a bare minimum—suitable, as it was thought, for the busier members of the laity as well as for others. But later changes (especially in 1552) in the Liturgy itself were far less conservative and liturgically defensible. Even so the first paragraphs of the present Preface drawn up by Robert Sanderson, bishop of Lincoln, and prefixed to the original portion ('concerning the service,' etc.) so late as 1662 still profess

'to observe the like moderation as we find to have been used . . . in former times. And therefore . . . we have rejected all such [alterations] as were . . . of dangerous consequence as secretly striking at some . . . laudable practice of the Church of England or indeed of the whole Catholic Church of Christ.'

(4) They desired uniformity of use throughout the kingdom.

'Whereas heretofore there hath been great diversity . . . some following Salisbury use, some Hereford use, etc. . . now, from henceforth all the whole Realm shall have but one use.'³

¹ Of the two schemes drawn up before 1549 by Cranmer (recently published by Henry Bradshaw Society, vol. I. [1915]) the first retains the Latin language throughout, but the second introduces the use of English for the Lord's Prayer and the Lessons.

² Published by H. Bradshaw Soc., vol. xxxiv. [1908].

³ It is curious to reflect that after the Council of Trent (1563) the Roman Curia followed suit, and since then has rigorously repressed local uses, with rare exceptions.

(5) Yet another principle of the Reformers has so far been taken for granted rather than asserted, except as the use of the English tongue and supplantation of the forms give evidence of it, viz. their intention to give the laity proper facilities for joining in the divine service. This of course specially refers to the Daily Offices. The theory always had been that the people as well as the clergy should attend the day hours in the parish church, though it may be doubted if it was ever very generally put in practice. In 1549 and onwards the aim was to facilitate the practice as much as possible, though still with doubtful success.

The Preface, as it now (since 1662) stands, bids 'all Priests and Deacons to say daily the Morning and Evening Prayer either privately or openly, not being let by sickness or some other urgent cause' (in 1552 'preaching and studying of divinity' had been particularized). 'And the Curate . . . being at home and not being otherwise hindered . . . shall cause a bell to be tolled thereunto a convenient time before he begin, that the people may come to hear God's Word and to pray with him.'

Fresh emphasis was likewise given to the obligation in 1662, when the words 'daily to be said and used throughout the year' were added to the first title of 'Morning and Evening Prayer.'

It should be observed that much of the original Preface recalls the language of Cardinal Quignon's Preface to his Breviary (1535), because it shows that the Spanish Reformer's ideas had clearly as much influence on Cranmer as, if not more than, those of Luther and other less conservative Reformers on the Continent.

2. Historical résumé.—It is now matter of common knowledge that, though a great deal of the work of constructing the Prayer Book had been done in Henry VIII.'s reign, yet the first edition was not actually published till 1549, when Edward VI. had been on the throne more than a year. It was to come into use on Whitsunday, 9th June.¹ But the great and rapid progress made by the extreme Puritan party during this reign availed very soon to bring about much more radical changes, and by All Saints' day 1552 the First was superseded by the Second Book, the contents of which are much more nearly what we are familiar with in our present Book; in fact most of the subsequent modifications have been by way of addition to, rather than alteration of, its text.

Edward died in July 1553, and during the reign of Mary the old unreformed services and ceremonies were restored in their entirety.

When Elizabeth in her turn came to the throne (1558), she had to be content with the fewest possible improvements in the Second Book, which was then again (1559) brought into use: such as the addition of Sunday Lessons, the omission of the petition against 'the Bishop of Rome and his detestable enormities' from the Litany, and the present words of distribution in the Holy Communion, which combine the formulas of 1549 and 1552. By the end of her reign the Puritans had regained such strength that they hoped on the accession of James I. (1603) to get rid of much that they disliked, but at the Hampton Court Conference, to which both sides were summoned, hardly any of their demands were conceded. The most important change was the addition to the Catechism of the part about the sacraments (by John Overall, then dean of St. Paul's, afterwards bishop of Norwich), which the Puritans can hardly have regarded as favouring their views.

The next stage in revision was at the Restoration of Charles II. (1660), when the Prayer Book was brought back into use, after being suppressed during the Commonwealth. In 1661 a conference was held in the Savoy, at which it was again felt

¹ But without the Ordinal at first (see above, p. 205).

impossible to entertain most of the Puritan proposals, such as the doing away with the sign of the cross in Holy Baptism and with the kneeling posture at Holy Communion. A fair number of changes were, however, admitted under the direction of John Cosin, bishop of Durham, and they were mostly by way of distinct improvement. They came into force in the year following (1662).

Another attempt at revision made in 1689 was ineffectual, and not much has been done since then. We may note, however, (a) that of four State services drawn up for occasions of national importance in the 17th cent. only one has been retained since 1859, that for the king's accession (revised 1901); (b) that a new Lectionary was issued with the sanction of Canterbury and York Convocations in 1871; and (c) that a limited permission was given in 1872 to shorten or modify the service and use hymns. Of these changes the first two must be reckoned as of advantage, while the third is of more questionable value. But that the time has come, or ought to have come, when yet another general revision should be taken in hand to meet modern needs on carefully considered and wisely conservative lines is obvious to most thinking Churchmen. But so far only tentative proposals are forthcoming and 'adhuc sub iudice lis est,' though a certain amount of progress has recently been made.

3. The contents of the present Book in detail.—It will not be possible to describe in full the various contents under separate heads. We must be content with drawing attention to salient features as best we can.

(a) *The Preface*.—The first five paragraphs were prefixed in 1662, having been composed by Sanderson of Lincoln and slightly altered by Convocation before approval.

(b) *Concerning the service of the Church*.—Here the original Preface (1549) began; it was probably the work of Cranmer, as was also the section that follows, *Of Ceremonies*; but the latter was transferred from the end of the Book to its present place in 1552, while *Certain notes for the more plain explanation and decent ministration of things contained in this Book* were then expunged.¹ Besides one or two verbal alterations of small importance, three interesting sentences are now omitted. The first has been already quoted (p. 205^a, n. 4), the second justifies the adoption of a single use throughout the realm, and the third, which only in a general way bound to the saying of the Daily Offices such of the clergy as serve the congregation in cathedral and other churches, has given way to the present much more definite and stringent regulation (see above, p. 206).

(c) *The order how the Psalter is appointed to be read* originally contained a special provision for the first three months of the year, by which 31st Jan. and 1st March were to be treated as if they were 1st and 29th (or 30th) Feb. respectively and the rest of the days of the month shifted forward by one (i.e. 1st Feb. became 2nd and so on); and in leap-year on the intercalary day (between the 25th and 26th) the Psalms (and Lessons) of the previous day were to be repeated. The order about repeating 'Gloria Patri' at the end of each Psalm, always provided for in the rubric, was not originally inserted here.

(d) *The order how the rest of the Holy Scripture, etc.*—The original provisions in this section were modified in 1871 to suit the New Lectionary now in use. It is impossible here to compare the old with the new course or to indicate the changes made and the principles of selection.

(e) *The Calendar* proper as published in 1549 contained but few commemorations and of these the only one that calls for notice is [St. Mary] Magdalen (22nd July), because it was at first furnished with a special Introit, Collect, Epistle, and Gospel, but in 1552 all mention of her was removed. The bare name, however, was restored in 1561 together with several other names, St. Anne (26th July) among them.

The list of commemorations underwent various vicissitudes (1561, 1604, 1662) chiefly in the way of addition, though it is not always easy to arrive at the reasons for the selections: some of the saints are very obscure—e.g., Valentine Bp., Nicomede Mart., Enurachus (Evortius) Bp.,² and Machutus Bp.—and there are some notable omissions (e.g., of Eastern worthies).

The following details are to be observed: (1) St. Alban's day, now 17th June, is usually the 22nd, and St. Cyprian's, now 26th Sept., the 14th; (2) the Transfiguration (6th Aug.) was not formally authorized in the West till 1457 (to commemorate the

deliverance of Belgrade from the Turks); it now has a proper Collect, Epistle, and Gospel in the American Prayer Book; (3) the Name of Jesus (7th Aug.) was never a very general commemoration; (4) Enurachus Bp. (7th Sept.) is probably a misprint for Evortius, bishop of Orleans (4th cent.); (5) it is somewhat strange to find the Visitation (2nd July) and Nativity of B.V.M. (8th Sept.) included, since her falling asleep (15th Aug.), a much more general feast-day, is omitted; (6) 'O Sapientia' (16th Dec.) marks the beginning of the series of Advent antiphons before Christmas, though no provision is made for their use in Magnificat during that season; (7) K. Charles Mart. (30th Jan.) was added in 1662 and has been omitted without authority, since the special service of that day was abolished in 1859.

(f) *Tables and rules for feasts and fasts*.—These were first added in 1662, probably at Cosin's suggestion. Hitherto they had been kept according to tradition and custom only, except that in the Calendar the vigils had been marked. It is to be noted, (1) that only the 'red letter' days among the feasts are here mentioned; (2) that the Friday fast is of unusual strictness, being now only relaxed when Christmas falls on that day of the week; the ancient rule extended the relaxation to all Fridays within Easter and Christmastide and those on which a feast falls; and (3) the distinction between fasting and abstinence (as if the latter were less strict than the former) is to some extent a modern (Roman Catholic) innovation.

(g) *The tables for finding Easter* are too technical and elaborate to find treatment in this article (cf. CALENDAR [Christian]). And the same may be said about the 'Ornaments' Rubric, that stands before the Order for Morning Prayer.³

(h) *The Daily Offices*.—Roughly speaking, Morning Prayer is compiled from the mediæval offices of Mattins, Lauds, and Prime, Evening Prayer from those of Vespers and Compline, with certain new elements added to each later. Thus the former, from the first Lord's Prayer (with which in 1549 the service began) to 'Te Deum,' followed the lines of Mattins and, from the second lesson to the third collect (with which it ended), the lines of Lauds. But Evening Prayer was made to conform more to the new Mattins, and therefore the materials taken from the ancient Vespers and Compline were subjected to rather greater changes, though here again the first part up to Magnificat more or less corresponds to Vespers and the latter part to Compline. The opening sentences, Exhortation, Confession, and Absolution, were added to Mattins in 1552 and to Evensong in 1662. The concluding prayers were transferred from the end of the Litany to their present place in 1662. Of these the second was composed in 1604; the others were inserted in 1559, the first dating from 1545 (or possibly 1534) and the third being found in the so-called 'Gelasian' Sacramentary. The fourth concludes the Deacon's Litany before the 'Little Entrance' in the Liturgies of St. Basil and St. Chrysostom. It stands therefore suitably at the end of our Litany, when it is followed by Holy Communion, as was originally intended, but is less suitable at the end of Mattins and Evensong.

(i) *Quicunque vult* before the Reformation had been appointed for daily use at Prime. In 1549 it was turned into English and ordered to be used immediately after Benedictus on the six great festivals; and in 1552 seven saints' days were added, which brought up its recitation to about once a month throughout the year. The direction that it is to be said 'instead of the Apostles' Creed' was added in 1662.

(j) *The Litany* in its present form is perhaps Cranmer's greatest liturgical triumph. Any one acquainted with mediæval litanies will appreciate the mastery skill with which he has by various devices (such as the grouping of petitions drawn from different sources² and the exercising of great wisdom both in selection and in omission³) turned the old forms from barren strings of names and short petitions into an astonishingly rich and satisfactory instrument of devotion—at all events for occasions when humiliation of the soul and deep penitence are timely, even if we could desire an alternative form which should be more suitable for times of uplifting and rejoicing.

As to the second part of the Litany after the Lord's Prayer, it is impossible to give here a complete description of the materials of which it is built up. The first versicle, response, and collect are taken from Luther's Litany; the collect, however, is ancient, being that 'in Missa pro tribulatione cordis' (Sarum); the 'Amen' has never been printed. Then follows a section taken from a litany for Rogationtide; it consists of anthem and psalm with 'Gloria Patri'; only (perhaps by accident) the repeated anthem⁴ precedes the 'Gloria' instead of following it, as it ought to do. The versicles and responses,⁵ which come next, ought properly to be sung by the clerks: they were for special use 'in tempore belli' in the Sarum use.

¹ Much that is reasonably and usefully to be said on opposing views of this rubric will be found in F. C. Eeles' tract no. 17 in Mowbray's *Churchman's Penny Library* and in G. Harford's art. s.v. in *Prayer Book Dictionary*, p. 516 ff.

² Not only did he use the old Roman forms, but he also used Luther's Litany (1529) and the Deacon's Litany in the Liturgy of St. Chrysostom.

³ At first (1544) invocations of St. Mary Mother of God, the angels, blessed spirits, patriarchs, etc., were retained, but in 1549 they were removed.

⁴ The variation in the anthem is unusual.

⁵ The address 'O Son of David' probably stands for the original 'Fili Dei vivi,' as if it were 'Fili Davidis.'

¹ But partly incorporated (much modified) in the rubrics at the beginning of Morning Prayer.

² Not included in the Elizabethan Calendar (1561), but added in 1604, perhaps because it had been Elizabeth's birthday and therefore a public holiday for some years. Similar national or even local reasons may have guided the selection in other cases (e.g., St. Audrey [17th Oct.], the great E. Anglian fair-day).

The concluding versicle, response, and collect are freely adapted from the Sarum Rogations. The Grace (2 Co 13) was added in 1559.

(k) *Holy Communion*.—We here deal mainly with the present order, characterizing the contents *seriatim* as briefly as may be.

The first Lord's Prayer and the Collect for Purity appear in the Latin rite among the private devotions of the priest before the Mass; hence perhaps comes his repeating the former alone, 'Amen' and all.

The Ten Commandments have been a special feature of our service since 1552.¹ Apparently they are intended to recall or represent the *Lectio Prophetica* (the OT lesson) of the early Liturgies. Their present use with the tenfold (instead of the former ninefold) repetition of 'Kyrie eleison' (specially applied to each individual soul) is a very happy inspiration of Cranmer's, to which, in spite of certain difficulties of interpretation and application, English Christianity owes much of its certainty as to the true standard of good living.

The (alternative) *Collects for the King*, composed in 1549, were then ordered for use after the collect of the day, not before as now.

The *Collects proper* may be divided into three classes: (i.) those which belong to the pre-Reformation period, some of them as old as the 'Leonine' or 'Gelasian' or 'Gregorian' books;² (ii.) those first issued in 1549; (iii.) those issued in 1662. But it must be remembered that many of the older forms have received important additions or modifications in either 1549 or 1662 or at both dates.

As to the *Epistle* (during which the right position for the people is that of sitting), it is worth noticing that out of 90 passages chosen seven are taken from Isaiah or one of the Prophets (only one of these being for a Sunday, viz. that next before Advent), thirteen out of the Acts, and four out of the Revelation (of which two are from the last book for Sundays, viz. Whitsunday and Trinity Sunday).

As to the *Gospel* (for which the rubric especially orders the people to stand), all that need be said is that the ascription before ('Glory be,' etc.), inserted in 1549 was removed in 1552 and was not restored in 1662, though Cosin desired it and it had been inserted in the Scottish Office (1637) together with 'Thanks be,' etc., afterwards.

The rubric ordering a *Sermon* after the Creed is one of the very few references to preaching during service in the Book, the others being in the baptismal and marriage services, while in the Ordinal the Sermon is put before the Litany instead of in the usual place. The traditional and natural place for exhortation or exhortation is after the reading of God's Word.

Offertory sentences.—In 1549 one or more of these were to be sung 'where there be Clerks'; but this direction was removed in 1552 and now only the saying of them by the priest is mentioned.

The *Prayer for the Church* (+ *Militant here in earth*, 1552).—This portion of the Canon of 1549 was separated from the consecration of the elements and placed here in 1552; and at the same time the Lord's Prayer,³ with which in accordance with ancient use the Canon ended, was placed after the Communion of the people as now, and the first of the two following prayers was likewise cut off and put separate, as an alternative to the Thanksgiving.

It is to be observed (1) that with the Church militant are now included 'all thy servants departed this life in thy faith and fear' (which is strictly inaccurate), and (2) that 'oblations' are generally considered to mean the sacred elements in contradistinction to the 'alms' for the poor; but there are grounds for holding that they more correctly refer to the people's contribution to the support of the clergy or their offerings in general.

The three *Exhortations* which follow are a special feature of our Book originally introduced in 1549; since then they have been subjected to many changes, and are still printed, though but seldom used, the need of them having now in a large measure gone. Nevertheless, they contain much valuable teaching and advice, though some of it has given rise to unfortunate misunderstandings (e.g., as to the 'unworthiness' of those who receive). The first is for ordinary use in giving notice of Communion, and suggests the lines on which private confession to a minister is desirable in the English Church; the second (attributed to Peter Martyr) is to be substituted when there is negligence as to attendance; the third is to be used at the Communion itself, after the communicants have been 'conveniently placed' for the reception. No reference to the withdrawal of non-communicants now remains.

The section from 'Ye that do truly,' etc., down to 'We do not,' etc., came after the Consecration and immediately before the people's Communion at first (see above, p. 206). It was

removed to its present much less appropriate position in 1552, the Prayer of 'Humble Access' being then separated from the rest of the section by the first part of the Canon.

The Canon began with 'The Lord be with you, R and with thy spirit,' in 1549, in accordance with ancient usage; but this was omitted in 1552. It is now much broken up, and other traces of unobjectionable pre-Reformation beliefs and practices besides those mentioned have been obliterated. In particular the beautiful Epiclesis of 1549 has gone: 'With thy holy spirit and word vouchsafe to bless and sanctify these thy gifts and creatures of bread and wine, that they may be unto us the body and blood of thy most dearly beloved Son Jesus Christ.' The directions for the manual acts, removed in 1552, were brought back in 1662.

The present form of words at the people's Communion happily combines both the forms of 1549 and 1552 and dates from 1559 (see above, p. 206).

The second post-Communion prayer of thanksgiving was composed in 1549 and then stood alone, but is now (since 1552) an alternative for the prayer of oblation (see above).

The '*Gloria in Excelsis*' in 1549 occupied its ancient place between the 'Kyrie' and the collect, but was removed in 1552 to the end of the service; and, though this position is contrary to all precedent, it may justly be considered a fitting conclusion to our worship.

The *Blessing* (1549) is likewise a distinct improvement on the rather abrupt ending of the Roman Mass ('*Ita: missa est*'), to which, however, since 1604 an appendix with a short blessing has been added.⁴

The last six collects, of which the first, second, and fourth are old and the rest date from 1549, were originally appointed for use 'after the offertory, when there is no Communion,' but may now be used at other times.

(l) *Holy baptism*.—Of the three offices now supplied the first, as issued in 1549, was mostly derived from the ancient services considerably modified and simplified. From the first the use of salt and the *Ephphatha* were omitted, but the chief points then retained and now since 1552 given up are the exorcism, the anointing, and the chrism; the interrogations, the sign of the Cross, and the reception into the Church are, however, still kept. The novel feature is the insertion of the several exhortations suggested by Luther's *Baptismal Book* and Hermann of Cologne's *Consultatio* (1543).

A second form (for private baptism and subsequent reception into the Church, if the child survived) also appeared in 1549 and has always been retained with such modifications (esp. in 1662) as were required to safeguard the validity of the sacrament and also to bring it into conformity with the first office as altered in 1552.

The third form (for baptism of adults) was inserted in 1662 (George Griffith, bishop of St. Asaph, being the chief member of the committee that drew it up) to meet the growing needs of the natives in our 'plantations' (=colonies) and others converted to the faith (from anabaptism, etc.). It follows the lines of the first office with such adaptations as are appropriate, and the rubric prefixed definitely recognizes (1) that the bishop is ultimately responsible for the administration of the sacrament 'per se vel per alium,' and (2) that fasting as well as instruction and prayer should form part of the candidate's preparation.

(m) *Catechism*.—The former part was drawn up and issued in 1549 and has not been altered since. The latter part (on the sacraments of the Gospel) was due to Overall, dean of St. Paul's in 1603. In spite of certain defects,⁵ which need rectifying, the whole is a valuable manual of elementary instruction in Christian doctrine, so far as it goes.

(n) *Confirmation*.—The order in 1549 began at 'Our help,' etc., and included the signing on the forehead as well as the laying on of hands; but the former of these ceremonies was abolished in 1552 and the present prayer at the imposition of hands substituted for the older form. The preliminary exhortation, which incorporates the substance of a former rubric (and this accounts for its complete inappropriateness)⁶ together with the bishop's question and the answer, were not added till 1662. This addition has had the unfortunate effect of obscuring the true meaning of the rite in the minds of many.

(o) *Holy matrimony*.—This office has remained without any change of much importance since 1549. But the following are of sufficient interest to be noted: (1) a phrase in *parentheses*, 'after bracelets and jewels of gold given of the one to the other for tokens of their matrimony,' after 'as Isaac and Rebecca' in the prayer 'O Eternal God,' etc., was omitted in 1552, when the words in the rubric which suggested it were also omitted: 'a ring, and other tokens of spouseage as gold or silver'; (2) the phrase about the sending of 'thy Angel Raphael to Tobias and Sarah the daughter of Raguel' was altered to the sending of 'thy blessing upon Abraham and Sarah' in the prayer 'O God of Abraham,' etc. (an undoubted improvement); (3) the phrase 'loving . . . husband' in the prayer 'O God who,' etc., was substituted in 1662 for a quaint reference to the wifely virtues of Rachel, Rebecca, and Sarah which had stood there hitherto; (4) before the address in 1549 the rubric ran: 'Then shall he begin the Communion, and after the Gospel shall be said a Sermon,' etc., whilst another rubric required the newly-married persons to receive the Communion the same day. These indica-

¹ See Fortescue, p. 392 ff.

² E.g., the answer does not usually contain the gist of the question; the unity of God is not established, and there is no mention of the Church and its constitution.

³ See F. H. Chase, *Confirmation in the Apostolic Age*, London, 1909, p. 13 n.

¹ In the Nonjuror's Prayer Book (1718) Mt 22:37-40 was substituted for them. The Scottish Office (of 1764) allows these verses as an alternative for the Decalogue. The present American Prayer Book (1892) allows the alternative only on days when the Decalogue has already been recited.

² This nomenclature is misleading, but much of their contents belongs to the 5th cent. at least. The great majority of the 'Sarum' Collects are drawn from them.

³ The present position of the Lord's Prayer here seems to be in accordance with a principle of the Reformers noticeable elsewhere; it occupies a similar position at Baptism, Confirmation, Matrimony, and Burial, i.e., when the principal or essential ceremony has been performed.

mons of the retention of a nuptial mass were not obliterated till 1662, when the present rubric before the address was substituted, and afterwards it is only stated to be 'convenient' (i.e. suitable) that they should communicate at the first opportunity.

(p) *Visitation of the sick*.—After the salutation the form in 1549 proceeded with Ps 143 (omitted 1552). The second collect, 'Hear us,' etc., made mention of Peter's wife's mother, the captain's servant, and Tobias and Sarah preserved from danger by the angel, in 1549; the last reference was omitted in 1552, and the other two in 1662, when the present form was adopted.

The second part begins with an exhortation and proceeds to an examination of the sick person with a view to his confession and absolution, if he feel his conscience troubled with any weighty matter (on the lines laid down also in the Holy Communion Office (see above)). Since 1662 the sick person is to 'be moved' to do this; previously it had been left to his own initiative. The form of absolution here is naturally more authoritative and personal than those in the Daily Offices and at Holy Communion.

The third part consists of collect (partly old) and Psalm 71 with anthem ('O Saviour,' etc.) and blessing. The commendation to God's mercy was added in 1662 and also the appendix (containing four well written though somewhat long occasional prayers).

A service for anointing the sick if desired, which was included in 1549, has been omitted since 1552.

(q) *The Communion of the sick*.—The present form (with certain alterations in 1662) has been in use since 1552, when preservation of the sacrament for the sick in the modified form of 1549 was abolished.

(r) *Burial of the dead*.—The present form dates practically from 1552, when the definite expressions of prayer for the dead and the provisions for Holy Communion made in 1549 were omitted. The last 'collect' was originally the collect at the Communion. The alternative Psalms were not added till 1662; and the lesson was then transferred to its present place, having previously been read at the grave between the anthem ('I heard a voice,' etc.) and the Lesser Litany. The Grace was added in 1662.

(s) *Churching of women*.—The title (1549) was 'Purification of women,' altered to its present form in 1552. In the first rubric (1) the phrase 'decently apparelled,' added in 1662, is thought to refer to the old custom of wearing a veil, which had been discarded during the Commonwealth; (2) the words 'convenient place' had been more carefully defined as 'nigh unto the quire door' (1549), or 'nigh unto the place where the Table standeth' (1552). Ps 121 (1549) was replaced by Ps 116 and the alternative Ps 127 also added in 1662. The final rubric shows that the office is intended as the woman's preparation for Communion.

(t) *A Communion* was for use on Ash Wednesday only in 1549. The present title was given to the service in 1552, when it was ordered to be used at 'divers times in the year.' Its use on Ash Wednesday was again specified as well in 1662.

The opening address advocates the restoring of the primitive church discipline of open confession and penance, which had gradually given way to private confession (whether occasional or regular). The final prayer of humiliation by minister and people is called an 'anthem to be said or sung' in 1549. The special form of Blessing (from Nu 6²⁴) was added in 1662.

(u) *Prayers to be used at sea*.—Those were first inserted in 1662, though some provision of the sort had been made previously in 1644 by order of parliament.

(v) *The Ordinal* (see above, p. 205).—The Preface was altered in 1662 (1) better to guarantee episcopal ordination after the laxity which had prevailed during the Commonwealth, (2) to raise the age of deacons from 21 to 23, (3) to restrict the times of ordination usually to the Ember seasons.

The present rubric (1662) orders candidates for either the diaconate or the priesthood to be 'decently habited.' The exact meaning of this is doubtful; probably it was intended to restore such distinctive clerical attire (e.g., cassock, surplice, and hood) as had fallen into desuetude during the Commonwealth, and that is how it is now interpreted. In 1550 they were to wear 'a plain alb'; in 1552 no direction is given at all. So, too, in 1550 the 'Gospel Deacon' was to put on a tunicle (for which see also the 4th rubric before Holy Communion [1549]). But since 1552 this direction has been omitted.

The special petition in the Litany did not actually mention either the deacon's or the priest's office till 1662; in fact the petition was omitted altogether in 1559.

Since 1865 the Oath of the Royal Supremacy has not been administered to either priests or deacons during the service.

The present Gospel (Lk 12³⁶) at the *Making of Deacons* was substituted for the Gospel of the day in 1662.

In the *Ordering of priests* the first presentation of candidates came after 'Veni Creator,' which followed the Gospel, till 1662, when the present arrangement was made.

The present Epistle (Eph 4⁷) was substituted for two others, which were alternative, in 1662.

In 2019² has been a third alternative Gospel (for priests) in 1552, but this was omitted in 1662 and is now one of three alternatives at the consecration of bishops.

Veni Creator.—The first and shorter version (in all probability by Cosin) was added in 1662 and is far superior to the diffuse anonymous version of 1550, which has been slightly touched up and improved since then but is very seldom used.

The *Commission* 'Receive the Holy Ghost.'—The very important addition 'for the Office and Work of a Priest . . . hands' was made in 1662.

The ancient ceremony of handing 'the chalice or cup with the bread' to the priests has been omitted since 1562.

In the *Consecration of bishops* the collect was added and the present selection of Epistles and Gospels was made in 1662. There has been no *traditio instrumentorum* since 1552; in 1549 the bishop elect received the pastoral staff and the Bible was laid on his neck. The present vaguer injunction (to read and be a good shepherd) was substituted in 1552. In 1550 he was to wear a surplice and cope; so likewise were the bishops who presented him (also their staffs); in 1552 no direction was given; the present rubric 'vested with his rochet' was added in 1662.

(w) *Accession service*.—This is now the only survivor of four State services (see above, p. 207). The present revision, which provides three separate forms, was made in 1901 and is on sound liturgical lines. We may note in particular the careful way in which the method of pointing preserves the composite character of 'Te Deum.'

(x) *The Articles of Religion* (1571), though usually printed in the volume, form no proper part of our Prayer Book.

LITERATURE.—Of the large number of books that have been published on the subject only some of the more practically useful (and mostly more modern) are here mentioned.

(a) The Irish Prayer Book, 1877; the Welsh (only a tr. from the English), 1867 and onwards; the Scottish, 1837; the Communion has important differences which have undergone various vicissitudes (see J. Dowden, *Annotated Scottish Com. Office*, London, 1884); the American, 1789; alterations have since been made in 1877, 1886, 1889, and 1892.

(b) C. Wheatley, *A Rational Illustration of the Book of Common Prayer*, ed. G. E. Corrie, Cambridge, 1858; W. Palmer, *Origines Liturgicæ*, Oxford, 1845; J. H. Blunt, *Annotated Book of Common Prayer*, London, 1866; F. Procter, and W. H. Frere, *New Hist. of the Book of Common Prayer*², do. 1902; *Teacher's Prayer Book*, ed. A. Barry, do. 1882; *Prayer Book Commentary*, ed. F. E. Warren, do. 1906; J. H. Maude, *Hist. of the Book of Common Prayer*, do. 1890; Leighton Pullan, *Hist. of Book of Common Prayer*, do. 1900; E. Burridge, *Liturgies and Offices of the Church*, do. 1885; W. E. Scudamore, *Notitia Eucharistica*², do. 1876; J. Dowden, *Workmanship of the Prayerbook*², do. 1902; *Further Studies in the Prayerbook*, do. 1908; H. B. Swete *Church Services and Service-books before the Reformation*, do. 1896; *The Prayer Book Dictionary*, do. 1912; F. E. Brightman, *The English Rite*, do. 1915; *Cranmer's Liturgical Projects*, ed. Henry Bradshaw Society, I. [1915]; W. H. Frere, *Some Principles of Liturgical Reform*, London, 1911; C. Gore, *Body of Christ*, do. 1901; J. Wordsworth, *Ministry of Grace*, do. 1901.

C. L. FELTOE.

PRAYER FOR THE DEPARTED (Christian).—I. The custom earlier than the development of doctrine.—That prayers for the faithful departed do not, as a matter of history, depend necessarily on any particular doctrine of the intermediate state between death and judgment is seen from the fact that they existed long before the doctrines on that subject were developed. Even in comparatively late times the form of the prayers for the departed was framed before the teaching was stereotyped. The only thing that the custom necessarily assumes is that the departed, or some of them, can make progress in holiness after death and before the Last Day.

The custom does not necessarily even assume that the departed are conscious; for it is quite conceivable that progress might be made by an unconscious soul. But it was the practically universal belief of Christian antiquity that the souls of the departed, good and bad, are conscious, the belief being based chiefly on passages such as the promise to the penitent robber (Lk 23⁴³), the descent of our Lord to Hades (1 Pt 3¹⁸, 4⁶ etc.), the parable of Dives and Lazarus (Lk 16¹⁹), and on the desire of St. Paul to be absent from the body and at home with the Lord, to depart and be with Christ (2 Co 5⁸, Ph 1²³).

This article, then, will not deal with doctrines about the intermediate state except so far as it is necessary to refer to them in order to explain the historical custom of prayers for the departed.

2. Jewish background of the custom.—It was only in the two centuries immediately preceding the Christian era that Jewish conceptions about the dead were developed. But in 2 Mac 12³⁰⁻⁴⁴ we find prayers for the departed mentioned and defended. For the soldiers who had fallen, when it was discovered that under their garments were consecrated tokens of idols and that this was the cause of their death, their companions 'betook themselves unto supplication, beseeching that the sin committed might be wholly blotted out'; and Judas Maccabæus sent alms to Jerusalem to offer a sacrifice for sin. This the writer justifies, because of the resurrection: 'If he were not expecting that they that had fallen would rise again,

it were superfluous and idle to pray for the dead.' This book is an abridgment of a lost work by Jason of Cyrene (2nd). Jason wrote c. 150 B.C., and the abridgment was made between that date and the destruction of Jerusalem (A.D. 70). The passage in question probably shows the existence among the Jews of the custom under consideration in the 2nd cent. before our era; but whether Judas extended it beyond the limits afterwards approved by the Christians (below, § 6) is another matter. That Jews inscribed on their tombstones words similar to 'Requiescat in pace,' and that in later times (as at the present day) they habitually prayed for the dead, is universally agreed; but the dates of the tombstones are uncertain (for the evidence on these heads reference may be made to Luckock, *After Death*³, pp. 56-65). It has often been said that the Jews would never have borrowed the custom from the Christians. This is a line of argument which history shows not to be very safe; but in this case we have the evidence from 2 Mac. for the early existence of prayer for the dead among the Jews. We must not, however, push this argument too far; the practice was, almost certainly, not universal among the Jews at the beginning of our era, for the Sadducees would not have used it. And it is hazardous in any case to say that our Lord approved everything in the teaching of the Jews which He did not condemn.

3. Early Christian evidence.—The silence of the very earliest ages on the subject is somewhat remarkable, in view of the fact that the custom was in existence among the Jews. Our Lord does not refer to it. A phrase in the Pastoral Epistles (2 Ti 1¹⁸) has been not unnaturally judged to be a prayer for Onesiphorus after his death (see the context, v. 16 4¹⁰). The wording is not much more than a pious wish: 'the Lord grant unto him to find mercy of the Lord in that day.' The lately-discovered liturgical portion of Clement of Rome's *Epistle to the Corinthians* (59-61), though it contains intercessions for the living, has none for the departed (c. A.D. 96). The *Didache* (c. A.D. 120 ?) in its prayers at the agape (or eucharist) only prays God to remember His Church and deliver it from all evil, perfect it in His love, and gather it together from the four winds (§ 10)—a petition which must by its wording include the whole Church, but does not explicitly mention the departed.

We find, however, copious evidence of prayers for the departed in the catacombs, usually in the simple form 'Mayest thou live in peace,' or the like. There are some inscriptions asking those who come to the catacombs to pray for the deceased person (Swete, in *JThSt* viii. 502). The exact dates of these are uncertain, but they are undoubtedly ancient. An inscription in Phrygia gives the remains of the epitaph made for himself by Avircius (Abercius) Marcellus, bishop of Hieropolis, in the 2nd century. This is also given by other authorities, and has been restored by Lightfoot (*Apost. Fathers*, pt. ii., 'Ignatius and Polycarp,'² London, 1889, i. 496); it contains this line: 'Let every friend who observeth this pray for me' (the extant inscription breaks off before this). For Perpetua's prayer for the dead at the end of the 2nd cent. see below, § 6. Tertullian (*de Monogam.* 10 [c. A.D. 217]) bases an argument against remarriage on the fact that the widow prays for her deceased husband that he may have refreshment and fellowship in the first resurrection. Of later writers it is necessary to mention only Eusebius, who describes how all the people, with the priests, prayed for Constantine's soul after his death (A.D. 337; *Vita Const.* iv. 71).

4. Prayer for the departed in public worship.—This first appears in Tertullian, who, however,

does not treat it as a novelty; and for some time we have no absolutely certain evidence of it outside the province of 'Africa.' We read of eucharists for the departed on their anniversaries, 'as birthday honours,' in Tertullian (*de Cor* 3, *de Monogam.* 10); and so in Cyprian (*Ep.* xxxix. [xxxiii.] 3, on the ordination of Celerinus) we read of them being offered for the repose even of martyrs and confessors on their anniversaries (see also § 6 below). At the end of the 3rd cent. the 'African' Arnobius speaks of the Christian churches (*conventicula*) in which 'peace and pardon are asked for all . . . for those still living and those freed from the bond of the bodies' (*adv. Gentes*, iv. 36). Such anniversaries were apparently known to Origen, who testifies to the reading of Codex Claromontanus in Ro 12¹³ of *μνηταις*, 'memorials,' for *χρηταις*, 'needs' [of the saints]; but some think that this passage is due to Rufinus's Latin translation and not to Origen.¹ Two references in the *Canons of Hippolytus* (xxxiii. [ed. H. Achelis, *TU* vi. 4 (1889), § 169 f.], and in E. Hauler's *Didascalie Apostolorum Fragmenta Veronensia Latina*, Leipzig, 1900, p. 85), which, though themselves perhaps of the 4th cent., yet, if so, adhere closely to a 3rd cent. original, attest memorial eucharists for the departed at the time when they were written, and perhaps 100 years earlier. In the 4th cent. memorial eucharists are constantly attested—e.g., in the *Apostolic Constitutions* (vi. 30 [c. A.D. 375]), which say that they were held in cemeteries (so the *Verona Fragments*, as above); in pseudo-Pionius (*Life of Polycarp*, § 20 [Lightfoot, iii. 452]), who says that at the funeral of Bishop Bucolus (Polycarp's predecessor at Smyrna; early 2nd cent.) 'they offered bread for Bucolus and the rest' (we can only take this as evidence for the 4th cent., when the *Life* was written); in Ambrose (*de Excessu Satyri*, i. 80, ii. 5, and elsewhere), who speaks of the eucharists on the solemn anniversaries of the departed. An earlier example is in the Leucian *Acts of John*, which speak of a eucharist on the third day after death at a grave; but the date is not quite certain. Augustine describes the eucharist at the grave when his mother Monica was buried (*Conf.* ix. 32 [12]), and says that it was a universal custom, because eucharist and alms help the departed (*Serm.* clxxii. 2). We also read of an agape, or commemorative feast, for the departed (e.g., *Can. of Hipp.*, loc. cit.; *Apost. Const.* viii. 44; see also art. AGAPE). And we frequently read of alms being given for the benefit of the dead; in the *Testament of our Lord* (c. A.D. 350 ?) they are taken out of the deceased's possessions and given to the poor that he may be profited (ii. 15, 23).

As the earliest written liturgies known to us are of the 4th cent. (but see below), we cannot tell whether the departed were prayed for at the ordinary eucharists before that time; and, indeed, the intercessions were probably developed into fixed forms somewhat later than the other parts of the service (see art. INTERCESSION [Liturgical]). In the early liturgy known as the Old Ethiopic, which some believe to be a translation of Hippolytus's liturgy of the 3rd cent., there is no intercession given (Brightman, *Liturgies Eastern and Western*, i. 189). But we find the departed prayed for either in the 'Great Intercession' or in the 'people's prayers' given in the *Testament of our Lord*, by Cyril of Jerusalem (A.D. 348), by Sarpapion, bishop of Thmuis in Egypt (c. A.D. 350), in the *Apostolic Constitutions* (bk. viii.), and the *Arabic Didascalie* (c. A.D. 400 ?), as in all the

¹ Origen is clear that the departed pray for the living—e.g., *Com. in Ep. ad Rom.* ii. 4. So the *Testament of Abraham*, § 14, a work probably of the 2nd cent. A.D. (ed. M. E. James, in *TS* ii. 2 [Cambridge, 1892], p. 94).

Great Liturgies of the following ages. Sarapion also gives a prayer for the departed, to be used at a funeral (§ 18).

5. **Purport of the prayers.**—In several of our authorities the language is severely restrained, the prayers being, as in Sarapion, for the repose of the departed in 'chambers (*trapezoi*) of rest' and for his resurrection 'in the day which thou hast ordained,' and that his transgression and sins be not remembered (§ 18), or, as in the prayer which follows the recitation (*ὑποβολή*, lit. 'prompting') of the names of the departed at the eucharist, for their sanctification. So in the *Testament of our Lord* the prayer is for a place of rest and remembrance (i. 23, 35). Note especially the oration of Gregory of Nazianzus on his brother Cæsarius (c. A.D. 369). He prays for him that he may have an entrance into heaven, and enjoy 'such repose as the bosom of Abraham affords, and behold the choir of angels and the glories and splendour of sainted men and share their joy,' etc. (§ 17). Nothing is said of suffering for sin. Compare also Gregory's oration on his deceased sister Gorgonia (§ 23). Many of the Great Liturgies have an equally restrained prayer for the dead: the Byzantine 'St. Basil' and 'St. Chrysostom' (Brightman, i. 332, 388); the Greek 'St. Mark' (Egyptian *ib.* i. 129), which asks for them rest and that they be made worthy of the Kingdom of Heaven, and for us a Christian end; the Coptic (*ib.* i. 170), which has nearly the same language, but somewhat amplified; the Greek 'St. James' (Syrian rite *ib.* i. 57); and the Armenian (*ib.* i. 440).

In other cases the forgiveness of the sins of the departed is explicitly prayed for. In Arnobius we find the first instance of this (above, § 4), though perhaps he means 'pardon' for the living and 'peace' for the dead. But forgiveness of sins is emphasized by Augustine (*Conf.* ix. 34 f. [13]; he is speaking of his mother Monica); and so in the *Apostolic Constitutions* (viii. 41: 'that God . . . may forgive him every sin, voluntary and involuntary'), and in several of the Great Liturgies, as in the Syriac 'St. James' (Brightman, i. 95), the E. Syrian 'Addai and Mari' (*ib.* i. 265); and in the West in the Leonine, Gregorian, and Gelasian sacramentaries (for the Gregorian see H. A. Wilson's ed., Henry Bradshaw Soc. [London, 1915] p. 209, etc.). Theodoret tells us (*HE* v. 36) how the emperor Theodosius II., when the body of St. Chrysostom was brought to Constantinople, laid his head against the bier and 'prayed for his parents and for pardon on them who had ignorantly sinned, for his parents had long ago been dead.' Augustine (*Enchiridion*, 29) uses the word 'propitiation.' Cyril of Jerusalem had already spoken of 'propitiating our merciful God both for them [the departed, 'though they be sinners'] and for ourselves' (*Cat.* xxiii. [*Myst.* v.] 10).

6. **Who were prayed for.**—(a) There seems to have been a difference of opinion in Christian antiquity as to whether all the faithful departed should be prayed for, or the martyrs and great saints should be excepted. Cyprian (*Ep.* xxxix. [xxxiii.] 3) speaks of offering sacrifices for certain martyrs 'as often as we celebrate the passions and days of the martyrs in the annual commemoration.' At the end of the 3rd cent., in 'Africa,' Arnobius makes no limitation (see above, § 4: 'for all'). In the 4th cent. also there is no limitation in the prayers in the *Testament of our Lord* (i. 23, 35), and Epiphanius of Cyprus expressly says:

'We make our memorial on behalf of righteous and of sinners; on behalf of sinners praying for the mercy of God, and on behalf of righteous and fathers and patriarchs, prophets, and apostles and evangelists and martyrs and confessors, and bishops and anchorites and all the estate (*τάγματος*) [of man], that we may separate the Lord Jesus Christ from the order

(*τάξεις*) of men by means of the honour given to him, and that we may render worship (*σεβας*) to him, remembering that the Lord is not to be put on the same footing with any man' (*Hær.* lxxv. 8).

Already, it seems, there was a tendency to exalt the greatest saints to a superhuman position.

In Syria the *Apostolic Constitutions* mention assemblies in the cemeteries with lections and with psalm-singing (*ψάλλοντες*) on behalf of (*ὑπέρ*) the martyrs and all saints who have fallen asleep (vi. 30), and the liturgy in bk. viii. explicitly says:

'We offer to thee also on behalf of all the saints who from the beginning have pleased thee, patriarchs, prophets, just men, apostles, martyrs, confessors,' etc. (ch. 12).

In the era of the Great Liturgies the same feeling still survived in some Churches. The Greek 'St. Mark' prays for rest and remembrance for the souls of the patriarchs, prophets, apostles, martyrs, confessors, and others, including St. Mark himself by name (Brightman, i. 128). In the Byzantine rite the Greek 'St. Chrysostom' and the Armenian liturgy have an almost identical prayer (*ib.* i. 387 f., 440).¹

On the other hand, there was a tendency in some circles in the 4th cent. to abstain from prayers for the martyrs and the greatest saints. Cyril of Jerusalem, speaking of the Great Intercession in the eucharist, makes a distinction:

'We commemorate . . . first patriarchs, prophets, apostles, martyrs, that at their prayers and intervention God would receive our petition. Afterwards also on behalf of the holy fathers and bishops who have fallen asleep before us, and, in a word, of all who in past years have fallen asleep among us, believing that it will be a very great advantage to the souls, for whom the supplication is put up, while that holy and most awful sacrifice is presented' (*Cat.* xxiii. [*Myst.* v.] 9).

Augustine (*Serm.* clix. 1) expressly denies that martyrs are prayed for, though they are commemorated at the altar; and he considers that it is an insult (*injuria*) to pray for a martyr, 'to whose prayers we ought to commend ourselves.' And we see the same feeling in several of the Great Liturgies—in the Greek 'St. James' (Syrian rite [Brightman, i. 47 f.]), the E. Syrian 'Addai and Mari' (*ib.* i. 264), and the Abyssinian Liturgy (*ib.* i. 206, 208, 228 f.). The Coptic takes a middle line (*ib.* i. 169). It asks for rest and remembrance for all the great saints, including the 'holy Theotokos Mary,' but goes on to say:

'Not that we . . . are worthy to intercede for their blessedness . . . but . . . that . . . they may in recompense intercede for our poverty and weakness.'

The question depended much on whether it was believed that the greatest saints have already received their full reward or await it at the Last Day. That they have already received it is denied by Justin Martyr (*Dial.* 80) and Irenæus (*Hær.* v. 31). Tertullian (*de Anima*, 55, *de Res. Carn.* 43) makes an exception only in the case of the martyrs. In the 3rd cent. Origen makes no exception (*Hom. in Lev.* vii. 2: 'not even the apostles have yet received their joy'). So, indeed, Augustine, though with some hesitation, makes the Last Day the time for all the faithful to receive their complete reward (*Serm.* cclxxx. 5). But gradually in the West the view prevailed that all the great saints, whether martyrs or not, are already reigning with Christ, and ought not to be prayed for (for a review of belief on this subject see A. J. Mason, *Purgatory*, pp. 81–96).

(b) There was a general feeling that it was of no avail to pray for the heathen departed, for any but the baptized. There might, indeed, be an exception, especially in times of persecution, in the case

¹ This article is not concerned with the subject of the invocation of saints; but, as an illustration of the feeling expressed in these authorities that all the faithful departed are of one class, it may be mentioned that the Greek Orthodox Church at the present day habitually invokes the prayers, not only of the saints, but of departed relatives, whether they were especially saintly or not. There is a beautiful poem by Alexis Khomiakoff, asking his dead children to pray for him (Birkbeck, *Russia and the English Church*, p. 21).

of a catechumen who desired baptism but died before he could receive that sacrament. The *Canons of Hippolytus* (x., ed. Achelis, § 63) say that catechumens are already 'Christians,' and so the 7th canon of the Council of Constantinople (A.D. 381). The former work (xix. [101]), the *Egyptian Church Order* (Sahidic, § 44), and the *Testament of our Lord* (ii. 5) recognize a martyred catechumen as 'baptized in his own blood.' But, generally speaking, only the baptized were prayed for. Augustine says (*Enchir.* 29): 'We offer . . . for all baptized departed.' We do, indeed, read that Perpetua prayed for her brother Dinocrates, who, as we gather from her own words, was unbaptized, though Augustine denied this. A similar case is found in the *Acts of Paul and Thecla* (Swete, *JThSt* viii. 502 f.). Gregory the Great prayed for the soul of the emperor Trajan, and was warned in a vision not again to pray for the unbaptized (Lightfoot, *Ignatius*, i. 5). But these were mere private speculations, which did not represent the ordinary feeling of Christianity.

For those who died in wilful sin it was felt that prayer could not be offered. The *Apostolic Constitutions* (viii. 43) say that one will never help the wicked (ἀσέβων), even though he gave all the goods in the world to the poor. Augustine (*de Civ. Dei*, XXI. xxiv. 2) says that prayers are not for unbelieving and unholy dead; they are (*Enchir.* 29) neither for those who are very good nor yet for those who are very bad. In the 3rd cent. Cyprian had forbidden the eucharist to be offered for the soul of a certain person who had seriously transgressed an ecclesiastical rule and had died impenitent (*Ep.* i. [lxv.] 2, to the clergy and people at Furni).

7. Early objectors to the custom.—In the 4th cent. Aërius, a presbyter in Pontus, the founder of the sect named after him (it seems scarcely to have survived his death), protested against prayers for the departed. We learn about his history and his views from Epiphanius, who says that he was alive in his time (*Hær.* lxxv. 1), and from Augustine (*de Hær.* liii.). He had been disappointed at not being made bishop, and lapsed into Arianism. Among other things he said that the eucharist 'ought not to be offered for them that sleep.' He adduced as the reason for his objection the danger of a man leading a sinful life in the hope that he would be saved from punishment by the prayers of his friends.

Though Aërius is the only person in antiquity known by name who objected to prayers for the departed, there must have been others. Cyril of Jerusalem says that 'many' held that they were profitless (*Cat.* xxiii. [*Myst.* v.] 10); and the language of Augustine (*Enchir.* 29) and others seems to imply that the question was frequently debated in the 4th century. Yet the objection cannot have been much pressed, for Augustine (*Serm.* clxxii. 2) says that the custom was universal, and Epiphanius (*Hær.* lxxv. 8) traces it back to primitive times.²

8. Mediæval Western views.—As doctrines about the intermediate state developed in the West, chiefly in consequence of the tentative suggestions of Augustine and the visions related by Gregory the Great, the principal aim of prayer for the departed came to be the deliverance of souls from a penal purgatory. The schoolmen discussed the matter at considerable length. Their speculations concern us here only so far as they resulted in the

¹ This is clearly the meaning. At the time προσέβειν and offerre were used absolutely, without a substantive, as the technical terms for celebrating the eucharist. See the present writer's *Ancient Church Orders*, Cambridge, 1910, p. 48.

² On the subject of prayers for the departed reference may be made to a learned catena of Patristic and liturgical writings (as far as they were known in his day) by James Ussher, archbishop of Armagh (1625-56), reprinted in the *Oxford Tracts for the Times* (Tract 72, London, 1837).

particular shape taken by the prayers. When purgatory was conceived as a place of punishment whose tortures differed from those of hell only in not being eternal, it is not surprising that men's energies were directed to the deliverance, by prayer and alms, of their friends therefrom. Yet the prayers of the mediæval Latin service-books show great restraint, and do not reflect popular beliefs to any very large extent. But they exhibit a sadness which is not found in earlier rites. The keynote to the Sarum service for the burial of the dead is struck by the opening antiphon:

'Circumdederunt me gemitus mortis, dolores inferni circumdederunt me' (see W. Maskell, *Monumenta ritualia Ecclesie Anglicanæ*², Oxford, 1832, i. 142).

The popular conceptions about purgatory are not necessarily the official views of the Church of Rome. According to Roman Catholic writers of repute, the only statement which is of faith in that communion is that 'there is a purgatory and that the souls detained in it are helped by the prayers of the faithful' (Creed of Pope Pius v.). The Council of Trent (*Canones et Decreta*, sess. xxii. § 2) says that the eucharist is offered 'for the departed in Christ not yet fully cleansed'; and sess. xxv. (decree on purgatory, A.D. 1563) has the words just quoted from the Creed, adding 'especially the acceptable sacrifice of the altar,' and enacting that a 'sane doctrine of purgatory, handed down from the holy fathers and sacred councils, is to be believed and taught.' The last words probably are meant to rebuke the extravagances of some popular teaching.

9. The Church of England at the Reformation took a middle course. In the First Prayer Book of Edward VI. (1549) there were explicit prayers for the departed. But since 1552 these have been removed from the public-services; the only relics of them remaining are the petitions in the Communion Service (perhaps purposely left ambiguous) that 'we and all thy whole Church may obtain remission of our sins,' etc., and (in the prayer for the Church militant) that 'with them (the departed) we may be partakers of thy heavenly kingdom'; in the latter case the title does not exactly correspond with the contents of the prayer, as is sometimes the case in the Thirty-nine Articles. In the Burial Service there is a prayer 'that we, with all those that are departed in the true faith of thy holy Name, may have our perfect consummation and bliss,' etc. But, while thus removing explicit prayers for the departed from its Prayer Book, the Church of England declined to condemn the practice in itself. In the original draft of art. xxii. it was proposed to do so, but the condemnatory words were struck out (see E. C. S. Gibson, *The Thirty-nine Articles*, London, 1897, p. 537 f.). And the Act of Uniformity of 1552 expressly declared that the First Book of 1549 was 'a very godly order, agreeable to the Word of God and the primitive Church.' In the Second Book of Homilies, on the other hand, the homily on prayer repudiates prayers for the dead; and this book is said by art. xxxv. to 'contain a godly and wholesome doctrine,' though all its opinions are not necessarily the official views of the Church of England. The position of that Church is thus a mediating one. It neither commands nor condemns the practice, and leaves it, as far as private practice is concerned, to the discretion of its members.

10. The Westminster Confession.—This was adopted as a standard by the Presbyterian General Assembly in Scotland, A.D. 1647. It takes a very precise line on the subject now under consideration. It says:

'Prayer is to be made . . . for all sorts of men living, or that shall live hereafter; but not for the dead, nor for those of whom it may be known that they have sinned the sin unto death' (xxi. 4).

The same statement (with a slight difference of wording) is found in the *Larger Catechism* of 1648 (qu. 182), but is not contained in the *Shorter Catechism* of the same date. Already in 1580 the Scottish National Covenant, when denouncing (in the strong language of the day) 'that Roman Antichrist,' had repudiated among many other things 'his purgatory prayers for the dead.'

The reason for the prohibition of prayers for the departed in the *Westminster Confession* is seen in its teaching as to the state of the faithful after death. All progress after death is denied. After saying that at death man's soul does not die nor sleep, it goes on:

'The souls of the righteous, being then [at death] made perfect in holiness, are received into the highest heavens, where they behold the face of God in light and glory, waiting for the full redemption of their bodies: and the souls of the wicked are cast into hell. . . . Besides these two places for souls separated from their bodies, the Scripture acknowledgeth none' (xxxii. 1).

Very similar is the wording of the *Larger Catechism* (qu. 86). The well-known words of the *Shorter Catechism* (qu. 37) are:

'The souls of believers are at their death made perfect in holiness and do immediately pass into glory; and their bodies, being still united to Christ, do rest in their graves till the resurrection.'

This may be taken to be the general teaching, not only of Presbyterians, but of a large number of other Protestant communities throughout the world. Luther, however, favoured the practice of praying for the departed (see S. C. Gayford, *The Future State*, London, 1903, p. 58).

11. The Eastern Orthodox Church.—The teaching of this Church remains much the same with regard to prayer for the departed as that of the Greek Fathers of the 4th and 5th centuries. It is remarkably cautious in refusing to dogmatize. The eminent Russian layman, Alexis Khomiakoff, remarks (Birkbeck, p. 217 f.):

'Each person owes his prayers on behalf of all, the living and the dead, and even those who are as yet unborn. . . . We do not acknowledge purgatory, that is the purification of souls by sufferings from which they may be redeemed by their own works or those of others. . . . Who will forbid us to pray [God] to glorify his saints and to give repose to his elect?' (see above, § 6).

The official treatise *On the Duty of Parish Priests* (§ 16 [Blackmore, *Doctrine of the Russian Church*, p. 281]) says that we ought to pray for the departed in the hope and faith of the resurrection of them that sleep, and bases this teaching on Bar 3rd, 2 Mac 12th, and on apostolic and primitive tradition. The Synod of Jerusalem (or Bethlehem, A.D. 1672) went farther than Khomiakoff and most Eastern theologians would approve. 'The doctrine of purgatorial fire has never been recognized or admitted in the Eastern Church' (Duckworth, *Greek Manuals*, p. 63); but the Synod, which was held at a time when the Eastern Church was largely under Roman influence, pronounced in favour of some sort of punishment in purgatory for a certain number of sinners, and affirmed that 'they are released by God's goodness in answer to the prayers of priests and the benefactions done in the name of the departed by their kinsfolk,' and that for this the eucharist is 'of especial avail'; 'but the time of their release we know not' (*ib.* p. 64 f.). On the other hand, Archbishop Philaret of Moscow, the author of the *Longer Catechism* of the Russian Church in its present form, denies that there is such a thing as purgatory in which souls have to pass through fiery torments in order to prepare them for blessedness (Headlam, *Teaching of the Russian Church*, p. 17). And the Catechism itself (Blackmore, p. 98 f.) says nothing of any punishment even for those who have died without having had time to bring forth fruits worthy of repentance, but affirms that they may be aided towards the attainment of

a blessed resurrection by prayers, eucharists, and works of mercy offered for them. It says of all the righteous dead that they 'are in light and rest with a foretaste of eternal happiness,' while the wicked 'are in a state the reverse of this'; the righteous do not attain to perfect happiness till the resurrection of the body.

12. The Separated Churches of the East.—The service-books of these communities have already been dealt with, in reference to prayer for the departed (§§ 5, 6). We may, however, in conclusion notice a very remarkable custom which is found among both the Armenians and the E. Syrians (Nestorians), namely that of animal sacrifices. These seem to be properly memorials of the dead (for the custom among the E. Syrians see A. J. Maclean and W. H. Browne, *The Catholics of the East*, London, 1892, p. 334; for the Armenians see F. C. Conybeare and A. J. Maclean, *Rituale Armenorum*, Oxford, 1905, pp. 54-60). This custom appears to be a curious survival of paganism.

LITERATURE.—A. J. Mason, *Purgatory, the State of the Faithful Departed, Invocations of Saints*, London, 1901; H. B. Swete, 'Prayer for the Departed in the first four Centuries,' in *JThSt* viii. [1907] 500 ff.; H. M. Luckock, *After Death*, London, 1881; E. H. Plumptre, *The Spirits in Prison*, do. 1886, ch. ix. f.; F. G. Lee, *Christian Doctrine of Prayer for the Departed*, do. 1875; F. E. A. J. MACLEAN.

PRAYER-WHEELS (or 'magical wheels').—This name is applied to wheels or cylinders which are made to revolve in the expectation of spiritual or magical profits. Sometimes they are actual wheels, hung in a temple and turned by hand or by means of a cord. To this category belong the small metal wheels fixed in the wooden pillars at the entrance of certain Japanese pagodas.¹ Such also are the so-called 'wheels of fortune,' suspended from the ceiling or attached to the pillars of some Breton churches. Worshippers are allowed to turn these on payment of a few pence for behoof of a saint whose image is placed alongside, and which bears the name of 'Saint of the Wheel' (*Santic-ar-rod*). The Japanese wheels have metal rings, which slide along the spokes and make a silvery sound. The Breton wheels produce the same effect by means of the small bells with which they are decorated. The use of these instruments is of long standing in the Church. According to the *Monasticon Anglicanum*, St. Ethelwold, bishop of Winchester in the 10th cent., introduced into his cathedral a wheel of gilt metal, all covered with little bells ('tintinnabulis plenam'), which was made to revolve on saints' days, to increase the devotion of the faithful ('ad majoris excitationem devotionis').² Among the ancient Greeks the grammarian Dionysius of Thrace notes 'the wheels which are revolved in the temples of the gods.'³ Plutarch and Heron testify to their presence in Egyptian temples of a late period. Plutarch makes them a symbol of the instability of human things,⁴ Heron an instrument of purification: 'Below the colonnade of the Egyptian temples are placed movable bronze wheels, which are turned by those entering, in the belief that the bronze purifies.'⁵

Again, the instruments used may be cylinders, or rather cylindrical boxes, containing texts or sacred objects. Such are the praying-mills, which have assumed special importance among the Buddhists of the North. The smallest ones are bobbins, often of silver, attached to a wooden handle, which the lamas by a slight movement of the wrist keep steadily revolving for whole days, while they repeat the invocation engraved on the surface—generally the famous formula, *Om mani padme Hūm*, 'O the jewel in the lotus!' Other cylinders, of a larger size, generally of wood painted in bright colours, are to be seen in the vicinity of the lamaseries. Passers-by make them revolve by means of a handle which returns to the hand, making a bell ring several times. As many as 300 of these wheels may be found, placed side by side like barrels in a beer-cellar.¹ Some are of such a size that it requires several persons to set them in motion. The traveller Gérard saw one at the monastery of Sunum which carried 108 lighted lamps. Others contain shrines, images, and prayers, and occasionally a number of manuscripts. Each revolution confers on the worshipper the same spiritual benefits as the reading of all the texts. Miss Gordon Cumming found some in Japan which were veritable libraries—'circulating libraries,' as William Simpson wittily called them.² Gabriel Bonvalot mentions having encountered, in the monastery of Dotou, 100 large bobbins, each containing 10,000 invocations. As a few minutes suffice to revolve the whole in succession, one may thus rapidly gain the benefit of the indulgences attached to the recitation of 1,000,000 formulæ.³

In the Himalayas these mills are often erected above a rushing stream, which turns unceasingly a wheel with blades dipping into the water. It appears that the merit mechanically engendered by these applications of natural forces goes to increase the *karma* of those who constructed the apparatus. E. R. Huc,⁴ Gilmour, and W. W. Rockhill⁵ report that among the Mongols there are mills made of paper and hung in the tents over the fireplace in such a way that they may be set in motion by the displacement of the heated air.

Such is the fashion in which the Buddhists of the Northern school have materialized the 'wheel of the Law,' the *Dharmachakra*, the chain of causes and effects. There is no mention of praying-mills in the oldest Buddhist treatises. Nor are these instruments known among the Buddhists of the South. Nevertheless the symbol of the wheel was in very early times held in high esteem by the followers of the Buddha. It is to be seen on Buddhist monuments prior even to the first appearance of the image of the Master. The wheel figures in the oldest Buddhist sculptures, in the place of honour upon altars, where it receives the homage of the faithful.⁶ A. Cunningham supposed that it represented the Buddha himself.⁷ But it is more probable that it personified his teaching, the 'wheel which he set in motion for the salvation of humanity,' by the revelation of the Four Great Truths in his famous sermon at Benares.

We may suppose that the Buddhists have combined their symbolism of the wheel with a magical rite previously practised either by the Scythian races of Central Asia or by the Brāhmins of Northern India. In support of the former of these conjectures use may be made of the circumstance that on a coin of the Indo-Scythian king Hoerkes or Huvichka this monarch holds in his hand a spindle-shaped object in which some have thought to recognize a praying-mill.¹ On the other hand, William Simpson has found in the *Satapatha Brāhmaṇa* a text which shows beyond question that the Brāhmins revolved chariot-wheels horizontally around a stake fixed in the ground, while they chanted a hymn from the *Samaveda* in honour of the sun-god Savitri.²

What was the original purpose of this rite? The wheel, which has a round shape, and which implies a movement of translation in space, has everywhere been one of the images most frequently employed to represent the sun. The latter is called by the Latins *rota altivolans*,³ in the Edda 'the beautiful wheel' (*fagravel*),⁴ by the Celts 'the luminous wheel' (*roth fail*),⁵ and the *Rigveda* invokes the god who directs 'the golden wheel of the sun.'⁶ The wheel thus becomes the symbol of the regular course of the sun, and consequently of the celestial or cosmic order, the *rita*. Another passage of the *Rigveda*⁷ speaks of it as 'the immortal wheel which nothing stops, on which all existence depends.' It was this symbolism that the Buddhists applied to their 'wheel of the Law,' with its thousand spokes, the *Dharmachakra*, 'that wheel which not by any Sahmana or Brāhman, not by any god, not by any Brahmi or Mara, not by any one in the universe can ever be turned back!'⁸ All observers agree in stating that the praying-mills must turn in the direction followed by the sun.⁹

On the principle of imitative magic, to revolve the wheel in the apparent direction of the sun's course is to facilitate or assure the beneficent movement of the sun, and thus to secure general luck, as in the similar case of circumambulation (*q.v.*). Hence the popular customs, described by Mannhardt¹⁰ and Gaidoz,¹¹ in which the inhabitants of certain districts—in Germany, France, and England—may be seen driving a wheel, sometimes set on fire, across the fields. As Mannhardt maintains, this is simply a solar charm, intended to secure an abundant harvest.

Finally, mention must be made of certain forms of rattles used by the inhabitants of New Mexico. In so far as they are magical instruments, they resemble in construction the invocation-cylinder, but they belong to quite a different symbolism.

PREACHING (Christian). — 1. **The early Church.**—From the accounts of Christian worship in the NT, especially in the Epistles to the Corinthians, it can be gathered that great liberty of prophesying was allowed in the meetings of the primitive Christians, although there was a general understanding that the prompting to speak should come from the Spirit of God. As early as the *Didache* the 'prophets' are mentioned as a separate class, the members of which wandered from community to community in the exercise of their gift; but already their inspiration was so far from being above suspicion that the churches were coming to be better satisfied with any authentic light they could receive from their own elders than with the illumination afforded by those wandering stars. This tendency was increased by the growing sense of the inexhaustible treasures of wisdom and spiritual power lodged in the Holy Scriptures the canon of which was gradually forming. From the synagogue the Church had inherited the practice of reading aloud the sacred writings and attaching to this reading the word of exhortation. When the Christian community had the whole of the NT and the OT thus to draw upon, it could not lack the bread of life, if a moderate amount of attention or skill were given to the application of what had been read to the life of the individual and the community. At all events the first form of preaching was homiletical, a homily being a running commentary on a passage read. This is known to have been the form of instruction given at the first college for the training of preachers, the Catechetical School of Alexandria, of which Clement and Origen were the shining lights. Many of Origen's homilies have come down to us; and they show how boundless a thesaurus of truth he was sensible of possessing in the Word of God, though the heritage left by him to succeeding ages was sadly vitiated by the introduction of the allegorical method, which tempted nimble wits into excessive ingenuity, but, in incompetent hands, could make almost any passage of Scripture mean almost anything.

During the first 300 years of its existence Christianity, in spite of the persecution to which it was subjected, made more rapid progress than it has ever done since; yet the names of outstanding preachers, after the death of the apostles, are so few that it cannot have been by this means that success was gained. It was rather by a kind of preaching which has been too little practised in subsequent centuries, but will have to be rediscovered if the world is to be fully evangelized. At the first the gospel was so intense a blessedness that no one who heard it with faith could keep the secret to himself. Neighbour told it to neighbour, slave to fellow-slave; the sailor carried it to every shore visited by his ship, and the soldier communicated it even to the enemy whom he had conquered on the field of battle. Justin Martyr, after becoming a Christian, continued to wear the philosopher's cloak, because this gave him access to those to whom he 'talked' the gospel, and the verb 'to talk' is a good name for preaching in the NT.

2. **The Middle Ages.**—When, at the beginning of the 4th cent., Christianity was adopted as the religion of the Roman empire, there immediately took place a great revival and extension of preaching; for it was no longer necessary to confine such testimony to the places where the myrmidons of

persecution could not find the worshippers, but, under imperial auspices, Christian places of worship, of growing size and magnificence, rose all over the empire. The first Christian emperor himself set an example of preaching, like a well-known imperial figure of the present day; and, as at least one of his efforts has come down to us, we can judge of their quality for ourselves. It is by no means bad preaching for an emperor. Even the apostate Julian, who attempted to restore heathenism, betrayed his consciousness of the importance of preaching by exhorting his priests to make sermons with the pagan myths for texts and by setting an example himself. But his attempt was very soon at an end; and in the courts of the Christian emperors by whom he was succeeded preachers and preaching held a conspicuous place. The more famous became as much topics of conversation at court as favourite charioteers or actors had been before; and in the sunshine of imperial favour preaching attained to a notable development. The 4th and 5th centuries contain many outstanding names, the greatest of which in the East is that of Chrysostom, in whose hands the homily was transmuted into an oration, which the hearers applauded in church, as they might a speech in a political meeting. In the West the greatest preacher was Augustine, whose sermons, being addressed to audiences of fishermen, were more simple and practical. But the first impression made by even the greatest sermons of that age is, how much the long continued exegesis of the Scriptures through the Christian centuries has benefited congregations; for, in explaining the book of Acts, e.g., the humblest preacher has now within easy reach materials far more true to the text and useful to the people than were at the command of even a genius like Chrysostom, who has left lectures on this book of Scripture.

Many other names of the period could be mentioned, such as Gregory and Basil in the East and Ambrose and Hilary in the West, to show that this was a great age for preaching; and it has another sign of distinction in the appearance of books on the preacher's art, both Chrysostom and Augustine having produced examples of this species of literature. But it was not long before the descent of the barbarians from the north, and then the pressure of Muhammadanism from the east, nearly squeezed the life out of the Church, and preaching, like the other functions of her life, was reduced for centuries to the lowest terms. Yet this was the time when monasticism arose and spread with extraordinary rapidity over the Church, occupying territory from which it has never since been wholly dislodged; and in the monasteries and nunneries preaching obtained a new sphere of influence. Monks and nuns must often, in the centuries that followed, have been unusually intelligent and sympathetic hearers, and the opportunities thus opened up to a spiritual and gifted preacher may be inferred from the relation of Staupitz to the youthful Luther; for this worthy, who was inspector of monasteries in the district of Thuringia, must have made use of preaching as one of his ordinary activities. A still more attractive aspect of the preaching of the Dark Ages is that of the missionaries; for, in spite of its repellent features, this was one of the great eras of missionary progress, when, issuing from the monasteries of Great Britain and Ireland, the

heralds of the Cross not only evangelized the tribes who had occupied the countries of S. Europe, but carried the gospel to the inhospitable regions of the north out of which the invaders had come. Names like those of St. Columba and St. Patrick, St. Columbanus and St. Gall, are worthy of everlasting remembrance, and in the remains of St. Boniface, in some respects the greatest of them all, we can still see for ourselves the kind of message with which they operated. It was a message of realism and terror; for the conditions were very rude with which the missionaries had to deal. Sin was then the chief theme of the pulpit, because there was abounding iniquity in the world; and it was not for centuries yet that preaching learned to deliver in its fullness the gracious message of deliverance from sin.

It was in the reaction from Muhammadanism that the sound of a new era of preaching began to be heard in the atmosphere of Europe. Peter the Hermit 'preached' the first Crusade; and the preacher of the second was no less a personage than St. Bernard, usually reckoned the greatest preacher of the Middle Ages, although the sermons for which he is most famous—those on the Song of Solomon—belong not to popular oratory but to the preaching of the monastery. The tendency, however, to consider the multitude had, as well as the romanticism of the Crusades, a place in the movements with which the names of St. Francis and St. Dominic are identified. Preaching was one of the principal instrumentalities made use of by both of these reformers; and even in our time, in Roman Catholic countries, it is a red-letter day in the history of a country congregation when a stranger in the graceful garb of the Dominican order rises in the pulpit, as a visitor, to occupy the place of the ordinary incumbent. Among the Franciscan preachers Antony of Padua and Berthold of Regensburg are the foremost. The matter of preaching was adapted for presentation to the general mind through the labours of the Schoolmen, not a few of whom were themselves famous preachers; and, after these had had their day, the hardness of their doctrine was softened in the atmosphere of the mystics, who gave to the pulpit some of its very greatest names, such as Eckhart and Tauler. The chapters of the *Imitatio Christi* preserve the exquisite blossom and flower of monastic preaching at its best.

3. The Reformation.—Immediately before the Reformation preaching suffered in most parts of the Church a sad decline. In many quarters there was hardly any preaching at all, the Christian religion being reduced to a mere pagan round of forms and ceremonies, pilgrimages and penances. In vain did councils summon the clergy to their duty; for the higher clergy, who presided in such assemblies, were themselves the most remiss in the discharge of this function, and the lower clergy were too deeply sunk in ignorance to be equal to the task. The description of the preaching of the time given in Thomas McCrie's *Life of John Knox* is not exaggerated, and it may be applied without hesitation to the rest of Christendom.

'It is difficult for us to conceive how empty, ridiculous, and wretched those harangues were which the monks delivered for sermons. Legendary tales concerning the founder of some religious order, his wonderful sanctity, the miracles which he performed, his combats with the devil, his watchings, fastings, flagellations; the virtues of holy water, chrisam, crossing, and exorcism; the horrors of purgatory, and the numbers released from it by the intercession of some powerful saint; these, with low jargon, able-talk, and fireside scandal, formed the favourite topics of the preachers, and were served up to the people instead of the pure, salutary, and sublime doctrines of the Bible' (*The Works of Thomas McCrie*, new ed., Edinburgh, 1855, i. 11).

It is in the writings of Erasmus that we see most clearly both the ludicrous and the deplorable aspects of the preaching of the time; but, in

Ecclesiastes, one of the worthiest of his books, this great Humanist exhibited the image of what, in his opinion, a preacher ought to be. The Reformers before the Reformation, especially Wyclif. Hus, and Savonarola, revealed popular talent in the pulpit, and in the last-mentioned especially the gift rose to the prophetic strain.

The Reformation was a crowning era in the history of preaching. Innumerable abuses were pushed aside, which had been preventing the pulpit from having its chance. The Word of God was exalted above all other authorities, and it was not only heard with new fullness and force from the pulpit but put into the hands of the common man, in his own tongue, so that he could bring what he heard to the judgment of the law and the testimony. The Reformers had themselves passed through the great experiences of the soul, and they spake that which they knew and testified that which they had seen. Among the people there was the most extraordinary appetite for the new message, the more prominent among the preachers being called on to preach every day, and no limit being put to length. In Luther there were accumulated all the elements of a great preacher—learning, experience, knowledge of men, humour, homeliness, indignation, spirituality. To this day the best of his discourses have not lost the freshness of their prime, and everywhere in them the music of free grace sounds like the tinkle of a hidden well. Zwingli was more of the orator, bringing into the new movement the treasures of the Renaissance, but his testimony to the new truth is also clear and strong. Calvin excelled in the exposition of the Scriptures, and his great dogmatic work, the *Institutes*, swelled, in the course of his lifetime, to five times its original size just because he crowded into the successive editions the best things gathered from the Word through incessant preaching and lecturing. John Knox applied the examples of the Bible to the problems of the passing hour; and the English ambassador, in a letter to Queen Elizabeth's Chief Secretary of State, bore to him this testimony:

'I assure you, the voice of this one man is able in one hour to put more life in us than five hundred trumpets continually blustering in our ears' (McCrie, *Life of Knox*, p. 178).

In all the countries in which the Reformation took any hold there arose preachers of power, whose names are cherished to this day as household words, and in many cities and towns men of the second or the third rank arose, who directed the course pursued by their fellow-citizens and left a name still identified with the scenes of their labours. The pulpit had the making of the people's convictions, the moulding of their manners, the direction of their education; and this continued for generations, in some places more and in others less visibly.

4. The Puritan era and after.—In England, in spite of such early names as Hugh Latimer, Nicholas Ridley, and John Hooper, the effective Reformation was long in commencing; but, when it began, it produced the same appetite for preaching; and there were not wanting those capable of satisfying this spiritual hunger. In the Long Parliament it was quite an ordinary practice to set time apart for the hearing of sermons, and days of humiliation or thanksgiving were frequent, in which not only sermons an hour long but even prayers of like extent were the order of the day. To satisfy such a critical assembly can have been no ordinary responsibility; but, if ever there was a dynasty of great preachers in England, it was in this age. On the Puritan side were such names as Thomas Cartwright, Richard Sibbs, Richard Baxter, John Owen, John Bunyan, John Howe, Thomas Goodwin, and Thomas Adam; and for

intellectual grasp, mastery of Scripture, spiritual analysis, and constructive skill these men have never been surpassed. He who is in search of the substance of Christian truth can turn to their works still with the certainty of finding in abundance that which he is seeking. But, with few exceptions, they were as defective in literary form and grace of utterance as they excelled in solidity. What, however, was lacking in them was supplied in abundance by their rivals—the Cavalier preachers of the period, such as Richard Hooker, John Donne, Joseph Hall, Thomas Fuller, and Jeremy Taylor. Whether it was that these had audiences to preach to less hungry for the bread of life than those who listened to the Puritans, or whether it was due to a marked difference of natural endowments, it is undeniable that these are as exuberant in all the graces which make style and literature as the others are deficient in them; and yet it cannot be said that there is any lack of substance in their discourses. On the contrary, although the ornamentation is sometimes excessive, the Cavalier divines, as well as their rivals, were great exponents of Christian truth and experience.

So great a revival of religion as Puritanism could not be confined to the British Isles; and on the Continent the stirring of the dry bones first appeared in Holland, where the signal of the new movement was the emergence of what is called the Federal Theology. This is usually fathered on Cocceius, a native of Bremen and a professor at Franeker and Leyden; but it is certain that the conception of revealed religion as a series of covenants belonged earlier to the Puritan thinkers, as, indeed, it is developed in the documents of the Westminster Assembly, which were in existence before the publication of Cocceius' renowned treatise on the subject. From Holland the revival movement spread to Germany, where its principal representative was Philipp J. Spener, court preacher successively at Dresden and Berlin; but it is known that he was influenced in youth by Puritan authors, especially by Richard Baxter, whose *Reformed Pastor* has been an inspiration to preachers and pastors in all parts of the Christian world. Spener was only the most outstanding of many preachers of the Pietistic order, the names of some of whom, like A. H. Francke, J. A. Bengel, and J. J. Rambach, have taken their places among the worthies of the Church universal. Out of the Pietistic movement issued directly the Moravian Church, whose founder, Count von Zinzendorf, and his successor, A. G. Spangenberg, were noted preachers who have communicated their inspiration to many successors in their small but active community. To the Moravian Church John Wesley owed his experience of the gospel; and the same may be said of his coadjutors, Charles Wesley and George Whitefield. These were preachers who shook not only England but America to the heart, and they have transmitted the sacred fire to innumerable successors not only in the denominations founded by them but far beyond. Though the Established Church was not able to retain their services, there arose within it many who imitated their methods and reproduced their spirit; and the succession of Evangelical divines, reaching from John Newton down through Charles Simeon to the shining lights of this section of the Church at the present day, may all be looked upon as derived from this source. An original step on the part of Wesley and Whitefield was preaching in the open air; and, in the churches founded by them, lay-preaching has been a prominent feature, with memorable effects not only on the community but on the character of the preachers themselves (cf. also art. LAITY, § 7).

Charles II. was not without a taste for preach-

ing, and a curious letter has survived in which, before a visit to Cambridge, he lays down the law that the university preachers must refrain from reading their discourses, as the extempore style, to which he had been accustomed whilst living abroad, was more in harmony with the royal mind. But the recoil from Puritanism soon became so universal that anything like enthusiasm in the pulpit was looked upon as vulgar, and the quenching of the fire soon proceeded from form to substance, the tone of belief becoming lukewarm and the distinctive message of the gospel being forgotten. Preachers formed their style on that of Addison, and many a sermon hardly attained to the warmth of an article in the *Spectator*. The model preacher of the time was Archbishop Tillotson, and even in the chapels of the Dissenters cold respectability held sway, although there were not wanting figures like Isaac Watts and Philip Doddridge to keep alive the memory of a better time. The Latitudinarianism of England had its equivalent in the Moderatism of Scotland, whose apostles were such men as William Robertson, Hugh Blair, and 'Jupiter' Carlyle, as well as in the rationalism of Germany, which was represented in the pulpit at the one extreme by the vulgarity of K. F. Bahrdt and at the other by the eloquence of J. L. von Mosheim.

5. The 19th century.—(a) Britain.—All historians of preaching are agreed that the 19th cent. has been an epoch of unsurpassed maturity and productiveness. It has been a period when the human mind has blossomed in every direction, and preaching has both enriched itself from the progress of investigation and discovery and risen to the demands coming from every side. The most native impulse has been that of the Evangelical Revival, and this has been visible in its purest form in Scotland, where, at the beginning of the century, the movement was received into the mighty mind of Thomas Chalmers, taking on there a form of singular benignity and dignity, which has never since ceased to hold the heart and mind of his fellow-countrymen. Indeed, at the end of a century it is more in possession than ever, there being hardly any preachers of note at present who do not look up to Chalmers with veneration or are not proud of the name of Evangelicals. Chalmers' own eloquence was believed by the best judges of the time to be not inferior to that of the very greatest masters of the oratorical art in any age; and his coadjutors in the ecclesiastical conflict, such as R. Murray McCheyne, Robert S. Candlish, Thomas Guthrie, Robert Buchanan, were all preachers possessed of popular gifts and spiritual power. The Establishment from which these seceded, however, continued to produce preachers of eminence, such as Norman Macleod, John Caird, George Matheson, and James MacGregor. The United Presbyterian Church, which had originally sprung from the gospel preaching of the brothers Erskine, had such outstanding names as John Cairns, Robertson of Irvine, John Ker, and W. M. Taylor, who, however, rendered his principal service in America. The English Presbyterian Church, in spite of its limited size, was rich in gifts, having such names as Edward Irving, James Hamilton, J. Oswald Dykes, and W. G. Elmslie.

In England there was much more variety. The Evangelical school in the Church of England had a nursery for talents in the Church of Simeon at Cambridge; and in the Keswick Movement it has produced speakers whose messages have been carried to all parts of the world. The same views have had much more powerful intellectual representation in such Congregational preachers as Thomas Binney, R. W. Dale, and Joseph Parker.

The Methodists had such distinguished names as Richard Watson, Jabez Bunting, W. M. Punshon, J. H. Rigg, and W. B. Pope. But the Baptists, for their number, were the most fruitful of all, with such celebrities as Robert Hall, Alexander MacLaren, and C. H. Spurgeon, who held an archiepiscopal position during the latter half of the century among the Dissenters of the world. In sharp distinction from the Evangelical school rose the Broad Church at Oxford; and, although its predominance did not last long, it yielded some fine fruits in the pulpit, such as A. P. Stanley, Charles Kingsley, and, above all, F. W. Robertson of Brighton, whose sermons were probably the most widely read in the last half of the century, while in the 20th cent. they are obtaining a new lease of usefulness through having been translated into German. With the Broad Church preachers may be mentioned a very eminent Unitarian, James Martineau. The Broad Church was succeeded by the High Church school, which has to a large extent superseded it and is still in process of expansion. It was by a sermon of John Keble's, preached at the assizes in Oxford, that the movement was started, and its best known representative, John Henry Newman, would be esteemed by many the greatest of modern preachers on account of the intensity of his convictions, his power of probing the conscience, the nimbleness of his wit, and the perfection of his style. But another of the same school, J. B. Mozley, seems to not a few of the discerning to indicate the high-water mark of Anglican preaching; and the school had a noted orator in H. P. Liddon.

Wales is a land of preachers. Nowhere else are favourite preachers more beloved or better remembered; and it is no wonder that the Welsh people have invented a name for the *je ne sais quoi* which makes preaching effective. This is the *huil*, which is a combination of nature, art, and grace. It is the happiness of the preacher; it is the thing that grips the hearer; and it expands and culminates like the rising tide. The present writer has heard Cyndylan Jones, secretary of the Welsh Calvinistic Methodist Church, do it to perfection in an hour's discourse, the tide setting in about a quarter of an hour before the end. But the effect can be attempted and missed; and then the preacher feels 'deserted,' and the people complain of the absence of the Spirit of the Lord. Among noted Welsh preachers the Anglicans have had Henry Thomas Edwards, the Wesleyans John Evans, the Baptists Christmas Evans and William Jones, the Congregationalists William Williams, Herber Evans, and John Thomas, and the Calvinistic Methodists John Elias, John Jones, Henry Rees, Edward Mathews, Edward Magan, and many of the name of Edwards, including two principals of theological colleges, of enormous influence in their day. The Irish pulpit has had its own share of both the Celtic fire and the spiritual power of the Welsh, and among the names that are household words are E. H. Plumptre, J. H. Bernard, and William Alexander (Episcopalians), and Henry Cooke and Fleming Stevenson (Presbyterians), while none of the smaller denominations has been without preachers of power, remembered with affection and reverence in a more limited circle.

(b) *The Continent*.—If the impulse of the Evangelical Revival was predominant in Great Britain, it was still more obviously so in some of the Continental countries. A visit to Geneva of a Scotsman, Robert Haldane, who had come powerfully under this influence was the occasion of a revival, which spread through the churches of Switzerland and brought to the surface such preachers as César Malan, Merle d'Aubigné, Alexander Vinet, Frédéric Godet, and, much later,

Gaston Frommel. The same evangelist, who was not himself a clergyman, was the means of initiating a similar movement in France, issuing from the college of Montauban and giving rise to the labours of such eminent preachers as Adolphe Monod, one of the most perfect sacred orators of all time, E. D. de Pressensé, and E. A. F. Bersier. In neither of these countries, however, was the gift of eloquence confined to men of one school; and in France especially Timothée Colani and the Coquerels, father and son, must be mentioned as belonging to the less Evangelical tendency.

In Germany in the 19th cent. everything in religion and theology dates from Schleiermacher, and preaching is no exception; for this second Luther both excelled in the art and expounded the theory of preaching to such a degree that great and small have in both respects been affected by him since. Many volumes of his sermons have been preserved, and they exhibit him as an original and daring thinker, a close interpreter of Scripture, and a Christian of spiritual power. A sermon by Schleiermacher usually begins where the sermons of other preachers end; that is to say, he takes for granted all the commonplace and ordinary remarks, and then inquires what else there is in the text. Sometimes what he finds left may be paradoxical, and not infrequently he leads for a considerable distance through a pathway which is obscure; but it is seldom that he does not at last come out on some height from which there is a wide and rewarding view over the fields of truth. The only German preacher since Schleiermacher who can be called a rival, as regards either the excellence of his own productions or the extent of his influence on subsequent generations, is F. A. G. Tholuck, who has also written, in the form of a preface to his collected sermons, an incomparable disquisition on the preacher's art. Tholuck is as infallible as even Robertson of Brighton in discovering something in the psychology of the hearer to which to attach the message that he brings; he has the same gift of unfailing interest; and he has an even stronger hold on the essentials of Christian truth. These two leaders have had a long and distinguished line of successors, exhibiting great variety and yet not forsaking the type. Among the more outstanding names may be mentioned L. F. F. Thiermin, Klaus Harms, W. Hofacker, K. I. Nitzsch, F. W. Krummacher, J. F. Ahlfeld, G. C. A. von Harless, C. E. Luthardt, J. K. W. Löhe, and Karl Gerok. The court of Prussia has for generations been careful to attract distinguished preachers to Berlin. When one heard Rudolf Kögel, the chief court preacher in the days of Prussia's greatness, it seemed impossible to conceive of any one more fitted for his position and his work; yet, when one was listening to Emil Frommel, who was preaching in Berlin at the same time, this divine seemed to have more genius for the business in his little finger than Kögel had in his whole body. The Ritschlian movement in theology has not failed to produce eminent preachers giving currency to its views. Among recent names may be mentioned E. Dryander, B. Dörries, C. Geyer, and F. Rittelmeyer.

In the neighbouring countries of Holland and Denmark there have been similar currents of opinion at the same time; and among preachers whose renown has passed into other lands may be mentioned J. J. van Oosterzee, C. E. van Koetsveld, and A. Kuypers for the one country; and N. F. S. Grundtvig, S. A. Kierkegaard, and H. L. Martensen for the other. For Norway may be added the names of W. A. Wexels, O. A. Berg, C. Knudsen, and J. G. Blom; and for Sweden J. O. Wallin, S. L. Oedmann, C. P. Hagberg, J. H. Thomander, and F. O. Nillson.

(c) *America*.—In no part of the world has preaching been a greater power in the 19th cent. than in America. The energy of the surrounding life has communicated itself to the pulpit also, and not infrequently have great preachers been the leaders of public progress, their names becoming so identified with the places in which they have been settled that the mention of the city still suggests the preacher or the mention of the preacher the place. Certain bodies, like the Methodist and the Baptist, have accompanied the pioneers on their westward way, suiting their ministrations to the stage of culture and the spiritual aspirations of those under their charge, and they have had their reward in the phenomenal development which these denominations have attained in the newer States. Preaching has been a very conspicuous social force, and preachers have occupied a commanding position and exercised unusual influence. Nowhere else has talent been surer of recognition, and the demand has called forth the supply. Not only has every variety of preaching been exemplified, but the art itself has been thoroughly studied and taught; and books on the subject have been produced in exceptional numbers and of high quality. At Yale University the Lyman Beecher lectureship on preaching has been established since 1872, and in the successive issues every phase of the subject has been handled by experts from both the Old and the New Worlds. A similar lectureship now exists at Union Seminary, Richmond. The countless sects into which Christianity is divided in the United States have all had men of spiritual power, whose names are warmly cherished within a limited circle; but it will be possible to mention here only those who have attained something like a world-wide reputation.

Here again the beginnings were Puritan and Evangelical. The Pilgrim Fathers carried to the shores of New England the convictions of the age of Cromwell, and these were powerfully reproduced in the pulpit by Jonathan Edwards and the other leaders of New England theology, such as Joseph Bellamy, Samuel Hopkins, N. W. Taylor, Samuel Harris, and E. A. Park. The piety of the country was deeply affected by revival movements, which emerged from time to time and in no small degree affected the character of preaching. Among the more noted revivalists may be mentioned C. G. Finney and D. L. Moody. But some of the denominations which kept apart from revivalism produced distinguished preachers nevertheless, the Unitarians having in W. E. Channing and Theodore Parker representatives of very opposite types, and the Episcopalians, besides producing many distinguished preachers such as S. H. Tyng, H. C. Potter, F. D. Huntington, and W. S. Rainsford, having in Phillips Brooks a pulpit representative of the first rank, whose *Yale Lectures on Preaching* may be characterized as the finest product of the kind yet given to the world by America, while the big humanity of the man, his spiritual power, and his literary charm will long keep his memory green.

The Congregationalists had many names of great eminence, and reached a supreme preacher in Henry Ward Beecher, who possessed in the highest degree almost every gift of the pulpit orator, and who was the first of the Yale lecturers on preaching. Among the Baptists, while the names are very numerous, the greatest is perhaps that of John A. Broadus, in the south, who not only illustrated the best qualities of the preacher in his practice, but wrote on both the theory and the history of the subject with distinguished success. The Presbyterians have not been behindhand, as the names of the Hodges and Alexanders at Princeton testify, as well as those in the south of M. D. Hoge at Richmond and B. M. Palmer at New

Orleans. In Canada the Anglicans have had Bishop Baldwin and J. de Soyres; the Methodists George Douglas, Potts, and C. L. Stafford; the Baptists E. A. Crawley, Denovan, and R. A. Fyfe; the Congregationalists H. Wilkes and P. S. Henson; and the Presbyterians G. M. Grant, D. H. MacVicar, and Barclay.

6. *The Roman Catholic pulpit*.—Protestants are apt to overlook the history of preaching since the Reformation among Roman Catholics; but these have had their own tradition and have embodied their practice both in books and in prelections on sacred eloquence in their seminaries. The prominence given to the Mass and other ceremonies tends to eject preaching from its lawful place; on the other hand, the arrangements for the observance of the Christian Year afford special opportunities for preaching on the greatest themes of the Christian system, and men possessed of oratorical gifts are trained to deliver courses of sermons at Lent and other seasons, which often attract very large audiences. There has been one scene of extraordinary development in the art of sacred oratory since the Reformation. This was the court of Louis XIV., during whose long reign a succession of orators was maintained, embracing the names of Bishop Bossuet, Louis Bourdaloue, Esprit Fléchier, Archbishop Fénelon, and J. B. Massillon. These lights of the pulpit were accounted among the principal ornaments in the court of the Grand Monarque; their merits and performances were compared and contrasted by the courtiers in the same way as the dramas of the poets and the books of the men of letters; and the stimulus of the cultivated audience excited the speakers to the utmost exercise of their powers. The sermons were expected to be lengthy and to deal with great themes in a great way; and in some respects the discourses thus produced remain as imperishable models of the art. Some of the greatest of them were on the death of princes, and the vanity of human things was a constant theme, as if the frivolity and the extravagance of the courtiers required this foil to make their enjoyment complete. The memory of this brilliant period has never died out in France, and from time to time there have been more or less successful attempts to revive it, as by J. S. Maury in the French Revolution and J. B. H. de Lacordaire, F. A. P. Dupanloup, and Père Hyacinthe (= Charles Loyson) in the 19th century. In other parts of the Catholic world there have been striking personalities in the pulpit, such as J. M. Sailer and Martin Boos in Germany, Theobald Mathew, Tom Burke, and T. J. Potter in Ireland, and N. P. S. Wiseman and H. E. Manning in England. In the United States such names are mentioned as Bishop England, Archbishop Spalding, Archbishop Kenrick, and Cardinal Gibbons.

LITERATURE.—There are books of the past on preaching which may be called classical, such as Augustine († 430), *de Doct. Christ.* iv.; Alanus ab Insulis († 1203), *Summa de Arte Prædicatoria*; Bonaventura († 1274), *Ars Concionandi*; Erasmus († 1536), *Ecclesiastes*; Melancthon († 1560), *Rhetoric*; Hyperius († 1664), *De Formandis Concionibus Sacris* (republished, Berlin, 1901, by E. C. Achelis and E. Sachse as *Die Homiletik und die Katechetik des Andreas Hyperius*); J. Wilkins († 1672), *Ecclesiastes*, London, 1646; P. Doddridge († 1751), *Lectures on Preaching and the Ministerial Office*, do. 1804; G. Campbell († 1796), *On Pulpit Eloquence*, do. 1807; F. Thieremin († 1846), *Die Beredsamkeit eine Tugend*, Berlin, 1814; A. Vinet († 1847), *Homilétique*, Paris, 1855, Eng. tr., Edinburgh and New York, 1858. But the modern books are better, as they not only include whatever was of value in their predecessors but address themselves to the tastes and requirements of the present day. Valuable to the practitioner are C. H. Spurgeon, *Lectures to my Students*, two series, London, 1875-77; H. W. Beecher, *Yale Lectures on Preaching*, 3 vols. in one, New York, 1881; R. W. Dale, *Nine Lectures on Preaching*, London, 1882; A. Phelps, *Theory of Preaching*, do. 1882; H. Bassermann, *Handbuch der geistlichen Beredsamkeit*, Stuttgart, 1885; Phillips Brooks, *Lectures on Preaching*, New York, 1881; W. Boyd Carpenter, *Lectures on Preaching*,

London, 1895; J. A. Broadus, *The Preparation and Delivery of Sermons*²⁶, ed. E. C. Dargan, New York, 1905; A. E. Garvie, *A Guide to Preachers*, London, 1906; P. Kleinert, *Die Homiletik*, Leipzig, 1907; P. T. Forsyth, *Positive Preaching and Modern Mind*, London, 1907. Preaching holds a place of course in works on Practical Theology, such as those of K. I. Nitzsch (*Prakt. Theologie*, 3 vols., Bonn, 1859-68), A. E. Krauss (*Lehrbuch der prakt. Theologie*, 2 vols., Freiburg, 1890-93), E. C. Achelis (*Prakt. Theologie*, Tübingen, 1903), J. J. van Oosterzee (*Practical Theology*, Eng. tr., London, 1878), as well as in series of books on the same subjects, like H. Hering's *Sammlung von Lehrbüchern der prakt. Theologie*, 50 vols., Berlin, 1895-1908, which includes both history and theory, in a series edited by himself. In the same way the subject is included in works on Pastoral Theology, such as those by K. Harms (*Pastoraltheologie*³, Kiel, 1878), P. Fairbairn (*Pastoral Theology*, Edinburgh, 1875), W. G. Blaikie (*For the Work of the Ministry*, London, 1896), J. O. Dykes (*The Christian Minister*, Edinburgh, 1908). Choice books, worthy of mention by themselves, are George Herbert, *A Priest to the Temple, or the Country Parson*, London, 1652; W. Loehe, *Der evangelische Geistliche*, 2 vols., Stuttgart, 1852-58; John Watson, *The Cure of Souls*, London, 1899; and H. van Dyke, *The Gospel for an Age of Doubt*, do. 1899. On the history of preaching there are an excellent work by Broadus (*Lectures on the Hist. of Preaching*, New York, 1876) and a small but characteristic one by John Ker (*Lectures on the Hist. of Preaching*, London, 1888); but the best work in the English language is an American one, by E. C. Dargan (*A Hist. of Preaching*, New York and London, 1905-11), vol. III, of which, dealing with the preachers of America, it is to be hoped will not be long delayed. The two volumes already published trace the theme from the beginning to the present day, and they are characterized by learning, insight, and vigour. In German there exist voluminous works on the history of both preaching in general and German preaching in particular, some of the outstanding names being R. Rothe (*Gesch. der Predigt von den Anfängen bis auf Schleiermacher*, Bremen, 1881), A. Nebe (*Zur Gesch. der Predigt, Charakterbilder der bedeutendsten Kanzelredner*, 3 vols., Wiesbaden, 1879), K. H. Sack (*Gesch. der Predigt in der deutschen evang. Kirche*², Heidelberg, 1875), C. G. F. Schenk (*Gesch. der deutsch-protestantischen Kanzelberedsamkeit*, 1841), C. G. Schmidt (*Gesch. der Predigt in der evang. Kirche Deutschlands*, Gotha, 1872). Of writers on French pulpit eloquence there are many, among whom may be mentioned E. Boucher, *L'Eloquence de la chaire*, Lille, 1894; A. de Coulanges, *La Chaire française au 18^e siècle*, do. 1901; A. Vinet, *Hist. de la prédication parmi les réformés de France au 17^e siècle*, do. 1860; P. Stapfer, *La grande Prédication chrétienne en France*, do. 1898. On the history of preaching in Holland and Denmark there are works by J. Hartog (*Geschiedenis van der Predikkunde in de Kerk van Nederland*, Utrecht, 1887) and V. L. Nannestad (*Portraits fra Kirken-Bidrag til en Karakteristik af dansk Prædiken*, Copenhagen, 1890), and on the same in Italy by U. Micocci (*Antologia della sacra eloquenza moderna*, Turin, 1897), and F. Zanotto (*Storia della Predicazione*, Modena, 1899). J. E. Kempe has edited two volumes on the *Classic Preachers of the English Church* (London, 1877-78), and J. C. Ryle published a volume entitled *Christian Leaders of Last Century* (Edinburgh, 1869). O. Jones has written on the great Welsh preachers (*Preachers of Wales*, London, 1885), while to the Scottish pulpit the same compliment has been paid by both W. G. Blaikie (*The Preachers of Scotland*, Edinburgh, 1888) and W. M. Taylor (*The Scottish Pulpit*, London, 1887). Under the title of *Representative Modern Preachers*, New York, 1904, L. O. Brastow published elaborate essays on nine preachers belonging to different countries. Finally may be mentioned collections of sermons, of which by far the greatest is that of J. P. Migne (Paris, 1844-66) in no fewer than 86 volumes. H. C. Fish's well-known *Hist. and Repository of Pulpit Eloquence*, New York, 1856-57, is modestly limited to two volumes and a supplement (*Pulpit Eloquence of the 19th Century*, do. 1857). Recent publications in America are *The World's Great Sermons*, 10 vols., ed. G. Kleiser, Chicago, 1910, and *Modern Sermons by World Scholars*, 10 vols., ed. K. Scott and W. Stiles, New York, 1909.

JAMES STALKER.

PREACHING (Jewish).—The word 'preach' is derived from Latin *prædico* (Gr. *πρόφημι*), and means to foretell or to announce (in public). Generally speaking, the term conveys the idea of making a proclamation on behalf of God. The notion of preaching is based on many passages in the OT, such as Is 29²¹, Am 5¹⁰, etc. The Biblical prophets are, therefore, to be considered as preachers in the literal sense of the word. In Dt 31¹² the injunction is laid upon the king to read the Law before the assembled people once in seven years. Such public readings are recorded in 2 K 23³, Neh 8³⁻⁸, and in the Mishnâh *Sôṭâh*, vii. 8. A kind of model sermon may also be seen in Pr 1²⁰⁻²².

During the second Temple, and some time after, preaching retained its spontaneous character. Whoever felt called upon to preach stepped forward

and spoke. The Mishnâh (*Ta'anith*, ii. 1) states that in times of prolonged drought the community, in deep contrition, gathered in the open and were addressed in stirring words by the oldest member present. John the Baptist preached (*ἐκήρυκε*) in the wilderness of Judæa (Mt 3¹), and Jesus preached in the synagogues. Preaching seems at that time to have been a regular feature of the Sabbath service. It grew out of the reading of the lessons from the Tôrâh, and consisted of the interpretation of the passages read and exhortations connected therewith. Since the people could not be trusted to follow the Hebrew text when read out, the latter was accompanied by a translation into the Aramaic vernacular, known as the Targum. The translator (*methurgemân*) was bound to be a person well versed in the original text. As a literal translation of many passages was impossible or impracticable, the translator frequently resorted to paraphrastic rendering, introducing into it elements of the Haggādâh as well as of Hălâkhâh. Instances of homiletic translation in the so-called Targum of Onqelos are Gn 49³⁻⁴ 10^f, Dt 32st, which contain expressions of comfort, hope of speedy delivery and the rebuilding of the Temple, also admonitions to observe the Law and to study the Tôrâh. Broader still are the homiletic additions to the other Targumim, but it seems that these were meant for private rather than public reading.

The Greek-speaking Jews proceeded in a similar way, using the Greek language for their religious lectures. We are in possession of two Greek sermons and the fragments of a third ascribed to Philo.¹ He is himself credited with having acted as preacher, and Freudenthal is probably right in regarding his allegorical writings in the light of public lectures actually delivered.²

The transformation of these rather informal lectures into sermons proper, based on Biblical texts, proceeded gradually. Their promoters were the heads of the Sanhedrin, who were distinguished by the title *darshanîm* ('interpreters'). As interpretation was the main feature of the lecture, the preacher 'opened' (*nîs*) his sermon with a quotation from the weekly portion, or *haphṭârâh*, or from any part of the Bible in some way connected with the occasion. These occasions were not only Sabbaths and festivals, but also marriages (Talmud *Brâkhôth*, 600) and funerals (*ib.* and *Mcgillâh*, 600). The specimens of introductions of funeral sermons given in these passages are in pure Biblical Hebrew, which is a sign that the preachers were highly trained persons who bestowed great care on their sermons. The ordination of rabbis was also solemnized by homiletic allocutions (*Sanh.* fol. 14v). A large number of such introductions (*מחנה*) are to be found at the beginning of the Midrâsh on Lamentations and the *Pesiqṭâs*, together with the names of the preachers, each paragraph giving either a complete sermon or the nucleus of one.

As a rule the sermon was spoken in the vernacular, Hebrew or Aramaic in Palestine and Babylon, and, correspondingly, Greek, Persian, and Arabic. Of the use of Arabic we have direct evidence in Muslim tradition. There existed a Bêth 'Midrâs' in Medîna, where the Jews interpreted the Tôrâh in Arabic.³ The preacher (also styled the *hakhâm*) often did not address the people direct, but spoke to the *methurgemân* (or *amôrâ*), a paid official who translated his words

¹ Ed. J. B. Aucher, Venice, 1826; see J. Freudenthal, *Die Flavius Josephus beigelegte Schrift über die Herrschaft der Vernunft*, Breslau, 1860, p. 9 ff.

² P. 7.

³ Bukhârî, *Ṣaḥîḥ*, ed. L. Krehl and T. W. Juynboll, Leyden, 1862-1908, iii. 198; see also H. Hirschfeld, *New Researches into the Composition and Exegesis of the Qurân*, London, 1902, p. 23.

aloud to the congregation. From this it follows that the *methurgemān* himself must have been a man of some learning. He had to add explanations and to answer questions, and the latitude allowed him is probably reflected in many passages of the Targumim and Midrashim.

Whilst the ordinary sermon was delivered in the synagogue, lectures on *Hālakhāh*, which demanded some preliminary knowledge, were left to the school hall (Beth Hammidrāsh). There was not, however, any fixed rule for such an arrangement, especially where the school hall was also used as a house of worship. On certain occasions, especially on Sabbaths preceding festivals, the public had to be instructed on certain duties and prohibitions, and the sermon assumed a mixed form. This custom is still observed in most communities. The natural place of the sermon was immediately after the reading of the lesson from the Pentateuch and the *haphṭārāh* from one of the Prophets. We read in *Massēkheth Šophertim*, xii. 7: 'On Sabbath the Targumān or Preacher (רש"י) recites the *haphṭārāh* from the Prophets.' A passage in the Midrāsh *Yalqūt* (92a) states that, when a person wakes from his sleep, he goes to the synagogue, reads the *Š'ma* and the *Tephillāh* ('Eighteen Benedictions'), and listens to the Tōrāh and to the elder (preacher). There are many passages in the Midrashim containing similar statements. Occasionally, when the morning service exceeded its limits, the sermon was delivered before the termination of the afternoon service. In some places this custom is observed even in modern times.

The Geonic period saw some changes. Whilst the preacher was honoured by the title *hākhām*, *darshan*, or *zāgēn* ('elder'), the *methurgemān* became a mere precentor, and the Midrāsh marks the contrast between the two by applying to them the verse Ec 77. The latter embellished the service by his melodious voice, but contributed nothing towards the uplifting of the congregation. The liturgy became fixed. The function of the translator was either abolished or greatly restricted. Relics of the same, however, still exist in congregations of Sephardic rite, where during the service of the Fast of Āb the Aramaic Targum of the *haphṭārāh* is read in an enlarged Spanish version. In Oriental congregations Arabic versions of the Targum are read of the Blessing of Jacob, the Song of Moses, the Decalogue, the *haphṭārāh* of the first and last days of Passover, and similar pieces.

Even the function of the preacher did not escape the vicissitudes of time. During the persecution of the Middle Ages many synagogues were closed, the 'public' service was banned to secret places, and expulsions made an end of many congregations. Another cause which affected the sermon, chiefly in 'German' congregations, was the enlargement of the liturgy, by the insertion of *piyyuṭim*, i.e. unofficial poetic compositions. The large Haggadic elements which they contained in some measure replace the homily, and sermons were delivered in intervals or on special occasions. The names of famous preachers in France and Germany are, therefore, comparatively few. A list of them is given in Zunz's *Gottesdienstliche Vorträge der Juden*² (Frankfort, 1892, p. 435 ff.). Spain, prior to the expulsion, offered a more fertile soil for pulpit eloquence, probably on account of the simplicity of the rite. Only on one Sabbath in the year and the minority of festival days are some *piyyuṭim* recited. This country, therefore, produced a large number of renowned preachers. Of those not mentioned by Zunz¹ must be named Jonah of Gerona² († Toledo, 1340), who was one of those who joined the movement against Maimo-

nides' philosophy, Nissim b. Reuben Gerondi (1350),¹ and Asher b. Jehiel († 1340). A great preacher of the 15th cent. was Joseph b. Shem Tōb. From a note prefacing a collection of his sermons² we gain some interesting information. It was in June 1452, when Prince Enrico arrived at Andalusia, that the Jews of Segovia dispatched a complaint to him concerning a persecution which had taken place on Christmas day. The prince sent Joseph with a written order to the authorities of the town commanding peace, and in another letter he assured the Jews of his protection. On the following Sabbath Joseph preached in the synagogue after the reading of the lesson. Subsequently he preached three more sermons in the same place. In Italy there were Abraham Farissol and Obadiah Sforno, both in the 15th cent., and David Zaccuth, who left a collection of 300 sermons.³ In the 16th cent. we find Joseph Taytazak of Salonica.

The following two centuries were not favourable to any further development of the spiritual life of the Jews, and this circumstance also affected public preaching. There exists a rather extensive literature of sermons produced in Italy, the German lands, and Poland, but, as they were written in Hebrew, it is doubtful whether they were actually delivered. In the Sephardic communities of Holland and England, where the Jews lived in comparative safety, sermons were delivered in Spanish and Portuguese. In other countries, with the exception of perhaps Italy, the vernacular was lost to them. In German-speaking countries the Jews could converse only in the Jewish-German dialect, whilst the use of pure German was almost regarded as rank apostasy. This condition lasted till Mendelssohn inaugurated a reform. The beginning of the 19th cent. brought the revival of the sermon. Its effect made itself felt all over Europe, and the old-fashioned *derāshāh* was gradually replaced by its modernized substitute.⁴ It has not died out entirely, and travelling and resident *maggidim* are listened to by large congregations in E. and W. Europe.

Even the modern form of sermons has undergone some modification in the direction of curtailment. The rather ponderous lecture, with its three (or more) points, which was fashionable fifty years ago is now a thing of the past, and is generally replaced by an address of about half-an-hour. A competent preacher can find sufficient scope for edification even in this short space of time, as long as he remembers that the sermon owes its origin to the exposition of the Law.

LITERATURE.—See works mentioned throughout, and L. Philippson, *Die Rhetorik und jüdische Homiletik*, Leipzig, 1890; S. Bäck, *Die jüdischen Prediger, Sittenlehrer und Apologeten in dem Zeitraum vom 15. bis Ende des 18. Jahrhunderts*, Trèves, 1895, 'Die Darshanim vom 15. bis Ende des 18. Jahrhunderts,' in Winter and Wünsche, *Gesch. der jüd. Litt.*, Leipzig, 1892-95, ii. 609-696.

HARTWIG HIRSCHFELD.

PREACHING (Muslim). — 1. The pulpit.—The pulpit is designated in Arabic by the Ethiopic word *minbar*, literally 'seat,' or 'throne,' ecclesiastically the bishop's throne, in Greek καθέδρα, whence the French *chaire*. In early times the Arabic synonym *maḥlis* seems to have been occasionally employed in lieu of *minbar* (Bukhārī, *Ṣaḥīh*, Cairo, 1312, i. 107). Such a throne was introduced into the Prophet's mosque at Medina before his death; it was of tamarisk wood, and

² MS Cod. Montefiore 166; see H. Hirschfeld, 'Descriptive Catalogue of the Hebrew MSS of the Montefiore Library,' in *JQR* xiv. [1901-02], xv. [1902-03], no. 61.

³ See Benjacob, *Ozar Ha-Sep̄harim*, p. 122, ש.ש. וררר and דרשה.

⁴ For a selected literature of sermons see S. Maybaum, *Jüdische Homiletik*, Berlin, 1894; see also M. Kayserling, *Bibliothek jüdischer Kanzelredner*, 2 vols., do. 1870-72.

was mounted by two steps. The traditions concerning the occasion and purpose of its introduction are contradictory, but the name indicates that it was conscious imitation of what was seen in Abyssinian churches; according to a tradition, the Prophet said that his purpose in introducing it was to enable the congregation to see how he performed the *ṣalāt* ceremonies. Of these, however, the prostration could not be performed on the *minbar*, whence it was eventually used only for the sermon, which was probably delivered by him standing, though there is some doubt about the matter. In 50 A.H. the Umayyad Mu'āwiyah contemplated removing this pulpit to the mosque of his capital, Damascus, but was prevented (it is said) by an eclipse of the sun, which was supposed to mark divine disapproval of this scheme; Mu'āwiyah accordingly disavowed this project, and instead raised the height of the pulpit by six additional steps. The eclipse is apocryphal. Several of the later Umayyads had the same idea, but they were all dissuaded (Tabari, *Chronicle*, Leyden, 1881, ii. 92). Peculiar sanctity naturally attached to this pulpit, which, since perjury by it was thought to bring terrible punishment, was used for the settlement of disputes. It is said to have lasted till 654, when the mosque was burned ('Ann al-Ma'bud, on the *Sunan* of Abū Dāwūd, Delhi, 1823, i. 421).

Pulpits were after a time erected in the mosques of the cities occupied or founded by the Muslim conquerors. Thus we hear of Mu'āwiyah, when governor of Syria, exhibiting the relics of the murdered Khalifah 'Uthmān on the *minbar* of the mosque in Damascus. The material is properly wood; hence 'the beams' is often used as a synonym for *minbar*. In the more elaborate mosques it is richly ornamented; specimens of such *manabir* are to be found in the South Kensington Museum.

2. The preacher.—The orthodox law-books prescribe that the preacher shall be properly clothed, without specifying the mode; the Shi'ite manual (A. Querry, *Droit musulman*, Paris, 1871-72, i. 86) ordains that he shall wear a turban and a striped Yemen cloak; the Umayyad Khalifah Walid II. used to robe himself in white when preaching (*Aghāni*, vi. 141); but in 'Abbāsīd times it would seem that the preacher wore a black gown (Ibn Abi Usaibīh, i. 274; A. von Kremer, *Culturgesch. des Orients unter den Chalifen*, Vienna, 1875-77, i. 137). In a description by Ibn Jubair (ed. M. J. de Goeje, London, 1907, pp. 222, 15) the preacher uncovers his head; the covering of the head was doubtless more usual, though the illustration cited by von Kremer (*loc. cit.*) perhaps refers to a special occasion. He should lean on a staff, bow, or sword, held in his left hand, 'indicating that this religion is maintained by the use of weapons' (Sherbini, *Comm. on the Minhaj*, Cairo, 1308, i. 286),¹ while his right hand rests on the pulpit-edge; and he should face the congregation, turning neither to the right nor to the left (Shāfi'i, *Umm*, Cairo, 1321, i. 177). The sermon (*khutbah*) is of two parts, between which the preacher should sit down;² if, however, bodily infirmity render it necessary, he may sit throughout, or even maintain a recumbent posture. Some authors recommend an elaborate ceremonial (so Rashid Pasha, *Dini Mubini Islam*, Constantinople, 1328, ii. 145-147). The preacher (*khatīb*) was in early times the sovereign, i.e. the Prophet and his successors; various authors profess to reproduce discourses pronounced by the Prophet himself

(Shāfi'i, i. 179; Jāhiz, *Bayan*, Cairo, 1232, i. 165; Ya'qubi, ed. M. T. Houtsma, Leyden, 1883, ii. 98; Bukhārī, i. 108), but these are very clearly spurious; Jāhiz produces others by early Khalifahs, and in the *Nahj al-balāghah* there are several supposed to have been delivered by the Khalifah 'Alī. Outside the metropolis the preacher was the Khalifah's representative; the historian Abū'l-Mahāsīn (ed. T. W. Juynboll, Leyden, 1852, i. 81) reproduces a sermon of 'Amr ibn al-'As, governor of Egypt for 'Umar I. During Umayyad times the Khalifah continued to deliver it; 'Abd al-Malik declared that his hair had been whitened by the fear of making a mistake in his Arabic when preaching (*Fakhrī*, ed. W. Ahlwardt, Gotha, 1860, p. 148). In 'Abbāsīd times it would seem that the duty began from an early period to be delegated; the preaching of the Khalifah Rāḍī in 324 A.H. is mentioned as exceptional (Miskawaihi, ed. H. F. Amedroz, in the press, i. 334). As late as 987 A.H. the emperor Akbar tried to deliver a sermon at Fatḥpur; but the experiment was a failure. An official called the *khatīb* was ordinarily appointed by the sovereign to discharge this function, and it was normally held that the sermon should be delivered only in cities, and in each city only at the official mosque. Where (as was the case with Baghdād) the city was bisected by a river, it might count as two cities. In the Shi'ite manual it is suggested that the mosques in which it is pronounced should be at a distance from each other of not less than three miles.

3. The sermon.—The occasions on which the law prescribes a sermon are before the mid-day prayer on Fridays, and after prayer on the feast-days, and in the services at times of eclipse and drought. Sermons are also delivered at weddings and on many public occasions. The language, according to the orthodox law-books, should be Arabic; the Zaidis, however, permit the use of Persian or any other language understood by the congregation (*Muntazā al-Mukhtar*, Cairo, 1327, i. 221), and some other authorities permit this, though use is rarely made of the leave on the prescribed occasions.

Orthodox jurists enumerate the elements of the sermon as five: the words 'Praise be to Allah'; a blessing on the Prophet; an admonition to piety, of which the minimum amount is the phrase 'Obey Allah'; a blessing on the believers; and a lesson from the Qur'ān, not less than a complete verse. The fourth belongs to the first part of the address, and the fifth to the second. This list fails to include the prayer for the reigning sovereign, which is prescribed in the Zaidi law, the legitimate sovereign to be named or not according to the needs of the time. Although an innovation, the practice is so general throughout Islām that orthodox jurists advise its observation, for fear of giving offence (Alī al-'Adawī, *Comm. on Sidi Khalīl*, Cairo, 1307, i. 432); but it is not quite clear when it was introduced. Shāfi'i (c. 200 A.H.) disapproves of prayer either for or against any individual being made part of the *khutbah* (i. 180); yet by 324 the prayer for the sovereign had become so regular a part of the Friday sermon that the Khalifah, having undertaken to deliver it, required expert advice as to his treatment of this passage (Yāqūt, *Dictionary of Learned Men*, ed. D. S. Margoliouth, London, 1913, ii. 349); and omission of it on the part of a preacher was at this time regarded as a sign of rebellion against the sovereign (Miskawaihi, ii. 90). Some writers assert that the practice was introduced by the Prophet's cousin, Ibn 'Abbas, when governor of Baṣrah (Ahmad Rasim, *Manaqib Islam*, Constantinople, 1326, ii. 437); the historian Ibn al-Athīr states that the first person for whom this prayer was offered in

¹ The orator's staff is an institution far earlier than Islām.

² Possibly this practice was suggested by the Christian sermon following the reading of Scripture (F. E. Brightman, *Liturgies Eastern and Western*, Oxford, 1896, Index).

Baghdād was the Buwaihid Sultān 'Aḍud al-Daulah in 367 A.H.; his meaning probably is the first person other than the Khalifah.

If the introduction of a prayer for the sovereign was late, the practice of cursing public enemies from the pulpit was early; the second Khalifah is said to have so cursed a man who was guilty of what was thought an immoral practice (*Mabsūt*, Cairo, 1324, xxiv. 20), and in the first civil war 'Alī and Mu'āwiyah introduced imprecations on each other into their sermons. The cursing of 'Alī in the Friday discourse was continued till the end of the 1st Islāmic cent., when the pious 'Umar II. put an end to it; as late as 321 A.H. there was a question of re-introducing the cursing of Mu'āwiyah (Miskawāhi, i. 260).

On the question whether the audience should be greeted at the commencement of the discourse there is a difference of opinion between the schools.

The Prophet is said to have recommended brevity to preachers, and the discourses attributed to him are of 'ten words,' i.e. a few sentences. The early discourses recorded by Jāḥiẓ (ii. 25 ff.) are somewhat longer than the minimum permitted, but are still very short. Some of them are partly in rhymed prose, and this style at a later time became normal. The cultivation of the sermon as a branch of literature may have been stimulated by the work of Jāḥiẓ († 255 A.H.), but the classical collection of sermons belongs to the 4th cent., and is the work of 'Abd al-Raḥīm b. Muḥammad, known as Ibn Nubātah († 374). The best edition of these is that published at Beirut, 1311 A.H. They are throughout in rhymed prose, and occupy on the average five minutes in delivery. The subjects with which they deal are such as are natural in homilies; owing to the preacher's patrons being princes who fought against the Byzantines, many of them are exhortations to the Sacred War. Probably from the time of their publication it became the practice of those official preachers who had no talent for their vocation to learn them by heart, and they are still largely used in the mosques of Egypt and perhaps elsewhere. In Turkey a collection by various authors is now ordinarily used for this purpose (Rashid Pasha, ii. 149, where one of these sermons is given in full with Turkish translation). The famous poet and sceptic Abū'l-Alā al-Ma'arri composed several collections of homilies (see *Centenario della nascita di M. Amari*, Palermo, 1910, i. 230), but they had little popularity. The polygraph Shammī al-Hillī (601) informed Yaḡūt that his own collection of sermons had superseded those of Ibn Nubātah in popular estimation (*Dict. of Learned Men*, v. 130), but this boast was not justified.

4. Unofficial preaching.—Besides the formality of the Friday service many persons felt a call to encourage their fellows to virtue and piety, to propagate the Islāmic religion by exhortation, or to spread particular opinions. The name usually applied to discourses of this kind is *majlis*, 'sitting,' *'aqada majlisal-waḍ'*, 'he held assemblies for the purpose of preaching,' being the phrase employed to describe this form of activity. Jāḥiẓ (iii. 86) speaks of Thursday as a natural day for such assemblies. Ṭabarī (ii. 507) gives a specimen of a sermon delivered in 65 A.H. by the most eloquent preacher of the time in the interest of the Prophet's house; it is partly in rhymed prose, but the artifice is irregular and the language on the whole simple. Most of the famous Ṣūfis were powerful preachers, and their effects on the audiences are described in the hagiologies; at a meeting held by Muḥāsibī († 243 A.H.) the company sat in silence after evening prayer until midnight; then some one propounded a question, whereon

the preacher began to discourse, 'the audience listening in rapt attention, some weeping, some groaning and some shrieking' (Subki, *Ṭabaqāt al-Shāfi'iyah*, Cairo, 1324, ii. 39). The crowds which gathered to hear these orators roused the curiosity of Jews and Christians, some of whom were moved by the sermons to embrace Islām (*Asrār al-Tauḥid*, ed. V. A. Zhukovski, Petrograd, 1899, i. 169). With the growing fashion of erecting religious buildings of various sorts which characterizes the 5th cent. of Islām the chronicles pay more attention to the presence of influential preachers in Baghdād; the ground occupied by the male audience of the preacher Ardashīr b. Maṣṣūr, who came to Baghdād in 486 A.H., was 175 cubits by 120, and the female audience was yet larger (Ibn al-Athīr, *Chronicle*, ad. ann.). The pulpit of the Nizāmiyyah College in this city was occupied by famous preachers in this and the following century; the sermons of 'Abd al-Raḥīm al-Qushairī († 524) delivered here led to riots between the Ash'arites, whose cause he supported, and the Ḥanbalites, in consequence of which the preacher was exiled to Nisabur (Ibn Khallikān, tr. de Slane, Paris, 1842-71, ii. 154). The arrival in Baghdād of powerful preachers belonging to these respective sects is recorded by Ibn al-Athīr for the year 516; the sermons of the Ash'arite were attended by the Khalifah himself, who presented him with the headship of one of the royal monasteries. For the middle of the 6th cent. we possess a volume of sermons by the famous Ṣūfi, 'Abd al-Qādir al-Jilānī († 561), called *al-Faṭḥ al-Rabbānī* (Cairo, 1302), some of whose discourses are also incorporated in the biography of him called *Bahjat al-Asrār* (Cairo, 1304); they were delivered on various days of the week, chiefly Sundays, Tuesdays, and Fridays (before the mid-day service) in different buildings of Baghdād, and would generally occupy about five minutes. They are in ordinary prose, but undoubtedly eloquent and spiritual; he claimed to have made 500 converts to Islām, and to have reformed more than 100,000 criminals (D. S. Margoliouth, 'Contributions to the Biography of 'Abd al-Qadir,' *JRAS*, 1907, p. 304). His personal character appears, however, to have left something to be desired, and it is to be observed that the authors of the *Maḡāmahs* (a word which properly means 'addresses' or 'sermons') place affecting homilies in the mouths of notorious evil-livers; and the success of the historical preachers at times led to their amassing great fortunes and maintaining *harims* of a colossal size. The traveller Ibn Jubair, who visited Baghdād in 580 A.H., notices the preaching of Baghdād as its one favourable characteristic:

'Scarcely a Friday passes without a discourse by a preacher, and those among the inhabitants who are specially favoured pass their whole time in meetings where such are delivered' (ed. de Goeje, p. 219). He describes a Friday service at the Nizāmiyyah College, where after the mid-day prayer the shāikh Qazwīnāscended the pulpit; chairs were placed in front of him for the Qur'ān-readers, who chanted elaborately, after which the shāikh delivered a powerful discourse; questions were then addressed him on strips of paper and he replied forthwith to every one. The historian Jamāl al-dīn Ibn al-Jauzī held services at this time every Saturday, and his eloquence also greatly impressed the traveller. The results were similar to the phenomena at times seen at revivalist meetings; many in the congregation sobbed and fainted, and crowds of penitents thronged to touch the preacher. 'It would have been worth while to cross the sea to hear one of these sermons' (p. 222). On Thursdays this preacher's gatherings were held in a private court of the palace, from which the Khalifah and his family could hear them. The text was a verse of the Qur'ān which ended in *nds*, and the preacher maintained this rhyme throughout his discourse. Into the sermon he introduced compliments to the Khalifah and his mother and prayers for them; he further recited many verses, some encomia on the sovereign, others of the Ṣūfi erotic style, which affected the audience powerfully.

This anecdote is of interest as indicating that the difficult artifice which characterized the

sermon was at the time unusual; we find it practised in a volume of sermons by a preacher of the 8th cent., Shu'ayb al-Huraifish († 801; *Al-Raud al-fa'iq*, Cairo, 1280), which closely resemble the style which affected Ibn Jubair so vehemently. These are interspersed with erotic verses or hymns, which appear to be the preacher's own compositions, and are much more lengthy than the sermons of 'Abd al-Qādir; the time which their delivery would occupy is probably from twenty minutes to half-an-hour, or in some cases considerably more. They are clearly intended to work on the feelings of the audience, and to produce something resembling ecstasy. The narratives introduced are highly imaginative, though they are often attached to historical names.

The style which has prevailed since seems to resemble that of Ibn Nubātah more nearly, when his discourses are not actually reproduced. A collection published in Damascus in 1909 by Muḥammad al-Qāsimi contains sermons extracted from volumes of the years 653, 772, 873, and 1079 A.H., intended to be delivered at the Friday service and on the feast-days; the time which they occupy rarely exceeds five minutes; the continuous rhyme is carried on through the opening sentences, but does not usually extend beyond the first third of the sermon. The *Majālis* of the official preacher of Baghdad, Alūsī-Zādah (*Ghāliyat al-Mawā'iz*, Cairo, 1911), resemble in length and to some extent in artifice those of Huraifish; the verses introduced are not, it would seem, original. It is said that the Islāmic preachers have in places where there are Christian missions modified their theory of the sermon in order to provide something as attractive as the Christian discourses; the reproduction of Ibn Nubātah has had to give way to a style more closely related to the spiritual needs of the time.

LITERATURE.—This has been cited throughout the article.

D. S. MARGOLIOUTH.

PRECEPTS (Buddhist).—The early Buddhists had very naturally quite a number of injunctions, precepts, short sentences on ethics or conduct, popular texts, or short verses current in the community. European writers call these 'precepts.' The Pāli word thus rendered is usually *sikkhā-pada*. *Sikkhā* is 'training'; *pada* is ambiguous, meaning either 'foot-step' or 'quarter verse,' and both meanings were called up by the word. Hence *sikkhā-pada* is either 'first steps in self-training' or 'textlets of training.' The basic idea is an influence from within, not an injunction or command from without.

An anecdote will show how such rules were looked upon by the new community. There came to the Buddha a *bhikkhu* of the sons of the Vajjians, and he said: 'Lord, it is more than a hundred and fifty precepts that are intoned to us every fortnight. I cannot, Lord, train myself in all these!' 'Could you train yourself, brother, in three—the higher morality, the higher intelligence, the higher wisdom?' was the reply. He said that he could. And he did. And thereby he put away lust, ill-will, and stupidity (i.e. reached *nirvāṇa*), and all the lesser matters were gained at once.¹ So also it is related of the Buddha that on his death-bed he told the order that they could revoke, if they chose to do so, all the minor and subsidiary precepts.²

In both of these cases the 'precepts' are for full members of the order. Another group consists of ten precepts for novices. It is often referred to in European books, but is found as a group only in the latest portions of the *Nikāyas*³ and in the *Vinaya* (i. 83). In this group the novice takes upon himself in succession ten precepts. These are: (1) not to destroy any living thing, (2) not to steal, (3) to be celibate, (4) not to lie, (5) to abstain from strong drink, (6) not to eat save at the right time, (7) not to frequent variety shows with

dances, songs, and music,¹ (8) not to wear garlands or to use perfumes, (9) not to use luxurious beds, (10) not to receive gold or silver. Each of the ten occurs in different groups and in different order in earlier parts of the Canon—eight of them, e.g., in a different order, in the *Sutta Nipata*, one of the earliest documents.² But the above are the number and order that have survived in the use of all those Buddhist communities which adhere to the older tradition. It should be added that no one of them is exclusively Buddhist. What is Buddhist is the selecting—the omission, e.g., of any precept as to obedience, or as to belief in any particular doctrine. But we need not here make any comparison between this list of 'first steps for the Buddhist novice' and similar lists for the novice in European or non-Buddhist Indian orders.

Of the many moral precepts for the use of ordinary Buddhists, not members of the order, it will be sufficient to refer to the well-known *Dhamma-pada*, an anthology of such precepts in verse gathered from the extant early books and other sources now lost. They are there arranged in groups of about 20 verses each on 26 selected subjects. Where the verses deal with ideas that are common ground to ethical teachers in Europe and India, the versions are easily intelligible and often appeal strongly to the Western sense of religious beauty. Where any verse is based on the technical terms of the Buddhist system of self-culture and self-control, none of the numerous translations is able to convey the real sense of the Pāli. The best translation is by Silāchāra.

There is a pretty custom that was current from very early times among the Buddhists in India, and is still current in Ceylon, Burma, and Siam. A layman (or laywoman), moved by some religious influence or emotion, will formally 'take upon himself,' for some definite period, the observance of the first five of the above ten precepts for novices. This is done by kneeling with clasped hands before a member of the order, and solemnly repeating after him, usually in Pāli, the words of each of the five precepts. This is called in Ceylon 'taking *pan-sil*,' i.e. taking the five moral precepts. It is not known when or where the custom originated.

PRECEPTS (Christian).—See COUNSELS AND PRECEPTS.

PRECIOUS STONES.—The first difficulty in considering the opinions of earlier times regarding gems is that of realizing the standpoint before modern chemistry had revealed the nature of matter. Only 140 years ago the editor of Theophrastus, Sir John Hill, was publishing entirely futile classifications, lumping together as varieties of sapphire such different materials as ruby, topaz, emerald, hyacinth, garnet, carbuncle, amethyst, chrysolite, and prase, and assigning the mixture which caused the colours of each, because 'we know the ingredients which give their colour by experiments in colouring glass' (*Theophrastus's History of Stones*, London, 1774, p. 286). Long classifying of spars and earths follows, which has no more reality than the epicycles of planets. All this was an advance on Pliny and earlier observers, yet it has been extinguished by modern chemistry,

¹ This is sometimes rendered 'concerts or plays'—wrongly for at that time in India they did not exist. See Rhys Davids *Dialogues of the Buddha*, i. 7, note 4.

² See Rhys Davids, *Buddhism*²², p. 130.

¹ *Anguttara*, i. 230; cf. *Samyutta*, iv. 251.

² Rhys Davids, *Dialogues of the Buddha*, ii. 171.

³ E.g., *Khuddaka Pāṭha*, i.

so that we can hardly realize the ancient confusion of thought. To understand the ancients we must set aside all chemical ideas, and regard stones only in their colour and hardness. Such a position must confound together materials entirely different, and divide identical substances which differ in colour. Thus the Egyptians had but one word, *mafkat*, for turquoise and malachite, a phosphate of alumina and carbonate of copper.

The questions about the ancient names and their modern equivalents are difficult to settle owing to the confusion of substances which look alike. The actual ancient usage of materials must be the guide, as it is impossible to connect with ancient names any gems that were then unknown. For the equivalents of the Biblical names see art. 'Stones, Precious,' in *HDB*.

1. **Egypt.**—In Egypt several stones are named anciently with specimens, and some others are named as the material for amulets which are regularly of one material. Thus we can be certain of *sef*, white quartz; *sef taken*, amethyst; *khenem*, red jasper, or sard; *hersed*, carnelian; *khesdeb*, lazuli; *gesonkh*, a variety of lazuli; *nemehen*, jade; *go* or *qada*, hæmatite; *neshen* or *mafkat neshen*, green felspar and beryl; *mafkat* of Syria, malachite; *mafkat* of Amen, turquoise; the last two may be perhaps reversed. The use of some stones was almost constant for certain amulets—carnelian or sard for the leg, hand, name-badge, and serpent-head; jasper, or imitation in red glass, for the girdle of Isis and the sacrificial cow; diorite for clothing; green felspar or beryl for the papyrus sceptre and the writing tablet; lazuli for figures of goddesses and the cartouche; hæmatite for the head-rest, square and level; obsidian for the double feather and *sma* sign of union. The reasons for such usage can be guessed in some cases: the green stones symbolized verdure and growth; the red jasper is called 'the blood of Isis'; the weighty hæmatite is for the repose of sleep or of levelled building; the flesh-coloured carnelian for the hand and leg. Some of these amulets are ordered to be made of such materials in the directions in the *Book of the Dead*.

2. **Italy.**—Italy is the land of which we know most regarding amulets, anciently from Pliny, recently from Bellucci. The ancient ideas attaching to stones are: diamond for poison or delirium; hæmatite for success in petitions or to reveal treachery; siderites (black hæmatite or meteorite) to cause discord in law-suits; brown hydrous oxide of iron (limonite) for pregnancy; quartz crystal for parturition; amethyst and emerald for intoxication, against spells, hail, and locusts, and for access to kings; agate against scorpions; jasper for public speaking; blood jasper for invisibility; black jasper for taking cities and fleets; yellow quartz against jaundice; amianthus against spells; serpentine against headache and serpent-bites; white steatite for increase of milk; malachite for preserving infants; amber for throat affections, and against fevers; ammonite for prophetic dreams.

In modern Italy pyrites is used to preserve the eyes; red hæmatite stops bleeding; black hæmatite is for the evil eye; limonite for pregnancy; sapphire is for headache, and promotes contentment; quartz crystal for evil eye; white chalcedony for milk; red chalcedony for bleeding; agate eyestone for evil eye; blood jasper to stop bleeding; black jasper against lightning; staurolite against witchery; nephrite for kidney disease; garnet for widows, and comfort in misfortune; serpentine against reptiles; malachite for the evil eye; dendrite against venom; selenite for increase of milk; amber against witchery; white coral for increase of milk; red coral for menstruation and

evil eye; madrepore against witchery and worms. Obviously the use of a large part of these is due to 'sympathetic magic,' or, as it may better be called, 'the doctrine of similars.' A considerable revival of fancy beliefs about gems has occurred in recent times among the ignorant and superstitious of wealthy classes in Europe and America. There is little or nothing collected as to traditional beliefs about stones in other lands outside of Italy.

3. **Motives for use of gems.**—An examination of subjects engraved upon gems throws some light on the purposes for which they were worn. For this inquiry the number of occurrences of a subject in Furtwängler's great catalogue may be taken, supplemented by a few published in Petrie's *Amulets*.

Strength and love seem to have been the great motives, Herakles and Eros each occurring 178 times. Far below these come wisdom, with 75 of Athens and Minerva; Selenos (66) for good living; Hermes and Mercury (63) for trade; Apollo (61) for music; and Daimon (53) for propitiation of evil; Dionysos (53) for mysteries; Nike and Victory (53) come next; and, strangely, Aphrodite comes as low as 52. Of the lesser classes are Gorgoneia and Medusa (45), Psyche (31), Artemis (29), Manad and Bacchantes (28), Bes (18), Siren (17), Zeus (16), Perseus (15), Isis (14), Nereid (14), Ares and Mars (13), Bonus Eventus (11), Serapis (11), Pan (10), Nemesis (9), Cerberus (8), Eos (6), Harpocrates (6), Helios (5), Leda (5), Fortuna (5), Tyche (5), Asklepios (4), Dioscuri (4), Triton (4), Ganymede (4), Hephaistos (3), Hera (3), Hekate (3), Agathodaimon (3), lion-headed serpent (3), Ceres (2), Abundantia (2), Europa (2), Thanatos (2), and one each Adonis, Orpheus, Osiris, Anubis, and Set.

It is surprising how popular some deities were, nine surpassing Aphrodite; while Zeus, Asklepios, Fortuna, and Ceres were strangely neglected.

PREDESTINATION.—I. IDEA AND PARTS.

—1. **Idea.**—The idea of predestination bulks largely in the history of religious thought. Recently it has grown in interest. It has come down to us in two connotations, the one more strictly theological, the other more purely philosophical; and in both references severer definition demonstrates the reasonableness of its essential truth.

(a) As a technical term in theology the word stands for that voluntary act of the divine will whereby God predetermines or foreordains whatsoever comes to pass, and in particular the destinies of the good and evil.¹ The inclusion of the reprobation of the wicked has lent the term an ill savour. Shorn of this part, the dogma remains, the divergences of the schools in other points appearing less firm under the pressing practical and social needs of the modern Church. The predominant tendency is to identify this, the redemptive, aspect of predestination with election (*q.v.*), and to use the three terms—'predestination,' 'foreordination,' 'election'—as synonyms.

(b) In its philosophical character the word stands for a conception much more comprehensive and profound, viz. that original all-inclusive definite purpose of God and act of His all-holy will to manifest His glory in self-revelation, which self-revelation takes effect by stages in time, appearing not only in redemption, but in creation and providence as well. Here the idea is not given immediately in experience, but emerges in reflexion upon it and has in consequence to vindicate its rational validity. It has won favour under the agis of the modern discipline of the philosophy of religion, its subject-matter furnishing one of the indispensable problems of that important science, where its claims are strengthened by several currents of the deeper thought of the age,

¹ The *Westminster Confession* used 'predestination' only 'to eternal life,' 'foreordination' 'to eternal death.'

the philosophy of nature and of history, comparative religion, the higher mysticism, man's tragic experience of life. The history of theism, moreover, shows predestinarianism to be an invariable concomitant of that form of religious thought, and to be as fundamental to theism as its other features. As theistic reconstruction proceeds, the idea of predestination correspondingly gains.

Note on the term.—The term 'predestination' has long been in disrepute, and for three reasons: etymologically it is unscriptural, theologically it is depraved in meaning, and philosophically it is not sufficiently distinctive. The word is not in the Bible. The verb and noun come from the Patristic period; the verb through the Vulgate won its way hesitatingly into the AV; in the RV its place is taken by 'foreordain.' The Latin *predestinare* translates the Greek *προορίζειν*—a better translation is *præfinire*. Then, in meaning, two declensions have occurred: *προορίζειν* does not include 'reprobation,' while *predestinare* has come to include it; on the other hand, popularly the term has lost the larger reference to the totality of divine self-revelation other than that in redemption. Further, the speculative understanding finds the theological controversial taint of the term repugnant, and prefers to argue for the idea under other names.

Is this disparagement wise? Three considerations may help to a negative answer. (1) Both Hebrew Wisdom and Christian theology worked out a large conception of God's relation to the world and to man as part of the world, which it was found difficult to embody in a single word. Accordingly, in both developments there occur a number of terms each of which conveys some special *nuance* of the general idea, for that is how the religious consciousness works. The philosophic consciousness, on the other hand, desiderates a term for the idea in its largest breadth; that is its nature. In Hebrew probably the nearest equivalent is *לֵב*. In Greek in the NT there is none; hence Patristic thought coined 'predestination' precisely as in the case of another doctrine, that of the Person of Christ, is coined *θεοσύνος*.

(2) If 'foreordination' be interpreted in a purely religious sense as the equivalent of election, referring to man's salvation from sin by grace, then it is not adequate to the whole idea intended in 'predestination.' God gathered His own in His electing will; but He has other activities in creation and providence, and, if these have a relation to redemption, they also have independent relations to God and each other, and, as such, have their ground in the divine will—a fact unrecognized in 'foreordination,' which, even if it be of wider compass than 'election,' embracing the reference of the divine predetermination of the works of creation and providence to that of redemption as its preparatory stages, is still inadequate to the whole idea of 'predestination.'

(3) The philosophical demand for stricter definition is not due simply to prejudice; there is a real need in the interests of truth to separate clearly the facts of religious experience from inferences deducible from them. The speculative impulse and the religious instinct move in different spheres and speak best each in its own tongue. The above contention is corroborated by the history of predestinarianism. The three greatest protagonists are St. Augustine, Calvin, and Jonathan Edwards (*q.v.*). The special worth of these three is to have combined in an unusual degree the religious and intellectual powers; they all feel the need of this term 'predestination.' It is noteworthy in this connexion that, in those forms of pure philosophy in which the spiritual aspect of existence has justice done to it, idealism becomes predestinarianism—as, *e.g.*, in the German succession from Kant, through Schelling and Krause, to Lotze; and that those forms of theology in which philosophy finds a constituent place exhibit the same tendency—as, *e.g.*, in the theosophy of F. X. von Baader¹ or the ethics of E. Rothe.²

2. Parts.—The predestination idea comprises two parts: (a) prescience, and (b) prevention.

(a) *Prescience.*—'Foreknowledge' (*πρόγνωσις*) is a necessity of God's omniscience. It is involved in His knowledge of Himself and of His own will, and the immutability of His knowledge; for He sees all things future in the mirror of His will, and has never at any time been ignorant of what He was to do and what would be the consequences. Foreknowledge of the actions of free agents has sometimes been excluded from the idea of God's omniscience on the ground of its alleged inconsistency with human freedom,³ and indeed the difficulty of explaining how actions are free yet ordained has never been solved. But that God has perfect foreknowledge of all events and that man has free agency, implied in moral responsibility.

² *Theologische Ethik*, 5 vols., Wittenberg, 1867-71. For this and the above English readers may consult O. Pfleiderer, *The Philosophy of Religion*, London, 1866-83, vols. I.-IV.

³ *E.g.*, by the Socinians, Rothe, Martensen, etc.

bility, are truths supported by sufficient and appropriate evidence, although we may not be able to compose their harmony until our knowledge is such as God has. His foresight need not lessen man's freedom, if freedom be understood not as simple self-will, but as the growing faculty of co-operating with the divine purpose. That purpose is working out a higher thing than can be wrought between precise forecast and exact fulfilment; it is rather the evolution of men's free intellectual and emotional life, adapting them to their environment and improving their conditions. We can conceive of God influencing His whole creation in this way, persuading every grade of living things to assimilate more and more of His life-force, and go forward in the full tide of progress, while they are still free to close their pores, so to say, to His wisdom and life that encircle them as an atmosphere.

Such a purpose etches itself out against a background of much that seems purposeless, where much happens that is not His will but the will of an autonomous creature not yet won by His persuasive agency. As the divine knowledge is intuitive, not inferential, free, not necessitated, we are bound to assign to it the prescience of all things and all relations of things, of all actions and all conditions of actions.¹

(b) *Prevention.*—Again, the premotion² of God is a necessity of His omnipotence. Predestination is no mere idea in God—not simply His resolve to enter on modes of self-revealing activity; it is also action creative of creaturely destinies and productive of His eternal purpose; it is the actual acting upon His resolve, action whereby He is the immanent spirit in all nature, history, life. We note, further, that God's prescience and prevention exclude the deistic and naturalistic formulations of His relation to the world, since both deny His active presence in it, as certainly as they exclude the pantheistic formulation which regards the world as illusion, emanation, or self-evolution of God. Thus it will be seen that in the predestination idea lies the thought that all the works of God form one whole and move to one goal, that all find their ground in His attributes, their cause in His will, that all are the issue of one presupposition in the divine nature. How do we affirm this? Religious experience postulates it as the basis of its certainty (predestination in redemption); philosophical reflexion postulates it as the integral ground of its view of the world and man's history (predestination in creation and providence). The word 'predestination' sums up both postulates and witnesses to secret affinities between the natural and revealed wills of God, wherein the realities both of reason and of faith find their ultimate reconciliation.

II. SOURCE AND ISSUES.—I. Source.—Here two points require to be noted. Predestination has its origin in the divine nature alone, and there alone in the divine attributes. God's act of resolving to enter upon the various modes of His self-revealing activity is a free yet responsible act.

¹ This excludes the celebrated distinction of *scientia media*, the proper discussion of which falls in connexion with the divine omniscience. It was invented by the Jesuits, defended and propagated by the Molinists, assailed by the Spanish Dominicans, and at a conference in Rome convened by Pope Clement VIII. was condemned. The agitation continued. The Arminians of Holland spread the view among the Reformers. In England it spread widely in the 16th century (see J. Strang, *De Voluntate et Actionibus Dei circa peccatum*, Amsterdam, 1657). The hypothesis of *scientia media* is untenable. There can be no such intermediate knowledge, all knowledge being either necessary or free. Again, as inferential knowledge it cannot worthily be ascribed to God, whose knowledge is intuitive. He knows all the relations of things, but does not reason out those relations in the act of knowing.

² The favourite term in Scholasticism for 'prevention.' St. Thomas Aquinas discusses it with fullness. Cf. also the controversy of Malebranche with Boursier.

to which He is determined by nothing outside of Himself, or alien to His nature, and by nothing in the way of an internal necessity of His being, or of any defect in His being, except the insistence of His own gracious character and good pleasure. There is no life outside the divine life. The life of God is inclusive of all life. It is a life with Himself alone and within Himself alone. In the vastest area of being there are no reaches beyond His boundless being or beyond the causation and control of His will. The whole actual and possible universe is at the last a monistic system, centring in a single truth to which everything in it may be referred. That truth is the one and absolute Being, who comprehends all being, the substance of all existence, God. God thus is not one side by side with others, whether like Him or unlike, co-equal or prepotent, relationship with whom He is bound to recognize and consider in His own action. He is God; and 'beside Him there is none other.' To be Himself is the sublimest glory conceivable. To go forth continually in self-manifestation is His constant good pleasure or will. Such a Being, overflowing with the sense of His beauty and infinite blessedness, must communicate Himself in love in every form and degree possible through which the features of His life may shine. His self-exhibition and self-communication are the only and original necessities of His action, and these reside in His own nature.

From that fact it follows that those original necessities operate in accord with the divine attributes and with nothing else—power, justice, wisdom, holiness, love. God is not all-powerful in the sense that He can do anything. He does what He likes, but He likes only what is according to His character, that which is true, just, holy. There can be no caprice in His action, for His will learns from His wisdom and works out what is just. His power is at the service of an idea which gives to His endeavour stability and worth. There can be no question here of His predetermining any thing or person to what is contrary to His character. The attributes of God, since they alone regulate His action, are the basal principles of existence and the supreme categories of thought, which takes origin in their exercise. All finite existences through which He designs to manifest and to bestow His life, founded in the qualities of His nature, find their real principles, their *ratio essendi*, there, and represent each one or more of those divine qualities. All life is rooted in the divine Being, is in Him an organic whole, and includes the life of nature, of history, of humanity, in which He displays His power, wisdom, righteousness, truth, goodness, and love, and no attributes opposed to these. All these lives are independent unities within their own spheres, yet related to one another in the all-embracing whole, which is neither identical with God nor separate from Him, but in which He is so present (and it in Him) that He is not merely the cause of it and all its parts, but is its and their immanent and active ground, so that they truly appear as His finite expression and image through a series of ascending stages in an organic process which tends to His honour and glory.

2. Issues.—Such is the divine design. The method of accomplishing it science and philosophy unfold. To their investigation nature, history, and man are all separate if related economies, susceptible of distinctive analysis—a task to which the modern spirit has addressed itself with eagerness. Here we are concerned only with an inductive generalization of broad results. These would appear to be three: (1) God works towards an end through means; (2) He employs means in a graded succession in time; (3) the character of the end

displays the principle of the whole and motives the effort of progress towards it. If these results be kept in view, we shall be led in the path of a true theism and a right predestination. The universal dualism deeply seated in the entire constitution of things cannot be denied; it raises the problems. There are speculative systems that easily set it aside, in the way of logic joining opposites that are held to be originally one; but by such logical redemption no strength is given to human thought or moral aims. Theistic monism cannot thus proceed; it must show the dualism overcome in the way of historical fact and moral process, such that God is seen to be all in all, realizing Himself in His attributes in finite forms through the free play and independent life of their internal forces.¹ The steps of the proof are clear. The physical creation, operating freely within limits imposed only by its own material, is an orderly system working out its special end in man. Man is the living synthesis of nature, which in all its parts prefigures him, and in its functions aspires to what is only satisfied in him. History is characterized by the same independent interplay of all her forces and moves on under laws which reduce the acts of the countless conscious subjects who make events to a world of order, the progress of which is the evolution of the spiritual man. Man himself, granted that he is by nature a divided and complex being, is nevertheless in the healthy personality one. Aim, will, resolve, make him a complete unit; as mind or will he is a whole; and the more he advances in intelligence and ethical power, the better he is fulfilling the ideal of his own life, and responding to the preparatory movements beneath the human sphere which have gradually disclosed it. Humanity is thus the final cause of the world, history, human nature. Now, as it belongs to the nature of God to actualize Himself in humanity, the human spirit, as it descends into the depths of its own being, recognizes itself to be divine in principle. The perfect consciousness of this we see in Christ, and owe to Him. He made known to man his inborn divinity. His incarnation exhibits the unity of the divine and human. That consciousness comes first in a single individual, in isolated form, a present divine fact, serving to stimulate the human spirit to new life. The last consideration is of the highest importance. It contradicts all ideas which resolve the revelation of God in Christ into a general fact belonging to the phenomenology of spirit, and implies the personal God communicating Himself in dynamic force in positive historical form. Man has not grown into the consciousness of his own divinity; it has been revealed to him. Revelation is not simply an extension of the knowledge of God; it brings in an actual economy of grace as actively employed in the redeeming of men. Only by a sum of saving acts, unfolding His mind and will, can the living God become fully unveiled. In this sense Christianity alone is the revelation of God's redemptive love, since the whole person of Christ—His words, works, death, resurrection, exaltation—serves to bring into actual view the will of God as concerned in the salvation of men. Not through Christ merely, but in Him, in the undivided whole of His personality and history, as 'Head over all things to the Church,' God was reconciling the world to Himself. The Christological element leads us to regard the will of God for our salvation not as abstract, but as personal and positive in His Son. That, however, could not have happened haphazard in the divine mind; as it was essential

¹ The first thinker clearly to expound this position was the Italian G. B. Vico; cf. his 'La scienza nuova,' in *Opere*, ed. G. Ferrari, Milan, 1835-37; R. Flint, *Vico*, in Blackwood's 'Philosophical Classics,' Edinburgh, 1884.

to the setting forth of His glory, it was 'before the foundation of the world,' by His determinate counsel; and it determined the foundation of the world and the subsequent fortunes of all therein. Predestination is by the will of God, in an organic process,¹ in Christ who is its primal and final principle.

III. *SIGNIFICANCE.*—I. For the idea of God.—The predestination idea safeguards three factors in the relation of God to the world: (a) His free agency and responsibility in His activities, (b) His co-operation with His creatures in their true life, and (c) His efficiency in the fulfilment of His purpose.

(a) *Arbitrariness* has been associated with God's predestination. Yet predestination forbids arbitrary caprice on His part. The great advocates of its truth know nothing of arbitrary acts of God. The acts of God, they argue, are consistent with the character of God; the nature of God is prior to His laws, and His nature and character are of the absolute and perfect good. *Inscrutability* has been associated with predestination, as a cover for any injustice that may emerge in its issues. Now, while on any theory of the universe the last reasons of the constitution and course of things must always be sought for in the council of an eternal wisdom which it is beyond our capacity to fathom, and therefore inscrutable, in the inscrutability there can be no injustice or partiality; for those reasons are the outcome of an eternal wisdom, righteousness, love. God's action here can never be that of a selfish man. He acts according to His glory, which cannot be dissociated from His nature as absolute good. In that character His moral perfection implies an absence of arbitrary or unjust act. *Indeterminism* has been associated with predestination. But God cannot act as an indeterminate power. He is intrinsically and necessarily good—not by necessity, but freely, because He wills the freedom which lends His action its ethical character. The necessity which keeps Him from evil is moral—conformity to love, goodness, holiness.

In contradistinction from these, the divine predestination is an act of *sovereignty*, in the exercise of which God shows only mercy and goodness. Sovereignty is not simple supremacy; it is the sphere of divine freedom whence issues only blessing,² for there divine procedure is not limited by considerations of man's excellences or sins.

(b) God's blessing us is His co-operation with us to cultivate in us His life. As in Him, so in man, true life is attained by a combination of necessity and freedom. Man everywhere, as he ascends in intelligence, is inwardly conscious that He is able to do right. He is also convinced that God is on the side of the right. The tendency to excellency of life indicates God's will. It grows in man by his response which he makes in his freedom as he directs himself more perfectly towards God. Yet it is not simply by his desire and aspiration and the efforts born of these that he ascends, but also by their satisfaction in the answering care and recreative energy of creative love. These experiences point to the transcendent truth that creation was with God from all time, came from God, is in part turning of its own will towards God, is in part ever turning more and more consciously towards Him, and becomes at last completely, self-consciously, at one with God in will—the doctrine of the Logos, the hope of the eschatologist, the dream of the mystic.

(c) Is it but a hope and a dream? Can God's

purpose fail? Our conception of *omnipotence* must be modelled on what we know of finite power, though not limited by it. In our experience the secret of power lies in the ability to conceive the end in view and to regulate action towards that end. Those are not absent from God. For the creation of the finite He is responsible. He has chosen to create it not a passive thing, but a life with a way of its own. Why should we not believe that it is only the possibility, not the actuality, of evil that is necessary? If the end which God has in view is a form of life produced by the ability to co-operate with or to resist Him, it must be part of His omnipotence to be able to give the ability to resist Him. The resistance would be evil. In so far the Creator is responsible for the possibility of evil and its attendant risks. On the other hand, the divine prescience cannot be conceived as dim or vague, or the divine blessedness as uncertainly fluctuating with the uncertainties of men's choices, as Calvin asks, 'How can the contingent affect the First Cause on which it entirely depends?' The possibility of future failure on His part must, therefore, be limited. God must be credited with provision against the results of all possible disaster. Is not fatherhood the best symbol of omnipotence? His creation must not finish in itself, but must go on to recreation—a consummation visible in Christ and Christian humanity, in whom 'the whole world is reconciled to God.'

God, then, has willed all men to be saved. He has predestinated all men and things in His Son. Creation is prelude to incarnation, and was never designed to furnish occasion for irreformable sinners. In the foreordination as in the judgment God might say, 'I never knew you sinners.' He has contemplated all in Christ; He has foreknown all in Christ; He has loved all in Christ; He has elected all in Christ; and by the one same act. He has taken every possible means to fulfil that act with success. Through creation, history, redemption, He has gradually exhibited and communicated His life to men, to raise men to its likeness step by step. Respecting his liberty God forces no man, yet presciently and preventively seeks to persuade men. He reserves also the right to intervene by His omniscience and omnipotence in order to avert thoroughgoing disaster. Both courses He takes in the exercise of His sovereignty, which is the field of His freedom. That 'preferential action'¹ of His can fail only if the infinite resourcefulness of His nature fails—a result inconceivable.²

2. For the idea of man.—The predestination idea yields two precious assurances for man's conviction along with a grave warning: (a) the certainty of his practical freedom of will, (b) the ability to attain his destiny, (c) the fact of failure as both possible and permissible.

(a) *Necessity* has been associated with predestination. The problem that it raises is perennial. Its reproach no system can roll away from itself. As the divine Being is a harmony of necessity and freedom, so they run through all His handiwork inclusive of man's life. In themselves they are not antitheses, and they are but crudely conceived when opposed. A theistic predestination excludes their opposition and leaves the vindication of necessitarianism to 'the wisdom of this world' as in materialism and idealism—in men of science like Huxley, Spencer, etc., in men of speculative idealism like Hegel and others more pronouncedly pantheist, who assert that they see in all things the working out of an eternal necessity. Philo-

¹ Martineau's phrase.

¹ The first philosopher clearly to recognize the organic process of the divine purpose was St. Augustine.

² Calvin terms the opposed doctrine 'frigid and jejune' (*Inst.* i. 16. 1).

² The foregoing excludes three positions: (a) the notion that God predestinates fixed numbers, (b) the notion that God predestinates to evil, and (c) the notion that God predestinates 'by permission,' eternal consequences of evil.

sophers of the type of Schelling, Lotze, and others are truer guides. History, they urge, is characterized by a union of freedom and necessity, the product of a freedom somehow pervaded by necessity, composed of the acts of countless conscious subjects which yet form a world of order.¹ How can this be?, they ask. Only through the operation of a principle superior to both in which they are one—God. History is the evolution of that principle. It reveals itself through the free play of individual wills, and could not be were those wills not free so that they are fellow-workers with it. Free will is incapable of rigid objective presentation; it is best exhibited by a process corresponding to the development of freedom itself. What is freedom? It is only in terms of experience that it can have any meaning at all. So with necessity. They are two constantly alternating poles of our experience. The only solution is a repeated appeal to the subject. The freedom which we at once oppose to and collate with necessity is subordinate to the higher freedom of consciousness on which the distinction rests. Thus modern psychology. In the metaphysical reference the difficulties arising from finite freedom may be met by the contention that, while the total possibilities, however far back we go, are fixed, yet within these, however far forward we go, contingencies arise,² and the best is reached only by living through the less good.

(b) *Fatalism* has been associated with predestination. Calvinism is alleged to be specially chargeable with the error in Christian times. Unquestionably paganism furnishes abundant traces. The popular misunderstanding of foreordination is fate. Predestination, however, is not fate. Fate is a conception for which there is no foothold in the Christian system. Belief in one's fate or star or fortune is apt to characterize both great men and small, and to prompt both to trust in their strongest qualities, which may not be their best. In so far as a man is possessed by a blind feeling of being an instrument of destiny used by an irresistible force he knows not to what end, his belief is a weakness. It bears no likeness to the Christian idea, which has two features: it makes a man rationally conscious that he has a mission to accomplish, and it impels him when he learns the divine will to be humbly submissive to its dictates. 'I will do God's will and what I choose,' said General Gordon. The Calvinistic 'fate' is incentive to heroic effort, a challenge to play the man. God's predestinations are moral inspirations.³ What God ordains man realizes. Yet withal there is more. Calvinism in its severer aspect embodies something additional. It is often neglected in Christian thought; it was seldom absent from the

¹ F. W. J. von Schelling, 'Philosophische Untersuchungen über die menschliche Freiheit,' in *Philosophische Schriften*, Landshtut, 1809; E. H. Lotze, *Mikrocosmos*, Eng. tr., 2 vols., Edinburgh, 1885.

² This is Martineau's solution, accepting it from Dugald Stewart; cf. *A Study of Religion*, bk. iii., 'Determinism and Freewill.' It is the position gradually but cogently won through the succession from Kant to Lotze. Science, as distinct from metaphysics, has also in recent years begun to vindicate 'freedom' as rational; with the activistic and vitalistic philosophies of Eucken and Bergson it has entered on a new era. In a recently published letter of more than ordinary interest Bergson writes: 'From all this [the contentions of his three works, *Essay on the immediate Facts of Consciousness*, *Matter and Memory*, and *Creative Evolution*] there clearly emerges the idea of God, Creator and Free; the generator at once of matter and of life, whose creative efforts as regards life are continued through the evolution of species and the constitution of human personalities.'

³ Cf. J. Orr, *The Progress of Dogma*, London, 1901, lect. i. Calvin and Knox in their treatises strenuously deny that predestination is fate. Sir W. Scott credits Montrose with the ditty:

'He either fears his fate too much,
Or his deserts are small,
That dares not put it to the touch,
To gain or lose it all.'

pre-Christian conscience. In India and Greece, among the old Teutons, in many Christian sects and not a few of the noblest Christian minds it found impressive expression, viz. man's profound sense of the radical obscurity and deep underlying tragedy of human existence—the *Weltschmerz* of modern pessimism. It centres in that suffering in which the subject is victim. It is the tragic mystery of the world, something piteous and fearful; not emergent merely from external forces nor from human acts, not the moral order nor yet a mere fate cruel and indifferent; but something inscrutable and inevitable outside all these which bears on man's life and assails it. It is a demonic force, ready to spring, when circumstances or character or both give occasion, upon its victims to wreak upon them a dire doom, in the drawing down of which motives are nothing, circumstances nothing; the motives may have been aflame with goodness, the circumstances such that any other course was impossible, yet with sharp and swift consequence the stroke descends out of the place where dwell the Nornir (Teutonic), the Hathor (Egyptian), the Erinyes (Greek), the 'divine jealousy' (Hebrew), and all such as 'work woe to mortal man.' It is this almost universal dark instinct more than the Pauline election that is responsible for the horror of much Christian eschatology and Calvinistic gloom; it inheres in the natural man. Early Greek dramas, Shakespeare's tragedies, Maeterlinck's essays, cover a stretch of many centuries and represent widely divergent civilizations, yet in this they are one. It is an insistent sense in all thought which has these two grievous wants: the lack of personality in the Deity and the lack of reality in the world. It is the great merit of Christian thought to remedy both defects and to lift in some measure the awful burden from human hearts. It does so by teaching the unity of the physical and moral spheres, the organic character of all existence in God. It agrees that these spheres do not exhaust the content of reality nor enable us to grasp the depths of being, and so cannot be erected into the working powers of the world or made the complete expression of the divine will. But what is beyond them is not dark, cruel, vengeful, jealous of men, eager to slay, but an order far deeper and richer than that which we know in time and space, where God's will alone abides unchanged and unchangeable, working itself out not only in spite of but even by means of all opposed to it; and it is a will of good to man.

(c) Opposition there is. It is vital; so real and serious as, not indeed finally to thwart, yet grievously to hinder, the fulfilment of the divine purpose, and at the same time completely disintegrate its own spirit-power. God cannot fail; individual men may. The forces adverse to Him are autonomous, and the autonomy is real; hence all may not 'work to will and to do of His good pleasure.' His workmanship is not merely mechanical, infallibly realizing His conceptions. He has His conception and also its completion before Him, as every purpose must; but the first has to reach the second not forcibly but freely through the material in which it seeks to be expressed. That material may never move against Him in the mass, but it may in the individual; for the individual is not wholly moved by the mass and may use the energy that is his own at variance with the force of the whole. When this is so, what then? Are there refuges, reservoirs of latent self, for the rebels? The energy of life-force which they misuse, is it transformable? Perhaps; by lapsing into the universal life, there to be re-formed.¹ At any rate, it may utterly fail in its present form.

¹ Cf. the Biblical figure of God as 'the potter.'

Individual tragedy is too frequent here to render it improbable or impossible hereafter,¹ unless, within the reaches of the divine resourcefulness and the possibilities of the organic life of the race, there be means of conversion and renewal at which we cannot even guess. Men must 'give all diligence to make their calling and election sure.'

IV. HISTORY.—1. Ethnic.—Predestinarian conceptions arise at a certain stage of religious reflection of necessity; and kindred conceptions are to be found in all religions which have been influenced in their development by speculative thought. Even polytheism adumbrates them in divine personifications of Destiny.

(a) *Greek*.—The best instance of this we find in the Greek poets and tragedians, with whom the belief passed through a variety of forms: *φθῶνος*, *ἀτη*, *μοῖρα*, *πέμπεσις*, *Εἰρῆνης*. These are less intellectual solutions of the problem than dedications of experience; and they are remarkably comprehensive. At first, as in Herodotus, Pindar, and Theognis, envy and caprice characterize the Olympic gods in their dealings with men. Men are the restless rivals of the gods, and must be taught their proper place. Occasionally a righteous purpose governs the divine dealings; occasionally also defects of character in men bring on their misfortunes. But such features do not manifest themselves in force till we come to the great themes of Æschylus and Sophocles, whose tone is vastly superior. The caprice of the gods is by them modified in an ethical direction. Personal calamity is a judicial act pronounced by a moral governor on men's follies and crimes. 'Divine Justice displaces the divine Jealousy.'² The mental and moral clouding gives way to the notion of events baffling human foresight and so leading to unconscious crimes. Even the dark power of Moira is part of the moral order, designed to incite man to resistance, in making which he may fall, but in his fall he is greater than if he had never met the challenge. Within increasingly broad limits, too, man's freedom is recognized. In Sophocles there is the mature idea that suffering is not always final, but is foreseen in the counsels of the gods as part of the permitted evil which is a condition of a just and harmoniously ordered universe. It is not inconsistent with this that epic poetry gives more prominence to circumstances and external forces in the determining of character; for such is the nature of epic as distinct from drama. Thus there is little justification for the common theory³ that in the Greek drama everything is foreknown and develops inevitably from the beginning. Tragic fate needs a tragic trait in the victim. Cf. art. FATE (Greek and Roman).

(b) *Roman*.—Nothing like the same subtle sensitiveness is found in the Roman early theology. The citizens of Latium and the surrounding parts were a more secular and political race; and destiny with them amounts to little more than a belief in their own genius and the enterprise that renders it effective. The deity Fortuna embodies this faith. Destiny is seldom regarded as personal doom; it is rather racial mission. Nor does it often occur to the Roman thinker to inquire into the origin of

the special genius of his people. The metaphysical and ethical implications of the belief were not canvassed. Cf. art. FATE (Greek and Roman).

(c) *Teutonic*.—Remarkable is the contrast in the Teutonic idea of destiny. It forms a prime element in an elaborate mythology whose foci are Odin and Urd, divinity and fate. It is difficult to delimit the respective jurisdictions of these two; but the lion's share of power falls to Urd (Vyrð). She is the goddess of fate, and also of death—a significant conjunction. She is the dispenser of life and death, with her maids the Norns (arbiters of life) and the Valkyries (arbiters of death), who dwell with her under the world-tree (Ygdrasil), which stands forever green, watered by her gold-cased fountain. The might of Odin standing behind is no relief; he wields a lawless power, with a loveless will. He stands for blind, arbitrary, elemental will—will cut off from wisdom, a brute, blundering, pitiless, eccentric will (with the single bright feature that it chooses the warriors for Valhalla), which surrounds human passion and affection with a tragic cloud against which the heroic figure is shown off. A deep pessimism pervades the Eddas. It is as if the cruel and dismal climate of the North, the huge terror of storm and sea, the high courage of reckless hearts crushed by the irresponsive of apathetic deity, were all gathered up in a vast and bitter gloom—that general spirit which for modern understanding has been so powerfully portrayed in the romantic operas of Richard Wagner.⁴ Cf. art. DOOM, DOOM-MYTHS (Teutonic).

(d) *Indian*.—On a higher plane, turning to ancient India, we find a definite theistic development in the later stages of the *Upanishads*, in the *Kāthaka* and the *Svetāśvatara*, where there occurs the clear idea that 'only by the man whom he chooses is God comprehended—to him the *ātman* reveals his essence.'⁵ In the Buddhistic teaching prominence is accorded to the law of *karma* (q.v.), according to which the soul in its successive transmigrations has each stage irrevocably determined by its conduct in the previous stage—a suggestion of ethical necessitation which even in its fullest expression remains vague. Apart from express teaching, Hindu life and ideas are predominantly fatalistic, unfree, unenergetic. The drama is full of *deus ex machina*; the actors seldom rely on their own will. The religion, largely a ritual, shows the divine wrath ready to burst out on the most trivial occasions and for the most trifling offences.⁶ Cf. art. FATE (Hindu).

(e) *Chinese*.—In ancient China there is the great law of *Tao*, circumscribing the course of human life in a cosmos of omnipresent order. It overrules the entire animation of the universe in both its aspects of light and darkness, life and death, good and evil. It never deviates or diverges. It metes out justly and equitably to all men, by means of the spirits or gods rewarding the good, by means of the spectres punishing the bad, with perfect impartiality. Blessing comes to those who conform to its laws, hurt to those who violate them. The fear of the spectres is very great; there is an all-pervading demonism, counteractives to which make up a large proportion of Chinese religious practice.⁷ The evil spectres may interfere at any moment with human business and fate, favourably or unfavourably. These spectres are the instruments of retributive justice. *Tao* is

¹ Cf. on this paragraph V. Rydberg, *Teutonic Mythology*, Eng. tr., London, 1889, §§ 61-64.

² P. Deussen, *The Philosophy of the Upanishads*, Eng. tr., Edinburgh, 1906, pp. 172-179. Consult on the subject generally N. McNicol, *The Religious Quest of India*; *Indian Theism*, Oxford, 1915; Mrs. Sinclair Stevenson, *The Heart of Jainism*, do. 1915.

³ J. J. M. de Groot, *The Religion of the Chinese*, 4 vols. Leyden, 1892, bk. i. p. 935 f., bk. ii. ch. ii.

⁴ Granted this, it follows that the total effect of individual tragic failure hereafter on the whole world-plan may be dealt with as in the case of individual failure in this life's progress. The Creator's method, righting what goes amiss, here may indicate His method in the hereafter. What is that method? Briefly nature's desire is to rid itself of defects; if defects persist, the cause is not in them, but in the progressive organism of life in which they are survivals. But the primal and final plan of God can have no inherent defects.

⁵ S. H. Butcher, *Some Aspects of the Greek Genius*, London, 1904, p. 109.

⁶ Schiller's so-called reproductions of Greek dramas illustrate this popular but erroneous idea.

both the creation and the creator, the motive force of the universe and the free determiner of its agency, spontaneously working from all eternity. His favour, won by obedience to his motions, may be secured by faithful observance of them in the actual movement of the world and life. Having no superior or co-equal, he secures it that human destiny is neither dark nor cruel; it is clear and orderly as himself. Cf. art. FATE (Chinese).

(f) *Egyptian*.—In ancient Egypt the moral conditions of character and destiny are similarly conspicuous. Egyptologists are divided as to the characteristics of primitive Egyptian religion, whether they are those of a polytheism or those of a monotheism. But even that school which asserts its polytheistic character agrees that underneath the multiplicity of deities there is always the feeling of their unity; and, whenever that unity is at all recognized, it carries with it the further concept of the spirituality of the divinity in things¹—a spirituality that is righteousness. The goddess Hathor, the patroness of joy and happiness, is also the cosmic principle, the personification of the great universal power of nature perpetually creating and maintaining all things, great and small; she is further in the judgment a foremost figure on the bench. In 'The Precepts of Khensu-hetep' (F. J. Chabas, in *L'Égyptologie*, Paris, 1876-78, ch. vi.) the explicit references to *sekher neter* show a clear and definite idea of divine providence,² by whose goodness men subsist. To the supreme being who is thus regarded is attributed at the same time the creation of the world and all things; and, as he is righteous, his plan is righteous. We owe it to this religion that it emphasizes the fact that the guilty suffer, the penalty being exacted at the time of the wrong-doing, not deferred to a later day or generation.³ Cf. art. FATE (Egyptian).

2. *Jewish and Muhammadan*.—The OT and NT ideas are given in *extenso* in the art. ELECTION. There all in creation, history, redemption, is referred back to the divine sovereignty. The special features of that relationship as experienced in vital religious activity alone are set forth; the general idea never gets beyond its most general expression. The same speculative reserve characterizes later Jewish thought. Its particular interest is not high; except in the case of individual rabbis, nothing further is ventured than the statement of a comprehensive dependence of all things and all persons on the divine supremacy, and an insistence, always in subordination to God's sovereignty, on man's free will. Intellectual problems are evaded as beyond human solving. Of the Jewish sects in the time of Christ Josephus is responsible for making the Pharisees material predestinationists, the Essenes absolute predestinationists, and the Sadducees hostile to all forms of predestination, since they traced all events to chance. Material predestination limits the divine decree to this material life; an example from *Hul.* vii. 6 is to the effect that a man does not hurt his finger in this world unless it has been decreed. It is a peculiarly Judaic idea, and belongs to the main stream of Rabbinic conviction. Other currents represented in Rabbinism are the two familiar to Christian controversy—the one emphasizing man's freedom, the other divine overrule. According to the one, the decision rests with man, whose conduct determines his destiny; the spirit's prime endowment is freedom. According to the other, God directs and foreknows all. A representative utterance is that of R. Aḳiba (*Abhōth*,

iii. 15): 'All is foreseen yet freedom is granted'—a position whose last eminent apologist was the renowned Maimonides.¹

Muhammadanism teaches an absolute predestination, to both good and evil, happiness and misery. God is conceived of as absolute will, operating by rigid law, moulding the material by whose instrumentality it works, after the manner of Oriental despotism. Muhammadan philosophers expound it in a more extreme way than it is set forth in the Qur'an until the doctrine has become practically pernicious. The reaction set in by the Mu'tazilites, who assailed the orthodox view with keenness, made room for free will, but was eventually overcome by orthodoxy.² Cf. art. FATE (Muslim).

3. *Christian*.—Predestination holds a large place in the history of the Christian Church. It has fanned burning controversies, and generated popular fear; it has fostered stern ideals, and moulded strong natures. In its largest sense the finest intellects of the Church have been attracted to it, and those periods that have been most fruitful in reconciling the development of Christian ideas with the growth of culture have been indebted to it above all for inspiration. The epochs of its progress are marked by these periods.

(a) *First stage*.—The first stage is signalized by the conflict of the Greek Fathers with Gnosticism, the conquest of the Greek mind by Christian theology. The problems of Gnosticism are in the main two: (1) the nature of the Absolute, and the method whereby He can be the creator of matter, and (2) the origin of evil. The Gnostic solution is found in an endless succession of aeons or emanations of the Absolute which serve to span the gulf between Him and creation. Gnosticism, in establishing its theory, had to deny free will. It is a solution metaphysical and necessitarian. The Greek Apologists and Fathers, addressing themselves to the problem, reached a solution ethical and personal. They know nothing of unconditional predestination; they teach free will. Believing in the sovereign efficacy of reason and conscience, they interpret the Absolute in terms of them. Their contribution combines four points, viz. (a) the Absolute requires mediation; (β) the mediator is the Logos; (γ) through the Logos the Absolute is creator; (δ) freedom is the mark of man.

All schools at that period held an abstract notion of God. The central quest was after an appropriate medium of communion between the Supreme Being and the world. The Gnostic attempt failed before the magnificent doctrine of the Logos (*q.v.*)—the issue of the controversy and its end. The doctrine of the Supreme as Creator through the Logos, and the activity of the Logos in nature, history, and man, are the primary ideas of Patristic theology, set forth partially in the Apologists, with fullness and learning in Clement and Origen, and preached by Chrysostom. It is essentially a new Gnosis, summing up the divine design of cosmic history.

(b) *Second stage*.—The second stage opens with the Latin Father, St. Augustine († 430), and the fall of imperial Rome. That event gives the *motif* to his profoundest thought that history is the history of two antagonistic cities, so that he can compare the ordered series of the centuries to an antistrophic hymn pervaded by an antithetic parallelism which turns on the call of God and the response of man (*de Civ. Dei*, xi. 18). Into his particular opinions on religious predestination we need not enter (see AUGUSTINE, ELECTION). His

positions are not always superficially consistent. But his great merits are clear. He distinguishes prescience from predestination, and aids to a better analysis of the latter. He expounds a richer idea of will than the inherited views of the Greeks and the Pelagians; and initiates a discussion from the main position of which Christian thought has never since withdrawn, viz. that the unregenerate will is not free; freedom is growth in the power to do right.¹ Great as these services were to the progress of truth, they are not his chief contribution to the predestination idea. That concerns itself with the nature of the divine purpose the *motif* of which is referred to above. He unfolds his ideas in his main book, *de Civitate Dei*, called forth by the decay of the Roman State. The underlying principle of that masterly exposition is the organic character of the divine purpose. It is pervaded by his deep sense of the continuous evolution of the divine purpose in all things. It sums up his conviction of a life's study. Throughout his life he was intent on reducing to a consistent unity the varied elements of nature, history, and revelation, as they presented themselves in believing consciousness. So successfully has he vindicated that principle that subsequent developments have proceeded upon it, always the more clearly to demonstrate its essential truthfulness. The controversies that ensued, directed against St. Augustine, assail details—in particular the doctrine of 'predestination to evil' or the reprobation of the impenitent wicked. Rabanus Maurus († 840), Hincmar († 882), and others argued the inconsequence of that doctrine by Scripture proof, John Scotus Erigena² († c. 877) its inconsequence metaphysically—both legitimate corrections. The Augustinian doctrine in its general drift worked on with increasing cogency throughout mediæval Christendom, quickening an extraordinary ferment of ideas, creative of new impulses in every direction, religious and disciplinary, political and social. Into the stream of religious and general culture there entered currents widely dissimilar, deriving from the study of Aristotle and of Dionysius the Areopagite, really alien to the Latin genius. The pregnancy of St. Augustine's philosophy succeeded in acclimatizing rich elements in both in the atmosphere of Western theology.

(c) *Third stage.*—Of this the constructive intellect was that of St. Thomas Aquinas (c. 1227–74), who quells the maelstrom of mediæval thought. In him we see St. Augustine pruned of his many verbal and logical inconsistencies and his view of the world and history so presented with a logical thoroughness and developed on different sides as to exhibit a proper system, or *summa*. Of specific value is Aquinas's discussion of prevenience or premotion, and the grace of natural virtues—features of Augustinianism that have obtained a secure lodgment in Romanist theology, but not in Reformed. The whole effort of Aquinas results in a fusion of the best culture and most spiritual faith of his age. The Augustinian spirit pervading it is in his work definitely incorporated with the official teaching of the Roman Church. St. Thomas inspired the Decrees of Trent (1545–63), which, while affirming several Scotist positions, define a mild Augustinianism.³ The Augustinian principles are three: (a) God is absolute master by

His grace of all determinations of the will; (β) man remains free under the action of grace; (γ) the reconciliation of these two truths rests on the manner of the divine government. The Tridentine formulæ reaffirm original sin and man's need of grace as against Pelagianism (sess. vi. can. 2), the freedom of man and the ability of doing good and evil even before embracing faith (vi. 6. 7) as against the Protestants. Trent further, with St. Thomas, teaches the universal offer of salvation and divine provision of the means of grace. The problem of harmonizing grace and freedom is left undefined; the brief of Benedict XIV. (1748) gives liberty to all schemes of reconciliation—the strict Augustinian, the Thomist, and the Molinist.¹

(d) *Fourth stage.*—The fourth stage came with the Reformation and the awakened moral conscience. The absorbing interest of the 16th cent. was religious, not speculative. No commanding intellect of the comprehensive order of an Origen, Augustine, or Aquinas arose to offer the new synthesis of faith and culture which the times imperatively demanded, and little progress was made in the growth of the predestination idea. Luther and Erasmus, Zwingli and Calvin, with minor divergences, agree in reverting to St. Augustine on the main issues and in the supposed interests of evangelical piety; but none of them had adequate philosophical equipment to formulate anew the problem in consistent and convincing form. Hence Western Christendom remained divided. Its continuance in disruption was due as much to the absence of a first-rank philosopher as to the presence of a fiery Reformer; for fresh religious feeling is less divisive than stale religious dogma, and the speculative reason of the Reformers made but indifferent flights. The proper contribution of that age lies elsewhere, in the fresh emphasis set on the doctrine of election as the believer's ground of certainty of salvation as against the Church and its machinery of grace. Polemical motives against Roman ideas of authority impelled the Reformers to give election a paramount place in their system, with the result that its philosophical counterpart, predestination, assumes, not only in general theory, where it is relevant, but also in theological construction, where it is not, the position of basal principle controlling the entire system. The *Institutes* of John Calvin († 1564) is representative. It asserts the double predestination, to life and death quite irrespective of merit. The central idea² is that of an independent and immutable decree of God, in which foreordination and foreknowledge are inseparable. Beza, Calvin's successor at Geneva, is the father of 'high,' or supralapsarian, Calvinism. The common view of the Reformed Confessions, confirmed alike by the Synod of Dort (1618–19) and the Westminster Assembly (1647), is infralapsarian. The infralapsarian (*infra lapsum*) theory of predestination, or the decree of predestination viewed as subsequent in purpose to the decree permitting man to fall, represents man created and fallen as the object of election. The supralapsarian theory designates the view which supposes that the ultimate end which God proposed to Himself was His own glory in the salvation of some men and the damnation of others, and that as a means to that end He decreed to create man and to permit him to fall. Strict Calvinism subsequently found mitigations in the 'Federal Theology,' expounded by Cocceius (1603–69), professor at Leyden, who introduced the idea that God's judicial charging

¹ Augustine's denial of freedom is really denial of capricious choice—the assertion of self-determination along the lines of one's true character.

² Erigena's contention, 'no predestination to evil' because that would imply a duality in the divine nature, or else the existence of some power above God determining His will, is acute (cf. his tractate *de Predestinatione*). It undermined for the future the recurring idea of God as the author of evil.

³ Loofs's statement, 'the history of Catholicism is the history of the progressive elimination of Augustinianism,' we regard as a gross exaggeration.

¹ Cf. a valuable account by E. Portalié, in *CE*, s.v. 'Augustine.'

² Ritschl, Sneekenburg, etc., have denied the centrality; Schweizer proves it fully. M. Scheide (*Calvin's Prädestinationslehre*, Halle, 1897) describes the religious motives underlying Calvin's construction.

of the guilt of Adam's apostasy to his descendants was racial, and not personal; and in the contemporary Saumur school of Cameron, Amyraut, and others in France, who attempted a combination of particular election and universal salvation (sublapsarianism). Bold opposition was offered by the Remonstrants led by Arminius, professor in Leyden from 1602 to 1609. A year after his death his disciples, as an organized party, presented a Remonstrance to the States of Holland pleading for toleration, and, for the sake of defining their position, presented soon afterwards five Articles expressing their views. This is the origin of the famous 'Five Points' in the controversy between Calvinism and Arminianism. Of Calvinism the 'Five Points' are unconditional predestination, particular election, efficacious grace, divine reprobation of the wicked, and final perseverance of the elect. Of Arminianism the opposed points were conditional predestination on foreseen merit, universal salvation, resistible grace with the provision of means sufficient for salvation, preterition of the wicked, and possible lapse of the justified from grace. Later, Methodism came with a synergistic solution which is logically indefensible, but has proved serviceable for piety. The Calvinistic victory was one of logic only; even the victors felt that, if not handled with special prudence and care, the doctrine would be the reverse of helpful to morals and piety. The Calvinistic Synods restate old positions—Dort with relentless rigour, Westminster a little more cautiously. They contribute nothing new to the theology of the subject. The work of the Protestant scholastics was one of systematization for civil and religious reform rather than of inspiration to spiritual or apologetic progress. It had unquestionable merits. It demonstrated the political potency of the predestination idea in common life, when men are found to believe implicitly in the absolute will of God and to range themselves submissively under its behests in simple obedience. It established as never before the religious principle as the controlling principle of civilization, taught the civil power definite ethical function, laid thereby the only workable basis of free democracy, and thus, when the unity of the world's life and knowledge had been shattered by the break-up of the mediæval Church, pointed to fresh sources of cohesion which prove the more efficient the more they are tested in the complexities of modern growth. Whatever criticism may be urged against Calvinism as a religion and a theology, it is certain that as a polity it has been a triumphant success, as the maker not indeed of kings—the claim of the mediæval Church—but of what is much greater, States.

The most commanding Calvinistic intellect appeared where there was obvious relief from the political pressure, in New England. Jonathan Edwards (1703-58) draws into the system somewhat of the wider expanses of the New World that gave him birth. He sets forth the Calvinistic view of the world with a masculine strength and rich insight of rare excellence, and in face of the most imposing critical antagonism which Calvinism has ever encountered—New England Unitarianism. He prepared the way for the final outfit of the predestination idea for its modern task; and he did so by having greater confidence in reason than his contemporaries. Edwards was no reactionary. In the widely prevailing scorn of human reason he dived deeper into its depths and achieved two superlative results—the reconciliation of the divine decrees and free will, and the exposition of the divine motive for predestination as resting in the divine glory. Regarding the former he argued that the law of causality is

universal; that, while every man is free to act in accordance with his will, his power to will is controlled by causes outside of himself, so that ultimately the will must obey the behests of a power independent of its own purposes. Regarding the latter he argued that God's freedom is exercised in 'self-exhibition' and 'self-communication'—a self-communication which is creative in man of 'the religious affections' (the form that union of man with God takes) which display the reality of predestinating grace. His work is a distinct advance towards overcoming the dualism in the Calvinistic position, leading directly to the idea of God as moral personality, the controlling principle of modern theology. In the Catholic theology God is construed as substance; and in Scotist, Socinian, and Arminian theology as will. The Reformers conceived God as the embodiment of the moral law, bound by His own nature to punish sin and to uphold the eternal principles of righteousness. The conception, however, was not clear; and side by side with it we find the old conception of sovereignty as arbitrary will. Calvinism reconciles the two by distinguishing between the nature and will of God: nature is the sphere of necessity, will of freedom; justice belongs to the one, mercy to the other. Edwards makes 'the love of being' his controlling principle—lying behind both justice and mercy, containing them within itself. It is but a step from the divine self-love to the divine Fatherhood—the idea which fresh experience of the redemptive love of God in Christ (the discovery of the modern Church) revealed.

(e) *Fifth stage.*—Under the influence of the renewed study of the life of Christ modern theology has brought into fresh prominence the ethical and spiritual qualities which were central in Jesus' thought of God. For the abstract Absolute of the earlier theology and the arbitrary will of the later it substitutes the God and Father of our Lord Jesus Christ, and seeks to show that in His wise, holy, and loving character we have the ultimate reality of religious truth. In this attempt it receives aid from two quarters. Through a better understanding of the nature of the will modern psychology makes it possible to overcome the supposed opposition between freedom and law; while philosophy, through its renewed emphasis upon the immanence of God, opens a way for the conception of God which shall include the concrete features essential to Christian faith. So far as the first is concerned; we are coming to see that it is not will, but character, that is fundamental for our idea of personality. That man is most truly free whose will is most completely dominated by a consistent moral purpose and whose acts—given a knowledge of that purpose—we can most certainly predict. Character denotes to us such consistency of moral purpose; and law, so far from being a limitation of freedom, is its most effective means of expression. In Christ, then, we can fill up 'the mere good pleasure' of historic Calvinism with the inner constraint of redemptive love. Not less significant is the help from modern philosophy. We are seeing that the ultimate reality, instead of being the most abstract, must be the most concrete of all conceptions. We do not explain the world by thinking away all that is most characteristic in experience into a colourless residuum, but rather by studying experience to discover, amid the infinite variety which it contains, the elements of permanence. Life is to be interpreted by its highest forms, not its lowest, and the qualities which Christian faith finds central in God become those most needed for an explanation of the actual facts of life. The main outline of the historical growth of the pre-

destination idea is thus evident. In ethnic religion, lower, we have the instinct of fatality predominant; in ethnic religion, higher, we have the dawn and gradual growth of the instinct of freedom. In Hebraism there is a definite conviction of the general idea of predestination, combining the two features of divine sovereignty and human liberty. Judaism, on the whole, conserves the same general idea. Muhammadanism reverts to fatality. Christianity, primitive and Patristic, preserves and defends predestination as received from Hebraism along ethical lines. The mediæval Church deepens the idea, and develops its definition by setting in strong relief the absolute supremacy of grace over nature in St. Augustine and the congruity of grace with nature in St. Thomas. The Reformation Church deepens the idea, and develops its definition by setting in strong relief the absolute spirituality of grace as resting in God's mercy (in the Reforming leaders) and its finality as resting in God's glory (in Jonathan Edwards). The modern Church, relying on modern philosophy, which has gathered up the results of the modern sciences, of nature, history, and man in a broad synthesis centring in the Supreme Being as moral personality, accepts the vindication of the harmony of divine sovereignty and human liberty, thus closing the most prolific source of conflict concerning this subject. The two foci of the predestination doctrine are both true, and every theory exalting one at the expense of the other has had to give place to the more adequate formula. The stubborn protest of orthodox common sense, which has never in any age lapsed, has been justified. The facts of the religious consciousness have availed to beget the theory, not the theory the facts.

V. *THE MODERN TASK*.—The supreme desideratum of modern religion is strong individuality, with its enterprise, romance, ever-fresh experience, and transforming impulses. It may be secured by that enlarged conception of the divine will regulating man's destiny to which every vital pulse of the modern spirit points. It will include a larger theism, a freer society, a richer soul.

I. *A larger theism*.—The antitheisms of the age are not wholly in error. They are popular because of the meagreness of the current theism. They are attempts to do justice to factors to which the prevailing theism does scant justice or even violence. They are not negative; their negations proceed from a positive faith; and in their positive contribution to thought they correct one another and enable us to discern the lineaments of an impressive philosophy. Superficially regarded, they all seem to lead to determinism, apparently absorbing the individual in the whole. Pantheism, materialism, socialism, secularism, naturalism—they look like the dedication of the finite world. But only in the popular or semi-popular intelligence. Take, e.g., pantheism. It is a term to which the vaguest and most contradictory meanings are attached, the clearest being that which identifies the world with God and regards man as part of the world. Yet that is a notion destitute of historical foundation and, indeed, of any rational meaning. How can pantheism say that the finite world is the infinite? We may say that it represents the infinite, but not that it is the infinite; and that is the precise opposite of the dedication of the finite. It implies not the divinity, but the nothingness, of the world of sense and sight. The formula which expresses it is not 'All things are God,' but 'God is all in all'; or, in the comprehensive phrase of Indian philosophy, 'There is but one Being, no second'; or the Christian conception, 'There is one God, beside Him no other.' Do not materialism and naturalism, when their real signifi-

cance is seen, imply the same truth? They are eager to exalt the cosmic life-force as the dominating world-force. But how do they interpret it? Not abstractly, but from detailed observation of the actual phenomena of the world; hence its general conception is not untrustworthy; it is the concrete content of the abstraction of pantheism. And what is the contention of socialism ultimately but this, that no individual stands alone, that his perfection can never accrue in isolation, that, as the attraction of physical particle for particle causes every material body to retain its form and relations, so the self that will separate from the influence of other selves is on the sure path to disintegration? Together these antitheisms in their essential pleas urge that God is the only reality in the universe, that the life-force of creation is one, that man's safety and perfection rest in right relation with them. God's immanence in the world is the modern understanding of the eternal reality of its process and progress. Such conceptions are as profound as they are novel. They arise directly out of the minutest investigation into the facts with which science and history deal. They appeal to the theological mind to be drawn up into the idea of God and His relation to the world and man to enrich our apprehension of His transcendence and divine purpose. They teach us definitely concerning that purpose in the world that we know, and of Himself standing above it working out its ends. On the foundation of that knowledge we are summoned to build up convictions of the character and will of Him who thus acts and of the destiny of all His actions.¹

2. *A freer society*.—Social theory is as multi-form as antitheism. Anarchism, communism, socialism, nationalism, imperialism, are imperfectly understood apart from the ideal and emotional impulses prompting them. They are preparing the physical basis, the material conditions of large advances in human liberty. They are adversely criticized for doing the very opposite. But surely in their broad spirit they are operating to restrain those who need restraint within the attainments of human progress already won, in order that human welfare may enter on higher achievements. Social pressure, law, is not the foe of liberty; it is its nursing mother. Life depends on environment. A 'fullness of time and place' must be before fresh growth can come. Conditions must be organized if new life is to be generated. It is from lower forms that the higher arise as the appropriate *métier* of their life is secured. The social and industrial unrest of the times implies the bringing to birth of a fresh life of humanity. The new quality of life cannot live except with new social advantage. Here we note two facts of modern psychology: (a) social integration promotes individual independence, and (b) personality is enhanced by progress in material conditions. The individual is conditioned by his environment; that is the basis of all sound sociology. As a machine cannot work in an atmosphere that freezes its oils, or a plant flower in beauty in the Arctic zone, so man cannot grow to his full stature in a world of squalor, sin, and disease. This is the modern rendering of the ancient 'fate,' yet with what a difference for human hope! A large share of man's destiny is sealed by his birth and surroundings. On the one hand, while a certain power of choice remains his, his moral endeavour and moral vision are due quite as much to the community which produces him as to himself. On the other hand, it is a fact as well that this is for man's benefit; it is the grace of the universe to his growth. A man is, first of all, a unity; and his nature as such prevents his easy descent into

¹ Cf. R. Flint, *Agnosticism*, Edinburgh, 1903, last chapter.

the mass or dissolution into weakness. The more that unity of his is preserved and pressed, the stronger rises the outflow of original force of character, the result of social amelioration. Is this the mode of operation of the divine will upon the human? 'Our wills are ours to make them Thine'—have we here the method of discipline? Here once more is a summons to revise that harassing perplexity of foreknowledge and free will; here too a mightier incentive than before conceived for material progress and Christian enterprise.

3. A richer soul.—The practical experience of that old doctrine, the mystical union with Christ, has almost died down. It is well worth revival. The time is opportune. The stream of mysticism runs with a strong current in the modern conscience. It will enter theology as a power for good. Modern mystics are training us in their way of experience, and teaching the sacramentalism of nature; they are renewing our confidence in the validity of both in grace. Redemption is an economy like nature and providence; its spirit can be known and felt equally with theirs. The ordinances of Christ's appointment which sum up His saving acts to represent, seal, and apply their benefits, are its proper medium of communication, conferring 'God's essence and His very self' on believers. There is a spirit in creation; there is a spirit in history; there is a spirit in grace. These three are not one, but the experience of the first prepares for the last, in which their partial union with the divine life is consummated in perfect union. That union feeds the spirit of man, for the simple reason that the spiritual nature of man is not some special faculty or out-of-the-body ecstasy, but the conversion and sustenance of his ordinary powers. It is because we confine our union with the divine Being to communion with Him by our ordinary powers that our religious life is so pulseless. But the fault rests, not in the powers, but in the method of using them. We commit two blunders. We use our powers in analysis, not in synthesis; and the result is that the self is not offered to the divine life for its unfolding. The self is more than the collection of its faculties; and we have to realize that there is no end to the spiritual treasure latent in it when God has access to it. Then, again, we think God rather than experience God. But a thought God is abstraction; a lived-with God is power—action and passion. We have to learn that in the infinite personality there is no end to such action and passion. These recognitions, of our own deeper self and of the divine self, open the way for inflows from God constantly increasing unto perfection. Within our self God speaks and to our self; there is no identity, for identity would close intercourse. In this—the fine principle of the higher mysticism of our day—lies the sure hope of further spiritual advance.

But now every increase of living experience of this sort brings with it an increase of power to understand what God's will is, what it is doing, and by what method He is doing it. Those ideas, the divine immanence in the world, the social solidarity of the race, the enhancement of self-conscious life, have as yet no place in theological system.¹ The divine transcendence idea and predestination idea have been drawn deductively from data that are abstract; we must now build them

up by induction from what we have seen are the data alone intelligible to the modern mind. They will then assume their proper position as the controlling principles in a scientific theology fitted to enlist the finest sympathies of modern culture and to effect its greatly desired harmony with modern faith.

LITERATURE.—W. A. Copinger, *A Treatise on Predestination, Election and Grace*, London, 1889 (a full bibliography in Appendix, up to recent times). The classical authors are in need of re-perusal and study: Origen, *de Principiis*, ii., iii.; Augustine, *de Prædestinatione Sanctorum*; Eriugena, *de Prædestinatione*; Calvin, *Institutes*, iii.; Jonathan Edwards, *Works* (in particular 'God's End in Creation' and 'Freedom of the Will'), New York, 1869.

The Histories of Doctrine furnish useful reviews: Hagenbach, *Shedd, Harnack, Loofs, Bovon, Grétilat* (Protestant); and Moehler, Denzinger, Scheeben, Pohle (Roman Catholic). There are careful, if brief, articles in *EBI*, *PRE3*, *CE*, *JE*. The Biblical material has been laboriously canvassed by B. B. Warfield, in *HDB*.

The credal and confessional definitions will be found in G. B. Winer, *Doctrines and Confessions of Christendom*, Eng. tr., Edinburgh, 1873; C. A. Briggs, *Theological Symbolics*, do. 1913; W. A. Curtis, *A Hist. of Creeds and Confessions of Faith in Christendom and Beyond*, do. 1911; P. Schaff, *Hist. of the Creeds of Christendom*, 8 vols., London, 1877.

PRE-EXISTENCE. — 1. Definition. — Pre-existence, from being a general term, has come to have a limited, technical application in the philosophy of religion. It is used in stating the doctrine that the human soul has already been in being before the beginning of the earthly life, i.e. prior to the time of its union with the body. The precise character and conditions assigned to the pre-existent state cannot be brought out in a general definition, as these vary in different systems of religion. Where this belief appears it is generally

¹ Fragmentary essays in that direction have been forthcoming during the latter half of the 19th century. Modern theology has moved away from the old moorings; partial reconstruction is proceeding apace; the comprehensive synthesis still lags. Yet the most fruitful interpretation still of the divine nature is that of will, motivated by love, showing that in its general decline the heart of Calvinism, like that of Shelley in the ashes of his funeral pyre, remains entire.

held in conjunction with belief in transmigration, but in a strict sense it has reference to a state of being prior to any incarnation. The reference is to the human soul. For the pre-existence of the divine nature of Christ see the art. JESUS CHRIST (cf. also art. LOGOS). Doctrines regarding the pre-existence of the souls of animals and plants are treated, for the most part, in connexion with transmigration (*q.v.*).

2. Origin of the doctrine.—The origin of belief in pre-existence is obscure. Man has difficulty in conceiving himself as non-existent, but experience familiarizes him with the facts of birth and death. When he reaches the conception of a soul in distinction to the body, his thought turns not only to the future but to the past. What is its origin? Among the answers which suggest themselves is this, that it has already existed before its union with the body. The inquiry may not proceed beyond the thought of previous incarnations, and of this we have many examples in the more primitive religions. But in other cases the inquiry has been pushed beyond this, or has advanced independently, to the thought of the existence of the soul in a spirit-world previous to its embodiment on earth, and a definite doctrine has been formulated. If we cannot for the present discover more exactly the origin of the doctrine, or the precise influence which one people exercised on another with regard to it, we can in some cases trace its development and observe the extent to which it has prevailed. It is found in a well-developed form in Greek religion and philosophy, in Judaism, in the early Christian Church, in the religions of India, and to a very considerable extent associated with modern thought in the West.

3. Greek and Roman doctrine.—Belief in the pre-existence of the soul prevailed widely among the Greeks from an early date, and at a later time became a theory of their philosophers. The influence of Greek thought in this respect was strongly felt in the early Christian Church, and is still apparent to some extent throughout the whole of Western civilization. To gain a knowledge of the subject it is well, therefore, to begin by observing its place and character in the Greek religion and philosophy. Regarding the origin of the doctrine among the Greeks there is no reliable evidence that, in the early stages, Egyptian or Oriental thought had any considerable influence. It appears to be of native origin and to have two distinct sources: (1) the early religious ideas of the people which found expression in certain ceremonies and myths; and (2) the philosophic principles which were gradually formulated in the schools, and from a statement of which this doctrine followed as a corollary; but, even in the latter case, religious pre-possession was not without its influence.

To the Greeks, as to many other peoples, the soul is air or breath (*πνεῦμα, ψυχή*), or an essence of a similar nature. It departs with life; it comes at the beginning of life. What is its origin? Homer and Hesiod do not give us much help, but the answer of the Orphic religion is that it is divine. The direct testimony as to what was taught in the Orphic religion as early as the 7th cent. B.C. comes from a later date.

Plato speaks of it as an ancient doctrine that the souls of men, 'having gone there from here subside, and return hither again and are produced from the dead' (*Phædo*, 70 C). Philolaus states that 'the ancient theologians and soothsayers bear witness that the soul is joined to the body by way of punishment and as it were buried in it' (*Clem. Alex. Strom.* iii. 438a; cf. *Plato, Phædo*, 62 B).

The statement of Plato and even of Philolaus may refer only to transmigration, but their testimony must be taken in connexion with the evidence of the Orphic tablets, on one of which the soul

declares, 'A child of Earth and of starry Heaven am I; but of Heaven is my race.' There is also the strongest probability that Pythagoras derived his views on the soul's pre-existence from Orphic sources. The egg used in the Orphic ritual was a symbol of the cosmic egg from which sprang the principle of all life. We have here indications of an ancient religious belief that had already taken definite form. At a later time it gained precision of statement at the hands of the philosophers who adopted it, and became an integral part of their theories of the universe. The pre-Socratic philosophy prepared the way for the dogma. Some unifying principle was being sought. Thales found in water the principle of all things; Anaximander in undetermined, unlimited matter; Democritus in atoms which are indestructible; the Pythagoreans in number. The Eleatic school accounted for the phenomenal world by the principle of eternal, immutable being; Heraclitus by continual change, becoming; and the Atomists by an attempt at combining those two principles. The thought of the indestructibility of atoms involved that of the pre-existence of the constituents of the soul; and, as already in the Orphic religion, its transmigration was taught by Pherecydes and Pythagoras (c. 540 B.C.). The distinction between soul and body is worked out by Anaxagoras (c. 470 B.C.). He introduces into his philosophy the thought of a world-forming mind (*νοῦς*) that is absolutely separate from matter and that acts upon it. This matter-forming mind is immanent in different degrees as an animating soul in plants, animals, and men. The human soul is thus a portion of the world-creating mind, and existed in it prior to its manifestation in the body. In his treatment of the *νοῦς*, however, the conception of immateriality is not yet made clear.

Plato (c. 387 B.C.), developing the teaching of Socrates, turns his attention in the first instance, not, like the earlier philosophers, to the investigation of external nature, but to reflexion on the mind itself, its essential qualities, its endowments and activity, and in this way arrives at his theory of ideas. The idea is not a mere abstraction, but is a real archetypal essence and is eternal. The highest idea is the idea of the good, and this idea of the good Plato seems to identify with God who existed from eternity. Matter also existed eternally, but without quality or order. At the beginning of time God appears as the world-builder or demiurge, and out of the ideal world and the germs of the material world forms the soul of the world. The chaotic matter is reduced to order and fitted to this world-soul as its body, which it animates and rules. The universe, which is the result of this creative work, is fashioned for the sake of what is good only, in beauty and harmony, after the model of the eternal ideas. Of this universe man is a part. He consists of soul and body, and in the embodied soul there are three elements: (1) the cognitive soul, which has its seat in the head, and sways and controls the body but at the same time is debased by association with it; (2) the appetitive soul—the lower, sensuous faculty; and (3) the courageous soul, which in man forms a link between the other two. The relation of the last two to the first resembles that of two steeds to a charioteer. Sometimes Plato seems to think of the whole soul as pre-existent and immortal, but in general it is the cognitive soul alone that is thus represented. This rational soul, as distinguished from the irrational and mortal elements, is of the same nature and character as the world-soul. A certain definite number of souls have been created by God, and this number is neither increased nor diminished.

Before the terrestrial life begins, the soul, with true personality, exists in a state of purity so refined that it is difficult to conceive its original estate from beholding it, as we now find it, marred by its abode in a mortal body. It has knowledge of the divine and eternal, and enjoys a life of bliss in contemplating the ideal world. From this state of purity, for the sake of completing the world-order, the soul is brought into union with a mortal body. Its higher nature is still shown, when incarnate, by love of wisdom and by a yearning for the divine to which it is akin. The soul is indestructible, but in the conflict of the earthly life, if it is overcome by the sensuous, it migrates at death into another human body, or even into a lower form of existence; if it maintains its purity, it returns to its original state of bliss, from which, however, it will again become incarnate. Through all these changes the continuity of its life is maintained. The soul in any particular body may, apparently, be undergoing its first or any subsequent incarnation. In the *Phædo* a proof of pre-existence is found in the doctrine of 'reminiscence,' the meaning of which is illustrated in the *Meno*. It is shown that in mathematical and philosophical learning the knowledge of universals is not acquired by direct experience or by teaching, but is drawn out of the soul; that the gaining of knowledge is an awakening of the memory which has become dulled through the soul's embodiment, the recollection of ideas with which it was familiar before the present terrestrial life began.

Aristotle (335 B.C.) regards the soul as an organizing principle, manifesting its activity in plant, animal, or man. The human soul is a microcosm, uniting in itself all the faculties of the lower grades of organic being with the additional faculty—reason. This reason, which is divine and immortal but not subject to transmigration, is the only element in the soul that exists before the body. His statements are, however, conflicting and his reference may be merely to the universal reason.

For the Stoics (from 310 onwards) the soul is an inborn breath pervading continuously the whole body. It is an emanation from the deity or a part separated from him. The fiery breath or generative reason which pervades the whole world appears in man as a rational soul. This purest portion of the central fire outlives the body, but at the end of the world-period at longest it returns to its source.

Stoic teaching, as well as Platonism, Pythagoreanism, and Oriental mysticism, had its influence on Greek and Jewish speculation at Alexandria from before the Christian era, and the thought of emanations was given a prominent place. This thought was taken up and developed by the Neo-Platonic schools which arose from the teaching of Ammonius Saccas (c. A.D. 210). Besides its influence in Alexandria the Neo-Platonic movement gave rise to Roman, Syrian, and Athenian schools. The most notable exponent of Neo-Platonism is Plotinus, the mystic who founded the Roman school in A.D. 224. In the system of Plotinus the Absolute One or the Good is not merely, as with Plato, the highest of the ideas, but 'is greater than all we call being, greater and better than reason and intelligence and sense, though it is that which gives them whatever reality they possess' (*Enn.* v. 3, 14). The ideas are emanations from the Absolute One and the soul is an emanation from the ideas. As the sun emits rays, the One, through its very perfection, overflows and sends forth an image of itself; and this image in turning to behold its source becomes the *voûs*, or pure intelligence. In like manner the soul, an immaterial substance, is an emanation from the *voûs* of which

it is an image. The ideas, endowed with true being and life, are immanent in the *voûs*. As the *voûs* exists in the One, so the soul exists in the *voûs*; and thus partakes of the divine. The soul has a generative power which enables it to produce and fashion its material environment. Of souls the highest is the world-soul. It occupies the lowest stage of the ideal world and produces the world of matter and change. Other souls are not mere parts of the world-soul; but, although they are included in it, they have a distinct existence. The life of the human soul, derived from the universal intelligence, is prior to its union with the body and is independent of it as regards power of thought, memory, and even sensuous perception. It is in itself indivisible and permeates the body as fire permeates the air, or, rather, we ought to say that the body is in the soul. Its union with the body is the result of a fall from its original state. In its self-will it has revolted and has sought to be something for itself; it has chosen the unrest of time instead of the peace of eternity. In consequence of its own act it is shut out from the universal life of reason and joined to a mortal body. It has forgotten its dignity and its divine origin, but it has not lost its freedom; it can attain to consciousness of its own nature; by a faculty higher than discursive reason, by ecstatic feeling, it can rise into contact with God and partake of the truest bliss.

Except in so far as they adopted Greek ideas, the Romans do not appear to have formulated any theory of pre-existence. Where the influence of Greek speculation concerning the soul is apparent in the writers of the classical period, the interest generally centres in transmigration, as we see by the references of Ennius, Persius, Horace, Lucretius, and others; and, when inquiry is made into the soul's origin, the answer is mythological, or is given in a pantheistic sense, as by Virgil, or in other terms suggested by the theories of the Greeks. Cicero thinks of the human soul as an essence of a divine nature, a portion of the divine and rational principle. The Sextians favoured the Pythagorean doctrines, and Marcus Aurelius, although he is vague on this point, speaks of 'the divinity within a man' (*Meditations*, iii. 6, 16, v. 10). Later came the Neo-Platonic doctrine, elaborated by Plotinus and maintained by his disciples Amelius and Porphyry in pagan circles when Christianity was spreading at Rome.

4. The doctrine in Judaism.—According to the teaching of the OT, the soul had no previous existence apart from the body. The representation of man's origin excludes the idea. In the case of the first pair there is a direct creation (*Gn* 5^{1f} etc.). When the other works were finished, man was not yet made (*Gn* 1²⁶), and in the statement 'God created man in his image . . . male and female' (v. 27) the same verb is used as in v. 1, where the object is 'the heaven and the earth,' and in v. 4, with object 'sea-monsters.' The account in 2⁷ is more in detail: the dust is fashioned and man becomes a living soul (*nephesh*) by the divine inbreathing. The life of the soul or of the body is not contemplated apart. With regard to other individuals of the race, there is nothing to suggest the view that the soul existed before the joint life begins on earth. The few passages most frequently quoted as favouring pre-existence are to be explained otherwise.

In Job 12, 'Naked came I out of my mother's womb, and naked shall I return thither,' 'mother's womb,' on account of 'return thither' in the parallelism, has been taken to mean the deep bosom of mother earth, Sheol, in which the soul previously dwelt. This is a strained interpretation, and it makes the 'I' identical with the soul. 'Mother's womb' is to be taken in its natural sense (cf. 310f. 16 108ff.); then in 'return thither' there may be an abbreviated comparison between this and the depths of mother earth (cf. Sir 401); or, less pre-

cisely, the state after death is thought of as being similar to the conditions in the womb whence man issues when life begins. Another passage is Ps 139¹⁵, 'When I was made in secret, curiously wrought in the lowest parts of the earth.' The term 'lowest parts of the earth' is elsewhere used of the realm of the dead (Ps 63⁹), and it is suggested that it means here the abode of the soul before birth; but two things are against this application: (1) the whole passage (vv. 13-16) is a description of the growth of the embryo, and (2) the reference is explicit in v. 15a to 'my bones' (RV 'my frame'). We have here, therefore, a poetical comparison of the 'mother's womb' of v. 13 with the deep, mysterious recesses of the earth. In Job 38²¹ the context shows that the words are used in an ironical sense: 'Thou knowest; for thou wast then born' (LXX 'I know then that thou wast then brought forth'); i.e. Job was old as the first dayspring. The reference is to birth. It is only by a fanciful interpretation that passages like 1 S 2⁶, Dt 29^{14c} can be thought to have any bearing on the subject.

Outside the Hebrew canon, however, we have early traces of the doctrine, and in Hellenistic circles and in later Judaism we find it fully developed. The idea of a disembodied soul, with an individuality of its own, had already become familiar to the Jews through their contact with Persian and Greek thought. The question of the disciples (Jn 9² [see below]) shows that theories of pre-existence were known to the Jews of Palestine in the time of Christ. Josephus tells us that it was a doctrine of the Essenes that souls are immortal and continue for ever; that, when they wander forth from the most subtle ether, they are drawn down by a kind of natural allurements and entangled in bodies as in prisons (BJ II. viii. 11). Whether his account is exact or not, the idea was familiar to him. The Essenes were probably influenced by the Pythagorean views that spread with Hellenism. Parsi and Buddhist influences are also suggested.

Among the Jews of Alexandria the doctrine was held before the Christian era, as we see from the statements of Philo and from the Apocryphal writings (Wis 8^{19t}, 'Now, I was a child of parts, and a good soul fell to my lot; nay rather, being good, I came into a body undefiled'). He speaks first as if his personality was distinct from his soul (so, too, Wis 15², where man at death 'is required to render back the soul which was lent him' [RV]), but then he corrects this and speaks of the soul which pre-existed as being the real self. He implies, further, that there is a distinction between souls, as being pure or corrupt prior to union with the body (cf. *Slav. Enoch*, xxiii. 5, 'All souls are prepared to eternity, before the formation of the world'; *Syr. Apoc. Baruch*, xxx. 2 and 2 Es 4²⁵, sometimes quoted, are not to the point). Philo the Jew, at the beginning of the Christian era, developed this doctrine under the influence of Plato's idealism, and fitted it into his allegorical method of interpreting the OT. Man is composed of soul and body. The soul consists of two parts, the rational and irrational principles. It is only in speaking of its functions that he adopts the Platonic tripartite division. The irrational part of the soul, like the soul of animals, rises by generation, and, being material in its origin, is mortal. The rational principle, which is the true soul, is pre-existent and immortal. It is an emanation from the Deity; and, although Philo makes a distinction between the Supreme Source of all things and the world, he speaks of the human soul as 'a fragment of the Soul of the universe' (*Mutat. Nom.* 39), and as 'a fragment or a ray' of the divine reason (*de Mundi Opificio*, 51). Of incorporeal souls, which are emanations from the Deity, there are two classes, and these have their abode in the air and the heavens. The higher class, called 'dæmons' in philosophy and 'angels' in the Scriptures, do not descend into bodies and are incorruptible; but the other class, viz. the souls of men, being nearer to the earth, are attracted by the body, and by their union with it become corruptible. The soul finds in the

body its prison-house or tomb, from which it escapes at death to enjoy its true life.

In the Talmud and the Midrash the pre-existence of souls is clearly taught. They are created by God and given a distinct existence as living beings. There are variations in the statements regarding details such as the time of their creation and their abode. In *Brēshīth Rabbāh*, 8, God is represented as taking counsel with the souls of the righteous before He created the earth. According to *Tanhūmā*, 3, all souls which were to enter human bodies were formed during the six days of creation and were in the Garden of Eden. Before their descent to earth the souls are kept in the seventh heaven (*Hagigāh*, 12b) or in the store-house (*Sifrē*, 143b), and it has been said that the Messiah will come when all the souls in the *gāph* have passed through the earthly life (*Abōdāh Zārāh*, 5a; cf. *Y'bamōth*, 62. 1). It is not settled whether the soul comes to earth at the time of conception or after the embryo has taken form (*Sanh.* 90a). The doctrine appears in great detail in the Kabbālā literature. According to the book of *Zōhār* (13th cent.), the soul in its essence is derived from the Supreme Intelligence, the Universal Soul. When the Holy One purposed to create the world, it was brought before Him in His will, and He formed all the souls that were to be given to men; they were there made in the exact form in which they were afterwards to appear as children of men on the earth; they were created pure, but He saw that some of them would afterwards corrupt themselves in the world (*Zōhār*, i. 96b). They are sent into their bodies that they may be educated by taking their part in the universe and by contemplating creation. The doctrine was further developed and rendered popular by Isaac Luria (16th cent.) and his school. All souls destined for the human race were created together in Adam. They had their place in different parts of his body—the brain, the eye, the hand, etc.—and, as there are superior and inferior organs and members, there are corresponding differences in the qualities of souls. As every human soul is a spark from Adam, all bear the taint of his first sin. These theories of the Kabbalists are put forward in connexion with an elaborate system of transmigration (cf. Luria, *Sefer Hagigatīm*). At present the doctrine, as taught in the Talmud and the Midrash, is part of the creed of the Jews (cf. Prayer Book, *passim*), whilst the Hasidim, who constitute perhaps half of the race, adopt in addition the Kabbalistic views. In the Morning Prayer in the Synagogue the form of expression, 'the soul which thou hast given me,' is similar to that used in Wis 8¹⁹, but it is understood in the sense made explicit in v. 20 (cf. above).

5. In the Christian Church.—Pre-existence is not taught in the NT. When the disciples asked the question, 'Who did sin, this man, or his parents, that he was born blind?' (Jn 9²), they probably had the doctrine of pre-existence in mind; but this would merely show that it was current in Palestine at the time, and that they may have still held it at this stage of their discipleship. Through the influence of Hellenistic philosophy and the Zoroastrian and Buddhist religions, it soon made its appearance among certain sects who derived part of their teaching from Christianity, notably the Mandæans (*q.v.*), originating in Palestine in the 1st cent.; the Gnostics (*q.v.*), spreading from Antioch and Alexandria in the 2nd cent.; and the Manichæans (*q.v.*) from Persia in the 3rd. It is involved in their theories of emanation and of the inherent evil of matter, by association with which spirit is defiled. An illustration may be given from the

speculations of the Valentinian Gnostics. From the dust of the earth and the pneumatic seed which Achamoth had conveyed into it the Demiurge formed man and breathed into him psychical life. He placed him in the lower heavens, but in consequence of disobedience banished him to the earth, and clothed him in a material body. Men multiply and the best of them—those with pneumatical natures—have an innate longing to return to the Pleroma. With the Manichæans the soul is a particle of the heavenly light imprisoned in matter, from which it may, at death or after further purification, return to the realms of light.

Under the influence of Greek philosophy many of the Church Fathers made a theory of pre-existence part of their system of doctrine. As early as the middle of the 2nd cent. it was taught by Justin Martyr, who, being a Platonist before his conversion, allowed his philosophy to colour his views of Christian doctrine; but its most influential advocate was Origen, who works it out in a clearly defined form in his great dogmatic treatise, *de Principiis*. Origen was familiar with the Alexandrian philosophy, being a fellow-student of Plotinus at the school of Saccas. Fundamental to the system of Origen is the thought that God is immutable and spirit indestructible. Among the spirits which God has created from all eternity are the spirits of men, and these were made in the image of God. All created spirits are endowed with freedom, and in the exercise of that freedom the spirits of men have fallen. The material world was subsequently created for the discipline and purification of spirits who have misused their freedom. The fallen spirits of men are banished into bodies in this material world. Man has a threefold nature: body, soul, and spirit, the material body and the rational soul or spirit being united by the animal soul. The rational soul is the immortal and eternal part which has suffered the premundane fall. Origen was followed in this teaching by Pierius, John of Jerusalem, Rufinus, Nemesius, and others. Jerome at one time believed in it, and Augustine acknowledged himself in doubt. It was opposed by Methodius and Gregory of Nyssa, and condemned by a decree of Justinian in A.D. 543, and by a synod at Constantinople in the same year; but in the Western Church it maintained itself in some quarters till the time of Gregory the Great at the end of the 6th century. Since that time it has been commonly held that the existence of all men was present to the foreknowledge of God and that it is part of the divine purpose; but a definite statement of actual pre-existence has not had a place in the acknowledged creed of any of the great Christian Churches. Still, individual theologians are to be found who have explicitly maintained it.

A particular phase of this doctrine occurs with regard to the person of Christ. It was taught by Origen and held by his followers that, like the souls of men, the *human* soul of Christ was created by God from eternity. It did not, like the others, suffer a premundane fall. The divine nature of Christ united with this undefiled soul and through it with the body. Among modern writers Isaac Watts (1747) adopted this theory. Cf. also Julius Müller.

6. In Indian religions.—The doctrine of pre-existence has a place in some form or other in most of the religions of India—Buddhism and Islām being the chief exceptions. Whether it was brought there by the Aryan invaders or afterwards originated among them, or was adopted by them from the pre-Aryan inhabitants, has not yet been determined. The significance of the doctrine is

conditioned by the varying conceptions of the Deity which have been current in different periods and in different religious systems. The prevailing mode of thought is pantheistic, but in the Vedic hymns it sometimes shades off into polytheism; and sometimes—as is the case also in the later codes of laws—it approximates to monotheism. In Buddhism it becomes practically atheistic; whilst the pantheism of Brāhmanism becomes blended with polytheism in Hinduism.

In the Rīgveda the mother Aditi, 'immensity,' is conceived of as the substratum of all existences; she is 'what has been born, and what will be born.' The teaching—already a part of Brāhmanism—becomes clear in the *Upaniṣads* (c. 500 B.C.) and in most of the systems of philosophy founded on them, as well as in the codes of law. The doctrine is common to all these writings that the soul (*puruṣa*, or 'the self,' *ātman*) is eternal. It has always existed and it always will exist. In the case of man the soul, when united to the body, is brought into bondage and endures the misery of an earthly life. Of the various modes of presenting the doctrine only examples can be given here. According to one representation, all organized existence, material and immaterial, develops out of a primal substance, *prakṛti*, in virtue of its own inherent energy. In the earliest *Upaniṣads* this view is set forth in such a way as to involve a materialistic monism, but in the Sāṅkhya philosophy the basis is dualistic. According to the last theory, besides the *prakṛti*, there are individual souls existing eternally and indestructible, and it is to unite with these that the *prakṛti* energizes itself. There is no supreme soul, for all souls are equal; but the modifications of the *prakṛti* with which they unite produce differences in the earthly life. When the soul comes to recognize its distinction from matter, it can free itself from it and regain its liberty. There is another way of presenting the theory in the *Upaniṣads* and worked out in the Vedānta philosophy which is essentially idealistic and involves a pantheistic view of the universe. One principle of life animates man and nature. It is the *ātman*, or self. It appears in nature as air or ether and in man as breath. The individual soul (*jīvātman*), which has its abode in the heart, is part of the supreme soul (*paramātman*), but has an independent existence of a practical, experimental kind. The consciousness of separate existence is, however, illusion, ignorance of its real nature, and true knowledge consists in recognizing itself as identical with the supreme *ātman*.

A doctrine of pre-existence cannot be said to find a place in Indian Buddhism (which denies the *ātman*), but it appears in a distinct form in the closely related system—Jainism. The Jains believe that the world is eternal; all animate beings are composed of soul and body; the soul has always existed and always will exist, but during the earthly life or series of lives it is in bondage through its association with matter.

The two most prevalent forms of religion among the Hindus are Vaiṣṇavism and Śaivism, although the sects which represent these have been subjected to almost endless subdivision. The materials for their creeds are derived chiefly from Brāhmanism but partly also from ancient ideas, Aryan and aboriginal, that were independent of Brāhmanism. Vaiṣṇavism has the greatest number of adherents, and among most of its sects the influence of the Vedāntic idealism, as expounded by Śaṅkara, is apparent, although as time went on dualistic conceptions became more common. Sometimes Kṛṣṇa, one of the incarnations of Viṣṇu, is represented as being alone real, the absolute being in human form, and the consciousness of independent

existence in men is the product of his deceptive magic; but in the teaching of the Pancharātras individual souls are emanations from the Supreme Being and, till they are absorbed in him again, enjoy a real and distinct existence. The followers of Rāmānuja, who are numerous both in N. and in S. India, attribute a distinct but finite reality to individual souls; and the followers of Ananda-tirtha in the south regard individual souls as having an eternal existence distinct from matter and from God. The Sikhs—in some respects deists—follow the Vedāntic teaching on this subject.

In Saivism, which is more closely related to the deism of the Sāṅkhya philosophy, the distinction of the soul from God on the one hand and from matter on the other is made clear. While the soul is united to matter, it is subject to error and sin; it is separated from God, held back as by a chain which the faithful should earnestly seek to have broken. There is, however, a branch of the Saivite religion, represented chiefly by ascetics in Benares and in the Deccan, in which a pure idealism is adopted. God is regarded as the only substance, and objects, including the individual ego, as His ideas.

These notices are far from an exhaustive enumeration of the modifications of the doctrine to be found in the Indian religions; but from them we see that pre-existence has been part of the teaching of all the great religious systems of the Hindus except Buddhism; that it is still a definite part of the teaching of that Hinduism, whether the cult adopted be that of Viṣṇu or that of Śiva, which is now the religion of more than 200,000,000 of the people of India, as well as of the smaller communities of the Sikhs and the Jains.

7. In other religions.—The belief in previous incarnations common to many primitive religions—among N. American Indians, Australian aborigines, African tribes, and elsewhere—is discussed under the title INCARNATION; here we are concerned with the origin of the soul previous to any incarnation. On the other hand, it is probable that pre-existence was believed in among some races whose religious system was more developed, but where direct evidence is now wanting. This is probably true of the Celts of the Druidic period, who believed in transmigration. The references to the cosmic egg in Teutonic legends, in the Orphic mysteries, and in Indian myths show that all these had certain ideas in common regarding world-origin. Among the ancient Egyptians there was a belief that one element in man—the *khui*—is a god-like essence, a spark of the divine intelligence. It comes down from heaven and forms part of the human soul, or *ka*, from which it is separated at death and, rising again to heaven, becomes a spirit. The Pharaoh was regarded as an incarnation of the sun-god and subordinate princes as incarnations of various gods. Chuang Tse (c. 300 B.C.), the opponent of Confucianism and the expounder of the philosophy of Lao-tse, the founder of Taoism, teaches that the soul is an emanation from God; that life on earth is a misfortune, involving a breach of the partnership with God, to whom the soul returns at death. Some forms of Buddhism, through contact with native religions outside of India, have developed a doctrine of pre-existence. Among certain Arab philosophers the Neo-Platonic teaching was revived, notably by al-Fārābī of Baghdād († A.D. 950).

8. In modern philosophy and general literature.—In modern times and within the bounds of Western civilization belief in pre-existence has been shown by various philosophers, poets, and other writers. In some cases it is accompanied by a pantheistic faith or undefined views tending

towards pantheism, and in others by belief in a personal God. There are many varieties in the form of the doctrine, and all that can be done here is to refer to typical instances. In Spinoza it occurs in a pantheistic sense, the individual finite forms being *modi* in which the Infinite Substance particularizes itself. In Hegel's philosophy finite persons are differentiations of the Absolute Spirit, who is the sum of reality. God is the One-and-All of which every man is a part. 'The whole is in every part, and every part is essential to the whole' (J. M. E. McTaggart, *Studies in Hegelian Cosmology*, Cambridge, 1901, p. 243 f.). For Leibniz human souls are monads of a high rank. They have existed since the beginning of things and have been in the ancestors since Adam's time. They have been, however, merely sensitive souls possessed of perception and feeling, and are endowed with reason at the time of generation by a kind of transcreation. From the beginning they have the imperfection inherent in finite things. Kant is generally referred to as teaching pre-existence in discussing the origin of evil, but the statement of his position requires care. Man at his birth has an innate bias, which Kant calls 'radical evil.' This bias is referred to the will, and (as *peccatum originarium*) is itself an intelligible act, cognizable only by reason, performed by the individual, not in the phenomenal world but in the supersensible sphere. He does not, however, represent this act as taking place in a pre-existent state. The act is timeless (*Religion innerhalb der Grenzen der blossen Vernunft*, ii. [Gesammelte Schriften, Berlin, 1900-13, vi.]). The thought thus darkly suggested by Kant was given more definite form by subsequent philosophers. Schelling, postulating pre-existence, conceives of man as falling at the beginning of all things from absolute to self-dependent existence, in which state he remains till birth. Variations of a theory of pre-existence on a basis of idealism or of realism are to be found in Schleiermacher, Schopenhauer, I. H. Fichte, Herbart, and many others. Julius Müller presents the doctrine in a clearly-defined form. A threefold primitive condition is assigned to man—his primitive state in the eternal ideas, in the extra-temporal existence of every ego, and in the temporal beginning of his earthly development. Believing in trichotomy, he regards the *ψυχή* as being generated with the body, and the *πνεῦμα* as being the element that is pre-existent. The *πνεῦμα* of every individual, except Christ, became involved in a condition of primitive sinfulness in the extra-temporal stage of existence. Among recent philosophers J. M. E. McTaggart thinks that pre-existence can be proved in a directly metaphysical way. He believes in a plurality of lives both before and after the present life. Henri Bergson, developing his theory of creative evolution, speaks of souls as being continually created, which, nevertheless, in a certain sense pre-existed. William James, in explaining his transmission theory of the function of the brain, thinks of our consciousness as being continually derived from something mental (a mind or minds) that pre-existed—from a consciousness that exists, behind the scenes, co-eval with the world. The direction in which the minds of many writers are turned is shown by the frequent use of such terms as 'oversoul,' 'soul-stuff,' 'mind-stuff,' 'subliminal self,' and Fechner's 'psycho-physical threshold.'

Belief in pre-existence is expressed by several English poets and by other writers. Vaughan has it in *The Retreat* (1654), the leading thoughts of which are borrowed and amplified by Wordsworth in his *Ode on the Intimations of Immortality*. In the treatment in both cases there is a echo of

Plato's doctrine of reminiscence, with this difference that it is the child in its earliest days that has the clearest recollection of the heavenly world and the impression becomes dimmed as life advances. Rossetti, in *The House of Life*, assumes pre-existence to account for his familiarity with a strange place, and for the bond that binds two lovers. Browning represents Cristina as feeling that 'ages past the soul existed' (cf. *La Saisiaz*). Tennyson expresses it in *Early Sonnets*, i., and in *Crossing the Bar* (cf. *The Two Voices*). Of course in poetry it is sometimes difficult to distinguish between the statement of a conviction and the play of poetic fancy or what is spoken in character. Jules Michelet, in *L'Oiseau* (1856), whilst not advocating transmigration in the ordinary sense, speaks of birds as embryo souls, candidates for the life to which the human soul has attained. Edward Beecher is an advocate of pre-existence in *The Conflict of the Ages*. A. B. O. Wilberforce, in *The Hope That is in Me*, says, 'I believe we have all been in being prenatally.' The evidence of a similar belief can often be seen in recent Russian literature. Among modern theosophists the belief is common that the conscious spirit is an eternal entity, a unit from eternity.

9. **Summary.**—By referring to the particulars given above it will be seen that belief in pre-existence prevailed very widely in ancient times, especially in the more developed ethnic religions. To what extent borrowing occurred has not been determined, but the probability is that in several cases the belief originated independently. It is held at present by most of the Hindus, by most Jews, and by many philosophers and other writers in Christian countries. There seems to be a tendency to revert to it in philosophic arguments in favour of the immortality of the soul. The doctrine appears in at least three distinct forms, each of which has several variations. (1) In the pantheistic form the soul pre-existed only in the Deity, and in the present life it continues to be merely a manifestation of the Deity. The Vedāntic philosophy, Spinoza, Hegel, and many others may be cited. It ought to be noted that in strict pantheism the same theory applies to the body as to the soul. (2) Another form is where the soul is thought of as having a distinct independent existence during the present life, and as having existed previously, but not as a soul. Manichæism and some of the Hindu systems supply instances. (3) In the other form the pre-existing soul is a distinct individual entity. The degree of consciousness ascribed to it varies, but the present life is a continuation of that which went before. The soul is an emanation from or is created by the Deity, or is eternally existent. It is in one of the varieties of the last form that the doctrine generally appears. The conditions in which the pre-existent soul lives are seldom described with any attempt at exactness, but generally it enjoys a state of bliss or at least of freedom from distress exceeding anything known on earth. This is the doctrine of the Essenes, Plato, Philo, and the Saivites. In many cases pre-existence is simply postulated, but attempts have also been made to justify belief in it. It has been regarded as more easily credible than any other account of the soul's origin—than either creationism or traducianism; as accounting for the feeling of familiarity that one sometimes has with a place never visited before, and the affinity that certain persons discover to each other at their first meeting (so in modern poets); as accounting for innate ideas (Plato), for original depravity (Müller). Origin derives it from the nature of the soul and regards it as the correlative of immortality; the idealists from the conception

of existence. McTaggart hopes (1915) to justify his belief by a discussion of the fundamental nature of reality. None of the arguments advanced is convincing, and the phenomena observed can be better accounted for on other grounds.

R. MOORE.

PREFERENTIAL DEALING.—'Preferential dealing' has been defined (e.g., in the Christian Social Union paper on *Preferential Dealing*) as 'the practice of purchasing goods only from tradesmen who observe the standard regulations for each trade'; and 'standard regulations' are taken to mean 'the best that can be secured at a given time in a particular locality,' whether the result of an agreement between capital and labour or of an award by an arbitrator. In this sense of the term preferential dealing was first applied by the C.S.U. in 1896.

An attempt had been previously made in England to organize a movement on similar lines under the title of a 'Consumers' League,' but no definite results seem to have been obtained by this method. It should be noted, however, that in America the 'National Consumers' League' has established a permanent position, with a wider scope of action, including the promotion of legislation by the various States in regard to the early closing of shops, the limitation of the hours of work for women and children in factories, etc. At an earlier date the principle of preferential dealing had been publicly recognized in England by the 'Fair Wages Resolution' passed by the House of Commons in 1891, requiring the payment of 'standard' or 'current' wages under all Government contracts.

As initiated by the C.S.U., this practice was described at first as 'exclusive dealing,' but this negative term was soon replaced by the positive term, 'preferential dealing.' It was found that the mere suggestion of an organized attempt to exclude tradesmen from public custom, for any

reason however just and valid, was liable to legal action as being in restraint of trade, whereas it was quite legitimate to offer preferential custom to those who were willing to adopt the standard regulations for their respective trades.

To give practical effect to this purpose, lists of tradesmen who observe the standard regulations (commonly called 'white lists') have been circulated, to be used by ordinary consumers at their discretion. Such a list may be published (a) by a Trade Union, dealing with a single trade as organized throughout the country—e.g., the Typographical Association; (b) by a Trades and Labour Council, including many trades in a particular locality—e.g., at Leeds; (c) by a society like the C.S.U., primarily for its own members—e.g., a joint list of tailors in London, Oxford, Cambridge, Liverpool, Exeter, Eton, and Rugby; or (d) by a C.S.U. branch, giving a list of local trades—e.g., at Oxford. It should be noted that, so far as the C.S.U. is concerned, it assumes no responsibility either for the code of rules or for their observance. The code is taken to be a mutual agreement between capital and labour, and it is assumed that it is the duty both of the Masters' Associations and of the Trade Unions to see that the standard regulations are faithfully obeyed. All that the C.S.U. supplies in this respect is an educated conscience ready to act on information given.

The ethical basis of preferential dealing was enunciated by the bishops of the Anglican Communion at the Lambeth Conference in 1897, when it was declared that Christian opinion ought to 'press upon retail purchasers the obligation to consider not only the cheapness of the goods supplied to them, but also the probable conditions of their production.' It has also received support from modern economists; e.g., W. Smart of Glasgow University wrote:

'The producing man is, essentially, the servant of the consuming man, and the final direction of industry lies with the consumers. . . . There are two distinct responsibilities which must not be confused: one is responsibility for the conditions under which goods are made; the other is responsibility for their being made at all. A slight awakening of the public conscience has induced some to ask, if it is not possible to demand some guarantee that the goods we buy are made by workers paid decent wages and working under healthy conditions' (*Studies in Economics*, pt. 265, 268).

LITERATURE.—See *Preferential Dealing, Commercial Morality, List of Tailors*, etc., papers published by the Christian Social Union, Oxford, 1897-1912; J. G. Brooks, *The Consumers' League*, Cambridge, Mass., n.d. [1897]; *Work of National Consumers' League* (American Academy of Political and Social Science), Philadelphia, 1911; W. Smart, *Studies in Economics*, London, 1895.

J. CARTER.

PREGNANCY.—1. Ignorance of the cause of conception.—Among the Arunta and other tribes of Central Australia conception is regarded as the result of the entrance of an ancestral spirit individual into the woman.

'They have no idea of procreation as being directly associated with sexual intercourse, and firmly believe that children can be born without this taking place.'

Similar ideas are found among other Australian tribes,¹ and the belief that conception can take place apart from sexual intercourse is found sporadically elsewhere, though perhaps not always with the same ignorance of the real cause of it. Examples of this have been found in New Guinea, in Melanesia, formerly among the Baganda, and in the Niger and Senegal regions.² Folklore and mythology show that conception might take place

² W. E. Roth, *N. Queensland Ethnography*, Brisbane, 1903, p. 22; other instances cited in *GB*, pt. iv., *Adonis, Attis, Osiris*, London, 1914, I. 108 ff.

³ R. Neuhaus, *Deutsch New-Guinea*, Berlin, 1911, iii. 26; W. H. R. Rivers, *JRAI* xxxix. [1909] 178 f.; J. Roscoe, *The Baganda*, London, 1911, p. 46 f.; M. Delafosse, *Haut-Sénégal-Niger*, Paris, 1912, iii. 171.

by more or less magical means, but, in many instances this is in addition to actual cohabitation.¹ Some writers have maintained that ignorance of the cause of conception must once have been widely spread, and possibly at one time in the history of early man was general. The reasons alleged for this ignorance are several: conception is found not to result from the wide-spread practice of cohabitation before puberty; why then should it follow it after puberty? Premature intercourse tends to impair fertility. There is again a disproportion of births to acts of sexual union. And even where the cause is known, it is not regarded as invariable and indispensable.²

In spite of all this, it may be doubted whether the belief in virgin-birth has ever been wide-spread. In most cases where conception is due to a god or spirit these are envisaged in very material and human aspects.

Among the Sinaunglo (British New Guinea) pregnancy is thought to result from frequent cohabitation. Conception begins in the breasts (from signs of pregnancy seen in them). Later the child drops to the abdomen. There is no idea of an intra-abdominal organ.³ Among the Yakuts the woman is thought to have a greater share in procreation than the man, who therefore takes no responsibility for monstrosities.⁴

2. Averting barrenness and securing male children.—As the possession of some children at least is regarded as a necessity with savage peoples as well as at higher levels, many devices are made use of to avert barrenness.

The Eskimo woman of Behring Straits goes to a shaman, who gives her a kind of doll over which rites have been performed. She sleeps with this under her pillow.⁵ This is a piece of mimetic magic, and may be compared with a Japanese method in which the woman is put through a form of delivery with a doll at the phallic festival.⁶ Various practices with a doll-like image occur elsewhere—among the Battas, in Torres Straits islands, among the Maoris, the Huichol Indians, the Basutos and other African tribes, etc.⁷ Among the Bahima women are thought to be barren or fruitful at the will of the clan deity. The husband who wishes a child prays to him and commits his wife to the god's care during her pregnancy.⁸ In the Congo region barrenness is supposed to be cured by entering the *ndembo* secret society, when the entrant gets a new body.⁹ Among the Awemba barren women wear two tiny horns in hope of bearing children, the reproach of barrenness being the worst insult.¹⁰ In E. Central Africa the woman provides a black hen, which is tied to her back, and there fed as if it were a child.¹¹ In Egypt barren women pass seven times under the stone on which the bodies of decapitated criminals have been washed, and then lave their faces in the polluted water. Others step over the body of a decapitated man.¹² Bathing in or drinking the waters of a sacred well or spring is often resorted to for the cure of barrenness in various regions, and some legends tell of girls becoming mothers after doing so.¹³ In modern Muhammadan districts favourite places of resort are the tombs of saints, where prayers and an offering are made—a practice found also in Christian countries. Contact with fixed rocks or boulders or megalithic monuments is often believed to be effectual for the removal of barrenness—the spirit of the stone or of the dead buried there perhaps being supposed to assist the rite or even to be reborn of the woman.

Sometimes special ceremonies occur to ensure that the expected child will be a boy.

In Sabai, Torres Straits, the expectant mother nurses the image of a male child made by her husband's sister. Or, to obtain a male child, the woman presses to her abdomen a fruit like the male organ in shape and then gives it to another woman who has only male offspring.¹⁴ In Japan the expectant mother puts on part of her husband's dress, and, having gone round a well three times, looks at her face in the water. Without looking behind, she repeats, 'Woman is unlucky, man is lucky.' Then for three days she leaves the cover on the well, which is a

domestic god.¹ In India a low-class mother of daughters only has been known to kill a neighbour's girl as a sacrifice in order to procure a son.²

3. **Tabus during pregnancy.**—The expectant mother and sometimes also the father are the subjects of various tabus, for the mother usually connected with food, for the father with that also, but more usually with his actions or pursuits. The woman in pregnancy is generally herself in a tabu state, since her condition is associated with those sexual crises which are so mysterious to and so much feared by savage man. Some of the tabus imposed on her or her husband may arise out of direct observation of ill-effects following the eating of some particular food; others are the result of mal-observation or superstition; others are purely arbitrary. Only a few typical examples need be given here.

Among the Australian tribes food restrictions are general for the woman, less so for the man, for fear of hurting the child or causing its death.³ In Murray Island birthmarks are attributed to the mother's eating a certain fish, the juices of which touched the child.⁴ With the Sinaugolo of British New Guinea, lest the child should be deformed, certain species of yam and fish are forbidden to the mother, who often tabus her own food.⁵ Among the western tribes of Torres Straits no woman may eat of a certain pigeon till past child-bearing.⁶ In Halmahera the woman is not allowed to eat the remains of her husband's food, for that would cause difficult labour.⁷ In Assam one of the *gemmas*, or tabus, is that the woman must not eat meat called *ipechi*, if it has been placed in her hut over night uncooked. If she does, her child will be sickly, and, when it begins to crawl, its hair will fall out, and sores will come on its scalp.⁸ Among the Bageshu, while there are no special tabus, precautions are taken against eating foods which might do the child harm. The husband must not take violent exercise or climb trees, rocks, or the house-roof, lest a miscarriage occur.¹⁰ The father is prohibited from eating certain foods among the Bangala, and may not hunt or fish unless the wife has certain ceremonies performed over her by the *nganga* (medicine-man). The husband is said to be in a state of *iboi*. Tabu is also placed on certain foods for the woman by the *nganga*, but not the same for all.¹¹ With the Baganda sickly or delicate children are kept away from the woman, who is forbidden to eat several kinds of food, lest the child be still-born or delicate.¹² Among S. African tribes there are several restrictions prescribed by custom, but no evil consequences are thought to follow departure from these.¹³ In ancient Persia the woman was forbidden to eat dead matter under pain of death, and she could not be purified from this pollution.¹⁴ A final instance may be taken from the Indians of the Issa-Japura district, S. America: foods are much restricted—e.g., paca flesh, lest the child's skin be spotted, capybara, lest it have teeth like that animal's, etc.¹⁵

A further tabu is seen in the very general avoidance of sexual connexion between husband and wife either during the whole period of pregnancy or during part of it, especially towards the end. Sometimes a definite reason is given for this—e.g., lest the child be deformed (Sinaugolo, British New Guinea),¹⁶ or lest the hunting and fishing of the father should be bad and the child sicken or die (Bangala).¹⁷ Such avoidances are the result of the belief that any time of sexual crisis is dangerous. Examples are found in many parts of the world.¹⁸

In British Central Africa a man will not commit adultery during the pregnancy of his wife because he would be accused of it if she died.¹

In connexion with this subject of tabus certain Hindu rules are worthy of notice. The pregnant woman must be given food before the householder and even before guests;² way must be made for her;³ no toll is taken from her at a ferry;⁴ she is not fined for committing a nuisance;⁵ a Brahman must not eat in her house;⁶ the crime of killing her is equal to that of killing a Brahman.⁷

Other tabus are of a precautionary nature, though the link between them and the unborn child or the process of birth is of a magical kind.

One of these is that no knots may be tied during pregnancy by the woman or sometimes also by her husband. The reason of this was that delivery would be difficult—the woman being thus herself apt to be tied up, or the child constricted.⁸ This is akin to the custom of unlocking; all locks in the house at child-birth, lest the womb should be locked up, or to the German superstition that a pregnant woman should not creep through a hedge.⁹ So, too, Ainu men should not spin or twist ropes when their wives are pregnant, lest the child's intestines should be entangled, and Roman women praying to Lucina were to loosen their hair, so that she might loosen their wombs.¹⁰ For similar reasons a pregnant woman should not sit with legs crossed, nor should her husband do so, nor any one sitting near her; nor should they sit with clasped hands. Lucina sat by the house with legs crossed and hands clasped at the birth of Hercules; hence his mother travelled with him seven days.¹¹ In Sumatra the woman must not stand at the door or on the top rung of the house-ladder, lest she have difficult labour; and among the Torajas standing or loitering on the ladder is forbidden to every one for the same reason.¹² In India an eclipse is thought to have its dangers for the expectant mother. No work must be done—e.g., locking or unlocking a door—lest the child be deformed, nor any sewing or cutting, lest it have holes in its flesh or a hare-lip.¹³ An ancient Parsi regulation was that no toothpick should have the bark left on it. This was dead matter, and, if a woman stepped on it, her child would come to harm.¹⁴ In India no one should step over a fallen broom, lest he cause suffering to a pregnant woman.¹⁵ The woman herself in the W. Indies should not step over a rod or small branch, and in Fife folklore stepping over a hare's form causes the child to suffer from hare-lip.¹⁶

In some instances charms are worn to prevent any mischief which might happen to the woman or the child, or to give an easy delivery.

Among the Bangalas in the later weeks of pregnancy pigments are painted by a medicine-man on the woman's breast, abdomen, shoulders, etc., and she wears charms to cause easy delivery.¹⁷ After her marriage a Nandi woman collects pieces of their dress from unmarried girls in the neighbourhood and wears them as a charm to ensure pregnancy taking its normal course. After birth they are returned and a feast takes place.¹⁸ With the Awenba the woman wears necklaces of little wooden balls with fetish-medicine inside to avert dangers of pregnancy and cause easy delivery. They are made by the medicine-man.¹⁹ Muhammadan women in the Panjab wear charms or a cowry on the navel. They are procured from a priest, who blows upon them.²⁰ See also CHARMS AND AMULETS, and for other instances A. E. Crawley, *The Mystic Rose*, London, 1902, p. 9.

Pregnant women being in a state which renders them liable to the attacks of evil spirits, various precautions are taken against these. The charms so often worn probably form one of such precautions.

B. von Spix and C. F. P. von Martius, *Travels in Brazil*, Eng. tr., London, 1824, p. 247).

Among the Sinhalese the woman is protected from devils by *mantras* for charming each day's first food and drink.¹ Among the people of Nias spirits of murdered infants cause miscarriage. The woman is protected at night by an idol, which is connected with a second by a chain of palm-leaves, while before the latter a small banana-tree is placed. The spirits, seeing the first idol, run along the chain in fear and then leap on the tree, mistaking it for the woman.² With the ancient Parsis fire was maintained in the woman's house, the reason being that such a fire protected Zoroaster's mother when attacked by demons.³ Among the Nagas, pregnant women being exposed to attack from evil spirits, the river-spirit and also the Python are worshipped to cause easy delivery.⁴ Protection of the woman against *jinn* is effected in Tlemsen by keeping a black fowl in the house from the seventh month onwards. After delivery it is let loose in the Jews' quarter, carrying the *jinn* with it.⁵ Among some of the Veddas the aid of the *yakus* (spirits) is invoked, and a religious dance performed as soon as pregnancy is diagnosed.⁶ Prayer is also made by the woman's father for her safety. For a Bavenda goddess of pregnant women cf. *ERE* ii, 364^b.

Sometimes the pregnancy rites are of a more elaborate nature than those which have just been described.

In Java in the seventh month husband and wife go to a river or well. Banana-leaves are fastened round the upper part of the woman's body. Through an opening in front of these the husband drops a weaver's shuttle, which an old woman catches, pretending that it is a child. An egg, emblem of the afterbirth, is then passed through, and a cut is made at the opening in the leaves in imitation of cutting the navel-string. The purpose of this ceremony is to facilitate delivery.⁷

Most elaborate of all are the rites followed in India, of which, as practised by Hindus and Muhammadans, a detailed description has been given by H. A. Rose.⁸

These rites vary from tribe to tribe, and consist of ceremonies in the 3rd, 5th, or 7th month or in all three, or in the 8th or 9th month. There is an interchange of presents between the woman and her mother. Offerings are made to the spirits. The woman is bathed and dressed in new clothes—not worn before the performance of the rites. The kinsfolk assemble, and gifts of food or fruit are placed in her lap. She and her husband adore the gods. The Muhammadan rites are analogous to these, but without the worship of the gods.

The Khatris, a Panjāb tribe, perform funeral rites for the father in the 5th month, while the parents are remarried after the birth.⁹ This goes back to the belief found in the *Laws of Manu* that, after conception by the woman, her husband becomes an embryo and is reborn from her.¹⁰ He dies when his son is quickened; hence the funeral rites.

4. Power of the pregnant woman.—The condition of the pregnant woman is often thought to have magical power, especially for fruitfulness.

Corn ground by her is used to fertilize the growing crops among the Zulus.¹¹ She eats of the food at the feast held among the Minang of Sumatra when a rice-barn is built, in order to increase the fruitfulness of the rice.¹² In the Nicobar Islands gardens are made more fertile by her presence in them or by her planting fruit there.¹³ Similar ideas are wide-spread among savages and survive in European folklore. Probably for similar reasons pregnant cows were sacrificed at the Roman *Fordicidia* to the earth 'pregnant with the seed,' the unborn calves burned, and their ashes used at the *Parilia*.¹⁴

It may be noted here that in Lancashire gypsy belief a pregnant woman protects a man from hunt by mortal hands.¹⁵

On the other hand, pregnant women being more or less in a tabu state,¹⁶ their influence on the crops may be dangerous, as examples from New Guinea and elsewhere show.¹⁷

In British Guiana, again, if a pregnant woman eats of game caught by hunting dogs, it is thought that they will never

hunt again.¹ In the Panjāb it is held that a snake becomes blind if the shadow of a pregnant woman falls on it.² Parsi texts say that, if a dead pregnant woman is carried by two men, both must be cleansed by the *bareshnūm* rite.³

5. Determination of sex, etc.—Many methods are adopted to discover whether a woman is with child, its sex, and the like.

If a Kagoro woman is in doubt as to her condition, she goes to a medicine-man, who, after washing his eyes with a magic drug, looks into a calabash of water and tells what is to happen.⁴ In Banks' Island divination consists in pinching a leaf cup full of water. If the water squirts out, a boy will be born; if not, a girl.⁵ Sex is determined among the Veddas by the position of strips of bast as they fall on the woman's head in the dance already referred to. If they fall over the face, a girl will be born; if on the occiput, a boy.⁶ In Japan, if some one calls a pregnant woman who is walking southwards and she looks back from the left, the child is a boy; if from the right, a girl. Another method of determining sex is to add together the years of the father's and mother's ages and divide by nine; if the remainder is odd, a girl will be born.⁷ Among Muhammadans in the Panjāb it is thought that, if the woman's milk before birth is thin, she will have a boy; if, when it is put in a shell and fire is applied, it dries up, she will have a girl.⁸ According to the *Saddharma Pundarika* (xviii, 34 f. [*SBE* xxi. (1884) 344]), a preacher of the law (Buddhist) can discern if a woman is pregnant of a dead child or if she will have a healthy child. He discerns by the odour whether the child will be a boy or a girl.

PREMONITION.—See PRESENTIMENT.

PRESBYTER.—See MINISTRY.

PRESBYTERIANISM.—The name 'Presbyterianism' may be applied in a general sense to that theory of the Church which aims at realizing its visible unity through government by presbyters, clerical and lay, such presbyters being set apart by their peers with popular consent, being all of equal status, and being organized for purposes of ecclesiastical administration into Church courts, which rise one above another in an ascending scale, from the congregational to the national. In a sense more particular 'Presbyterianism' is used to denote the concrete effort after the realization of that idea which, originating in the work of John Calvin, was elaborated by those who followed him into a definite form of Church organization, with a distinctive type of doctrine, morals, and ritual, and which in one form or another counts perhaps 100,000,000 adherents to-day. Presbyterianism seeks to avoid, on the one hand, the absolute subjection of individual congregations to government from without and above, and, on the other, their absolute independence of all restraint. Of the three great types of Church government it is therefore the middle one, between Congregationalism and Episcopacy.

I. EMERGENCE OF THE CALVINIST PRESBYTERIAN SYSTEM.—1. **The NT basis.**—Serious Presbyterian scholarship is long past the stage of the crude 'jure divino' defence of Presbyterianism, as if it were the only form of Church government expressly sanctioned by the Word of God and the institution of Christ. During the first phase of the famous controversy between Puritans and Anglicans the Puritans claimed divine sanction for their ecclesiastical system, or, at least, divine disapproval of that of their opponents, as against the Anglican argument from the expediency of the episcopate; but in the later stages of the conflict the two sides reversed their rôles. The controversy died down about A.D. 1700 after the battle over the Ignatian Epistles; and the whole question as to the primitive form of Church government only revived under the stimulus of modern histori-

cal scholarship, with new methods, and under a new form. It is now realized by impartial critics that no one form of Church government is to be definitely discerned in Holy Writ more than another. While Calvin, therefore, and others of his day believed themselves the restorers of primitive Christianity, freed from the errors and corruptions of Romanism, modern scholarship cannot absolutely subscribe this opinion. Even if the Reformers had possessed the necessary critical insight to construct a clear picture of the NT Church, they must have found it impossible to reproduce with perfect faithfulness a primitive creed and polity which later had been in successive contact with the Græco-Roman and barbarian worlds; conversely, such a reproduction of primitive institutions would be a poor guarantee for their success in modern times. A living organism is necessarily subject to change, and the attempt to ignore a millennium of ecclesiastical history could not but fail. So far, then, as the advocate of Presbyterianism makes use of the NT to-day, he must claim to reproduce the spirit and intention of the primitive Church, and not its mechanism; he will draw his main arguments rather from considerations of expediency. He will show how Presbyterianism has proved itself particularly suited to the genius of its adherents; how it has played a prominent part in the political development of those peoples who have worked but systems of representative government; how it has produced a unique and admittedly worthy type of character; and, if these and other possible contentions savour to some extent of pragmatism, he may reply to this criticism that Church government can be, as an actual fact, traced in all ages—the NT age included—to motives of expediency, and that one of the fatal errors which have helped to rend the Church has been the injudicious elevation of government into the region of dogmatics.

Although the conditions prevalent in the early Church are inconsistent with the possible existence of either Presbyterianism or Episcopacy as we understand them, we find both presbyters and bishops mentioned in the NT; and the problem of their relationship, which has given rise to endless controversy, cannot be passed over. Whether we argue with Jerome that bishop and presbyter were originally identical, and hold with Lightfoot that the episcopate was developed from the presbyterate by elevation; whether we contend, with Harnack, that the offices were distinct from the beginning; or whether, with Lindsay and Loofs, we hold that *πρεσβύτερος* was the official name, while *ἐπίσκοπος* described the function, the problem remains the same, viz. How did the bishop come to overshadow the presbyter, and finally reduce him to a definitely inferior position? The most feasible explanation yet suggested seems to be that which is founded upon the bishop's connexion with the Eucharist, a connexion indicated by practically all the sub-apostolic literature.

2. *Sub-apostolic development.*—While the *ἀγάπη* still existed, the official in charge of the celebration would enjoy a distinctive place, not only in the Church itself, but in the eyes of outsiders. As the *ἀγάπη* fell into disuse, and the sacramental aspect of the Eucharist gained prominence, the bishop's pre-eminence would develop with it. The crux of the entire episcopal development seems to lie here; and, once the bishop had definitely asserted his special position among the officials of the Church, circumstances favoured his steady elevation. Roman imperialism and Jewish nationalism were in deadly conflict about the close of the 1st cent.; Jewish Christianity was rapidly disappearing; and all the conditions were in favour of the Gentile *ἐπίσκοπος* and his function being

recognized as against the Jewish *πρεσβύτερος* and his function. The *Didache* is the most valuable document for this transition period; and in Ignatius we first find the threefold ministry, with the supremacy of the bishop, clearly set forth as the divinely-appointed form of Church government.¹ It is difficult, at this time of day, to accept Ignatius's own view that he received this theory by divine revelation; and the brief interval of time between him and Clement of Rome shows that his theory cannot have been extensively in practice when he wrote; but his martyrdom 'barbed and fledged' his teaching, and gave undue weight to his ecclesiastical expedient. Moreover, the Church was faced in times immediately following by heresy within and hostility without, and the concentration of power in as few hands as possible proved of great value. The forming of a creed, and of a collection of Holy Scriptures upon which to base it, was logically followed by the need of an authoritative interpretation for both. The bishop, already prominent, naturally if not logically became the authoritative mouthpiece of the Church in matters of the faith; and apostolic succession followed in due course. Irenæus, *e.g.*, definitely connects the theory of the apostolic succession of the episcopate with the necessity of maintaining sound doctrine; and the bishop thus emerges from the comparative obscurity of earlier times with a status in matters of the faith equal to that which he had previously enjoyed in matters of administration. Cyprian's position introduces a new factor. By his time creed and canon had attained a position of greater certainty, and the sacerdotalism of the Church under OT and also pagan influences had been intensified, so that apostolic succession is now a guarantee not so much of sound doctrine as of the validity of the priesthood. The evolution of territorial from congregational episcopacy was completed by the gradual assimilation of the ecclesiastical system to the imperial. The fall of the Empire, the transference of barbarian respect from it to the Church, the conversion and absorption into the Church of the northern peoples, all assisted in the process of closer organization; and so by degrees grew up the great mediæval hierarchy—the feudal system being theoretically crowned by the twin summits of a papacy supreme in spiritual affairs and an empire supreme in temporal.

3. *Mediævalism.*—Superficially considered, the whole history and tendency of mediævalism might seem designed to bury ever deeper the very idea of any but monarchical Church government; and the Reformation systems might seem so sudden and complete a contrast to previous developments as to justify Calvin's theory of a reversion to primitive Christianity by the ignoring of mediævalism. But nothing ever makes its appearance in history without preparation; and, while we cannot eliminate the genius of Calvin and the rest by explaining their systems out of any or all of their antecedents, we may discern certain mediæval tendencies which led up to their work. Presbyterians may find the beginnings of their history either in the NT or in the book of Exodus, if they will; but the mediæval continuation of it has been too much neglected. Although the practical needs and problems of mediævalism served to exalt the ecclesiastical society at the expense of the individual, and to sacrifice the intellectual and homiletic interests of the Church to the organizing and sacerdotal tendencies, yet the homiletic, intellectual, and individual element never completely perished. Practical exigencies might favour the creation and maintenance of a rigid monarchical system, which deprived the individual of all political or intellec-

¹ This episcopacy was congregational, not diocesan.

tual scope; but the mastery of the system was never wholly undisputed, and the essential Christian truth of the worth of the individual before God never fell completely out of sight. Throughout the growth of ecclesiasticism we can discern a continuous process of revolt against it, which, manifesting itself primarily in the form of Montanism (*q.v.*), was suppressed, but, in its essence, defied extinction. Athanasius was faced by Arius, Augustine by Pelagius, Bernard by Abelard, Aquinas by Scotus; the slavery of intellect was always incomplete. But it is in monasticism (*q.v.*) that we can see most clearly the opposition of individualism to the tyranny of the institution. The impulse which, in the successive forms of Montanism, Novatianism, and Donatism (*qq.v.*), succumbed to the need for closer organization persisted in the form of monasticism, and established an unbreakable hold upon Western Christendom. From the beginning of monastic history the conversion, the education, and the civilization of N.W. Europe were almost entirely the work of monks; and, while the episcopate succeeded in forcing the monks into the priesthood, monasticism conquered by forcing celibacy on the Western clergy and emancipating the orders from episcopal control. The opposition between the secular clergy and the monks runs throughout mediævalism; and the monastic side of the opposition represents the preparation for the Reformed Churches. Whereas the secular clergy obeyed a monarchic bishop, the monks obeyed a presbyter-abbot. Their vow of poverty gave expression to the truth that a man is of value apart from his property, their vow of celibacy destroyed the feudal fetish of family prestige, their vow of obedience was that of free-will obedience to a superior in whose election they had a voice, and in making this vow a man left a society in which he was a mere irresponsible cog accidentally placed in a machine for one into which he entered voluntarily. Thus, while, as A. V. G. Allen puts it, 'every direct specific purpose of the monk seemed in the long run to have been reversed, or to have proved a failure,'¹ yet there was 'a deeper purpose which could not be defeated,—the accomplishment of individual personality.'² It is in this presbyterial, as we might call it, conception of Christian organization that we discern the germ of the Reformation. Moreover, whereas the secular clergy and the episcopate had all along represented sacramentarianism in worship and rigid solidarity in government, the monastic system, on the whole, had stood for the homiletic aspect of worship and a form of organization at once more elastic and more representative of the popular voice. Of course, each side reacted upon the other. The monks were often the stoutest champions of orthodoxy, and their services were often most highly ritualistic; on the other hand, the Church was democratic enough to make it as possible for the most obscure Churchman to ascend to the papal throne as it is for any citizen of the United States to become President; and the semblance, at least, of representative government was retained in the election of bishops by the cathedral chapters and the choice of the pope by the conclave. But, in essence, the difference which afterwards became open in the Reformation between Catholic and Protestant subsists throughout the Middle Ages between the episcopate and monasticism; and it only required favourable circumstances to set on foot the process of disruption.

4. Decline of papacy and the Reformation.—The decisive factor in the final separation of the 16th cent. was the weakening of the papacy, which

was the only power capable of holding together the opposed sides of ecclesiastical life. The fate of Boniface VIII. marked an era in the decline of the papal monarchy, which had ruined the Empire, only to find a new and more vigorous opponent in the growth of European nationalities; the Babylonish captivity of the Avignonese popes weakened the papal grip upon England and Germany. Early in the 14th cent. William of Occam and Marsiglio of Padua outpaced the pope in the interest of Louis of Bavaria. Marsiglio's fully-developed democratic idea of Church and State is a sign of the times; the fact that the Fraticelli were deeply involved in the anti-papal revolt is another; and the whole incident has been well named the Miniature Reformation. The work of Wyclif in England is a manifestation of the same spirit, which, passing from England to Bohemia and John Hus, remained active there far into the 15th century. These various movements combined projects both of political and of ecclesiastical reform—they attacked the dogma as well as the organization and morals of the Church. To the growing distrust of the papal monarchy and the whole system with which it was bound up the Great Schism contributed in no small measure; and the conciliar movement, while it represents in essence the struggle between the aristocratic episcopal form of Church government and the autocratic papal form, helped to pave the way for democracy by asserting the responsibility of rulers to those whom they affected to rule. With the close of the Council of Basel in 1447 the papacy secured an illusory victory over its foes, but not even the splendour of the Renaissance period could blind the eyes of serious men to the moral and financial corruption of the Curia. The rise of European nationalities, the inventions of printing and of gunpowder, revolutionary discoveries both geographical and scientific, contributed to the general ferment. Moderate men might desire a reform of the Church on the existing basis, but others were driven by the monstrous indifference of the Curia towards its own corruption to consider the evil as inherent in the system itself, and to desire a more radical reformation. In particular, the New Learning, by exposing the hollowness of many ecclesiastical pretensions, by weakening the belief in transubstantiation and sacramentarianism generally, and by reviving the interest of Europe in the teaching and homiletic side of Church activity, helped to relax the hold of the papacy upon the Church, and to set free the monastic side of its life from the long alliance with the episcopal. Finally, in the hands of Luther, Zwingli, and Calvin, the crisis came—divergence matured into division—and monasticism achieved its independence in the Reformation. It is no accident, but the result of a profound historical necessity, that the lands which remained in the Roman obedience were precisely those which had been fully Christianized in pre-monastic days, whereas the lands in which monkish missionaries, especially of the Iro-Scottish type, had laboured went over to the Reformation side.

From one point of view, the Reformation represents revolt and the rending of Christendom in pieces; but the pieces into which the Church fell correspond, with some definiteness, each to some previous tendency within mediævalism; and, from another standpoint, the Reformation is the substitution of spiritual unity under the headship of Christ for external, mechanical unity under the papal monarchy. The democratic constitution proposed for the churches of Hesse, *e.g.*, was the work of Lambert, a Franciscan monk, and recalls the Benedictine organization. Lutheranism reminds us forcibly of the Augustinian order; and

¹ *Christian Institutions*, Edinburgh, 1898, p. 173.

² *Ib.* p. 175.

the Presbyterian type of constitution under Calvin and his followers calls to memory the organization of the great monastic orders of later mediævalism, wherein many houses were affiliated into one great society. Point for point, this parallel between mediæval tendencies and Reformation facts could be worked out in much detail. It will suffice, however, to note that Presbyterianism, like other ecclesiastical systems, was no new phenomenon suddenly entering about 1550 on a career totally unprepared for, but was the emergence into freedom of a tendency many centuries old. Substitute Christ for the pope as the head of the Church, and spiritual for corporeal unity, and you have at once the explanation of our Protestant divisions, and the antidote to much of the alarm which they cause in unreflecting minds.

5. The question of government.—When we consider the great importance which by and by came to be attached to the question of Church government—so that the form of organization adopted by Presbyterianism became, in time, its chief differentia from the rest of Protestantism, and 'jure Divino' arguments went hand in hand with armed force to resist any encroachment upon its rights—it is curious to reflect that, in the early days of Protestantism, the question of government was a secondary consideration. The Reformers, following the monastic lead, were more concerned with teaching than with administration; and, provided they got rid of the papal headship and could secure the safety of great truths like that of justification by faith, they kept a reasonably open mind on the question of organization. The salvation of the individual through the direct mediation of Christ was the vital point; other matters were subsidiary. Being in revolt against over-organization and all the loss of individual Christian liberty which that implied, Luther, Calvin, and the rest could scarcely make a virtue of ecclesiasticism.

Ecclesiastical organization was perhaps the least important activity of Martin Luther and the Lutheran Church. In common with the Calvinists, this Church recognized the priesthood of all believers and the parity of ministers, but, unlike the Calvinists, did not harden this into a fixed principle of organization. In the Scandinavian countries, where kings and bishops co-operated in the work of reformation, the episcopate was retained, though in a modified form; in the German principalities the *jus episcopale* was delegated to the civil power, which in turn delegated it to Consistories, and the persistence of civil government and patronage in the Church prevented Lutheranism from ever attaining to the firm representative organization which has become a feature of Presbyterianism. The attitude of Melancthon, who would have recognized either bishops or a pope if they could have been shown to be of real use, has remained typical; the small crop of Lutheran Free Churches has resulted mainly from doctrinal objections to the union of Lutheran and Reformed a century ago in Prussia and allied states, and at least one such body seceded on the question of whether government was an essential feature of the Church at all.

The Calvinist bodies were prevented by circumstances from any such indifference to the form of Church government; for, whether by accident or by necessity, they found themselves situated either in republics or in principalities and kingdoms where the absence of a sympathetic ruler rendered the Lutheran plan impossible, and where the opposition of the bishops sooner or later demanded the repudiation of episcopacy. As has now been shown, the retention of episcopacy in some Reformation lands and its rejection in others was no accident, but a logical consequence of the attitude

assumed by the bishops and the civil authorities towards the Reformation.

II. *SUBSEQUENT DEVELOPMENT.*—i. DOCTRINE.—In the dogmatic sphere two great doctrines mark off the Calvinist system from all others.

(a) The first of these is the doctrine of *the absolute sovereignty of God*, which is the keynote of all the other Calvinist developments. This carried with it the doctrines of election and predestination (*q.v.*), which, in their rigid Supralapsarian form, denied man any participation whatever in the work of saving himself, and, in their milder Infralapsarian form, left him only a very minor part to play in it. This dogma, harsh as it may seem to the more lenient spirits of to-day, is not to be dismissed off-hand as if it were a mere negation of man's free will. The 'mere good pleasure' aspect of the doctrine is not the vital part of it. In the days when Calvin promulgated it the agony of a dying age and the birth-pangs of a new might well seem to renew the circumstances under which Augustine had set it forth, and to force upon men anew the conviction that God was all and man was nothing; to depend absolutely on the sovereign will of God for salvation was better than to depend upon the arbitrary will of a corrupt decaying papacy and an ignorant, evil-living priesthood; the folly of too much freedom was demonstrated by the excesses of Anabaptists and other irresponsible sectaries, and Lutheranism hesitated between universalism and the predestined release of certain elected men from the consequences of a totally depraved and enslaved human will. Calvin's doctrine of election was not so much a gloomy and pessimistic denial of human freedom as the joyous proclamation that man lived in an ordered universe where the sovereignty of God removed from the region of doubt the salvation of the true believer. It is an attempt to recognize necessity and order in the world of God's creation—to see temporal things, in Spinoza's immortal phrase, '*sub specie eternitatis*.' This teaching runs throughout the Calvinist Confessions; and, though the settling down of modern civilization has induced in many quarters a revival of the softer Semi-Pelagian ideas, it still remains the official belief of Presbyterian Christendom.

(b) The other doctrinal differentia of Calvinism is found in connexion with the *sacraments*. It differs from Lutheranism in regard to baptismal regeneration and the ordinary necessity of baptism; but the chief difference is in regard to the Lord's Supper. The Roman Catholic doctrine of transubstantiation fell into disfavour as vitally connected with the ideas of priesthood and organization against which Protestantism was an avowed revolt; and the Lutheran idea of consubstantiation, with its insistence upon the corporeal presence of Christ in the sacrament, seemed to more radical Reformers to differ so little from the Catholic notion as to be an insufficient guarantee against the reintroduction of a tyrannical priesthood using unscrupulously a magical key by which they could open or close heaven to the rest of mankind. On the other hand, Zwingli and his following, by denying any real presence at all and reducing the sacrament to a mere memorial, seemed to many to go too far in the other direction. In actual fact the difference between Luther and Zwingli seriously divided the Reformers. Calvin's theory of the sacrament occupies a position between these extremes: it substitutes for the corporeal presence of Christ a spiritual, though quite real, presence; for the magical *opus operatum* of Roman Catholicism it substitutes an operation of the Holy Spirit whereby the believing communicant really feeds upon Christ; it professes to find in the real presence a mystery too profound to be explained by

the simple mechanical theory of Catholics and Lutherans or to be explained away by the equally simple denial of Zwingli; and, while the mediating position of the Calvinist theory has brought it under the suspicion of being an *επινοητόν* cunningly devised in the interest of ecclesiastical and political union among the Reformers—the work of a Presbyterian politician rather than a philosophic theologian—so far as is known, no scrap of evidence exists to show that Calvin had any such deliberate purpose. It fits in quite articulately with the rest of his theology, and is the natural result of an effort on the part of one who was not an extremist to devise a theory of the sacrament which would retain the real presence of Christ without degrading it into the mechanical production of a priest with a formula. If it has served to hold together a great mass of Protestant opinion upon a subject so vital, that is not so much the result of any definite political design as a tribute to its innate reasonableness and moderation. It remains yet a feature of confessional Presbyterianism.

ii. **POLITY.**—The most characteristic aspect of Presbyterianism, however, is its evolution as an ecclesiastical polity. It is a natural inference from the doctrines of justification by faith and of the sole sovereignty of God that all men are equal before their maker, and the status of the clergy as a special caste wielding the powers of spiritual life and death was thereby destroyed. The ecclesiastical organization was looked at no longer from above but from below: the call of the people and the approval of his peers replaced episcopal consecration in the making of a minister; the laity received a share in the government of the Church, and the responsibility of officials to the general body became a recognized feature of ecclesiastical organization. Thus, behind all the formal shapes assumed by Reformed Church constitutions, an essentially democratic spirit is discerned. All was, at first, experimental; definite and rigid systems were evolved only by degrees. A 'jure humano' episcopacy did not frighten Calvin; and Knox, the founder of national Scottish Presbyterianism, approved, before his death, the reintroduction of bishops for certain specified purposes and on a basis of responsibility. But the fundamental ideas of the Reformed Churchmen had sealed the doom of the old type of episcopate, and, before long, the dangers involved in the preservation of even its outward form rendered a definitely Presbyterian theory and system inevitable. Circumstances forced upon Melville and others a greater rigidity of view and practice than had been found necessary by Calvin and Knox; and the conception of ministerial parity as an essential feature of the true Church was forced upon the Calvinist communions by ecclesiastical and political strife. The effusion of blood, as well as ink, in its defence caused the Presbyterians to set a great, perhaps an exaggerated, value upon their theories of Church government, for which they have suffered and fought, as other men for their faith.

The starting-point of any inquiry into the nature and history of Presbyterian Church government is necessarily found in Calvin's *Institutes* and especially in bk. iv., which deals with the doctrine of the Church. According to Calvin, a Church and ministers are necessary as external helps to the true believer, for whose edification the ministers at public worship expound God's Word. A careful distinction is drawn between the invisible Church—known only to God—and the visible Church which is discerned 'wherever we see the Word of God sincerely preached and heard, wherever we see the sacraments administered according to the institution of Christ' (bk. iv. ch. i. § 9). This very simple idea of the marks of the true Church renders the

independence of many various bodies consistent with the essential requisite of true spiritual unity; taken in connexion with the idea of an invisible Church known only to God, it renders secession, except for the weightiest reasons, wicked and frivolous. Calvin will not even go so far as to unchurch Rome, though he contends that the insignificance of the remnants of a true Church contained in it abundantly justifies men in repudiating the Roman communion. 'We behoved to withdraw from them in order to draw near to Christ' (bk. iv. ch. ii. § 6).¹

In the Church God uses men for the useful and honourable office of the ministry, and in Holy Scripture, the touchstone of all his ideas, Calvin finds only two permanent orders of ministry—the pastor and the teacher—though temporary offices, such as those of apostle, prophet, and evangelist, existed in NT times for special purposes, and might profitably be temporarily renewed on sufficient occasion. Of the permanent officers the pastor roughly resembles the apostle, whose function he localizes. 'What the apostles did for the whole world, every pastor should do for the flock over which he is appointed' (bk. iv. ch. iii. § 6). His office entitles him to preach, to administer the sacraments, to exercise discipline, to admonish, and to exhort; and, while this is ordinarily to be done for a special church to which he should be restricted, Congregationalism is avoided by the qualification that the pastor should move by public permission or be moved by public authority when the public good demands it. The idea of ministerial parity, which later became a rigidly defined principle of the Presbyterian system, comes out in the contention that, in Scripture, bishop, presbyter, pastor, and minister are interchangeable terms for the same ecclesiastical office. Calvin's later correspondence serves to show that he had no objection to episcopacy in so far as bishops might be useful and expedient; but his doctrine of the Church leaves them no essential place in it. Historically he regards the ancient bishop as a mere chairman of presbyters; and, with him, Jerome's famous dictum as to the original equality of bishop and presbyter, which raised no controversy in Jerome's day, and yet was never forgotten, became at length the basis of a Church polity.

The teacher, who corresponds roughly to the prophet and evangelist, is restricted to a purely educational function. Among the offices mentioned in Ro 12 and 1 Co 12, two are recognized as permanent—government and the care of the poor; and the secondary position of government, in Calvin's eyes, is shown by the admission of the laity to a share in these. Elders assist in the government of the Church, and deacons are divided into two classes according as they care for the poor and sick or deal with almsgiving. The permanent officials of the Church therefore are: pastors, teachers, elders, and deacons. The essentials for the making of a minister are: the call of God, examination as to life and doctrine, the call of the people, and a solemn setting apart to his office. Calvin almost goes out of his way to defend the people's right of electing their minister, but recommends that, in the interest of peace and common sense, other ministers should preside over the election. In the above conception of the Church we have in essence many of the features of present-day Presbyterianism—e.g., the equality

¹ It is not surprising that, in time, Catholicism came to regard Calvinism as the arch-enemy. The Calvinists, e.g., were excluded from the Peace of Augsburg (1555), and were only recognized in the Peace of Westphalia as late as 1648. How far the feeling had become mutual may be gathered from the fact that, as late as 1647, the stately and balanced Westminster Confession cannot refrain from abuse of the pope (xxv. 6).

of ministers, their election by the people, the share of the laity in Church government, and so on. But so far nothing unique is present, except perhaps the unusually vigorous defence of popular rights. The determinative feature of Calvin's system, however, appears on consideration of his theory concerning the relations between the civil and ecclesiastical powers. The Church, according to him, has a threefold power: (1) she can declare and interpret dogma, though she has no right to invent new dogmas not found in Scripture; (2) she can legislate for the Church, but she has no right to force purely human expedients and ceremonies upon her members to the prejudice of their consciences; thus he frees men from the Roman type of bondage to tradition and custom, and reduces the spirit of Church government to the observance of mutual charity and edification; (3)—and here the most distinctive feature of Calvinism is reached—he insists upon retaining for the Church a certain sphere of jurisdiction. Unlike Luther and Zwingli, who freely surrendered the administrative and disciplinary power of the Church to the civil authorities, whether princely or republican, Calvin attempted to mark off for the Church a sphere of spiritual jurisdiction distinct from the civil; and on the determination of his followers to define and preserve this sphere, irrespective of all difficulties, hangs much of the trouble that fell to the lot of Presbyterianism in later years. Spiritual government, in his view, was as necessary to the Church as civil government to the State; and the two jurisdictions, though mutually helpful rather than antagonistic, were quite distinct. The Church could not surrender, voluntarily or compulsorily, the power of the keys; she claimed no right to inflict civil punishment, but only to admonish and, if necessary, to excommunicate, for the purpose of producing repentance in offenders—a purpose in which the civil procedure frequently failed. This useful power of ecclesiastical discipline for spiritual evil-doers was to be in the hands of a Consistory 'of elders which is in the Church what a council is in a city'; and the basis of its judgments upon individuals was of course to be Christian doctrine. The error of the Roman Church lay not in the claiming of this power, but in the abuse of it for unworthy and worldly ends through the agency of corrupt and irresponsible individuals. Calvin does not seek to interfere with or to minimize in any way the scope of the civil power. He calls the magistrates 'ambassadors of God,' 'vicegerents of God,' and says that God considers their office an honourable one; and, while he indicates his personal preference for aristocratic government tempered by democratic consent, he holds that it is the duty of all Christian men to obey whatever lawful rulers have dominion over them. The only circumstances under which resistance, active or passive, is justifiable arise when the commands of rulers clash with the commands of God. Conversely, it is the duty of rulers to preserve public peace and happiness, and their first care must be for religion and morals. Their co-operation is due to the Church in this regard,

'provided this is done to preserve, not to disturb, the order of the Church, to establish, not to destroy, discipline. For, seeing the Church has not, and ought not to wish to have, the power of compulsion (I speak of civil coercion), it is the part of pious kings and princes to maintain religion by laws, edicts, and sentences' (bk. iv. ch. xi. § 16).

While thus fully recognizing the civil jurisdiction, Calvin holds that it should not interfere with the ecclesiastical, unless by direct invitation or necessity; and in this effort to define the respective limits of Church and civil power, to secure civil co-operation while keeping spiritual jurisdiction and liberty inviolate, he stands alone among the

Reformers. The forms of procedure set forth in bk. iv. ch. x. are of only secondary importance. The point of his system which is distinctively characteristic of Presbyterianism consists in his determination to keep ecclesiastical discipline in ecclesiastical hands.

Such, in brief, are Calvin's ideas of Church government; but he lacked a field in which to test them, until, overwhelmed by the 'formidable obstetation' of Guillaume Farel, he consented to settle in Geneva. In that city there had long been an unstable equilibrium of three forces—the viceminus of the house of Savoy, the bishop, who was often a member of the same house, and the people; and, when Calvin arrived in the city in 1536, the people had just won their freedom, after a contest in which independence and the new faith had played an equal part. But a state of confusion had supervened; and Farel the Reformer knew that no one in the city was capable of reducing the chaos to order. Accordingly, he persuaded Calvin to relinquish his project of further study for the work of organization. The system of Church government introduced was naturally Presbyterian; not only did Calvin's own ideas run in that direction, but the attempt to continue episcopacy would have had scant hope of success in a city which had just shaken off the tyranny of a bishop. Nevertheless the people hated the bishop less as a Roman Catholic, or a corrupt Churchman, or an official without NT warrant than as an interferer with their liberty, just as they afterwards hated Calvin and the rest for the same reason. Trouble began almost at once. In a memorandum of 15th Jan. 1537 Calvin asked the Council for a body of incorruptible men to exercise Church discipline up to and including excommunication. But the civil authorities did not like Calvin's request that the Church might have a disciplinary authority which neither Luther nor Zwingli had asked for it, and many citizens feared for their personal freedom. In 1538 a majority of the new Council consisted of Calvin's opponents. Strife began, and grew so keen that the ministers were forbidden to preach politics. Disgusted by this, and angered by the attempt to force upon them the observance of the Bernese usages, the ministers finally revolted openly at the Council's command to exclude no one from communion, and on 21st April they brought matters to a crisis by refusing to dispense the sacrament. They were banished, and all mediation was rejected by the Council. This refusal to accept dictation from the civil power on a matter vital to the welfare and liberty of the Church, and the choice of banishment before surrender, are a new departure in Protestant history, and are determinative of Presbyterianism.

Calvin's first experience of Geneva, however, did not deter him from returning, though reluctantly, three years later; for no city in France was safe, and no city in Germany politically free, and in Geneva alone could he hope to find a sphere of operations. Within twenty-four hours of his return he was at work; and the *Ordonnances* were the final outcome of his labours. He wished to embody the distinction between civil and spiritual jurisdiction, to secure the independence of the Church within her own sphere, to obtain the acceptance of a creed based on Holy Scripture alone, and to tune up Genevan morals to a NT pitch. The difficulty was that he must gain the consent of the civil powers to his solution of a problem which had hitherto been solved very differently, and must induce them to relinquish a great part of their authority. At the same time the enforcement of a NT standard of morals was distasteful to many citizens. Accordingly the *Ordonnances*,

while Calvin's sole work, do not represent his ideal. Four classes of official are recognized in the Church—pastor, teacher, elder, and deacon. The ministers were chosen by those already ordained after an examination as to life and doctrine. The civil power then approved of them; finally the people heard them, and they were ordained without laying on of hands. The democratic idea of this became aristocratic in practice; for, in actual fact, the people accepted, rather than elected, their ministers. The ministers were to meet once a week in conference and once in three months for mutual criticism; in this 'venerable company,' which did not, except by censure and moral weight, interfere in civil affairs, we discern a germ of the Presbytery. The teachers were purely for educational purposes. The ruling elders were in the Church what the magistrates were in the city. Their function was purely spiritual, confined to the judging of spiritual offences and the infliction of spiritual penalties, the aim being to secure the repentance of the offender. But, though Calvin, in accordance with his general principles, attempted to mark off this eldership, with its ecclesiastical sphere of action, quite distinctly from the magistracy, with its civil functions, he could not quite secure what he wanted, and had even the worse of the compromise which followed: He was unable to secure the election of the elders by the Church alone, or on the pure ground of spiritual and moral fitness. The Council, besides fixing the number of elders at twelve, decreed that two must be chosen from the Little Council, four from the Sixty, and six from the Two Hundred. The twelve, in the first instance, were really civil functionaries, and a committee of the Council; only secondarily and nominally did they form part of a Church court. Calvin may have had a paramount influence in that court, but his influence was a purely moral one, and he never presided. Indeed, in spite of the presence of these twelve councillors in the Consistory, along with the ministers, Calvin had much ado to secure for it the right of excommunication. It was agreed that, if no repentance resulted from judgments up to and including excommunication, the persistent offender should be handed over to the civil power. As this applied to doctrinal as well as moral cases, it really amounted to a declaration of the right of persecution; here at least Calvin is not in advance of his age, and his readiness to admit the interference of civil power, so long as it is not opposed to him, weakens his position as against hostile interference. The deacons discharged the functions already indicated in the *Institutio*, but were not organized, as recommended therein, into two classes. Calvin's machinery for the doctrinal and moral regeneration of Geneva, therefore, consisted of a verbally inspired Word of God, ministers to expound the same, a Consistory to enforce it, and the Council to deal with recalcitrants. A great deal of petty and almost ridiculous business came before the Consistory, but it accomplished its main purpose of raising the undoubtedly low standard of Genevan morals. Even to hold what he had got cost Calvin a long and bitter struggle. He was opposed by many old Genevans who had taken a prominent part in the liberation of their city and resented foreign intrusion, however salutary; and by that section of the citizens who resented the strictness of his moral control. His gains were not secure for over a decade; and not till he received the citizenship of Geneva in 1559 did he attempt to define more clearly the distinction between Church and State, in a series of demands which were practically all granted by the Council. Before his death in 1564 he had vastly bettered Genevan morals, given the city a splendid educational system, and made it a refuge

for the oppressed of Europe, and he had the satisfaction of knowing that in France, in Scotland, and elsewhere his ideas of Church government and of the relation of Church and State were being extensively put into practice. The Presbyterian Church as a distinct and definite ecclesiastical body had entered upon its honourable career.

iii. HISTORY IN EUROPE.—1. Scotland.—Presbyterianism, in its national form as an established Church, is best exemplified in the case of Scotland, where, after an eventful history of three centuries and a half, it still retains a powerful grip upon the people. The Scottish Reformation, in the Lutheran form, was already so far advanced in 1525 as to call for stringent government interference; but, when it became strong enough to dominate the nation forty years later, it had assumed the Calvinist form, and it was the Calvinist type of theology and polity that received official recognition in 1560. The great protagonist of the movement was John Knox, who was called to the ministry at St. Andrews by popular acclamation during the period of excitement which followed the murder of Cardinal Beaton (1546). Knox was made prisoner when the French fleet captured St. Andrews castle in 1547, and spent two years as a galley-slave. After his release he remained in exile till 1559. Part of this period was spent in England, where he more than once refused preferment, part in Frankfurt, where he and others vainly attempted to set the Church upon a Puritan basis, and part in Geneva, where he was enabled to see at work opinions and ideas which he had independently drawn from Scripture. His views were moulded and confirmed rather than created by his Genevan experience. Returning finally to Scotland in 1559, he became at once the head and front of the Reformation movement; and, if any confirmation of his Presbyterian convictions was necessary, he found it in the opposition of regent and bishops. By the middle of 1560 the Treaty of Edinburgh marked the triumph of Protestantism and English influence over Catholicism and the French interest, and the religious influence of Knox held the field in Scotland. The Confession of 1560 is thoroughly Calvinist, and is conspicuous for a wise moderation, which is unfortunately less apparent in the conflicts of later times. The first Book of Discipline embodies an essentially Presbyterian conception of the ministry. The differences from the Genevan organization are exactly what we might expect from the differing ecclesiastical needs of a nation and a city-state; the differences from the modern Scottish organization may be explained from the different circumstances of the age. Knox and his coadjutors were faced by the difficult problem of an abundant harvest and a lack of labourers; they had to find 100 ministers where Calvin had to find one. The first General Assembly, *e.g.*, contained only six ministers; accordingly, the ministerial office was supplemented in two directions. The reader's office was added to fill the gaps in the ranks of the regular ministry, the temporary nature of the expedient, however, being fully recognized. Readers were expected and encouraged to justify by their work eventual promotion to the regular ministry; persistent incapacity to do so was followed by exclusion from office. The scarcity of ministers also implied the necessity of making the best possible use of those available, and the country was therefore divided into ten dioceses, each in charge of a superintendent, who had to see that kirks were planted at the proper strategic points, to help the ministers in their work, and generally to exercise supervision. Some of these were laymen. The contention that these superintendents were virtually bishops cannot be upheld

—still less the almost fantastic contention that they were intended in time to be superseded by fully-qualified bishops. In this connexion we may note a curious and instructive parallel to the Scottish system of 1560 in the Canadian organization of to-day. There, similar needs have called forth similar expedients. The difficult problem of Church extension in the rapidly-filling West has called into being the office of superintendent without any afterthought of episcopacy. Divinity students in full standing and lay missionaries who look forward to ordination after a special course correspond to the readers of 1560. Knox's doctor is represented by the professor, the lay elder by his kind, and the deacon by the manager. The parallel is strikingly complete.

In the Church of 1560 the germ of the later Presbytery is discerned in the weekly meeting of local ministers in the towns, the Synod is foreshadowed by the superintendent's Council, and the General Assembly, irregularly constituted as yet and with uncertain powers, met at frequent intervals. The fully articulated system of later times grew only by degrees. Knox and his fellow-workers took substantially the same view as Calvin regarding the relation of the civil and ecclesiastical powers; indeed, though his own views on the point were independently matured, Knox had consulted Bullinger and Calvin on it during his exile; and the struggle of Geneva was repeated on a national scale in Scotland. The return of Mary Queen of Scots from France in 1561 ushered in a period of strife. The Reformers mistrusted Mary's good intentions towards the new Church, and resented the withholding of recognition from certain of their standards; she, on her side, was piqued by ministerial interference in her private concerns, and saw in the Church a formidable obstacle to her scheme of Roman Catholic reaction. Politics and the greed of the nobles went hand in hand with ecclesiastical strife to make difficult the way of the new Church; and civil war at length broke out, as a result of which the unhappy queen was driven from Scotland (1568) and the Roman Catholic power in the country was finally broken. But the defeat of the Roman Catholic party and the establishment of the Protestant succession in the person of the infant James VI. did not bring peace to the Church. The ministers found it nearly impossible to secure their stipends in terms of the agreement come to with the civil authorities; and, after some discussion, bishops were re-introduced into the Church by the Concordat of Leith (1572). To this expedient Knox consented before his death, recommending, however, that such bishops should be responsible to the General Assembly. The experiment proved a disastrous failure. Not only did the new episcopate escape ecclesiastical control, but they also rendered the clergy poorer than ever, by becoming the cat's-paws of the nobles in their seizure of ecclesiastical revenues, instead of the pay-masters of the unhappy clergy. The contemptuous name of 'tulchans' applied to the bishops of 1572 shows the estimation in which they were generally held, and the contemptible part which they played in the history of the time was a severe blow to the cause of Episcopacy in Scotland. In 1574 Andrew Melville returned to Scotland from Geneva, and proceeded to uphold the view that the office of bishop was unscriptural and by no means to be tolerated in a pure Church. Circumstances assured his success. By 1580 the 'tulchans' had disappeared; and in 1578 the second Book of Discipline was prepared, to be endorsed by the General Assembly in 1581. The first Book had grown out of the circumstances of the time, and found its best sanction in con-

temporary needs; the second Book, on the other hand, aimed at the deduction of general principles from the NT. *E.g.*, the offices of superintendent and reader were excised as episcopal and unscriptural; and, whereas the first Book had set up no Church courts, the second supplied the omission, but, strangely enough, left out the most characteristic court of all—the Presbytery. Presbyteries, however, were coming rapidly into existence; and the Assembly which adopted the Book erected several in 1581. Of the offices mentioned in the Book, the doctor and the deacon have practically disappeared; minister and elder alone remain with their original functions. The second Book of Discipline, with its determined attempt at a closer organization than that of 1560, never secured, in its entirety, the sanction of the civil power.

From the time of Melville's return to Scotland a determined struggle raged in the country for a century. On the one side we have Melville and those who followed him, holding the most rigid views concerning the parity of all ministers and the divine necessity of Presbyterian Church government; on the other, the determined Episcopalianism of the Stuart kings. Parallel to this divergence of view, and vitally connected with it, ran the question of the relation between Church and State, which became acute in every state where the Reformed Church had trouble with the authorities. Melville, on his side, believed in the double jurisdiction of Christ and the temporal king, and strenuously resisted any interference with the Church within her own inviolate sphere; James VI., on the other side, believing in the Divine Right of kings, saw in the Church's claim to spiritual independence as great a menace to the royal power as the papal jurisdiction had been. Moreover, as his succession to the English throne became more and more assured, the king was moved by a sense of the risks attendant upon the maintenance of two differing ecclesiastical polities within his dominions, and his consistent aim was to conform Scotland to Anglicanism. By means of episcopacy he could best hope to maintain control over the Church. Throughout the long struggle absolutism by Divine Right, episcopacy in the Church, and royal supremacy over all causes were banded together against limited monarchy, Presbyterian Church government, and ecclesiastical supremacy in spiritual affairs.

The details of the struggle need not be closely followed. The king, on his part, aimed at the complete subordination of Church and people to his views; the Church, on her part, resisted royal interference in spiritual matters. But the Church founded all her activities, beliefs, and claims ostensibly on the Word of God; and, as the ministers alone had the right to interpret that, no practical limit could be set to the claims of the Church, except by effective intervention on the part of the civil power. The king, as it turned out, would concede nothing, and the ministers claimed too much; and there is some truth in the thesis that Scotland had to choose between the tyranny of a king and the tyranny of a ministry self-constituted as the interpreters of an infallible Bible. But, on the whole, the Church represented the popular will, and served the popular cause. The ministers were chosen by popular election, they educated the people to the best of their ability, and sought to win their confidence; and there is no doubt that during the 17th cent. the General Assembly was a more representative body than the subservient Scottish parliament. Presbyterianism won a victory in 1592, when it secured from king and parliament what has been called its *Magna Charta*; but Episcopacy was re-introduced

in 1610, and the next opportunity of the Presbyterians came in 1638, when the injudicious and obstinate interference of Charles I. and Laud with the liturgy caused a wave of feeling to inundate Scotland that made the National Covenant possible. The Glasgow Assembly of that year swept away Episcopacy; and the king, whose hands were tied by difficulties in England, was powerless to save the bishops. Four years later civil war broke out in England between king and parliament. Now at length the long opposition culminated in an appeal to arms, and by the Solemn League and Covenant the Scottish Church and the English parliament were united in the cause of representative government and religious freedom.

2. *England.*—It will be convenient at this point to refer to the history of English Presbyterianism, which in 1643 found itself allied with its Scottish neighbour. The growing rigidity of ecclesiastical arrangements during Elizabeth's reign stimulated nonconformity into life both within and without the State Church. Of the nonconformists within the Church one party agreed on the whole with the Anglican establishment, but wished to see certain Romanist survivals purged away; another party, taking up the Presbyterian attitude, disagreed entirely with existing arrangements. Of the fortunes of the former party little need be said—they varied with the degree of persecuting zeal exercised by the authorities. But both parties have their essential connexion with Scotland from the beginning; for the troubles of the English congregation at Frankfort, in which John Knox was involved, were in fact a struggle between Anglicanism and Puritanism, and the first really Puritan congregation was John Knox's in Geneva. To that city, therefore, may be traced, not only the genesis of Scottish Presbyterianism, but also the beginnings of Presbyterianism and Puritanism in England. English nonconformity was largely the result of what the Marian exiles had seen and done abroad.

The movement of repression was well under way in 1561, by which time Acts of Supremacy and Uniformity and other measures were in operation against nonconformity. A second Act of Uniformity followed in 1563. About 1565 Parker declared that Presbyterianism was the Church's most threatening foe—and certainly it was the most definite and concrete form of opposition to existing ecclesiastical arrangements. About 1570 Cartwright, a Cambridge Divinity professor (later deprived for his anti-ecclesiastical views), brought Presbyterianism into prominence by his activity; and in 1572 the propaganda evolved into the 'Admonition to Parliament.' The 'Admonition' consisted of two manifestoes which never reached the stage of presentation to parliament. It is fanatically Presbyterian in tone, and aims at the substitution of presbytery for episcopacy in English Church government. In the same year the first English Presbytery was erected at Wandsworth. Cartwright was forced to flee the country, but maintained from his exile a vigorous literary defence of Presbyterianism against Whitgift. Other writings in defence of presbytery, such as that of Travers in 1574, continued to appear; and in 1583 enough Presbyterians existed in England to make possible the issue of a *Directory of Church Government*; but after that date the Presbyterian movement, having flourished for a decade, began to decline. Whitgift, though he did not, like Bancroft, insist on the divine right of episcopacy, was sternly set against nonconformity; and, by means of an ecclesiastical commission, forced from all ministers the admission that episcopacy was at least not contrary to Scripture. In 1584 the Presbyterians failed to introduce into parliament a bill

in favour of their discipline; the Marprelate Tracts of 1588–89 roused Whitgift to a fresh access of persecuting zeal; the incident of the Armada in 1588 helped to confound in men's minds the ideas of nonconformity and political disaffection. Thus, though about 1590 there were some 500 Presbyterian ministers in England, the Act of 1593 ended meanwhile all effective opposition to the State Church. Presbyterianism found itself in especial difficulties when subjected to persecution, because, unlike Independency, it could not realize its ideal except by means of an elaborate organization, and so could not retire into hiding till the storm blew over, without relinquishing essential principles. Driven by the Act of 1593 to exile, or silence, or the assumption of the cloak of Puritanism, Presbyterianism languished for a time; and the hopes raised by the Hampton Court Conference (1604) proved illusory. But, as time went on, the ideas of James I. and Charles I. concerning Divine Right gradually drove into alliance the causes of civil and religious liberty, and the consistent harshness of Laud towards nonconformity helped to precipitate the great crisis of the Civil War. About the time when the Long Parliament met (1629) Presbyterianism had begun to raise its head. London was strongly Presbyterian, and Presbyterianism was widely diffused throughout England. In 1630 appeared Alexander Leighton's *Sion's Plea against the Prelacie*, for which the author was severely punished. Other incidents of the same nature occurred; and, while the Long Parliament, to begin with, merely desired to abate the overweening pretensions of the bishops, there were many who desired more, and their ideas gradually prevailed. Scottish commissioners were in London, preaching frequently, writing, holding conferences. In 1641 appeared *Smectymnus*, a plea for Presbyterianism which recalled the days of Cartwright. The Root and Branch petition of Dec. 1640 and the ministers' petition of Jan. 1641 were on the same lines. Parliamentary defeats in the early part of the Civil War rendered the Presbyterian alliance necessary, and the Solemn League and Covenant of 1643 ushered in the period of Presbyterian ascendancy, which lasted till 1648. Charles I. had now combined against himself all the elements of ecclesiastical and political revolt in the British Isles; and Presbyterianism was meanwhile the dominating religious factor in the combination. The decision of battle went against the royalists, who were decisively beaten at Naseby in 1645; and Presbyterianism enjoyed its triumph. The terms of the Solemn League and Covenant show how far short Presbyterianism yet was of learning from its own sufferings the lesson of toleration. One of the avowed aims of the treaty was to force all the British Isles into Presbyterian conformity; and, though the English Presbyterians were less narrow and fanatical than their covenanted Scottish brethren, and though the Independents, a growing body, were still more set on liberty of conscience, the Scots had their way. The Westminster Assembly was overwhelmingly Presbyterian in sentiment and policy, and adorned the few years of the Presbyterian ascendancy with those classics of English-speaking Presbyterianism which almost make us forget the narrow spirit of the time and are the fine flower of Calvinist dogmatics.

The Westminster Confession of 1647, still the official Confession of English-speaking Presbyterians, is a noble monument to its authors and to the age which gave it birth; in its stately and balanced style, in the completeness with which it sets forth the Calvinist theology, in its pointed avoidance of what is merely controversial, it is the model of a Confession for a great body of Christian believers who are conscious enough of

their own worth in the world to refrain from speaking evil of others. The same Assembly of divines sent forth the *Form of Church Government*, the *Directory for Public Worship*, and the Longer and Shorter Catechisms; and of them all, whether we judge by its intrinsic excellence or its long and widely-diffused influence, the Shorter Catechism is undoubtedly the best. A new version of the Psalms also appeared in due course; and the sacrifices made to the cause of union by the Scottish Church consisted in the repudiation of Knox's Psalms for the new version, in the adoption of the King James Bible in place of the Geneva, in the dropping of Knox's liturgy, the Book of Common Order, and the Confession of 1560.

3. **Wane in England and Scotland.**—But, even while the Presbyterians rejoiced in the creation of an imperial Presbyterianism and in the consent of parliament thereto, their power was on the wane. Independency was growing in the army, and men like Cromwell and Milton were already on the Independent side. Independency was gradually preparing to play the chief part in the religious situation; and 1646 may be taken as the high-water mark of Presbyterianism. After that date, except in London and Lancashire, a thoroughly Presbyterian organization ceased to exist in England; and, when Charles I. escaped to Carisbrooke, and made promises which turned the Presbyterians royalist, Presbyterianism fell with the falling cause. The Scots made a desperate effort to save the situation. Parliament, in defiance of the General Assembly, who thought Charles's concessions insufficient, entered into the 'Engagement,' and the 'Engagers' invaded England, to suffer a crushing defeat at Preston (1648). Cromwell was now master of the situation, and Pride's Purge and the execution of Charles I. rapidly followed. But the Scots were not yet crushed. After the disastrous failure of the 'Engagers' the Covenanters seized the reins of government, excluded all non-Covenanters from official positions by the Act of Classes, and offered Charles II. the crown only on the most rigid and humiliating terms. Nevertheless they did offer him the crown, and prepared to fight for him, but stultified their efforts by first purging the army of 80 uncovenanted officers and several thousand uncovenanted men. The defeat of Dunbar in 1650 brought them to their senses; but even then the excluded soldiers were re-admitted to the army only under humiliating conditions, and the repeal of the Act of Classes rent Scotland with the strife of 'resolutioners' and 'protesters.' Cromwell's final victory at Worcester (1651) involved both in a common disaster; yet, though the General Assembly was dismissed in July 1653 after the manner of the English parliament, the minor Church courts continued to exist and the antagonism of resolutioner and protester rent Scotland during the rule of Monk.

In England also the régime of Cromwell was tolerant. The Rump Parliament having failed to touch the religious question, Cromwell had finally to take it up himself; and, as the Presbyterians outnumbered their colleagues in the ministry, Presbyterianism still existed in a shadowy way. The minimum of ecclesiastical machinery that continued to exist was Presbyterian; but what was left was the ministry rather than the system. In 1660 Monk set up Presbyterianism once more, but not for long; it was the calm before the storm let loose under Charles II.

(a) *England.*—To take England first: Charles would doubtless have tolerated Presbyterianism, if he could have secured for Roman Catholicism a share in the toleration; but the anti-Catholic and anti-Presbyterian sentiment of Commons and

country was bound to prove too much for the easy going king whose chief desire was to avoid further exile. The reluctance of the parties themselves foiled his efforts to secure a working agreement between presbytery and episcopacy. Bills introduced into parliament were of no avail; the Commons concluded a series of proceedings hostile to nonconformity generally by passing the Act of Uniformity, which became law on 19th May 1662, and signified the defeat of English Presbyterianism. About that time the rise of a latitudinarian school in the English Church which included such men as Benjamin Whichcote, John Moore, John Tillotson, and Edward Stillingfleet, and which based episcopacy on no higher ground than that of expediency, might have held out hopes for Presbyterianism; and Charles himself made various attempts to gain for the Presbyterians by the use of his royal prerogative what parliament refused to grant. But parliament pursued its course by passing the First Conventicle Act (1664), the Five Mile Act (1665), and the Second Conventicle Act (1670), and when Charles, on his own initiative, declared an Indulgence in 1672, parliament forced him to withdraw it within a year. The Test Act supervened in 1673. Neither the use of the prerogative nor occasional personal generosity on the part of the king arrested the fall of Presbyterianism; and the efforts of James VII. and II. produced no better result. The Presbyterians distrusted Indulgences which showed Roman Catholicism an equal kindness with themselves. On the accession of William III. they could not secure ascendancy nor even a working compromise with Episcopacy, but only toleration. Between 1660 and 1690 Presbyterianism and Congregationalism had drawn together in the wilderness of persecution—a movement apparent in local working agreements and in a lowering of Presbyterian Calvinism. Socinianism became rife; and in 1727 the ministers of the 'Three Denominations' (Presbyterian, Congregationalist, and Baptist) formed an organization. The Presbyterians who remained steadfast were few except in the north. During the time of nonconformist revival about the middle of the century the Presbyterians were of more intellectual than spiritual account, and they played a conspicuous part in the struggle for religious liberty about 1780. Before 1843 there were in England Presbyterians connected with the Established and with other Churches of Scotland—the first of these bodies retains its affiliation up to the present, while the others in 1876 united into the Presbyterian Church of England, which has 12 Presbyteries and nearly 400 congregations with missions in China.

(b) *Scotland.*—Turning now to Scotland, we find that the theocracy which had existed in 1638—a narrow theocracy with presbytery and the covenant in place of Christianity, hating alike prelacy and prelate, false faith and false believer, episcopacy and independency—had received a rude shaking at the hands of Cromwell. Worse was to follow under Charles II. The Restoration fell heavily upon Scottish Presbyterianism, as upon English. In 1661 the servile Scottish parliament enacted the royal supremacy in all causes, and in 1662 passed the Act Rescissory, which, by undoing the legislation of the previous twenty-seven years, destroyed at a blow all the work of the Covenanting period. The Presbyterians discovered all too soon how easily Charles II. could sacrifice his promises to his inclination or interest. Episcopacy was re-established in 1662; ministers were ousted and replaced by curates, whose characters, in many cases, as ill fitted them as their scholarship to take the places of those who had been deprived. The ousted ministers and their flocks took to holding conventicles; the system of dragging them into

compliance began, and, as feeling on both sides was exasperated, the situation in Scotland grew steadily worse. Previous experience made the Presbyterians chary of attempted compromise, and such Acts of Indulgence as were passed did little to mollify the growing bitterness. On the one hand, we have Test Acts and the like, abuses of justice, persecution of the most odious kind, the doings of a Claverhouse in the field and a Mackenzie in the forum, torture, imprisonment, proscription, death. It is little wonder if we find, on the other, wild fanaticism and rebellion mingling with a singleness of purpose and an endurance that sometimes rise to the sublime. After the unsuccessful rebellion of 1679, when the victory of Drumlog was eclipsed by the defeat of Bothwell Brig, dissensions broke out among the persecuted Covenanters, and the fanatical societies came into existence with their Apologetic Declarations, their fondness for the OT as a guide to the treatment of enemies, and their desperate anticipation of what the English Revolution achieved ten years later. In the last few years of Charles's reign the persecution grew so fierce that the name of 'Killing Times' has been applied to the period; but the triumph of the Presbyterians came not long after, when James VII. and II. was deposed in favour of William III. Even then the issue hung in the balance for some time; but the sensitiveness of William III. to public opinion, coupled with the influence of Carstares, decided the establishment of Presbyterianism in Scotland. Since 1690 no Scottish Presbyterian has ever been called upon to suffer for the name. It would be easy to exaggerate the sufferings of the period from 1662 to 1690. Much of the country remained quiet; Kirk-Sessions, Presbyteries, and Synods continued to function under the bishops; the old Creed and worship were little interfered with; the bishops did not err on the side of worldly pomp; and a large proportion of the people had no objection to some features of Episcopacy. But where real antagonism existed, as in Galloway and in Fife, persecution steadily rendered it worse; incidents like the murder of Archbishop Sharp and the punishments which followed it could not be forgotten; the Covenanting and anti-Erastian element was too severely antagonized ever to be reconciled; and the sufferings under Charles II. have scored their mark deep upon the religious history of Scotland. To this day the suspicion with which the old Scottish Presbyterian looks upon anything that savours in the least of Episcopalianism remains a heritage from Covenanting times.

After the establishment of Presbyterianism the question of jurisdiction as between Church and State continued to be a source of strife, but the political sense of William III. rendered easier the smoothing over of difficulties. The last martyr to die the victim of opposed religious convictions was Aikenhead in 1697; the same year saw in force for the first time the educational ideas of the Scottish Reformers—the educational fruits of Episcopal enterprise under an Act of Parliament of 1633 having fallen into decay under Charles II. Presbyterianism by degrees justified its establishment in Scotland, its victory being largely helped by the contrast of its loyalty in the 'Fifteen' and the 'Forty-five,' with the undoubted Stuart sympathies of its Episcopalian and Roman Catholic rivals. Moreover, a better feeling grew up between the opposing bodies, so that Archbishop Denison of Canterbury, in a debate in the English House of Lords on the Act securing Scottish Presbyterianism, could say that

'he had no scruple against ratifying, approving, and confirming it within the bounds of Scotland; he thought the narrow notions of all Churches had been their ruin, and he believed

the Church of Scotland to be as true a Protestant Church as the Church of England though he could not say it was so perfect' (W. Carstares, *State-papers*, Edinburgh, 1774, 769, 760).

The Toleration Act of 1712 lent the sanction of law to the new spirit of peacefulness; but the successful issue of the struggle with Episcopacy did not, any more than the victory over Roman Catholicism, end the troubles of the Scottish Church, for, in the same year, the Patronage Act introduced a new cause of discord which rent the Church in pieces. The first Book of Discipline had advocated the popular election of ministers; patronage, with the General Assembly as the final court of appeal in disputed cases, was decreed by parliament in 1567. Patronage was abolished in 1649, restored in 1660, abolished in 1690, and now restored in 1712—from which time onwards this ancient cause of strife assumes the position of chief disturber of the peace of the Church of Scotland. From time to time also the old question of civil and spiritual jurisdiction is raised. The result is to make the Church history of Scotland for the past two centuries a perfect kaleidoscope of separating and re-uniting sects. During all that period the Church remained singularly free from doctrinal troubles of any sort; the 'Marrow' case about 1720, the Simson case of 1729, and the Leechman case of 1744 represent all the heresy troubles of the Church until very recent times; but already in 1733 secession was at work. Troubles arose over the working of the Patronage Act—troubles encouraged by the indefinite practice of a perfectly definite law—and the strife between patron and people tended always to be fought out on the higher ground of spiritual *versus* civil jurisdiction. The Erskines, after taking the definite step of constituting the 'Associate Presbytery,' refused the concessions made to them by the General Assembly of 1734, and would not re-enter the Church which thus sought to make amends for their ejection; their final ejection by the General Assembly of 1740 confirmed their secession. Previous to this their 'Judicial Testimony' of 1736 had recalled all the old Covenanting bitterness; and, after the Cambruslang 'Wark' and the visits of Whitefield in 1741 and 1742, they produced 'The Declaration, Protestation and Testimony of the Suffering Remnant of the anti-Popish, anti-Lutheran, anti-Prelatic, anti-Whitefieldian, anti-Erastian, anti-sectarian, true Presbyterian Church of Scotland,' etc.—a document whose character is sufficiently indicated by its title. In 1746, when the 'Forty-five' had definitely failed, the Associate Synod itself split in two over the question of taking the Burgess Oath, and burgher and anti-burgher communicated each the other in 1747.

Meanwhile the question of patronage continued to agitate the Church of Scotland, which divided into the 'moderate' and 'evangelical' parties. Both objected to patronage; but the moderates believed in the enforcement of the existing law, while the evangelical party attached greater importance to the popular call. Disputed settlements resulted, often attended by painful scenes, and, as a consequence of one such disputed election, Thomas Gillespie, who had been deposed for refusing to assist at the ordination of an unpopular presentee to Inverkeithing, formed with Thomas Boston and Thomas Collier in 1761 the 'Presbytery of Relief.' Another sect was thus launched upon its career, but the kindly attitude of Gillespie towards the Establishment and his desire to get back to it contrast most favourably with the determined hostility of the Erskines. The moderates had the best of the battle within the Church; but their ascendancy was purchased at the cost of increased dissent; for, in 1764, there were 120 meeting-houses in Scotland, served by ministers

for whom the people had forsaken unpopular presentees and parish churches, and the rigid enforcement of the patronage law seemed of set purpose to aggravate the popular opposition. The moderates certainly pacified the Church, and put an end to the painful scenes only too common at unpopular settlements; by 1770 the people had learned either to submit quietly or to secede quietly, but secession was more frequent than submission. William Robertson, who led the moderate party to victory, was one of a group of brilliant men who adorned the Church of Scotland at that time; among others may be named John Home, the author of the tragedy of *Douglas*, George Campbell, who answered Hume, and Thomas Reid, who answered Locke. One result of the labours of the moderates was an improvement in the literary quality of Scottish pulpit work.

Towards the end of the century the burghers split into two—the Old Lights and the New Lights—over the question of the Covenant and the powers of the civil magistrate; the anti-burghers also divided into two Synods over the question of the civil magistrate; and, as the Cameronians, in their new Macmillanite form, contrary to expectation, remained aloof from the secession, forming the 'Reformed Presbytery' in 1743 and renewing the Covenants for the last time in 1745, the Church in Scotland was torn in pieces by the end of the 18th century.

The end of that century witnessed important changes—the slackening of the anti-popish spirit, the beginning of debates concerning creed-subscription, the shifting of population with the resultant need for new churches, the rise of a missionary spirit and of a sentiment of greater catholicity. Roman Catholic emancipation in 1829 and the Reform Bill of 1832 were symptoms of a wave of liberalism, which had its effect on the Church of Scotland. The Church's sore was still patronage, and from 1832 onwards overtures began to pour in from Presbyteries, asking for the restoration of the Call to its old place. The General Assembly of 1833 threw out the Veto Act, which conferred upon the majority of heads of families in any church the power to veto the appointment of any presentee on reasonable grounds—and this in spite of the powerful support of Thomas Chalmers. But this was the last victory of the moderates, who could not prevent the passing of the Veto Act and the Chapels Act the following year. Ten years of strife supervened. A number of *causes célèbres* brought the Assembly and the Court of Session into violent conflict, and the question was raised as to the competence of the Assembly to pass such Acts. The Claim of Right of 1842 took very high ground in regard to spiritual independence, and nothing less than total abolition of patronage, with complete independence of the civil power, became the claim of the extreme 'non-intrusionist' party. The quarrel over patronage had developed into the old quarrel over jurisdiction, and in 1843 occurred the great secession known as the Disruption. Out of 1203 ministers, 451 left the Church. In 1874 patronage was abolished; but the Churches in Scotland still continue their separate existence, though the signs of the times point to better things. Indeed, the tendency of nearly a century past has been, on the whole, towards the re-union of the broken fragments of the Scottish Church. To take the more important examples, in 1820 the two bodies of Old and New Lights coalesced into the United Secession Church; and, by the union of that body with the Relief Synod in 1847, the United Presbyterian Church was brought into existence. Thus the Secession Church became the pioneer of union; and in 1900 was consummated the wider union of United

Presbyterian Church and Free Church into the United Free Church of Scotland. A remnant refused to enter the new Church, and was declared after an appeal to the House of Lords to be the legal Free Church. The latest statistics show that the Church of Scotland has 16 Synods, 84 Presbyteries, 1442 parish churches, 53 chapels with ordained ministers, 201 mission or preaching stations, 718,719 communicants, 2149 Sunday Schools with 19,662 teachers and 218,702 scholars, adult classes numbering 59,091 scholars, and a Christian liberality of £555,116, 16s. 10d. per annum. The United Free Church has 12 Synods, 64 Presbyteries, 1565 congregations, and 18 congregational missions with ordained ministers; communicants number 512,003, Sunday Schools 2224 with 24,055 teachers and 223,559 scholars, adult classes 2018 with 77,666 pupils; and the annual income is £1,046,049, 8s. 4d. In addition the Church of Scotland has a Synod in England, a Presbytery in British Guiana, and missions in Africa, India, and China, while the United Free Church has Presbyteries in the Italian and Iberian peninsulas and missions in India, Manchuria, Africa, and the W. Indies. The Free Church of Scotland has 4 Synods, 13 Presbyteries, and about 160 congregations (many of them vacant) with a mission in Africa. Of the smaller bodies, the Reformed Presbyterian Church, which is in full communion with the Reformed Presbyterian Churches of America and Ireland, has 11 congregations, and the Synod of United Original Seceders has 4 Presbyteries, 26 congregations, and a mission in India.

4. Ireland.—Presbyterianism in Ireland took its rise among the colonists who were settled in Ulster after the abortive rebellion of the early 17th century. These settlers were mainly of Scottish birth; and, as Episcopacy was just then enjoying one of its brief triumphs in Scotland, Ireland received her fair share of exiled Scottish ministers. Thus the spread of Presbyterianism was rapid. The Anglican Churchmen, poorly supported from England, could not in any case have made effective opposition; as it was, following the lead of Archbishop Ussher, they welcomed the Scottish ministers, and for a time Presbyterian and Anglican worked amicably together. Under the new conditions the original evil repute of the Ulster colonists was gradually lived down; but the growing success of Presbyterianism at length aroused the antagonism of the bishops, who, forsaking the spirit of Ussher for that of Laud, secured, for the time being, the suppression of Irish Presbyterianism. The process was complete by 1636. Five years later Scottish troops were sent into the country to aid in the suppression of a rebellion; and, as the completion of their task demanded a prolonged stay in Ireland, the chaplains of the force were able to re-introduce Presbyterianism. A Presbytery was formed at Carrickfergus on 10th June 1642, and within twenty years the Church numbered 5 Presbyteries, 80 congregations, and 70 ministers. This brief period of rapid expansion was followed by a century of persecution, which was interrupted by a short space of toleration and the institution of the *Regium Donum* under William III., only to be resumed under Queen Anne by the Test Act of 1704. The results were made apparent in a steady stream of American emigration, which drained Ireland of vast numbers of her best citizens; but not till near 1800 was the obnoxious Act of 1704 cancelled; and even since then Irish Presbyterianism has enjoyed freedom rather than privileges.

Two controversies have agitated the Church. The first of these gathered round the New Light movement, which, beginning in 1709 as a revolt against creed-subscription, resulted in a wide-spread

laxity of doctrine. The movement was not decisively checked till about 1750, when the arrival from Scotland of a sufficient number of rigidly orthodox seceders turned the tide. The Arian controversy broke out in the early half of the 19th cent., and, after a ten years' battle, Henry Cooke, a prominent figure on the orthodox side, forced matters to a decision in 1829. The secession of only 17 ministers was a sufficient proof of the triumph of orthodoxy. There followed in 1840 a union between the Secession Synod and the Synod of Ulster, and gradually the scattered congregations of the south and east came in, till, in 1854, there was only one Presbyterian Church in Ireland. From that time onwards progress has been rapid in every department of Church work. The *Regium Donum* was discontinued in 1869; but the loss has been more than balanced by the addition of a Sustentation Fund to the interest on the commutation of life-interests. The Irish Church has been of great influence, especially in Ulster, where powerful opposition has had to be faced, but also wherever Ulstermen have congregated abroad. It numbers at present 36 Presbyteries, 562 congregations, 653 ministers, and over 100,000 communicants.

5. **Wales.**—Alone among the Presbyterian Churches of the British Empire, the Welsh Church owes nothing to Scotland. Its formation resulted from an evangelical movement within the Anglican Church, which was begun by Howell Harris in 1735. As the movement grew and spread, societies were formed, and the treatment meted out to those societies by the Established Church at length drove them to separatist courses. The unwillingness of the episcopate finally forced the societies to seek ordination for their pastors elsewhere; and, after they had adopted the practice of ordination by presbyters (1811), the society organization speedily developed into a strong Presbyterian Church which has nearly 200,000 members to-day. There is also a Welsh Presbyterian Church in the United States of America with over 13,000 communicants.

6. **France.**—Early in the 16th cent. a movement of reform had begun in France under the impulse of the New Learning. Francis I., an enthusiastic patron of the Renaissance, was keenly interested, and the movement was fostered by men of weight and learning like Jacques Lefèvre, Bricconnet, and Guillaume Farel, and by women of position like Margaret of Navarre. The prospects of reform were bright enough, until the outbreak of Martin Luther alarmed the Church in France as elsewhere. Francis passed over to the side of the enemies of reform, and from 1535 Protestantism was proscribed. Yet, during the persecutions under Francis I. and Henry II., Protestantism continued to make headway in France; and, as this was due mainly to the influence of the exiled Calvin, who, from Geneva, poured into his fatherland a steady stream of letters and messengers, it was the Calvinist form of Protestantism that gradually diffused itself throughout the country. In 1555 La Ferrière, a noble Frenchman, who desired baptism for his child, but could not visit Geneva for the purpose, succeeded with difficulty in persuading his immediate circle of friends to elect La Rivière, one of their number, as pastor, and thus form a congregation. So rapidly was this example copied that, in the three years following, 2000 congregations were formed throughout France. Church and king had hitherto seen in Protestantism no more than religious nonconformity; they now began to discern in it a political menace as well, and persecution was redoubled. On the other hand, as the result of a discussion at Poitiers, the Reformed Church in Paris summoned delegates from all over France to a meeting in the capital; and 150 delegates, assembling in due course in a

private house in the Faubourg St. Germain, constituted themselves the First National Synod of the Reformed Church in France (26th May 1559). They adopted a Calvinist Creed (the *Confessio Gallica*), and, with such changes as the different conditions rendered necessary, reproduced in their constitution the polity of Geneva. Each congregation had a pastor, elders, and deacons; but the Genevan practice was departed from by regarding the diaconate as a spiritual office, and admitting the deacons to a seat in the Consistory which directed congregational affairs. The first set of these officials in each church was chosen by popular election, but subsequently such gaps as might occur were filled by the Consistory; and this 'aristocratic' method of election was long maintained in the face of popular opposition. To bind the congregations together, provision was made for a gradation of Church courts. Provincial Synods, composed of all the pastors within the bounds, with one elder or deacon from each congregation, were to meet twice a year, in order to decide upon appeals from congregations, to arrange and effect the translation of pastors, and generally to administer all competent affairs. General Synods, representing the whole Church, and composed of delegates from all the Consistories, were to be held as need arose. As time revealed defects in the system, means were devised to remedy these. A Colloque—the analogue of the Presbytery—was inserted between the congregational Consistory and the Provincial Synod; and, by the additional arrangement that delegates to the National Synod should be commissioned by the Provincial Synod instead of the Consistory, the Church was provided with a compact conciliar organization, which fitted it to play a part in the political sphere.

The Church had now a definite constitution; its members came to be known by the name 'Huguenots' ([*q.v.*] probably *Eidgenossen*, 'oath-companions'), and it found itself definitely linked with the party whose chiefs were Anthony, King of Navarre, Louis, Duke of Condé, and Admiral Coligny, as against their political and religious opponents, headed by the Guises, Duke and Cardinal. Henry II. died in 1559, the year of the first National Synod; and Francis II., the husband of Mary Queen of Scots and the tool of the Guise faction, did not live long enough to do serious mischief. During the minority of his successor, Charles IX., the regency was in the hands of Catherine de Medici, who pursued the policy of playing off the two parties in the realm one against the other. The Colloque of Poissy (1561), at which Beza pleaded the cause of Protestantism with an eloquence that drew a reluctant tribute from his opponents, was a consequence of this policy; and the result of the conference was the tolerant Edict of St. Germain (1562). But in March of that year a massacre of Protestants, inaugurated at Vassy by the Duke of Guise, transferred the issue from the council-chamber to the camp, and in the course of the next thirty years France was torn by no fewer than eight civil wars. The Roman Catholic party enjoyed almost invariably the military superiority, but the Huguenots were always formidable enough to extract good terms even from defeat and to renew the contest as need or opportunity arose. Sometimes, indeed, the Crown seemed about to lend them definite support, as, *e.g.*, in 1571-72, when Coligny was all-powerful at court, and the English marriage project and the union actually arranged between Henry of Navarre and the king's sister were devised to cement the alliance between Protestantism and the Crown. But the regent feared undue Protestant influence no less than the undue preponderance of the Guises, and the reaction from this brief period of friendli

ness took the shape of the massacre of St. Bartholomew (24th Aug. 1572). Except in Rome and in Madrid this horrid butchery excited universal disgust; and, as a result of it and of the renewed civil war which followed, a large moderate party began to form in France. Toleration, however, had the same effect upon the extreme Roman Catholics as persecution upon the Protestants, viz. an increase of zeal; and war, conducted by leagues on the one side and on the other, each affiliated with sympathetic foreign powers, continued to distract the unhappy country. At length, in 1588, Henry III., seeing in the Guises the chief disturbers of the peace and the chief menace to the royal power, took the desperate step of having the duke and the cardinal assassinated; and the support of the Crown might, as a consequence, have passed speedily and definitely to the Protestant side, but for the assassination of the king in his turn by a fanatical Jesuit emissary (1589). Henry of Navarre, leader of the Huguenots since the death of Coligny in the great massacre, was now king; but, while he could and did win victories in the field, he could not, so long as he remained Protestant, conquer so definitely as to pacify France. Accordingly, he turned Roman Catholic (20th July 1593) and, after the peace of Vervins had ended a war with Spain which united all France for a common object, the Edict of Nantes (1598) was issued. The Protestants were given the right of public worship, except in Paris and a few other places; they still had to recognize the establishment of Roman Catholicism, but their own members had full civil and political rights; and they were given, besides an annual grant, full control of such towns and fortresses as had been in their possession the year before the Edict. In many ways the Reformed Church had suffered during the civil wars: the absence of many members in the field had woefully reduced the livings of the clergy, the number of congregations had shrunk from 2150 to 763, the influence of Henry of Navarre as leader was in sad and unspiritual contrast to that of Coligny. But the constitutional framework of the Church had been well looked to, and altogether 15 National Synods had been held during the wars. At one of these, held in La Rochelle (1571) under the moderatorship of Beza, the Creed and constitution of 1559 had been revised and renewed, and Presbyterian government formally adopted during the brief sunshine of royal favour. Thus, though the growth of the Reformed Church was checked, owing to many of the Huguenot nobility and gentlemen following the king's lead and turning Roman Catholic, a strong body remained staunch, and the growth of the Church's wealth was some compensation for its slower increase in numbers. The grant of 43,000 crowns per annum was devoted to the foundation and upkeep of theological colleges at Montauban and Saumur, and the independence of the French Church was rendered complete. After Henry's death in 1610 his work as a statesman was taken up by Richelieu, but Richelieu's fear of the Huguenots as a possible menace to the royal power gave his religious policy a reactionary character. An expedition was sent against Béarn, which had been a Protestant stronghold for sixty years, and a massacre of Protestants resulted in the re-establishment of Catholicism. In 1623 it was decreed that a royal commissioner must be present at all meetings of the National Synod to ensure that none but strictly ecclesiastical matters should be discussed. The policy culminated in a demand for the surrender of La Rochelle, which was refused; but the city was forced to capitulate after a year's resistance (1628), and, with the capture of the sadly-reduced stronghold, the politi-

cal power of the Huguenots disappeared. Thereafter the Provincial Synods were suppressed; and the consequent removal of all organization told heavily upon the individual congregations. The Huguenot nobles were tempted with offices and political preferment, the pastors were tempted with higher stipends; and many yielded to these temptations. Under Louis XIV. and Mazarin the process was carried on: Colloques were suppressed in 1657, and in 1659 the Synod of Loudun was informed by the royal commissioner that Synods would be held in future only if the king considered it expedient — which of course the king never afterwards did. Yet, up to the death of Mazarin in 1661, the Huguenots continued to be numerous; for their commercial honesty enjoyed no less repute than their commercial skill, and, realizing their economic value to the nation, Mazarin did not push them to extremity. But he had deprived them of their last shred of organization, and, after his death, the king fell under the influence of Roman Catholic bigots, who used the opportunity to destroy the Huguenots. Bribery again did its work, backed now by the exclusion from office of all Huguenots; converts to Protestantism were banished, while converts to Catholicism were held in honour, and their former pastors forbidden even to speak to them. Protestant children were kidnapped in great numbers by Catholic priests, to be reared in the Catholic faith, and their parents had no redress. About 1681 the practice began of converting Huguenots by quartering upon them troops of dragoons, whose iniquities and licence were connived at. The desperate Protestants at length took to emigration as a relief from their troubles; but, after about 50,000 had got away, a royal edict stopped even that loophole of escape. Finally on 22nd Oct. 1685 the Edict of Nantes was formally revoked. All Protestant ministers were to leave France within fourteen days, all Protestant churches and schools were to be closed, and the children, after baptism by Roman Catholic priests, to be brought up in the Catholic faith. If any of the unhappy people were caught in the attempt to flee the country, the men were sent to the galleys and the women to prison, for life; seven months later the penalty was altered to death. Nevertheless, some 250,000 made good their escape to Holland, England, Germany, and America, and by forcing them to flee France committed economic suicide. In Toulouse, *e.g.*, only one-tenth of the skilled silk-workers remained, and, from first to last, 4,000,000 to 5,000,000 of France's best citizens were lost to her by senseless persecution. A small remnant held out in the Cévennes, where, as in the case of the Scottish Covenanters, the hard, uncertain life and the lack of educated pastors gave rise to wild fanaticism. Like all fanatics, these Camisards (*q.v.*) endured and fought well; with a total strength of 10,000 desperate men they held out during a three years' war against all the troops that France sent against them, and not till 1715 did the royal power feel justified in saying that persecution had done its work. But persecuted heresy dies hard, and in the same year began the work of Huguenot reorganization under Antoine Court. He was finally forced to flee the country when his growing success attracted attention; but from Lausanne he continued to send trained pastors and to direct operations. Persecution hindered the work, but could not stop it; the Huguenots increased in numbers, and spread their organization far beyond the Cévennes. Finally, when Voltaire had made religious indifference the fashion, the Protestants received their civil rights in 1787, and the Revolution shortly afterwards restored their religious rights as well; but very soon the orgy of secularism

which supervened drove Catholic and Protestant alike into the wilderness. Robespierre's death, however, brought saner counsels, and Protestantism received in 1795 the full measure of liberty which she has since enjoyed. Napoleon, from the absolutist standpoint, greatly modified the Presbyterian constitution of the Church in his enactment of 8th April 1802. Congregational Consistories and National Synods were abolished. Congregations were grouped into consistorial churches, each consisting of 6000 souls, and the Consistory for each was composed of all the pastors in the group, together with 6 to 12 elders, who were chosen from among the principal tax-payers. Five such consistorial churches were grouped into a Synod circle, and these Synods were made up of one pastor and one elder from each congregation; they required State permission to meet, and a State functionary had to be present at their meetings. Indeed, so many were the restrictions that, during Napoleon's reign, none of those Synods met; and no Church court intervened between the consistorial church and the minister of culture. The Reformed Church, thus hampered, fulfilled government expectations by giving no trouble, but she suffered from lack of organization.

Yet Protestantism grew in the country, and amid the excitement of 1848 a great national gathering, with representatives present from 89 out of the 92 consistorial bodies, ventured to meet and make an effort at re-organization. They set up the old Presbyterian system once more with the complete machinery of Church Consistories, General Consistories, Provincial Synods, and General Synods, and would, no doubt, have secured State sanction for their proposals, had not a secession occurred among them. During the long period of disorganization differences had grown up unchecked; and friction immediately resulted from the effort at closer organization, becoming acute over the question of theological belief. The representatives of the old theology, under Monod of Montauban, seceded, sacrificing State connexion and State grant, and setting up on a voluntary basis the Union of Evangelical Churches. Their organization is a mixture of Congregationalism and Presbyterianism; and, though their numbers remain small as compared with the parent body, they have increased to some extent and are notable for their evangelical zeal. The parent body obtained, within three years, all that they asked for except the National Synod; even that they obtained in 1872. But the concession was followed almost immediately by a dispute over the framing of a new Confession; and the government took away from the General Synod all legislative power. Nevertheless, the body continues to meet once every three years, and, if it does no more, it at least represents the unity of the Reformed Church, and crowns its organization. All along the Protestant Church in France has wielded an influence out of proportion to its numbers; and its divorce, in common with all the other Churches, from State connexion should not impair its future usefulness. It has always, like other Reformed Churches, been on the side of civil as well as religious liberty, and it would be interesting to investigate how much suppressed Huguenot aspiration found vent in the French Revolution. Huguenot refugees have been the best of citizens in every land of their adoption, and the martyr Church of France is entitled to occupy a place of pride among its Reformed neighbours. Between them, the two Evangelical Churches of France count about 80,000 members, of whom about 95 per cent are in the parent body.

7. The Netherlands. — The situation of the Netherlands on the borders of both Germany and

France, together with the comparatively advanced state of education and independence of character among the Netherlands, favoured the spread of the Reformation in that country. As early as 1st July 1523 the martyrdom of Henry Voes and John Esch at Brussels testified to the progress of the movement, which, Lutheran at first, but later markedly Calvinist, found from the outset a determined opponent in Charles v. The excesses committed by the Anabaptists during a rising in 1534 gave the authorities an excuse to intensify the persecution; the Inquisition was introduced into the land, and in 1550 the anti-Protestant movement culminated in a barbarous Edict against the possession of Protestant books, the reading or discussion of Scripture, and all connivance at such offences. If a man convicted of such offences repented of them, he met death by the sword; a woman in similar case was buried alive; any one persisting in error was burned. In spite of this climax to the measures of persecuting zeal, and the death in all of 30,000 victims during the reign of Charles v., Protestantism grew to such an extent that the need of a Creed and constitution began to be seriously felt, especially in the south. In 1559 Guido de Brès, who had been trained in Geneva and England, drew up a Creed modelled on the French Confession of the same year. This Creed, revised by Francis Junius, developed into the *Confessio Belgica*; in 1563 a Synod at Antwerp adopted a Presbyterian constitution, and later, when the southern provinces had relapsed into Romanism, this Creed and Confession were accepted in the northern provinces. Meanwhile Charles v. had abdicated (1555); but the accession of Philip II. brought no relief to the Protestants. Philip increased the number of Roman Catholic bishoprics in the Netherlands from 4 to 14, made merciless use of the Inquisition, drafted troops into the country, and began to interfere with the civil liberties and privileges of the people. These aggravations of the 1550 Edict gradually identified in the popular consciousness the causes of civil and religious liberty, and Protestantism developed from a party into a national movement. A goodly number of the younger nobles formed a league, and approached the regent—the Duchess of Parma—with the request that the Inquisition and the Edicts might be withdrawn. Pending the arrival of a rescript from Spain, the regent relaxed the severity of the laws; and a great wave of Protestant enthusiasm forthwith swept the land. Huge crowds, thousands in number, assembled to hear the Protestant ministers, and the resultant enthusiasm found vent in an outbreak of iconoclast fanaticism, which was responsible for the wrecking of some hundreds of churches, but fortunately avoided the reproach of bloodshed. Philip retaliated by sending the Duke of Alba into the country with 10,000 fresh troops, and he employed the most barbarous means to end the revolt. His Council of Disturbances, by the severity of its sentences, soon earned for itself the name of the Council of Blood. In three months nearly 2000 executions took place, and the incipient organization of the Protestant Church was broken up by the death or exile of the pastors. At this stage William of Orange, hitherto a Roman Catholic and a loyal supporter of Philip, was moved to change his religion and his allegiance together, and then began in earnest that struggle for independence which issued in one of the most obstinate and bloody wars known to history—a war which lasted, with brief intermissions, till 1609. In the course of the struggle the southern provinces were won over to Catholicism; but in 1579 the seven northern provinces, by the Treaty of Utrecht, banded themselves together, declared their inde

pendence, and launched the Dutch Republic upon its career, electing William of Orange their first Stadtholder. The organization of the Protestants had been shattered at Alva's first onset, but a number of the exiled pastors had met at Emden in 1571 and framed a set of Calvinist articles against the day of their return. They took up *inter alia* the question of the relation of Church and State, which they solved after the usual Calvinist fashion. But, when the improved situation in Holland soon after permitted their return, and they renewed their Emden Articles at the Synod of Dordrecht (1574), the Stadtholder and Council refused to recognize these. Lutheran and Zwinglian elements had played their part in the moulding of the Dutch Reformation; and, while the Calvinist theology was generally accepted, there were many, William of Orange among them, who were not prepared to concede to the Church the measure of independence demanded by Calvinism. William had set before himself the ideal of toleration, and he believed that this could best be secured if the State were supreme. Accordingly, he submitted to the Church in 1576 a set of proposals which combined a Presbyterian constitution with State control. But the Church rejected his proposals in their turn, and counter-proposals from the Synods of Dordrecht (1578) and Middelburg (1581) also failed to secure agreement. The situation was further complicated by the ecclesiastical independence of the seven provinces and the consequent diversity of views. Finally, the problem was solved by the omission of a National Synod from among the courts of the Church, which was organized under seven independent Provincial Synods. These Synods were made up of representatives from all the 'Classes,' the 'Classis' being a body which had the characteristics partly of a Kirk-Session, partly of a Presbytery. The civil power was dominant over all.

Although war went on till 1609, this settlement of the Dutch Church was followed by a marvellous outburst of intellectual activity. Between 1575 and 1650 five universities were founded—at Leyden, Franeker, Groningen, Utrecht, and Harderwyk—and the Netherlands speedily became the chief theological school of the Reformed Church. This intellectual activity disclosed itself in two great controversies—the Arminian and the Cocceian. Arminius combated the Calvinism of his day, as Pelagius 1200 years before had attacked the Augustinian theology. In 1603 he set forth the thesis that Christ died, not for the elect only, but for all, and that grace was not irresistible. This protest against the harsh doctrine of unconditional election was vigorously counter-attacked by Gomarus from the Calvinist standpoint, and interest in the controversy rapidly spread to all ranks of society. Nor was the battle merely doctrinal, for the Calvinists still held out for spiritual independence, while the Arminians were ready to accept a large measure of State control. The political situation added a third element to the complication. While the majority of the States favoured Arminianism, Maurice of Orange, who was suspected of aspiring to the supreme power, took the opposite side. Even after the death of Arminius in 1609 the trouble continued. In 1610 the Arminians, chief among whom were Grotius the theologian and Barneveldt the statesman, issued the Remonstrance; disquieting incidents occurred in various quarters, and finally, in 1618, the Synod of Dort was assembled to settle the matter. At this Synod were present 28 foreign delegates—from Germany, England, Scotland, etc. Early in the discussions the Arminians were ruled out of the house because they would not submit to the rules or debate; thereafter their positions were con-

demned under five chief heads. A persecution followed. Many of their pastors were exiled; Grotius was seized, but escaped; and Barneveldt, who was less fortunate, was executed. After the death of Maurice of Orange the exiles were permitted to return, and were given complete liberty of speech and action. They founded the dissenting Remonstrant Church, which, though it has produced some eminent theologians, has remained so weak in numbers as to confer a pragmatist sanction upon its Calvinist opponents. Even to-day it has not more than 5000 members.

The second great controversy—the Cocceian—was so named from its originator Cocceius, a professor at Franeker, who sought to save the Calvinist theology from traditionalism and scholasticism. He contended for a Biblical theology, and held that Scripture should be its own interpreter. Working along these lines, he arrived at the Federal Theology, with its doctrine of the OT covenant of works, which had been superseded by the NT covenant of grace. This Covenant Theology (*q.v.*) was vigorously opposed by Voëtius and others; but the spirit of the age was on the side of Cocceius, whose type of doctrine was accepted by the English Puritans, embodied in the Westminster Confession, and speedily became dominant in the Calvinist churches.

During the whole of the 17th cent. Holland was a refuge for oppressed Presbyterians from other lands, notably from Scotland. Many Scottish ministers were trained in Dutch universities; Scottish congregations flourished in many Dutch towns; and the influence of Dutch theology spread thus to Scotland, and to all the colonial Churches that own the Church of Scotland for their mother. This was also the century of Dutch colonial expansion, and Presbyterianism flourished in all the Dutch colonies.

Up to about 1800 the only interference with the old Presbyterian system was in the direction of more efficient ministerial supervision—an object secured by the appointment of a visiting committee in each Classis. But about 1800 the Netherlands was attacked by the prevalent disease of constitution-mongering, and the Church shared in the general disorganization for about two decades. The return of the House of Orange to power in 1813 brought the trouble to an end; and the Church constitution, as renewed in 1816, was thoroughly Presbyterian, the organization, moreover, being completed by the addition of a National Synod. The State supremacy, however, remained, and it was further strengthened by a decree of 1827 authorizing a permanent committee of the National Synod. This committee was composed of 7 members, chosen by the Crown, out of 14 nominated by the Synod. In 1852 the State adopted the policy of the concurrent endowment of all churches, and, except for the endowments, all connexion between Church and State has since been at an end. For the last century rationalism has been a marked feature in the Dutch Church. In 1816 the Synod sanctioned a change in creed-subscription whereby the subscriber accepted any doctrine, not *quia*, but *quatenus* it was contained in Holy Writ. The result was soon evident in a wide-spread relaxation of Calvinist rigidity; and the fear of this laxity on the part of the more orthodox Presbyterians has given rise to two important secessions (1837 and 1886). These have seriously weakened the parent Church in point of numbers, so that in times comparatively recent many of her pulpits were vacant; but a return to greater orthodoxy, coupled with a gratifying increase in the number of Divinity students, holds out a brighter hope for the future. The Reformed Protestant religion is professed by the Dutch

royal family and by about three-fourths of the Protestant population, and at the end of 1912 the Dutch Reformed, Walloon, English Presbyterian, and Scottish Churches had between them 1 Synod, 10 provincial districts, 44 Classes, 1362 parishes, and at least 700,000 communicants. Branches of the Reformed Church also exist in the E. and W. Indies.

8. Other Continental Churches.—By their sanguinary initial struggle for existence, and their widespread influence, the Churches in France and Holland have earned their title to pre-eminence among the Presbyterian Churches of the Continent. But other Presbyterian or partly Presbyterian Churches exist in Europe, which, by reason of persecution, politics, or geographical situation, have remained isolated until the recent creation of a General Presbyterian Alliance. Indeed, some are isolated still. The National Evangelical Church of Germany combines Lutheran and Presbyterian elements. The Decree of Augsburg (1555), by its adoption of the principle 'Cujus regio, ejus religio,' introduced into Germany a fruitful cause of religious hardship and ecclesiastical discord. In 1559 Frederick III., an enthusiastic Calvinist, succeeded to the sceptre of the Rhine Palatinate, and, in terms of the treaty, began the endeavour to make Calvinism the religion of his dominions. His methods, which were not above suspicion, failed in the Upper Palatinate, but were successful in the Lower; and, where they did succeed, he prevented the introduction of Presbyterianism in its entirety by keeping in his own hands a large measure of ecclesiastical control. The Presbyterianism of the Palatinate has made for itself an enduring monument in the Heidelberg Catechism, the work of Olevianus and Ursinus, which, intended originally for local use, speedily won ecumenical significance as a Calvinist standard. The Catechism softens the rigidity of Calvinism with regard to predestination and some other points, and is remarkable for its general moderation of tone. Among the duchies of the Lower Rhine Presbyterianism was planted by refugees from Holland, France, and Britain; Alva's persecution drove Dutchmen over the border in thousands, and the influx gradually changed the prevailing type of Protestantism from Lutheranism to Calvinism. Presbyterian Church government replaced the consistorial system, and the Presbyterianism of the district allied itself with that of the Palatinate. Synods were held, notably that of Emden (1571), when the Calvinist and Presbyterian Emden Articles were adopted. But the civil authorities have prevented Presbyterianism from ever fully realizing itself. When the map of Europe was readjusted after the fall of Napoleon in 1815, these Presbyterian provinces fell to Prussia; and 1817, the tercentenary of the Reformation, appealed to Frederick William II. as a favourable occasion for uniting the two Protestant Churches in his dominions. The united Church was called the National Evangelical Church of Prussia, and the Prussian lead was followed by most of the other German States. Each of the two uniting Churches retained its own standards and its own system of government, but modifications introduced from time to time have rendered it necessary for the stricter adherents of both Churches to secede. The Lutheran theology and ritual have made serious inroads on the Reformed Church, but the Presbyterian form of Church government has been equally successful in the invasion of the Lutheran body. The civil power, however, maintains its firm hold upon the Church organization as a whole.

In Bohemia a modified type of Presbyterianism existed long before John Calvin ruled in Geneva. The intestine wars of the Hussites (*q.v.*) about the

middle of the 15th cent. led to the forming of the *Unitas Fratrum*, who, abhorring the idea of strife, repudiated both the warring sects, and contented themselves with a life of simple piety, seeking guidance from the Bible alone. A constitution essentially Presbyterian, embodying the eldership and the diaconate, was adopted in 1496, and testified to the presence in the Church of a strong lay element. But a distinctive feature was introduced into the government of the Church by placing the presidency of each Synod in the hands of a bishop elected by the pastors. In 1557 the Church was strong enough to assemble no fewer than 200 pastors in one of its Synods. It had indeed achieved the status of a national Church, and in Reformation times the most cordial relations were inaugurated and maintained between the Bohemian Church and John Calvin. At the beginning of the Thirty Years' War the abortive rebellion of the Protestant nobles and the crowning of Frederick V. the Elector Palatine by the rebels gave to the persecuting zeal of Ferdinand II. an excuse for increased severity, and his victory was followed by the ruthless suppression of Protestantism in Bohemia. Joseph II.'s Edict of Toleration (1781) gave the persecuted Church the first opportunity of renewing its activity, and, even after a century and a half of repression, the submerged Protestantism of the country soon blossomed forth into vigorous life and development only to be crushed again by the measures of a reactionary successor. A better constitution was granted in 1861; but the State, by means of its ecclesiastical Council, still keeps a firm hold upon the organization of the Church, and rules over its Synods and superintendents to the detriment of a complete Presbyterianism. The Church in Bohemia and Moravia continues small in numbers;¹ but its heroic past and its present zeal for Home Mission work and education hold out the hope that a more liberal policy on the part of the State may usher in a more prosperous time.

In Hungary, as in many other lands, Calvinism superseded in time the original Lutheran form of the Reformation, and, whereas a Synod at Erdöd in 1545 adopted the Augsburg Confession, the Synod of Debreczen (1567) made the Heidelberg Catechism and the Second Helvetic Confession the standards of the Church, which has since faithfully adhered to them. When Hungary fell into two separate political entities about the middle of the 16th cent., Transylvania came under the rule of Reformed or tolerant princes, and the Church grew unchecked till 1602, when Rudolf of Hungary conquered the principality, and began to persecute the Protestants. But the Treaty of Vienna (1606) restored Transylvanian independence and ushered in a period of seventy years' peace. The Church prospered till 1677, when Leopold I. of Hungary again subdued Transylvania, and persecution, marked by the imprisonment, exile, enslavement, and even death of Protestant pastors, plunged Protestantism into misery once more. The century of humiliation which followed ended only with the Toleration Edict of Joseph II. (1787), which conferred upon the Protestants a new lease of life. The Protestant Church has become strongly identified with the political aspirations of Hungary, and has been greatly benefited by the comparative independence which Hungary enjoys within the Dual Monarchy. Congregations to the number of 2000 and a membership of over 500,000 testify to the strength and prosperity of the Church. Up to 1881 the old territorial division of the Church was retained, but in that year the organization under five independent provinces was unified by the Synod of Debreczen. In her isolation this Church

¹ About 67,000 in 1912.

has developed distinctive features in her government. Each Tractus, or Church county, the body corresponding to our Presbytery, is presided over by a senior elected by the pastors, and a coadjutor curator elected by the elders. Similarly, each province has a clerical superintendent and a lay curator. This arrangement combines the benefits of Episcopal supervision with those of Presbyterian parity. The Church has been chiefly remarkable for its educational work; and its organization of parish schools, high schools, and colleges vividly recalls the 'devote imagination' of John Knox concerning Scottish education. In a land hemmed in by circumjacent Catholicism the work done by the Church in maintaining single-handed its army of some 5000 teachers with 300,000 pupils is of immeasurable importance for Protestantism.

The cantonal system of Swiss government has served to restrict the honour of Calvin in the land of Calvin's adoption. All the cantons except three—Geneva, Vaud, and Neuchâtel—favoured the Zwinglian rather than the Calvinist form of Church government; and in the three cantons named the Church remained isolated and quiescent till the beginning of the 19th century. The period of renewed activity which was then inaugurated had been characterized by secessions and divisions. In Geneva, on the occasion of a visit paid by the Scottish preacher, Robert Haldane, in 1817, a revival of evangelical zeal began. C. H. A. Malan, J. H. M. d'Aubigné, and others took up the movement, and the Church showed its resentment by deposing Malan. A separate ecclesiastical community at once began to gather round him. In 1832 d'Aubigné and others founded the Evangelical school of theology, and were deposed in their turn. At the same time the State was engaged in an attempt to destroy the independence of the Church; and the agitation finally issued in the formation of the Free Evangelical Church (1849). This Church is still weak in numbers, but it withdrew sufficient strength from the national Church to leave it at the mercy of the State, and since 1874 the national Church has really become Zwinglian.

In Vaud the famous theologian A. R. Vinet advocated the policy of separation between Church and State; and, when the State, as in Geneva, attempted to subordinate the spiritual to the civil power, 100 ministers seceded in 1845, forming the Free Evangelical Church of Vaud, which has been remarkable for its missionary zeal. The national Church is now controlled by the State, but not too rigidly.

In Neuchâtel a similar effort by the State to assume control of the Church resulted in a secession under F. Godet in 1873.

In Italy, Spain, Portugal, and Belgium 16th cent. Protestantism was strangled in its infancy; and only in the last century have more liberal ideas permitted the rise of a Reformed Church in those countries. The Italian Church, the descendant of the Waldensians, began its work in Piedmont in 1849, received an additional impetus when the unification in Italy under a constitutional government took place in 1861, and now exercises its semi-Presbyterian government over a membership of more than 20,000. In Spain the work was begun by Scotsmen in 1852. Persecution and exile followed in 1860, and the refugees, meeting at Gibraltar, took over the Westminster Confession, and adopted Presbyterian Church government. The revolution of 1868 permitted their return, and their work has since centred mainly in Seville and Madrid. This Church owes a great debt to the support forthcoming from Scotland and Ireland.

Belgium has recently become possessed of two Reformed Churches, each about 7000 strong, one

of which has laid claim to a historic succession by adopting the *Confessio Belgica*. Small Reformed bodies also exist in Denmark, Alsace-Lorraine, Austria, Greece, and Poland; and, if we are justified in regarding democracy as the type of future government, we may confidently assume the present to be only the day of small things, and anticipate a great future for this sanely democratic variety of Church organization.

The total number of Presbyterian communicants in Europe is now well over 3,000,000—more than half of them in the British Isles.

iv. HISTORY OUTSIDE EUROPE.—When we come to consider Presbyterianism elsewhere than on the continent of Europe—*e.g.*, in America—we reach a new phase of Presbyterian history, in which petty obstruction takes the place of sanguinary persecution, in which battles and martyrdoms are replaced by slow development and construction; and, whereas in the heroic days of early European Presbyterianism the leader often bulked larger than the cause, in other continents Presbyterian progress was, on the whole, a triumph of principles rather than of individual men.

i. America. — To American Presbyterianism England, Holland, France, and Germany have all made their contribution, as is seen below; but the contribution of the Church of Scotland has been greatest of all. Episcopacy arrived in Virginia with the early colonists of 1604, and in 1620 the Pilgrim Fathers (*q.v.*) laid the foundation of Independency in America; but not till near 1700 did Presbyterians begin to arrive in considerable numbers, and not till after 1700 was the first Presbytery organized. The Presbyterian wing of English Puritanism was represented from the beginning, but its adherents were at first too scattered to make organization possible or profitable, and only when the persecutions under Charles II. began to drive men from Scotland and Ulster to the colonies did numbers to be organized and minds to organize them make their appearance in the American colonies. Emigration from Scotland was encouraged during the persecution, and from 1660 to 1688 a steady stream poured out of the country — often in compact bands of several hundreds. These settled mostly in New Jersey and Pennsylvania, and the first church was built at Freehold, N.J., in 1692. By 1700 there were over 30 congregations—half of them in the two States above named; indeed, Presbyterianism soon became a feature in the life of the middle colonies. Francis Makemie, a licentiate of the Presbytery of Lagan in Ulster, had been sent out in 1683 in pastoral charge of a band of emigrants; and, combining in the land of his adoption the callings of itinerant trader and evangelist, he found in the country a sufficient number of Presbyterians to make organization worth while and enough Episcopalian opposition to make it expedient. In 1699 he was called to the charge of Snowhill in Maryland, and in 1706 seven ministers, with Makemie as leading spirit, founded the Presbytery of Philadelphia. Thereafter a rapid development took place. Appeals were made to Scotland, Ulster, Dublin, London, and considerable assistance was forthcoming, notably from the Synod and the University of Glasgow. While the home churches supplied ministers, the operation of Test Acts at home supplied the Church with a steady influx of emigrant members, and in 1716 she was strong enough to combine her four Presbyteries into the Synod of Philadelphia. The need of a Creed and a constitution soon made itself felt, but, when the Presbytery of Newcastle, alarmed at the lax doctrine of some of the incoming ministers, ordained in 1724 that all its future licentiates must subscribe the Westminster standards, and overtured

the Synod to make this rule general; the discussion in the Synod revealed the existence of two parties in the Church. In New England elements of Independency had been at work, and the native-born New England clergy looked askance at the more rigid Presbyterianism of Scots and Ulstermen. The resultant controversy lasted some years, and it was mainly the tact of Jonathan Dickinson that ended it in 1729. In that year a compromise was effected by the passing of the Adopting Act, whereby the Westminster standards were taken over as embodying in essence a sound system of doctrine and government, and their observance was enjoined upon the Church as far as circumstances might allow or Christian prudence direct. By this wise measure the Church was enabled to retain its historic connexions, to avoid Congregationalism, and to secure a degree of flexibility fitting it to deal with the conditions prevalent in a new and growing country. A fresh controversy soon arose over the question of ministerial education. The supply of ministers, both from the colony itself and from overseas, fell so far short of the demand that a lowering of the standard was hard to avoid. William Tennent, a Dublin emigrant, attempted to meet the case by founding a seminary, later known as the Log College; but his students frequently possessed more zeal and piety than education or culture, and filled the older Presbyterians with dismay. The visit of Whitefield in 1739 was followed by an outbreak of revivalism, and at length the un-Presbyterian methods of the Tennent school moved the Synod to insist upon Presbyterian discipline and a standard of education for all its ministers. A disruption resulted in 1745, when the Church split into the Synod of Philadelphia, or old side, and the Synod of New York, or new side. But the new side were quite alive to the benefits of education, and the old side not less alive to the blessings of evangelical zeal; and a sense of duty, combined with mutual esteem and a common interest, secured re-union in 1758. The cause of missions to the American Indians, which had been in operation since 1741, was warmly espoused by the re-united Church, which also interested itself deeply in the New Jersey College. When the Revolutionary war broke out in 1775, the Presbyterians of the middle colonies, who had not forgotten the history of their Church at home, took the colonial side almost to a man, and their devotion to the Revolutionary cause earned for the Church the lasting respect of the nation. John Witherspoon, who had come from Scotland in 1768, was the principal actor in the completion of the Church's organization, when, in 1789, 13 Presbyteries, meeting by their representatives at Philadelphia, constituted themselves the first General Assembly of the Church. They organized the Church on Scottish lines, and adopted the Westminster standards, making determinative the principle that 'God alone is Lord of the conscience.' At this stage the Church numbered 4 Synods, 13 Presbyteries, 186 ministers, and 419 congregations. About the end of the 18th cent. 'unions' and 'federations' were the order of the day; and in 1801 the Presbyterian and Congregational Churches drew up the 'Plan of Union,' which was really an effort to secure external and operative unity by ignoring the differences between the Churches. As a result the Presbyterian Church increased rapidly in numbers, but became thoroughly leavened with Congregationalism. Members poured in at the rate of 10,000 to 20,000 per annum; but the younger churches became lax in their adherence to Presbyterian doctrine, discipline, and tradition. A test case came at length in 1830, when Albert Barnes, a Congregational minister called to a

Presbyterian charge in Philadelphia, was vetoed by the Presbytery on account of his known laxity of doctrine. This breach of the 'Plan of Union,' ushered in seven years of ecclesiastical strife, which ended in the repudiation of the Plan in 1837. A disruption of the Church into old school and new school followed in 1838, and endured for thirty-two years. Feeling ran high in both schools over the slavery question; in 1857 the northern half of the new school repudiated their brethren of the south, and in 1861 the southern portion of the old school seceded. This fresh dismemberment drew the two northern bodies together, and they re-united in 1870. During the separation the two Churches had been vigorously engaged in Home Mission work, having sent out between them no fewer than 25,000 missionaries; and the united Church followed up the work with enthusiasm. Foreign Missions had been inaugurated in 1810 as the result of undenominational activity, but in 1838 the Church took over her own. Early in the period of separation the new school reverted to the original plan, but in 1854 she resumed control of her own missions; and now the Church has missions in Mexico, Brazil, Africa, Syria, Persia, India, and China. With over 9000 ministers, almost 1,500,000 members, 300 missionaries, and a dozen seminaries, including such famous schools as Princeton and Union, this Church is, in point of size, the greatest single Presbyterian organization in the world.

Of the other Presbyterian bodies of British origin in the United States little need be said. The Presbyterian Church in the United States (South) was formed in 1861 by the union of the old and new schools in the southern States. It possesses missions in Mexico, Brazil, and India, but its principal mission work has naturally been among the emancipated negroes. This Church has upheld the conservative tradition of the South. Since the end of the Civil War it has become increasingly friendly with its northern neighbour, but re-union has not yet taken place. It has over 1700 ministers and nearly 300,000 communicants.

The Cumberland Presbyterian Church, which, with its Coloured Branch, numbers about 150,000 members, had its origin in the Kentucky revival at the end of the 18th cent., when doctrinal and ecclesiastical vagaries increased to such an extent that at length the General Assembly intervened, forbidding the Cumberland Presbytery to ordain illiterate men to the ministry. The consequent secession gave birth to the Cumberland Presbyterian Church, which retains the Presbyterian polity, but has lowered the standard of ministerial education, and has relaxed some of the severer Calvinist doctrines. The United Presbyterian Church of N. America represents the main stream of 18th cent. dissent in Scotland, and its membership is over 100,000 strong. It remains very strict in its adherence to old standards, but is notable for its great evangelical and missionary zeal.

Among the Presbyterian Churches in the United States which trace their origin to continental Europe it will suffice to mention two. The Reformed Church in America (*q.v.*), which till 1867 retained its historic name of the Dutch Reformed Church, enjoys the distinction of being the oldest Presbyterian body in the United States. The first congregation, with Jonas Michaelius as pastor, was formed in 1628 in what was still the town of New Amsterdam, and the Church grew and flourished under Dutch rule till 1664, when the colony passed into English hands and became New York. The English authorities confined the activities of the Church to the Dutch inhabitants of the colony; and by this restriction, which remained in force till about 1700, its expansion was checked. Thereafter the Church itself hampered

its own growth by the exclusive use of the Dutch language in its services and by retaining its affiliation to the Classis of Amsterdam. But in 1764 the use of English in the services was permitted, and in 1785 the Church declared its independence of the Amsterdam Classis as the Synod of the Dutch Reformed Church in America. Since then it has grown slowly and steadily to the number of 100,000 members. The Dutch element and influence in it have naturally decreased, but the old doctrine, government, and ritual are still adhered to, and the doctrinal standard, the Heidelberg Catechism, is expounded weekly in every congregation, 'the complete exposition covering a period of four years. Foreign missions in India, Japan, and China constitute an important feature of the work of this Church; and the efforts of the Scudder family have made Arcot (S. India) a perfect model of what a mission ought to be.

The German Reformed Church was founded by emigrants, chiefly from the Rhine Palatinate, about the end of the 17th century. These settled mostly in Pennsylvania, and in 1747 M. Schlatter and four other ministers formed the first Coetus or Synod under the Classis of Amsterdam. Schlatter paid a visit to Europe in 1751, and secured substantial help from Holland, England, and Scotland. The Church declared its independence in 1773, and since then it has grown to such an extent that it now numbers about 300,000 members. It is estimated that of the German immigration to America during the last century two-thirds have found their way into the Lutheran Church, and the remaining third into the Reformed Church. The German Church has retained its native language much more tenaciously than its Dutch neighbour. The Heidelberg Catechism remains the doctrinal standard, and German customs and ritual are strongly adhered to, particularly in connexion with the great festivals of the Christian year. The six Churches already spoken of represent well over 95 per cent of American Presbyterianism.

Presbyterianism stands third in order of numbers among the Protestant Churches of America—a very creditable position, considering the comparative smallness of Presbyterian immigration and the restriction that the Church has placed upon her expansion by her insistence upon an educated ministry. Her membership is increasing over 50 per cent faster than the population of the country; and in culture, influence, wealth, and catholicity of spirit she calls no American Church her superior. The huge sphere of labour presented by the United States prevents the overlapping caused by denominationalism in smaller countries, and this, together with the friendly rivalry that exists between the various bodies, is a happy augury for a prosperous union at some future date.

The history of Presbyterianism in Canada presents two main features—enthusiasm for unity and tenacity in the face of opposition. The Huguenots first attempted to lay the foundations of Presbyterianism in Canada, and, while the tradition of Henry of Navarre persisted, they were not unsuccessful; but the revocation of the Edict of Nantes (1685) made an end of their work and turned Canada into a Jesuit preserve. The second impulse began from Britain in the latter half of the 18th cent., and, since then, Scottish characteristics have been well to the front. The increase of immigration early presented a difficulty, which was solved by seeking for outside help, and all the home Churches, as well as the American, did what they could. In this connexion the work of the Glasgow Colonial Society in Nova Scotia is especially worthy of mention. In the early part of the 19th cent. Episcopal opposition had to be faced in Canada as elsewhere. One-eleventh of the unceded

lands in Upper and Lower Canada had been set apart for the maintenance of a Protestant clergy, and it cost the Presbyterian Church twenty years of struggle to wrest its share from the grip of the Episcopalians. The battle raged from 1817 to 1840, at the end of which time the Presbyterians obtained a third of the 3,000,000 acres of 'clergy reserves.' In 1832, feeling the need of a training college, the Church applied to the government to endow additional chairs in King's College, Toronto; but, Episcopal opposition proving too strong to be overcome, the Church herself founded Queen's University in 1841.

The Disruption of 1843 aroused echoes in Canada, and this, with the territorial divisions obtaining till 1867, kept the Canadian Church divided. In 1845 there were seven principal bodies of Canadian Presbyterians; but mutual goodwill speedily developed, and in 1860 a succession of unions began. By 1875 only four separate Churches were left, and these united on 15th June of that year to form the Presbyterian Church in Canada. At present a scheme is afoot to bring about a wider union of Presbyterians, Methodists, and Congregationalists. The General Assembly approved the basis of union in June 1916, but a considerable minority left the house; and so far the matter is incomplete.

The Church does excellent work among the French Roman Catholics, but her finest and most productive activity has been along the line of Church extension in the West, where, especially since the opening of the Canadian Pacific Railway in 1885, a notable work has been done in what is practically a new nation.

The Church at present has 70 Presbyteries, 2336 congregations, 1769 ministers, and about 300,000 communicants.

2. Australia.—Four-fifths of Australian Presbyterianism is concentrated in New South Wales and Victoria. The Presbyterian Church of New South Wales came into existence as the original population was outnumbered and absorbed by the respectable immigration of later times. The first Presbyterian minister in the colony was John Dunmore Lang, who went in 1823 and some years later was instrumental in founding the Presbytery of New South Wales. In course of time certain ministers resented Lang's virtual dictatorship, and tried to end it by insisting upon punctilious observance of the rules of the Church of Scotland. Lang and his following, who considered such rigidity injurious to the prospects of a new Church in a new land, seceded in 1838. Union was restored in 1840, only to be broken by a similar secession in 1842. The Scottish Disruption produced a further split in the colonial Church. She did her best to remain neutral, but her dependence upon Scotland for men to fill her pulpits produced the inevitable division in 1846. At length, however, her growing independence, and the problems which she was called upon to face, paved the way for union; and since 1865 all sections have been united.

In Victoria the gold rush, and the situation created by the rapid influx of a certain type of population, brought about union in 1859; and by 1870 all the remnants had come in. Since 1886 there has been a federal union of the original six Australian Churches, with an annual Federal Assembly. Its 44 Presbyteries, over 600 congregations, and about 60,000 members witness to the strength of Presbyterianism in Australia.

3. New Zealand.—The first Presbytery of what became in time the Presbyterian Church of New Zealand, occupying the north island and half of the south, was founded at Auckland in 1856. The personnel was largely drawn from the Church of Scotland, but comprised Irish and other elements. Since its early days this Church has done splendid

Home Mission work, and has grown with the growth of the colony. The Presbyterian Church of Otago and Southland resulted from a resolution of the New Zealand Company to ask the co-operation of the Free Church of Scotland in the settlement of the new colony. The Free Church accepted the proposal, and the experiment of founding a model colony was tried at Otago. The first batch of emigrants arrived in 1848, with a nephew of Robert Burns as their minister, and in 1854 the first Presbytery was founded. The gold rush of 1861 presented the Church with a problem which has been very satisfactorily solved. The united strength of the Church in New Zealand now totals 17 Presbyteries, 230 congregations, and 40,000 members.

4. **S. Africa.**—There was a Dutch Reformed Church in Cape Colony from 1652; but, in spite of the steady stream of Dutch immigration and an influx of Huguenots about the end of the 17th cent., the Church had practically no history for the first century of its existence. After British rule began in 1806, better days dawned for the Church; and a Synod was organized in 1824. A Dutch law of 1804 had given the Church a constitution, but had left the supreme ecclesiastical power in the hands of the State. Ministers of a later date found State control irksome, and agitated to such purpose that the obnoxious feature was abolished in 1843; in 1875 State support also was withdrawn. The mutual animosity of Briton and Boer caused great Boer treks, and the Presbyterian Church in S. Africa was split into a number of territorial fragments. The various Dutch Reformed Churches have a communion-roll of about 200,000, and the British Church numbers over 11,000 communicants.

Leaving out of account the spiritual, ethical, intellectual, political, and economic influence of its splendid history, and regarding it from the point of view of mere statistics, we may allow the following figures, reported to the last General Council, to vouch for the progress of Presbyterianism and to bear testimony to the fact that the seed planted in Geneva has become a great tree overshadowing the world.

Continent of Europe	1,451,423	communicants.
United Kingdom	1,615,492	"
Asia	223,833	"
Africa	281,715	"
N. America	2,713,064	"
S. America	12,234	"
W. Indies	16,101	"
Australasia	104,147	"
Total,	6,418,014	"

As the total for 1888 was only 3,721,680, it will be seen that the communion-roll of Presbyterianism has nearly doubled itself within the last thirty years—a happy earnest of further increase.

III. **NATURE AND WORKING OF PRESBYTERIAN SYSTEM.**—All forms of Church government are ultimately reducible to three—Prelatic, Congregational, and Presbyterian. The Prelatic type of government, exemplified in the Roman Catholic and Anglican Churches, is characterized by the gradation of ministerial rank, by the institution of the diocesan episcopate, and by the emphasis laid on the distinction between clergy and laity. The Congregational type recognizes neither gradation of ministerial rank nor gradation of Church courts; it places all ministers on an equal footing, and makes of every congregation an independent judicature. It is the boast of Presbyterianism that it avoids the dangers of both its rivals; on the other hand, it has sometimes been charged with combining the evils of both without any admixture of their advantages. As opposed to prelacy, the Presbyterian type of government rests

upon the equality of ministerial status, and seeks to give ecclesiastical power to the members of the Church instead of to clerical individuals or councils; as opposed to Congregationalism, it seeks to realize the unity of the Church, by entrusting to a carefully devised system of graded Church courts legislative, executive, and judicial, not merely advisory, powers. This distinction between the three main types of Church government turns, of course, purely upon questions of ecclesiastical polity, and Presbyterian Church government is not the necessary concomitant of Calvinist doctrine, any more than it implies any definite and particular type of Church worship. Examples occur even of ecclesiastical polities which combine features drawn from more than one of the three chief types mentioned above. It will be noted that in such cases the operation of some factor external to the Church, such as the civil power, has generally to be taken into account. Indeed, in the last resort, any given form of Church polity must logically be based upon some definite doctrine of the Church, and any such doctrine of the Church is bound, in its turn, to form part of some articulated and unified dogmatic system. Thus we find that, on the whole and in spite of exceptions, Calvinistic doctrine, Presbyterian Church government, and a simple type of service which lays great stress upon the homiletic aspect of worship go together; and, in most cases, these exceptions can be traced to some extraneous influence working against the free self-development of the Church. Presbyterianism is characterized by the attempt to combine in its organization the following three features: (a) parity of the clergy; (b) government of the Church by its membership as represented by presbyters or elders, ordained to rule; (c) unity of the Church, so far as the conditions of nationality, language, space, and numbers will permit of organization. It will thus be seen that we have here the attempt to steer a middle course between Prelacy, which has made much of the doctrine of office in the Church, and Congregationalism, which is given over to individualism.

In support of the theory and practice of Presbyterian Church government the *jus divinum* argument has been largely made use of. At the height of the controversy between Presbyterianism and Prelacy which divided Britain in the 16th and 17th centuries the argument was pushed to the extreme of identifying Presbyterianism in detail with the ecclesiastical polity of the NT—a position untenable under the conditions of modern historical research, which would prefer to find the justification of any ecclesiastical system in considerations of expediency or of development. Yet the Presbyterian still clings to the *jus divinum* in a modified form. He holds that the NT, which sets forth the basis of the Christian faith, must necessarily supply the basic ideas concerning the institution which has sought to embody Christianity and to mediate it to the world; and he contends that in the fundamental ideas and principles of Presbyterianism the spirit and ideas of the NT are more faithfully reproduced than in any other polity. He would no more lay claim to a divine succession of presbyters than to an apostolic succession of bishops; the laying on of hands by presbyters has for him no more significance than episcopal consecration as a kind of mechanical device for the transmission of ministerial grace; he would find the true apostolic succession in the successive possession of the apostolic spirit by generations of faithful Christian pastors. His idea is of the *jus divinum* as belonging to an institution which is spiritually the successor of the NT Church, seeking on the whole to retain its offices and its general type of organization while modifying them to meet new requirements in a different age.

The Presbyterian form of polity in modern times is based on the Calvinist doctrine of the Church. According to this view, the Church is a fellowship of believers which aims at realizing the fellowship of each member with the others and of all with Christ. Such an essentially spiritual idea of the Church renders it impossible for the Calvinist Presbyterian to unchurch any professed believer or body of believers on merely external grounds. The true Church is invisible, known only to God; and the mechanical exclusion of any man from salvation by reference to some fixed ecclesiastical theory is a presumption. In fact, evangelical Protestantism must place first the true preaching of the Word and the proper administration of the sacraments, and all Church government is justified only as a means to that end. Up to this point Presbyterianism and Congregationalism are agreed; they differ only as to the means by which the Church can best serve those ends and express her mind to the world. Presbyterianism recognizes more fully than Independency that, in order to secure the three general ends of true preaching, true administration of the sacraments, and true discipline within an orderly and united body of believers, a certain amount of organization is unavoidable, even if of secondary importance, and the founders of Presbyterianism went to the NT for their models. In so far as they attempted or claimed to effect an exact and mechanical reproduction of the NT Church, they were mistaken, but they may at least claim to have worked out a system as nearly like it as anything that can hope to adapt itself to modern times.

1. **Ecclesiastical offices and officials.**—In order to grasp the significance of ecclesiastical office it is no less important to see the connexion of 'gift' and 'office' than to distinguish between them. At first the ministry of gifts that prevailed in the primitive Church rendered office unnecessary and even impossible, but it was not long before the failure or the capriciousness of gifts rendered office inevitable in the growing community, and offices and officials were undoubtedly existent in NT times. Gifts, on the other hand, were the basis of office, the holding of which originally signified a recognition on the part of the Church that the official possessed eminent gifts. As the Church grew in numbers, and had to face heresy within and persecution without, officialism naturally assumed a position of ever-growing importance. Montanism, *e.g.*, was, from one point of view, a protest against the growth of officialism in the Church, and the reaction against Montanism fostered the very growth against which it protested in vain. Ordination—at first simply the setting apart to a special task of a man with special gifts for it—became a more formal thing; the ritualism of the act came to surpass in importance the prayer which was originally its essence; and gradually the right to confer ordination, from being a distinction between clergy and laity, became a distinction between superior and inferior orders of clergy. The whole tendency of mediævalism was in the direction of this growing sacerdotalism, the original freedom and spontaneity of the Church were crushed rather than preserved as the machinery of it became perfected, and the Reformers aimed at getting behind this perfection of lifeless mechanism to the simpler ideas and organization of primitive times, the earlier among them recoiling even from such harmless symbolism as the laying on of hands in ordination. The Calvinist and Presbyterian wing of the Reformation distinguished in the NT certain offices which were intended to be ordinary and permanent from certain others which were of an extraordinary and temporary character. These permanent offices

were (a) the ministry of the Word, (b) ruling and discipline, (c) the care of goods, their distribution in needful cases, and the care of the poor and sick. Doctrine, discipline, and distribution were the distinguishing features of the three types of permanent official. Or a twofold classification might be made, into (1) elders, (a) teaching and (b) ruling, and (2) deacons. In the earliest times the Church modelled itself on the Synagogue rather than on the Temple, and the ruling body would naturally be the elders, the recognition of whom as a body of men possessed of special gifts of ruling soon became that of a body of men possessed of office. But, as some of them would be better teachers than others, and the need of sound teaching soon became apparent, the distinction between the teaching and the ruling types of presbyter is clearly marked at an early stage of ecclesiastical development. The needs of the Church, the disappearance of charisms, the rise of official doctrine and official books, fostered the need of competent teaching; such teachers would naturally be sought in the eldership, and the presbyter capable of teaching gradually assumed a position of greater distinctiveness—a distinctiveness emphasized by the fact that teaching power and business gifts form a sufficiently rare combination in the individual. Finally there comes about a clear distinction between the office of preacher and teacher and that of ruling elder; we find in Cyprian, *e.g.*, a clear recognition of the difference between teaching and ruling presbyters. The modern Presbyterian Church has always made a point of this distinction, which is very clearly brought out in the theory and practice of ordination. If ordination, as some have contended, admitted merely to order, then no special new ordination would be required to transform an elder into a minister. But the Presbyterian system regards ordination as admitting, not to order, but to office, and the requirement of a special ordination for a minister is a recognition of the different offices of teacher and ruler. Yet there has always been a certain confusion in the mind of Presbyterianism with regard to the exact relationship between the minister and the elder, the teaching and the ruling presbyter. Some, like John Calvin, followed by Gillespie, interpret 1 Ti 5¹⁷ as if preaching and ruling presbyters had held distinct offices from the very beginning; others, like Campbell, have considered the ruling elder simply as a lay coadjutor and councillor of the minister, his spiritual work being only such as might be done by any other pious member of the kirk; a third and more sensible group of thinkers hold that the distinction of office has arisen naturally out of a distinction of gifts in a Church faced by the problems of growth and maturing age. It is, in fact, better to consider the office of presbyter from the practical than from the theoretic and Scriptural point of view. The ruling elder, at the least, discharges the useful function of representing lay needs, ideas, and interests, and of keeping the minister in touch with the general life of the Church; and his tenure of an office which renders him of equal status with the minister as a member of any Church court is of immense practical value to the Church. Both offices declined in the Middle Ages, that of the ruling elder vanishing altogether. But at the Reformation the removal of the crushing burden of sacerdotalism caused both to revive. The minister as pastor, preacher, and teacher came into his own again, and, in the Presbyterian Church among the rest, he has ever since retained the highest place in the esteem of the membership. The office is ministerial, not sacerdotal, and, whatever 'presbyter' may be etymologically, it is certainly something quite different in practical

content from 'old priest writ large.' Regarding episcopacy and the episcopal office as a late development, unscriptural and unjustifiable, the Presbyterian reformers have always insisted upon the parity of the clergy, whose functions are preaching, the administration of the sacraments, and the exercise of discipline; and the sacerdotal side of the office has always been carefully kept in the background, lest the minister, in the guise of priest, should stand between God and men. The ruling elder disappeared, as has been said, in the Middle Ages; the attempt to trace him back to the Waldensian movement has not been successful; nor did he reappear in the Lutheran Church. From the beginning the need of a body of men to exercise Church discipline was recognized by the Reformers, who felt that, while the *jus episcopale* ought to be transferred, it must not be allowed to lapse. But the question at once arose as to whether these men should be chosen by the Church or by the civil authorities, and the first to see quite clearly that the Church ought to choose them was John Calvin. In this he differs from both Luther and Zwingli, who left the exercise of Church discipline to the civil power, and, alone among the Reformers, he insisted upon the exercise of discipline by means of an eldership, chosen by the people, founded upon the NT, and possessed of spiritual office for the discharge of a spiritual function. With this is bound up the theory of the relation between Church and State. It may be noted that the very alliance between Church and State in Geneva which realized one side of his ideal balked him in the realization of its other half, viz. the maintenance of a distinct and separate sphere for both. In France, however, the hostility of the State reversed the case: alliance was impossible, but the Church was therefore free to develop along her own lines. And the same state of affairs obtained in Scotland. In these two countries, therefore, the Presbyterian eldership came to its full development, and the office is distinctive of Presbyterianism. The elders are chosen by the general body of the membership, and specially ordained to their office. At first they held office only for a limited period, and then resigned, usually by rotation, to make room for other representatives of the popular voice; but in later times the office has come to be held 'ad vitam aut culpam,' and Presbyterian Church government is by representation rather than by direct reference to the popular will. The elder is recognized as a spiritual functionary; and, while he is debarred from the ministry of the Word and sacraments, he has the right to assist in the administration of discipline and in the government of the Church, in whose courts his vote is of equal value with that of the minister. The work of the diaconate, since the decline of that office, has largely fallen to the eldership; and the assistance of a competent body of elders is invaluable to the minister.

Early in the history of the Church it was found advisable to take the work of almsgiving off the shoulders of men otherwise too busy to attend to it, and thus originated the office of deacon. It is an open question whether the 'Seven' of the Acts of the Apostles were the first of those to be chosen at all, whether we have here the first instance of their work being formally recognized by the Church as the work of ecclesiastical officials, or whether these seven were then chosen in the Gentile interest, because those already in office did not command Greek confidence. The Presbyterian deacon, so far as the office still exists, is a more faithful copy of his prototype than the deacon either of Roman Catholicism or of Anglicanism. The office was never generally regarded as a spiritual one, implying any spiritual function,

though the French Church originally took that view; all that is implied in it is the application of spiritual principles to certain secular affairs. The originally unspiritual nature of the office may be gauged from the fact that, in spite of the disabilities of women for public speaking and the like, deaconesses were very early at work in the Church. Yet the deacon is more than a mere member of a managing board. He holds an ecclesiastical office to which ordination is necessary. We may describe the deacon of Reformation times as a secular Church official. The office has largely fallen into abeyance, especially where State connexion has eased the financial affairs of the Church, and the passing of the diaconal functions in such cases into the hands of the elder has done much to secularize the eldership.

Minister, elder, and deacon are the three ordinary and permanent officials recognized by Presbyterianism, but Calvin and the rest held that NT precedent would authorize the temporary use of extraordinary offices to meet special circumstances. The internal needs of the Church herself or the pressure of outside factors determined the nature and use of such special offices. In the earliest days of the Reformed Church, *e.g.*, there existed the office of teacher, as distinct from that of minister, an office which has quite naturally disappeared; for, with a growing knowledge of Reformed doctrine on the part of the people, and after the issue of Catechisms for the instruction of the young and comparatively ignorant, the special work of the teacher became unnecessary. Similarly, in John Knox's day the difficulty produced in Scotland by the inadequate supply of ministers to meet the national need gave rise to the two special offices of superintendent and reader, both of which disappeared as the ecclesiastical situation became settled. The chairmen of General Assembly committees and the Divinity students who spend their spare time in mission work represent the nearest survival of those two offices today; but it is noteworthy that, in Canada, a problem similar to John Knox's is responsible for the existence of superintendents at the present time, and for the use made of special-course men, who are virtually equivalent to readers. We have seen also that special officials exist in the Bohemian and Hungarian Churches, and, though a strict Presbyterian might, on the ground of these special offices, call in question the really Presbyterian nature of these Churches, it is interesting to find that the state of affairs in the Bohemian Church, *e.g.*, raised no qualms in the breast of John Calvin. Undue State interference has in many cases caused modifications in the Presbyterian theory and practice with regard to office; but the offices of minister, elder, and deacon are alone recognized or required as permanent in a thoroughgoing Presbyterian system, and even the deacon tends to disappear when the Church is prospering.

2. Church courts.—By the organization of her officials into a carefully graded system of Church courts Presbyterianism seeks to give expression to the unity of the Church. These courts exercise a threefold function: (a) legislative: they frame laws for the purpose of securing discipline, and for the proper control and dispatch of ecclesiastical business; (b) executive: they give effect to these laws; (c) judicial: they inflict and remove ecclesiastical censures; and the higher courts review the proceedings of the lower. The basis of these activities is, of course, the constitution of the Church, but the claim is made that both the constitution and the activities of the Church are ultimately based upon Holy Writ. In the Presbyterian Church the holding of a spiritual office is a necessary qualification for a seat in any of the

Church courts. Thus only teaching and ruling elders are eligible for membership, and the membership of any court must be composed of both. Congregational Church government is probably more directly popular in its nature, but Presbyterianism is also vigorously democratic; for both ministers and elders are popularly elected, and represent, in the last resort, the will of the people; nor is it more difficult to deduce the representative form of Church government from the NT than to deduce any other. In actual practice, even where the eldership of the Church is theoretically added to by co-optation, popular consent and approval form the basis of election; they are always aimed at, even if they are not considered indispensable.

All members of any ecclesiastical court are equal *qua* members; e.g., it is open to lay elders to consider judicially even the most abstruse theological problems. In legislative work as well all members of any Church court have equal deliberative and voting power. But in the executive sphere there are certain duties which can be discharged only by an ordained minister—such as the pronouncement of censure or of its removal; and herein lies the explanation of the apparent anomaly that in a system of Presbyterian equality only ministers can normally preside over Church courts, and that the presence of at least one minister is therefore necessary to a quorum. This does not render the presiding minister a man of special rank; he is only temporarily *primus*, and even then a *primus inter pares*; and his primacy deprives him for the time of his deliberative vote.

In the Presbyterian system the courts of the Church are graded, the lowest being congregational in their representation and the scope of their activity, the highest national. The essential courts are the Kirk-Session, Presbytery, and Synod; if the Church is very large, a National Synod, General Synod, or General Assembly crowns the edifice. In this way the rights of the individual congregation are neither exaggerated nor minimized. The higher courts supervise and review the work done by the lower; and the distinctive feature of Presbyterianism lies in giving to its higher courts authoritative control over its lower, and not merely advisory powers. Moreover, it has now become the practice of the Church that these courts shall meet at regular intervals, and not merely when occasion seems to demand it. The idea of gradation can be justified from Scripture and is, besides, of so great practical value that Independency even follows it to the extent of giving the association power to cast refractory congregations out of fellowship. The grading of Church courts frees the individual from the fear of local prejudice, and at the same time serves to impress upon him the idea of the unity of the Church. Of course, the gradually matured and elaborate organization of Presbyterianism renders inevitable a certain externalism; but, so long as this does not drive men to mistake ecclesiastical sameness for Christian unity, no harm is done.

Of the various courts of the Presbyterian Church and their respective functions only a general outline can be given, which may be taken as broadly characteristic of the Presbyterian system. We need not enter in detail into exceptions.

(a) *Kirk-Session*.—At the foot of the scale of the Presbyterian Church courts comes the Kirk-Session, which consists of the ministers and elders of the individual congregation. Its numbers vary with the size and needs of the congregation, but they should be sufficient to secure efficient working; and, if the congregation is too small to provide a quorum for the dispatch of business, it is in the power of the Presbytery to attach an elder or elders for the purpose. The jurisdiction of the

Kirk-Session extends over its own congregation, but it must act within the limits of the constitution, and its acts can be revised by a higher court. Subject to these limitations, it is a kind of parochial Presbytery. The Session supervises the congregation, takes charge of the communion-roll, and is responsible for its correctness. If necessary, it censures members, its findings being declared and its sentences executed by the moderator.¹ It is responsible, too, for admission to ordinances. The work of the minister is also looked after by the Session, which, if it sees fit, may bring before the Presbytery any matter connected therewith. In certain cases the Session also sees to the proper distribution of ecclesiastical goods.

Where a Deacons' Court exists, the last-named function naturally falls to it. The functions of the Deacons' Court are not of a spiritual nature; it is responsible directly to the Presbytery.

(b) *Presbytery*.—The Presbytery—otherwise known under the various names of Classis, Colloque, Tractus, etc.—is the unit of the Presbyterian system and the means of realizing Church unity upon the smallest scale. This court is a distinctive feature of Presbyterianism. The extent of its bounds and the number of individual congregations within its jurisdiction are matters of convenience. On the Presbytery are represented all the Kirk-Sessions within the bounds, the representation consisting of all the ministers, together with one elder for each Session. Thus, as the moderator, who is always a minister, has no deliberative, but only a casting vote, it may quite well happen that, if there are no collegiate charges within the bounds, the lay element will command a steady majority. Formerly a doctrinal discussion or the study of a portion of Scripture might form part of the proceedings of a Presbytery, but such study or discussion would take place now only under very special circumstances, and, for the most part, the court confines itself to purely business matters. This court has the power to grant licence and ordination, and also to take them away—subject, of course, to the laws of the Church and the revision of superior courts. It has in its hands the oversight and the refilling of vacant charges. The superintendence and review of the proceedings of lesser courts also belong to it—e.g., in Scotland since 1639 it has been the practice of the Presbytery annually to examine the books and records of Sessions within its bounds—and it hears references and appeals from these courts. The Session as a body, individual elders, or ordinary members of a congregation may petition the Presbytery concerning a moderator of Session. In the ordinary way the proceedings of Presbytery are regularly submitted to the Synod of the province. But it is in the power of any Presbytery to submit a suggestion direct to the General Assembly by means of what is called in Scotland an 'overture'; and the converse of this appears in the Barrier Act of 1697, which forbids any General Assembly to pass an act affecting the constitution of the Church until it has submitted the proposal to all the Presbyteries, and their opinions on it have been received by a later Assembly. In the act of ordination only the ministerial members of Presbytery take part.

(c) *Synod*.—The Synod—in some cases called the Coetus—is of the nature of a larger Presbytery. It is composed of the sum of its Presbyteries, together with a minister and elder from each of any neighbouring Synods as corresponding members. As the court intermediate between the Presbytery and the supreme court of the Church, the Synod has a comparatively narrow range of functions. It reviews the proceedings of Presby-

¹ 'Moderator' is the name applied to the president of any ecclesiastical court.

teries, examines their records, can overture the supreme court, can call the attention of any Presbytery to errors and omissions of duty, and is directly responsible to the supreme court. Those three are the necessary courts of the Presbyterian system; and, where there is nothing higher, the Synod would, of course, have extended powers.

(d) *General Assembly.*—In all Churches of more than provincial extent the highest court is the General Synod, National Synod, or General Assembly. The General Assembly has unlimited power—subject to the constitution of the Church, the constitutional rights of inferior bodies, and the law of the land. Its aim is to be representative of the whole Church; but, while Kirk-Sessions are represented in the Presbytery and Synod, Presbyteries are represented in the General Assembly. The proportion of elders to ministers varies in the various Churches. In the Church of Scotland the scheme is as follows:

By an Act of Assembly, A.D. 1694,

- (a) from Presbyteries of 12 or fewer parishes, 2 ministers, 1 elder;
- (b) from Presbyteries of 12 to 18 parishes, 3 ministers, 1 elder;
- (c) from Presbyteries of 18 to 24 parishes, 4 ministers, 2 elders;
- (d) from Presbyteries of 24 or more parishes, 5 ministers, 2 elders.

By an additional Act of A.D. 1712,

- (e) from Presbyteries of 80 or more parishes, 6 ministers, 8 elders;
- (f) by a rule of Assembly enacted in 1893 every Presbytery sends one minister for every four ministers on roll of Presbytery and for a part of four, and one elder for every six ministers and for a part of six;
- (g) 87 town council elders from royal burghs, and two from the city of Edinburgh;
- (h) a representative from each university.

The Free Church simply took one-third of each Presbytery (ministers and elders alike); and every Church has its own scheme of representation. The personnel of General Assemblies necessarily varies much more than that of inferior courts from one meeting to another; and, as a consequence, any given Assembly may differ widely in its opinions from its predecessor. But the judicial findings of one Assembly cannot be reversed by another; e.g., if the Assembly of 1889 has suspended a minister, that of 1890 may think its predecessor wrong, but can alter the decision of 1889 only by finding that the suspension has already been long enough to satisfy justice, or express its disapproval by coming to an opposite conclusion on a similar case. On the other hand, legislation passed by a previous Assembly—any act, indeed, which is not a judicial decision—can, subject to the usual limitations, be reversed, although, up to the time of its reversal, it is binding upon the Church. If the constitution of the Church is affected by any proposal, the Barrier Act prevents hasty action.

It will be seen from the above that in the lowest court, the Kirk-Session, the lay element must predominate; that in the next lowest, the Presbytery, it may; and that in the Synod the same state of affairs will prevail as in the sum of the Presbyteries. Not until we come to the highest court of all can a clerical majority ever be theoretically certain, though, as a matter of fact and practice, the ministerial element does usually predominate in every court higher than the Session. Still, when we consider that all ministers and elders eligible for a seat in any court of the Presbyterian Church are originally elected by the people, and must therefore, in the main, reflect popular opinion, and when we consider that such devices as the Barrier Act stand in the way of hasty and irresponsible decisions even on the part of the highest court of all, we cannot deny the right of Presbyterianism to be called a thoroughly democratic form of Church government.

The Presbyterian system did not spring suddenly

into being full-grown, but is the result of long development, patient study, and long resistance to opposition. On the general lines above indicated it is in use in Great Britain, the colonies, and N. America; but differences occur in various Continental Churches, due either to their smallness or to undue interference by the civil power.

3. *Difficulties of the system.*—The comparatively elaborate organization of the Presbyterian Church is, on the whole, an advantage; but it has its disadvantages as well. When English Presbyterianism was subjected to persecution which it was unable to withstand, it could not, like Independency, simply go into hiding till the storm blew over. It had either to remain organized, in which case it became obvious and was crushed by force, or to sacrifice its organization and so cease to be Presbyterianism. On the other hand, when the successors of Richelieu set themselves to crush French Presbyterianism, they began by suppressing its organization, and the result justified their scheme. This is merely to say that close organization is an advantage in times of strength, but an inconvenience in times of weakness.

From the beginning the political influence of the Reformed Churches has been on the side of popular government, as has been noted in the case of France, Scotland, and Holland, where the Church found itself in conflict with the established ecclesiastical system and the civil power, and under the necessity of fighting for its existence. The action of the existent authorities in each case contributed to identify in the general mind the causes of civil and religious liberty; and modern democracy owes a heavy debt to the religious impulse of the Reformation. It is noteworthy, e.g., that the American War of Independence found the Presbyterians practically solid for the colonial cause—a circumstance due as much to their settled belief in representative government as to their memory of past wrongs on the other side of the Atlantic. In the case of Geneva the people had already won their civil liberty, and were prepared to recognize the Church, so that events took another turn; and in certain Continental states the civil power, while recognizing the Church, has felt itself under the necessity of putting pressure upon Presbyterianism in the interests of its own supreme authority. Indeed, in every land where Presbyterianism has made good its footing the question of the relation between Church and State has arisen in a more or less acute form. Calvin's ideal was that the State and the Church ought to be in alliance, but that there should be no confusion between them. Each should have its own separate, clearly defined sphere of action: the State should not interfere with spiritual affairs, nor the Church with secular matters. But a Church member, who enjoys in that sphere a great measure of religious liberty and a share of ecclesiastical government, will not long be content with less in his civil capacity, and a king who believes in Divine Right, or an aristocracy clinging desperately to its privileges, cannot but look askance at a democratic Church. John Knox and Mary Stuart, Andrew Melville and James I., the Dutch and Philip II., must sooner or later find peace impossible; no theory of the independent spheres of Church and State could discount the truth, from his own point of view, of James I.'s shrewd saying, 'No bishop, no king.' But, even when that phase of the conflict is over, and the position of the Church secured, the difficulty remains of defining the respective limits of civil and ecclesiastical jurisdiction, a difficulty increased by the very fact that friendly relations exist between Church and State. For alliance without mutual interference is hard to secure; the members of the Church are in

another aspect the members of the civil community, and it is constantly hard to mark off a definite boundary between the secular and the spiritual. The same problem as vexed mediævalism on a European scale has recurred on a national scale in Presbyterian lands, and has been a fruitful cause of trouble and division. In Geneva Calvin experienced this difficulty of keeping alliance free from a confusion and conflict of interests; and in Scotland, where a fairly successful solution of the problem has at length been arrived at, this has been accomplished only at the cost of prolonged conflict and wide-spread secession. In spite of Calvin's desire for the alliance of Church and State, the modern tendency of Presbyterianism has rather been towards separation in the interests of peace and concord.

4. Educational activity.—The Reformers in general and the Calvinists in particular were from the first deeply impressed with the need for popular education; for a democracy must educate its citizens in the interest of sane self-government. Moreover, the Reformers believed themselves to be possessed of a system of doctrine so near to the absolute truth that it could challenge comparison with any other, and had only to be fully known in order to be accepted by intelligent and educated men. They therefore believed that an educated public was the best guarantee of a successful propaganda. Their doctrine and polity were new, and even among their own adherents many required some detailed and definite instruction in addition to the general considerations that had induced them to adhere. From the beginning, too, an educated ministry was one of the deepest desires of the Reformed leaders. To them the chief thing of all was that the Word of God should be properly expounded and properly understood. In this exposition and understanding, which called alike for an educated ministry and an educated people, lay the best hope, not only for the expansion of their Church, but also for the saving of souls. For all these reasons the Reformed Churchmen were ardent educationists. The school of Geneva, under Calvin's care, soon became famous throughout Europe; the first use that the French Church made of Henry IV.'s annual grant was to found and endow colleges; the settlement of the Dutch Church was followed by an amazing outburst of intellectual activity; and the destruction of John Knox's splendid scheme for Scottish education was a blow from which his country took long to recover. Knox advocated a scheme whereby every parish should have its school, and every considerable town its grammar school, and the scheme was to be completed by the maintenance of universities in certain important cities. The passing of likely pupils from the lower institutions to the higher should be in the public care, and, if need be, at the public expense. Knox shrewdly advocated compulsory education for the children of the very rich and the very poor; he seems to have trusted to the common sense of the middle class. One-third of the confiscated funds of the old Church was to be applied for purposes of education, but the greed of the nobles ruined the project, which became in sad fact a 'devote imagination'; and only in recent times, with her system of primary schools, secondary schools, and universities, with free and compulsory education as far as possible, and bursaries to help the needy scholar, has Scotland reached a stage of educational development resembling that devised by her great Reformer three-and-a-half centuries ago. It must not be forgotten that the educational schemes of the Reformers were devised in the religious interest. Knox, in his enthusiasm, even recommended that likely men should, if need be, be forced into the ministry. But, as time

went on, the educational horizon widened; and, though for a time the Church became the victim of a scholasticism as deadly as the mediæval type, the principle of free inquiry, upon which the Reformation itself rested, could not for ever be denied. The Church, with her doctrinal system fixed and hardened, has not infrequently been unsympathetic and even cruel towards her intellectual offspring; but modern science, with much else that has been attacked by the Church, owes a greater debt to the underlying principles of Presbyterianism than is superficially apparent. Even the much-abused Higher Criticism is a truer spiritual child of the Reformation than the rigid orthodoxy which opposes it, for the Reformers were the higher critics and revolutionary Biblical students of their day; and there are encouraging signs that the Church, on the whole, is coming to see this. It is all to the credit of the Church that, having set on foot educational systems and institutions, she has been content to see other authorities take them over in their maturity, secularize them, and use them in a wider interest than the ecclesiastical, while she herself undertakes the religious education of her own. No part of the work of the Presbyterian Church does her more honour than her efforts on behalf of education.

5. Morality.—The morality which accompanies the Presbyterian form of Church government and the Calvinist form of doctrine is quite distinctive. It might be logically expected that a profound belief in the sovereignty of God, in election and irresistible grace, would fill the individual with a deep sense not merely of his insignificance but also of his helplessness, and would conduce to a fatalism destructive of all energy and activity. But in Calvinism we find the same paradox as in early Islâm, viz. that a creed apparently inimical to all human activity has animated men to the most prodigious efforts. Calvin and Knox, and others of the same faith, when they considered themselves merely as men, were the humblest of creatures, giving God the glory for all that they did and were; but, when they considered themselves as instruments in the hands of God, they were filled with a sense of their usefulness in the world that made them marvels of energy and even of arrogance. Like Paul, they valued themselves little, but they magnified their office. This combination of personal modesty with diligence and fiery energy has always been characteristic of the best Calvinist morality. The Calvinist morality has generally been a little hard and unsympathetic, tending rather to the concealment and repression than to the consideration of personal feelings, and sometimes the Church's sense of official duty has driven her into tyrannical and inquisitorial interference with the private affairs of men; but a certain probity, a sturdy independence, a reluctance to act except from real conviction, a stiff-necked insistence upon just dealing, and the energetic will to make the best of any given situation have characterized Presbyterian morals throughout, and have made of the Presbyterian a sound and trustworthy business man, an excellent colonist, a soldier to be feared—indeed, a man to be reckoned with in any walk of life. Considering his creed, which makes the almost arbitrary will of God everything and man nothing, the Calvinist's fervency in prayer is as paradoxical as his energy and activity, but is equally a fact.

6. Conclusion.—It has frequently been made a reproach against the Reformation that it broke in pieces the unity of Christendom; and for this rending of the vesture of Christ the Reformed Churches have had to bear their share of the blame. But, as has already been pointed out, divergences existed in the Roman Catholic Church

before the Reformation which that crisis only brought to light, and, to a great extent, what occurred was really the substitution of spiritual unity under the headship of Christ for mechanical unity under the headship of the papacy. Moreover, the breaking up of the mediæval Church into national Churches was an inevitable result of the growth of nationalism in Europe; and, while Calvin and those who followed him were deeply impressed with the great truth of the unity of the Church, they found that circumstances prevented its realization in the meantime on any wider scale than the national. Yet, even when this is said, it must be admitted that the overscrupulous conscience of Presbyterianism has led to further divisions which are less justifiable, and not in the same degree necessary. The history of Scotland since 1700 affords abundant illustration of the truth of that statement. It must, however, be noted that, for the last century at least, the general tendency of Presbyterianism has been towards union and reconciliation, as the truth has been increasingly realized that the things which are common to the Churches are more important than the things which divide them. Apart altogether from the schemes which are now afoot in various quarters to unite Presbyterianism with other denominations, in Scotland, America, Canada, and elsewhere, the different Presbyterian bodies have been uniting and are pursuing the policy of union on a wider scale. In 1884 a significant Assembly took place, when for the first time the effort was made to hold an Ecumenical Council of Presbyterianism. Since that time ten such Councils have met in various centres, and one by one all the representatives of Presbyterianism in the world are being gathered in. The alliance has no authoritative control over the various independent Churches, but at least it serves to provide Presbyterians throughout civilization with a sense of the unity of the great Church to which they belong. The statistics collected become more and more full and accurate as time goes on, and it may be that the increasing influence of this pan-Presbyterian movement, and the increasing encouragement afforded by the results of its work, will one day lead to something closer by way of a bond between all Presbyterians the world over.

JOHN HERKLESS.

PRESCIENCE.—See PREDESTINATION.

PRESENTIMENT.—By 'presentiment' is meant a more or less vague anticipation or apprehension of an event, which befalls the individual himself or some one in whom he is interested; as a rule also it is implied that there are insufficient, if any, grounds in his conscious mind for the anticipation; and it is usually implied that the event is an evil, a misfortune. A vague apprehension is one in which the details, the particular mode of the event, are not consciously thought of; e.g., a 'presentiment of death' implies that the manner of the death is not foreseen; it may be merely a feeling of depression, which suggests the idea, more or less definitely, of some unfortunate happening.

The Society for Psychical Research and corresponding bodies in other countries have investigated a large number of cases in which an individual, either in normal waking or sleeping state or in a hypnotic trance—either without apparatus or by means of a mirror, a crystal globe, a pool of ink, etc.—has been said to be aware of, and to have reported, an event about to happen to himself or to a relative, a friend, or even a stranger, which, after the report was recorded, took place as it had been described. The correspondence between the anticipation and the reality varies from the representation in the former merely of the emotional element of the latter, 'something terrible about to happen,' or of its central fact, 'A is going to die on the voyage,' up to the complete representation of date, place, and circumstances.

One of the most famous examples of this class is Williams' dream of the murder of the Prime Minister, Perceval, in 1812, more than a week before it occurred (*Proc. Soc. Psych. Research*, v. [1889] 324, and at the end of Spencer Walpole's *Life of the Right Hon. Spencer Perceval*, 2 vols., London, 1874). Another is the painter Segantini's vision of his own death, thirteen days before it happened, which he represented in his last picture; a third, Countess Toutschkoff's dream of her father announcing to her the death of her husband at Borodino (Maeterlinck, *The Unknown Guest*, pp. 112, 158; *Memoirs of the Life and Labours of Stephen Grellet*, London, 1860, i. 434), three months before it occurred, that place being unknown both to her husband and to herself at the time. A case of simple presentiment is that of a lady who dreamt that 'something terrible' was going to happen to a friend, with various circumstances in the dream which were afterwards verified, along with the fact, not visualized in the dream, that the daughter of the person in question became insane.

It does not belong to this article to discuss the many problems that arise in connexion with this branch of psychical research. The question of evidence is all-important, and it may be said that in none of the cases is the evidence such as would satisfy the rigorous requirements of natural science; obviously the prevision, presentiment, or premonition must be fully recorded, before the event to which it refers occurs; the event must be such that it could not have been anticipated or inferred as probable, at least in its details, by the seer; even then we should have to exclude mere coincidence (e.g., dreaming of a person's death, and the death occurring within, say, a week afterwards, would not be a premonition to a person who frequently had such dreams, but not, except in this one case, followed by the death of the person in question). Again, we must exclude cases in which there is a possibility that the presentiment or the dream has led to its own fulfilment—where, e.g., nervousness caused by the presentiment of failure in a difficult or dangerous undertaking is itself a cause of such failure; in more extreme cases the death of the individual may be brought about by a belief, however caused, that it is going to take place on a given date at a given hour (e.g., the death of C. C. Brooks, *Proc. S.P.R.* v. 291). Supposing, however, that all chances of error are excluded, and that either one perfect and unassailable case or a multitude of imperfect cases compels

us to assume the possibility of prevision, different explanations will still be available: (1) spiritualism: it is suggested that spirits, whether of the dead or of higher beings, have clearer vision and deeper intelligence than the living man, and therefore can anticipate more accurately what is to occur, and that they may transmit this knowledge by vision or otherwise to human beings in whom they are interested; (2) telepathy from one living mind to another, as when A dreams of an event happening or about to happen to B, the conditions leading to this event being present in B's mind and transmitted to A's without the intervention of the ordinary senses; and this view may be extended: facts of which B is only latently aware (whatever that may mean) may be transmitted to A and enter his consciousness as a dream or vision; (3) if there occur cases in which a future event, of which the conditions are not and cannot be present to any living mind, is yet foreseen, we must assume a power, perhaps in our subconsciousness, in the subliminal self, of reading the future in the present. The future, in this interpretation, exists in the present, as the present in the past; time, like space, is unreal; and to the perfect vision of God, of which perhaps our higher unconscious self may have partial glimpses, past, present, and future are seen in one glance. It is obvious that this mystical interpretation explains nothing; neither spiritualism, nor telepathy, in the sense defined, nor the supposed powers of the subconscious self, nor the possibility of seeing the future by any other means than the imperfect ones of inference and analogy can be admitted without evidence far more thoroughly tested and far more overwhelming than that which at present exists. Meanwhile we are left with three much less heroic and less attractive suggestions: (1) slight impressions which are felt, but not noticed in our waking life—e.g., the onset of a disease—may force their way into fuller consciousness, in dramatic form, in a dream; we may then in the dream have a vision of what actually occurs, in the future, but through causes which are perfectly natural and normal; (2) we may be conscious at a given time of certain facts, without drawing from them the conclusion which they bear as to the outcome of the situation that they represent; the conclusion may be drawn subconsciously—i.e. in dissociation from our conscious personality, which it then affects either as a mere feeling with a vague sense of coming disaster or as dramatized into an actual vision of the conclusion realized; or (3) the conclusion may have been reached unconsciously, by a sort of summary intuition, by putting together a number of apparently disconnected facts; it may have been forgotten, and yet, again in dissociation from the self, may influence the latter as a presentiment or as a premonition, in any of the possible forms.

J. L. MCINTYRE.

PRESTER JOHN.—The story of Prester John is woven of the fact and fancy of the Middle Ages, the fact warped by the varying aspects of European policy, the fancy coloured by Oriental imagination and tradition.

Until the 14th cent. the evidence points to Asia as the home of Prester John. In the 15th cent., after the conquest of Timur and the overthrow of Christianity in Central Asia, the African claim took hold of the popular imagination. But the true claim of Asia has never lacked support in the writings of explorers and scholars.

Prester John is no mythical personage, though

myth and legend have gathered round his name. The simple uncoloured report of Friar Johannes e Monte Corvino in 1305 is historical evidence of the first order, and it is supported by many witnesses of the 12th and 13th centuries. This evidence supports the conclusion reached by J. B. Bury in his note to Gibbon (ch. lxiv.):

'Sir H. Howarth has shown very clearly (*Hist. of the Mongols*, i. p. 698 *seq.*) that the Karaites were Turks, not Mongols. Their territory was near the Upper Orkhon, between the rivers Selenga and Kernlen. They were Christians. Their chief Tughril received the title of Wang ("king") from the (Manchu) Emperor of Northern China for his services in 1198 against the Naiman Turks of the regions of the Altai and Upper Irtysh. Chinghiz also took part in this war, and his services were recognised by the title of Dai Ming, "high Brightness." For an account of Prester John—the name by which the Karait khans were known in the west—and the legends attached to him, see Howarth, i. cap. x. p. 534 *seq.* (Gibbon, *Decline and Fall*, ed. Bury, vii. 2, n. 8).

I. ASIA.—1. **Otto of Freisingen (1145).**—In 1145 Prester John first appears as an Eastern priest-king who had established a wide dominion in Central Asia. This rests on the *Chronicle* of Otto of Freisingen (vii. 33, sub anno 1145 [*MGH* xx.]). The bishop of Gabala (Jibul in Syria) visited the papal court in 1145, and stated that not many years before a certain John, king and priest, who dwelt beyond Persia and Armenia, a Christian but a Nestorian, had made war on the kings of Media and Persia, the Samiardi brothers, and had captured Ecbatana, the seat of their kingdom. He had then marched to the relief of the Church of Jerusalem, but was stopped at the Tigris. He was said to be one of the ancient race of the Magi, and had a sceptre of solid emerald.

2. **The letter of Prester John (1165).**—The letter was presented by the ambassadors of Prester John to the Greek emperor Manuel I. and the Western emperor Frederick Barbarossa (Albericus, in *Chron.* 1168).

In it Prester John, 'by the power and virtue of God and the Lord Jesus Christ King of Kings,' claims to be the greatest monarch under heaven. He desires to visit the Holy Sepulchre, and to fight against the enemies of the Cross. Seventy-two kings were under his rule. His empire extended over the three Indias, including Farther India, where lay the body of St. Thomas. In his dominions were the unclean nations whom Alexander the Great walled up among the mountains of the north, and who were to come forth in the latter days. Among the marvels of his territory were monstrous ants that dug gold, fish that gave purple, the Fountain of Youth, pebbles that gave light, the Sea of Sand, and the River of Stones. When he went forth to war, thirteen great crosses were borne before him, each followed by 10,000 knights and 100,000 foot. His palace was built after the model of that erected by St. Thomas for the Indian king Gondophoros. He was waited on by 7 kings and 365 dukes; 12 archbishops sat on his right hand, and 20 bishops on his left, besides the patriarch of St. Thomas, the proto-pope of the Sarmagantians, and the proto-pope of Susa, where the royal residence was.

This letter enjoyed great popularity in the West. Zarncke (*Der Priester Johannes*) refers to 100 MS copies of it, 8 in the British Museum, 10 in Vienna, 13 in Paris, and 15 in Munich (*EB*¹¹ xxii. 304 f.).

(1) The exaggerated style of the letter, the work of Nestorian imagination, was an appeal specially to the Byzantine court. The brilliant fêtes and tournaments of Manuel I. were renowned throughout Europe as the most magnificent spectacles of the kind ever seen (G. Finlay, *Hist. of the Byzantine and Greek Empires*, Edinburgh, 1854, ii. 179). There were also political reasons for the reception given to the embassy. The Seljuk Sultan of Iconium, Khilidi-Arsalan II., was consolidating his power in Asia Minor, while the Greeks were steadily losing ground during the reign of Manuel (*ib.* p. 234). The Latin principality of Edessa had fallen in 1144 to the arms of Omad ed-din Zengi, the *atabeg*, or ruler, of Mosul. His son, Nur ed-din (1146-74), united the Muhammadan powers, added the kingdom of Damascus to that of Aleppo, and waged a long and successful war against the Christians of Syria. The Latins and Greeks alike looked favourably at the promise of Christian help against their foe (Gibbon, ch. lix.).

(2) The reference in the letter to Alexander the Great points to the influence of the Alexander romance in the colouring of the story. This romance is attributed to Callisthenes. It arose in Egypt about A.D. 200. It spread in Latin translations to the West, and in Armenian and Syrian versions to the East. These would be known to the Nestorian ministers of Prester John. It became very popular in the West in the 12th cent. through the

epic of Alberich of Besançon and the *Alexanderbuch* of the German 'Pfaffe' Lamprecht (*Chambers's Encycl.*, s.v. 'Alexander the Great').

(3) Two further references in the letter witness to the Asiatic origin of the story. The Three Indias are traceable in the geographical conceptions of the 12th century. The earliest MS of the *Ravenna Cosmography*, itself a work of the 7th cent., is of the 18th cent. (*Ravennatis Anon. Cosmogr.*, ed. M. Pinder and G. Parthey, Berlin, 1860), and is the source of the Three Indias (pp. 40, 44 f.).

(4) The reference to the Sea of Sand, taken in connexion with the Three Indias, points to the Great Desert of Central Asia, and not to the Sahara.

3. The letter of Alexander III. (1177).—Alexander III. was in the midst of his quarrel with Barbarossa when the embassy of Prester John was received by the emperors. The reconciliation between them took place at Venice on 24th July 1177. Alexander remained at Venice until Oct. 1177; it was there that he gave audience to an embassy from Prester John. Philip, a physician in the papal court, had travelled to the Far East and visited the court of Prester John. He had put forward the claims of the Western Church and had returned to Italy with letters from Prester John to Alexander. These letters are lost, but the letter from Alexander to Prester John is preserved in several English Chronicles. The best text is that of J. Brompton (Pagi, *Critica Historico-Chronologica*, in Baronius, *Annales Ecclesiastici*, iv. 650). Prester John not only had asked for instruction, but had requested to have a church in the city. This was conceded to him, with the right of an altar in the church of the Holy Sepulchre in Jerusalem (*Chron. Joh. Brompton*, ap. R. Twysden, *Hist. Angl. Scriptores X.*, London, 1652, col. 1132 f.). The letter was entrusted to Philippus, who was commissioned to return to the East and deliver it to Prester John.

4. The conquest of Jenghiz Khan (1202).—The realm of Prester John was one of the first to fall before the conquering hosts of Jenghiz Khan. It was then ruled by his son David. Pagi gives three authorities: (1) the *Chronicle* of W. de Nangiac, sub anno 1202; (2) Marinus Sanutus (lib. iii. 'Fidelium crucis,' pt. xiii. ch. iii.); and (3) the older authority, Vincentius Bellovacensis (*Spec. Hist.* ch. lxix.). They agree in assigning a wide dominion to Prester John before the conquest of Jenghiz; and Gibbon, on their testimony, states:

'The boldest chieftains might tremble, when they beheld, enched in silver, the skull of the khan of the Keraites, who under the name of Prester John had corresponded with the Roman pontiff and the princes of Europe' (ch. lxiv.).

5. The letter of Philip to Gregory IX. (1237).—On the death of Jenghiz Khan in 1227 his son, Ogotai, was proclaimed Great Khan, or emperor, of the Moguls and Tatars. In the year 1237 a long report was received of the successful missions of the Dominicans among the Jacobites and Nestorian Christians in Asia. Matthew Paris (*Hist. Angl.*, sub anno 1237, ed. W. Wats, London, 1674, p. 372) speaks of it as 'jucundus rumor de Terra Sancta.' The report was sent to Gregory IX. by Philip, provincial of the Dominicans in the Holy Land, and was forwarded by Godfrey, the papal penitentiary, to the Dominicans throughout England and France. William of Montferrat with two others had studied the languages of Central Asia, and had received a promise from the archbishop of the Nestorians to submit to the unity of the Catholic Church. It is important to note, in view of the African claim, that Friar Philip had sent also to the patriarch of the Jacobites of Egypt, who had made the like promise. Matthew Paris adds:

'Huic subdita est minor India, Aethiopia et Libya cum Aegypto. Sed Aethiopes et Libii non sunt subjecti Saracenis.' The realm of Prester John is not therefore in Ethiopia, but in the Far East.

6. The report of Johannes e Plano Carpino (1246).—The annals of Matthew Paris between

1238 and 1245 record the ravages of the Tatar hosts under Batu and the terror which they inspired in the West. They were stayed at Neustadt in Austria by the valour of the Franks. In the winter of 1242 they withdrew to the east. This was in part due to the death of the Great Khan Ogotai in 1241. He was succeeded by his son, Kujuk.

Meanwhile the letter of Philip had stirred up the interest in the West, and the missions to the Nestorians opened the way for missions to the court of the Great Khan. This may also have been favoured by the policy of the Venetians, who were on good terms with the Mongols in the Crimea (Bury's note to Gibbon, vii. 15, n. 42).

Johannes e Plano Carpino was present at the enthronement of the new khan, and states that he was well-affected to Christianity and had many Christians in his service. There was a Christian chapel before his tent (Raynaldus, *Ann. Eccl.*, sub anno 1245, xiii. 595).

7. The mission of Friar Ascelinus (1247).—The hostility of the other leaders is illustrated by the mission of Friar Ascelinus to the Tatars of Persia. He had an audience with the Khan Bajotino in the Tatar camp. After suffering much ignominy, he returned with letters from Bajotino to the pope, Innocent IV. (*ib.* xiii. 642).

8. The Tatar embassy to Louis IX. (1248).—The Tatar embassy to Louis IX. at Cyprus throws much light on the position of the Great Khan and his relations to Prester John and the Christians of Central Asia. The embassy was sent by a Persian khan named Ercalthay, who had been for many years a Christian, but was not of the royal blood. David, the chief ambassador, had been baptized the year before. The Great Khan of Tartary had been baptized with his eighteen sons and many of his magnates three years before (c. 1245). The king asked many questions of the ambassadors. He was told that Ercalthay was anxious to join hands with the Christians against the enemies of the Cross, and that Bacho, the khan who had insulted the ambassadors of Innocent IV. in Persia, was a pagan and had Saracen councillors. They also reported that Quiothay, the mother of the present khan, was a daughter of Prester John (G. de Nangiac, *Gesta S. Ludovici*, ap. A. Duchesne, *Hist. Francorum Scriptores*, Paris, 1636-49, v. 349, 354).

9. The mission of Rubruquis (1253).—In the narrative of Rubruquis the title of 'King John' is assigned to Kushluk, king of the Naimans, who had married the daughter of the last lineal descendant of the Gur Khans. Kushluk was son of a powerful king of the Naimans, whose name, Ta-Yang-Khan, is precisely 'Great King John' in Chinese. It is evident that Rubruquis supposed this king of the Naimans to be the original of this widely spread legend (Yule, *EB*,¹¹ xxii. 306^a). Bury says that a new edition of Rubruquis is wanted. Gibbon (vii. 6) refers to the first volume of Hakluyt. Yule gives, among the chief points in the narrative of Rubruquis, the relation between the rulers of the Naimans and the Keraites khans and the habit of exaggeration common among the Nestorian writers.

10. The journey of Marco Polo (c. 1270).—The travels of Marco Polo brought him from Yarkand past Cherchen and Lob Nor to Tenduc. This is placed near the point where the Great Wall crosses the north-east portion of the great bend of the Hwangho. To the north and north-west lay the country of the Keraites with their old capital of Karakorum on the north edge of the desert of Gobi, on the bank of the upper reach of the Orkhon river. It is here that he speaks of Prester John, whose kingdom, though still ruled by a

member of the same family, is tributary to the Great Khan of Tartary (*Travels*, i. 64, *ap. Pagi*, iv. 649).

11. The mission of Johannes e Monte Corvino (1292-1305).—Kujuk, the son of Ogotai, died in 1248. He was succeeded by his cousins Mangu and Khubilag, the grandsons of Jenghiz Khan. On the death of Mangu in 1257 Khubilag became the Great Khan, and on the conquest of N. China removed the royal residence from Karakorum to Peking (Cambaluc). It was here that Marco Polo met him, and it was at his court that the Minorite friar Johannes e Monte Corvino established his mission-centre in the Far East. The letter written to Clement v. in 1305 is valuable testimony to the successors of Prester John and to the realm which was still ruled by them as tributary to the Great Khan (Raynaldus, sub anno 1305, xv. no. 19f.).

12. The evidence from 1145 to 1305.—The evidence for Prester John from Asiatic sources is continuous for 160 years, and the report of the last writer points to the old capital of Karakorum as being the seat in the early 14th cent. of the tributary kings of the dynasty. It is difficult, therefore, in the face of this evidence, to follow Yule in his statement:

‘However vague may have been the ideas of Pope Alexander III. respecting the geographical position of the potentate whom he addressed from Venice in 1177, the only real person to whom the letter can have been sent was the king of Abyssinia. Let it be observed that the “honourable persons of the monarch’s kingdom” whom the leech Philip had met with in the East must have been the representatives of some real power, and not of a phantom. It must have been a real king who professed to desire reconciliation with the Catholic Church and the assignation of a church at Rome and of an altar at Jerusalem’ (*EBr*¹¹ xxii. 306b).

The Prester John of the 12th and 13th centuries was not the king of Abyssinia, but the name by which the Keraite khans were known in the West. It would seem to have shrunk from the wide rule of the Gur Khans in 12th cent. to the tributary rule of the khan of Karakorum in the early 14th century.

13. The Tatar mission from 1308 to 1370.—(1) The work of Friar Johannes was recognized by Clement v. in 1307 by the constitution of the archiepiscopal see of Cambaluc (Raynaldus, sub anno 1307, no. 29).

(2) In 1318 John XXII. took a further step in the organization of the Church among the Tatars by the founding of the archbishopric of Sultania for the empire of the Ilkhans of Persia. Sultania was situated south-west of Resht on the Caspian Sea, and north-west of Kazvin. Friar Francus of Perugia, a Dominican, was appointed to the see with six suffragans. His jurisdiction was to extend over Chagdo and India and Ethiopia (*ib.* sub anno 1318, no. 4). The juxtaposition of Ethiopia and India under the authority of the archbishop of Sultania is of importance in the development of the story of Prester John. It is to the work of this mission-centre that the transposition of the story from India to Ethiopia may be traceable.

(3) Raynaldus states that it was the policy of the West to favour the frequent exchange of letters and embassies to the Tatar khans as a check on the encroachments of the Saracens (sub anno 1322, no. 41).

(4) In 1326 Andreas de Perugia sends a report of his work in the Far East to the Father Guardian of Perugia. He states that, after many dangers by land and by sea, he reached Cambaluc in 1308, and consecrated John as archbishop. He stayed there for five years. Gerard was appointed bishop of Zaitun in Fukien. He was succeeded by Peregrinus, on whose death in 1322 he himself became bishop of Zaitun. Four of the brothers were martyred in India by the Saracens.

(5) Yule gives a further reference to Prester John about the same year (1326):

‘Friar Odoric, about 1326, visited the country still ruled by the prince whom he calls Prester John; “but,” he says, “as regards him, not one-hundredth part is true that is told of him”’ (*EBr*¹¹ xxii. 306a).

(6) Johannes e Monte Corvino died in 1333. John XX. appointed as his successor another Minorite friar, Nicolaus. He wrote letters not only to the Great Khan but also to Secede Chigista, king of Corum, who may be a descendant of the Georgius referred to in 1305 (Raynaldus, sub anno 1333, no. 35).

(7) The last mission was in 1370. Urban v. in this year appointed the Minorite friar Guillelmus to the archiepiscopal see of Cambaluc. There are letters to the Great Khan and the people of Tartary (*ib.* sub anno 1370, no. 91).

The curtain then falls. The great conqueror Timur ascended the throne of Zagatai, and was crowned at Balkh in April 1369 (Gibbon vii. 46). Bury adds in a note to Gibbon:

‘As the Mongol power in China was overthrown about the same time by the revolution which set the Ming dynasty on the throne (A.D. 1370), this period marks a general decline of Mongol influence in Asia’ (*ib.* vii. 68, n. 74).

The conquests of Timur meant the overthrow of Christianity and the triumph of Islām in Central Asia.

II. AFRICA.—In the 15th cent. after the overthrow of the Christian missions in Asia by the conquest of Timur and the consequent difficulties of the land-routes to India, it seems that the Indian traditions of Prester John filtered into Europe through Aden and the African coasts of the Red Sea. India, in the popular imagination, lay behind and beyond Egypt and Ethiopia. But there is evidence also in the 14th cent. that the same tendency was taking place perhaps, as has been suggested (I. 13 (2)), through the grouping of India and Ethiopia under the jurisdiction of the archbishop of Sultania.

1. The 14th cent. evidence.—Yule definitely states that the assertion of Ludolf in his *History of the Ethiopians*, that the ascription of the title Prester John to the Christian kings of Abyssinia was an invention of the Portuguese, is a mistake. He brings the following evidence to support his statement:

(1) The earliest witness that Yule gives is Friar Jordanus.

‘Friar Jordanus “Catalani,” who returned from the East before 1328, speaks of the emperor of the Ethiopians “quem vos vocatis Prestre Johan”’ (*EBr*¹¹ xxii. 306).

Is this an example of the original source of confusion? In 1330 John XXII. wrote to the Nascarines of S. India, commending to them the Dominican friar Jordanus, whom he had consecrated bishop of Columbo, and the Dominican and Minorite friars who were associated with him in the mission. In a letter written the same year to John of Core, archbishop-elect of Sultania, the bishop of Columbo is referred to as one of his suffragans (Raynaldus, sub anno 1331, nos. 51, 57).

(2) Yule gives two witnesses c. 1350.

John Marignoli, apostolic legate in Asia, speaks of Ethiopia where the negroes are, and which is called the land of Prester John. And a Spanish work of the same date by an anonymous Franciscan states that the emperor ‘Abdeselib, which means “servant of the Cross,” is a protector of Preste Juan, who is the patriarch of Nubia and Ethiopia, and is lord of many great lands, and many cities of Christians’ (*Libro del conocimiento de todos reynos*, Madrid, 1877).

(3) A fourth witness is Simone Sigoli.

He visited Cairo in 1384, and speaks in his *Viaggio al Monte Sinai* of ‘Presto Giovanni’ as a monarch dwelling in India, but it is the India which is continuous with the dominions of the sultan of Egypt and whose lord is master of the Nile, to close or open its discharge upon Egypt (*EBr*¹¹ xxii. 306a).

It is on this evidence that Yule states that the title ‘Prester John’ had been used long before the name had ceased to be attached to the descendants

of the kings of the Keraites. The juxtaposition of India and Ethiopia under the archbishop of Sultania and the filtering in of Asiatic tradition through Aden at the close of the 14th cent. appear an adequate explanation of the difficulty.

2. The Ethiopian embassies of 1441.—Eugenius IV. in the previous year had sent the Minorite friar Albert on a mission to reconcile the Jacobite Christians of Ethiopia. In 1441 Andrew, abbot of St. Antony, and Peter the Deacon were sent to Italy as ambassadors to the pope on behalf of Constantine, king of the Ethiopians. They were received at the Council of Florence, and a 'form of union' was agreed upon. They then went to Rome with a letter of introduction to the canons and chapter of St. Peter's to allow them to see the Veronica. In this letter the title of Prester John is given to the emperor (Raynaldus, sub anno 1441, no. 2). In the same year another embassy from the Ethiopians was conveyed to Italy by Angelus Maurocenus. On their return Eugenius IV. gave to them a letter of commendation in which he again used the title (*ib.*).

On the occasion of these missions an oration was made before the council by the abbot Nicodemus, who presided over the Ethiopians residing in Jerusalem. In his address he alludes to the remoteness of their country as almost beyond belief, and distinctly asserts that their separation from Rome is due not only to this, but to the negligence of the popes for 800 years (*ib.* no. 3).

3. The map of Fra Mauro (1459).—Yule states:

'From the 14th century onwards Prester John had found his seat in Abyssinia. It is there that Fra Mauro's great map (1459) presents a fine city with the rubric, "Qui il Preste Janni fa residentia principal"' (*EBR*¹¹ xxii. 306b).

4. The Roman diary of Jacobus Volterrannus (sub anno 1481).—Raynaldus refers to a mission to the Roman court under Sixtus IV. in 1481, on the authority of the journal of Volterrannus. He speaks of it as a mission from Ethiopia, but says that the writer gives to Prester John the title of 'King of India' (Raynaldus, xix., sub anno 1481, no. 40 f.). Muratori publishes the *Diarium* from a MS in the library of Ferrara. There is nothing in the MS to indicate the country represented by the mission, no mention either of India or of Ethiopia. There is, however, a lacuna in the MS which may betoken some doubt in the writer. The brief record shows the interest aroused in Rome by the strange character of the mission (*Jacobi Volterrani Diarium Romanum*, sub anno 1481, ap. L. A. Muratori, *Rer. Ital. Script.*, Milan, 1723-51, xxiii. 156).

5. The quest of Prester John (1486).—John II. of Portugal made many attempts to get into communication with Prester John, hoping to form an alliance with him. Among other missions is that of 1486 entrusted to Alphonsus Paiua and Johannes Petreius. They travelled as merchants and at last reached Aden. There they heard of a Christian king in Ethiopia, but had doubts as to his identity, because they had been instructed that Prester John was a Christian king of India. It is clear from this doubt that the Asiatic tradition of Prester John still maintained its hold among the more educated circles in the West. To solve this doubt they thought it best to separate. Petreius sailed to India and left Paiua to await him in Egypt. The quest of Petreius was successful. He found among the Nestorians of S. India the tradition of the Prester John whose power had been overthrown by the Mongols (Raynaldus, sub anno 1486, no. 87).

6. Prester John of Ethiopia (c. 1500).—The quest of 1486 proves that in 1486 positive and negative evidence alike pointed to Prester John of Asia. The two travellers asserted that the king of

Ethiopia did not correspond with the Prester John of history in dominion, in name, or in priestly office, and Petreius in India found the tradition of the Prester John whose power had ended with the Mongol conquests. But the 15th cent. in Spain and Portugal was an age of romance, and the fable of popular imagination triumphed over the facts discovered by the travellers of 1486. In Portuguese writings of the last years of the 15th cent. and the opening years of the 16th cent. the history of Ethiopia and Abyssinia is the story of Prester John. He is synonymous with the emperor of Ethiopia.

7. Christopher Marlowe (1587).—In the earliest English drama when Prester John takes his place in English literature he is Prester John of Africa, not of Asia. In the second part of Marlowe's *Tamburlaine the Great*, Techelles, king of Fez, relating his conquests to Tamburlaine, says:

'And I have marched along the river Nile
To Machda, where the mighty Christian priest,
Called John the Great, sits in a milk-white robe,
Whose triple mitre I did take by force,
And made him swear obedience to my crown'
(pt. ii. act i. sc. 3).

The drier facts of history have to stoop at times to the romantic claim of literature. Marlowe has given his authority to the African story, and the Prester John of literature still lives as an African priest-king in John Buchan's romance of *Prester John* (London, 1910).

LITERATURE.—E. Gibbon, *Hist. of the Decline and Fall of the Roman Empire*, ed. J. B. Bury², London, 1900-04, v. 149, vii. 2, 15; C. Baronius, *Annales Ecclesiastici*, 12 vols., Rome, 1588-1607; O. Raynaldus, *Annales Ecclesiastici*, 9 vols., do. 1646-77; A. Pagi, *Critica Historico-Chronologica*, in Baronius; H. Yule, *Cathay and the Way Thither*, 2 vols., London, 1866, and in *EBR*¹¹; F. P. d'Avezac, *Recueil de voyages et de mémoires publiés par la Soc. de Géogr.* iv. [Paris, 1839] 547-564; H. Howorth, *Hist. of the Mongols*, London, 1876-88, i.

THOMAS BARNS.

PRIDE.—As a self-regarding passion or sentiment of self-love, pride is associated in popular speech with several related qualities of the selfish disposition such as arrogance, conceit, vanity, and egotism. Conceit or self-conceit is an exaggerated form of self-satisfaction; arrogance is an attitude of presumption manifested in temper and act and calculated to arouse resentment or disgust in others; vanity, as a showing off of one's supposed superiority, seeks the praise or good opinion of the world; and egotism is a habit of self-consciousness or self-regard which affects mind, manner, and speech, as in the case of the hero of George Meredith's *Egoist*, while the same writer's portrait of Alvan in the *Tragic Comedians* is an exposure of vanity. On the other hand, in pride there is frequently no idea of a comparison or competition with the rest of the world. Pride is a habit of self-isolation or conscious independence, a perversity of will which is indifferent to the opinions and favours of others. It repudiates all idea of obligation. Cf. the hero of Scott's *Idea of Lammermoor* as a typical example.

'Pride, unlike vanity, does not involve belief in one's own superiority to others. The most deeply rooted pride may be connected merely with the conception of independence or equality and may be manifested mainly by a refusal to accept favours or to be under an obligation' (see *DP&P* ii. 339, s.v. 'Pride').

The distinction between arrogance and pride may be illustrated by the phrase, 'toujours arrogant, jamais fier,' which has been applied to the demeanour of the Prussian officers in defeat (see *Times Literary Supplement*, no. 740 [23rd March, 1916], p. 135, quoting G. Lenôtre, *Prussiens d'hier et de toujours*, Paris, 1916).

Again, pride as a self-regarding sentiment is to be differentiated (cf. W. McDougall, *Introd. to Social Psychology*, p. 191 f.) from 'self-respect'

by the fact that the latter is susceptible to the pressure of outside opinion or authority. Pride, on the other hand, is without this negative self-feeling, and, as a law unto itself, lives on the deference and admiration of others, while at the same time it is indifferent to moral praise or blame. One of its worst features is indifference to the sufferings of others (cf. J. S. Mill, *Essay on Liberty*, London, 1859, ch. v., who speaks of 'the pride which derives satisfaction from the abasement of others'). It is self-love opposed to due respect for humanity and based on a fixed sentiment of satisfaction with one's qualities, actions, views, powers, social status, and reputation. It is capable of elation when the verdict of others coincides with its own preconception and of resentment when this is otherwise. But it is of the essence of pride to be moved by scorn or ridicule rather than by moral censure.

'Pride desires from others an honour it refuses to them and shows, therefore, a spirit which is really abject and mean' (E. Caird, *The Critical Philosophy of Kant*, ii, 391).

There is a pride of race, a pride of birth, a pride of position; a pride of goodness, a pride of evil; a pride of ignorance, a pride of learning; a pride of eccentricity, a pride of conventionality, and so forth. The forms of self-satisfaction are innumerable. On the one hand, we have Sir Percival in Tennyson's *Idylls of the King* (see *The Holy Grail*¹) exhibiting the pride of monastic repression and holiness, to which the highest vision is denied; and at the other extreme in R. L. Stevenson's *Master of Ballantrae*, the hero personifying the pride of wickedness as a man who 'entirely loved all the parts and properties of himself: a sort of imbecility which almost necessarily attends on wickedness' (ch. ix.).

It may be useful to classify chronologically the treatment of pride and to discuss its place in ethical thought.

1. In pre-Christian ethics. — In Aristotle's famous characterization of the high-minded man (*μεγαλόψυχος*) in the *Nic. Ethics* (iv. 3, ed. Grant) we have a species of pride described as inseparable from this type of excellence. The high-minded man is not only worthy of great things, but holds himself to be worthy of them. His estimate of his own merits is independent of the verdict of others. If he holds himself to be worthy of great things when actually unworthy of them, he is vain (*χαλκός*), while he who underestimates his own worth is mean-spirited. High-mindedness, then, is a mean between vanity and want of spirit. It is, in fact, a lofty type of pride which is its own star. It is without the sense of duty or moral obligation. Its motive is honour (*τιμή*) and it owes nothing to the instinctive sense of right. External honour is the best thing that the world can give to the high-minded man. He is glad to confer a benefit, but ashamed to receive one. If he does receive a benefit, he will wipe it out by doing a greater; he will remember those whom he has benefited, but not those by whom he has been benefited; he will be in want of no one; he will serve any readily; he will be proud (*μέγας*) to the great and prosperous, and lenient towards the lowly. He will not aim at the common objects of ambition; only for great honour or deeds will he strive; he will be open in friendship and hatred, disdaining timid concealment, contemptuously straightforward, really truthful, but reserved and ironical towards the common people. Indifferent to the praise and censure of others, he will bear no malice and be no gossip. On the whole, vanity is better than mean-spiritedness, which is to be condemned for its lack of energy. Aristotle men-

¹ Cf. the lines beginning:

'O son, thou hast not true humility,
The highest virtue, mother of them all.'

tions one thing that will provoke the resentment of the *μεγαλόψυχος*, and that is *ὕβρις*—calculated, if irrational, insolence. This is a form of pride much less subtle than the peculiar self-consciousness described by Aristotle in the above picture and more familiar to the Greek mind.

'Insolence or *ὕβρις* . . . has its root in want of reverence and want of self-knowledge . . . [and] is the expression of a self-centred will recognising no power outside itself, and knowing no law but its own impulses. . . . This insolence in the Greek tragedy is the deepest source of moral evil. . . . It is opposed to both *αἰδώς* and *σωφροσύνη*' (S. H. Butcher, *Some Aspects of the Greek Genius*, London, 1904, p. 109).

In the *Antigone* of Sophocles the tragedy centres in the *ὕβρις* of Creon, the author of a cruel and stern decree which outrages the laws of humanity and results in the sacrifice of Antigone, who defies the decree at the bidding of sisterly love; while in the *Prometheus Vinculus* of Æschylus it is the *ὕβρις* of revolt or self-assertion of the human intellect against the supreme deity.

Theophrastus of Eresus (374–287 B.C.), the successor of Aristotle as the head of the Lyceum, gives us in his *Characters* a picture of the *ὑπερήφανος*, or arrogant man, defining arrogance as 'a certain scorn for all the world beside oneself.'¹ In the Stoic and Epicurean ethics there appears to be no distinctive treatment of the passion of pride as such. But the moral independence of the Stoic sage, his *αὐτάρκεια* (see art. CONTENTMENT) and his equality with Zeus in all but non-essentials (cf. Seneca, *de Prov.* 1) indirectly illustrate the defects of the self-regarding temperament. On the other hand, the tendency of Epicurean ethics favoured the cultivation of the social virtues and helped to tone down the exclusiveness of ancient manners by its emphasis on friendliness, beneficence, and gratitude.

In the OT, especially in the Wisdom literature, we find frequent condemnations of pride in the sense of self-exaltation as manifested by the wicked or foolish (cf. Pr 11² 13¹⁰ 14⁸ 16¹⁸ 29³), while the prophets inveigh against national pride—the presumptuous and scornful sense of power (cf. Is 21^{1, 12} 16⁶, Jer 13⁹ 48²⁰, Zec 9⁸ 10¹¹), though the context occasionally suggests mere 'excellency' or 'greatness' without the implications of moral defect. In the later Wisdom literature the warning against pride recurs (see esp. the essay in Sir 10^{6–28}). Perhaps, however, the evil of pride is most clearly revealed in the character of outstanding individuals like Saul, Absalom, Joab, Rabshakeh, and others. As J. H. Newman says,

'[Saul's] temptation and his fall consisted in a certain perverseness of mind, founded on some obscure feelings of self-importance, very commonly observable in human nature, and sometimes called pride' (*Oxford University Sermons*, new ed., London, 1890, serm. 'Witfulness, the Sin of Saul,' p. 168).

2. In Christian ethics, early and mediæval.—The Christian ethic shows a great advance on the highest Greek thought in its valuation of such virtues as humility, meekness, and reasonableness. The NT conception of love in association with the doctrine of the divine Fatherhood and in its supreme revelation of the humanity of Christ gave a new significance to the moral defectiveness of pride. In 1 Co 13⁴ love is stated to be free from both arrogance and self-conceit. In Ro 1³⁰ we find *ἀλαζονεία*, or proud speech, and *ὕπερηφανία*, vain-glorious disposition, classed among the sins of paganism; but it is in the human character of Jesus as one who did 'not strive nor cry,' as 'meek and lowly of heart,' that we find a fresh and unique criterion of the sin of pride. Christianity is the apotheosis of self-surrender; and the Christian character cultivates an outlook upon the world entirely free from 'the pride of life' (1 Jn 2¹⁶) or

¹ La Bruyère renders *ὑπερήφανος* by 'un homme fier superbe,' entitling the section 'De l'Orgueil'; cf. *Les Caractères ou les mœurs de ce siècle*, Paris, 1688.

the valuation of earthly possessions which disregards their transiency and insufficiency. Jesus is no respecter of persons, condemns the Jewish self-righteousness (cf. the parable of the Pharisee and the Publican) and exclusiveness, has no sympathy with the national prejudice against Samaritans, and in His conception of the brotherhood of mankind invests the claims and rights of one's neighbour with a new dignity. The soul of the individual has an intrinsic and eternal worth. Hence His emphasis on the laws of mercy and forgiveness, which are the foundation of His ethical teaching, His inculcation of *érētheia*, or a gentle reasonableness, His eulogy of 'the poor in spirit' and of the voluntary surrender of power, His proclamation of self-repudiation as the condition of moral greatness, His warnings against self-assertion and self-advertisement. Pride is obviously a contradiction of the Christian ideal of unselfishness and stands condemned by the general spirit of the Christian ethic as well as by its positive precepts.

So deeply had these aspects of the teaching of Christ and His followers sunk into the consciousness of Christendom that Dante gives pride the first place in his seven sins. Earlier than Dante, Augustine had defined the unpardonable sin as a state of mind consisting of 'a desperate and impious obstination in sin, with a proud refusal to humble oneself before God' (*Epistole ad Romanos Inchoata Expositio*, § 23, quoted in W. Montgomery, *St. Augustine*, London, 1914, p. 198). Moreover, he had linked *superbia* with *voluptas* and *curiositas* in his analysis of the causes of sin (*Conf.* x. 36). But Dante derived his 'moral topography' from the *Summa Totius Theologiæ* of Thomas Aquinas (see *Summa*, II. ii. qu. 162, artt. 5-8), who regarded pride as a mortal sin and, further, as the first and most serious of all the sins. It is the first sin because every kind of sin springs from it, and the most serious because it involves non-subjection to God. It is most difficult to avoid because it takes occasion from our very virtues, so that some people are proud of their very humility. In art. 7 he asserts:

'Aversio a Deo quæ formaliter complet rationem peccati, pertinet ad superbiam per se, ad alia autem peccata ex consequenti.'

Dante classes pride with envy and anger as sins of the spirit, and again follows his master in tracing it to that disordered love from which all moral evil flows.¹ In the first terrace (*Purg.* x.-xii.) Dante meets with those who represent respectively the pride of birth, the pride of intellect, and the pride of dominion. They are depicted as being pressed down by terrible weights and reciting a paraphrase of the Lord's Prayer for themselves and those whom they have left behind on earth. Others follow, drawn from mythology and history, sacred and secular. The poet describes them as sick in mental vision, putting trust in backward steps, and, in spite of their soaring thoughts, but insects and worms. Celestial voices chant, 'Beati pauperes spiritu,' the sin of pride is expiated, and Dante passes on his upward way.

3. In modern ethics.—Pride in its many phases is naturally a theme for moral reflexion, and it finds a place in the discourses of the essayists from Montaigne onwards. Montaigne (see *Essays*, tr. J. Florio, London, 1603, bk. ii. 17, bk. iii. 9) has disquisitions on 'Presumption' and 'Vanity,' while Bacon treats of 'Vain-glory' in his 54th essay. The English translators or imitators of Theophrastus, such as Joseph Hall (*Characters of Vertues and Vices*, London, 1608), Thomas Overbury (*Characters or Witty Descriptions of the Properties of Sundry Persons*, do. 1614), and John Earle

(*Microcosmographie*, do. 1628, 1633), with the exception of the last-named, are not wholly successful as analysts of human nature.

Overbury, e.g., 'in his chapter on *A Proud Man* has confused the characteristics of Haughtiness and Vanity which could hardly exist in such a union as he depicts' (see preface to Theophrastus, *Characters*, tr. R. C. Jebb, new ed. by J. E. Sandys).

Of the English ethical philosophers, Hobbes is the first to give a special moral value to pride. He regards it as an offence against 'the laws of Nature,' which 'are immutable and eternal' (*Leviathan*, xv.). He repeats this in a subsequent chapter (xvii.):

'The laws of Nature (as Justice, Equity, Modesty, Mercy and (in summe) doing to others as wee would be done to, of themselves, without the Terror of some Power to cause them to be observed, are contrary to our Natural Passions, that carry us to Partiality, Pride, Revenge and the like.'

But Hobbes's 'psychological egoism' was rejected by Shaftesbury, who sought to establish a harmony or balance of the various impulses or affections as conducive alike to private and social good. In his *Inquiry concerning Virtue or Merit* he states:

'If there be found in any creature a more than ordinary self-concernment or regard to private good, which is inconsistent with the interest of the species or public, this must in every respect be esteemed an ill and vicious appetite, and this is what we commonly call selfishness and disapprove so much in whatever creature we happen to discover it' (*Characteristics*, 2 vols., ed. J. M. Robertson, London, 1900, i. 248).

Pride would naturally fall into his class of 'self-affections' or 'self-passions' which, while aiming at private good, become harmful to society at the point where they are harmful to the individual. Butler follows Shaftesbury in recognizing the general good as the aim of conduct, but clearly regards 'reasonable self-love and conscience' as the chief regulative principles of human nature. Where self-love and conscience are in conflict, the obligation of duty has to supersede that of self-interest. Pride therefore, as a natural or deliberate form of self-love, falls under the condemnation of conscience as being opposed to the happiness of society. But there is no detailed analysis of pride in these writers comparable with the study of it in David Hume's *Treatise of Human Nature* (ed. L. A. Selby-Bigge, Oxford, 1896; see bk. ii., 'Of the Passions,' pt. i. § ii. p. 277 f.). He calls pride an 'indirect' passion—i.e., it proceeds from the same principles as the direct passions (such as desire, aversion, grief, joy, fear, etc.), but by conjunction of other qualities. The indirect passions have the same object, namely self, which is not their cause. For the cause we have to distinguish between quality and subject, the latter being something related to us; e.g., in a beautiful house beauty is the quality and house the subject which must be our property or contrivance. In such passions as pride in country, in friends, in family, in riches, etc., the relations of contiguity and causation are required. Pride is a pleasant feeling; consequently it is derived from the double relation of impressions and ideas. Hume further suggests that the transition from pride to love is not so easy as that from love to pride. He finds in contempt or scorn (see art. CONTEMPT) so strong a tincture of pride that hardly any other passion is discernible; whereas in esteem or respect love and humility are the prominent ingredients. Finally, he asserts that nothing invigorates and exalts the mind equally with pride and vanity. It is to be noted that the psychological analysis of the affections had also engaged the attention of Hume's predecessor, Francis Hutcheson, who had divided the affections into the 'calm' (or extensive) and the 'turbulent' (or narrow). The Scottish school of philosophy represented by Dugald Stewart and Thomas Brown continued the study. The latter, in his *Lectures on the Philosophy of the Human Mind*, arranged the emotions under the heads of immediate, retrospective, and prospective. The first he subdivided into those passions which do

¹ See Aquinas, *loc. cit.* art. 5: 'Superbia semper quidem contrariatur dilectioni divinæ'; and cf. Dante, *Purg.* xvii. 112-118.

not involve moral affections, such as wonder, melancholy, etc., and those which are distinctive of virtue and vice, such as love and hate, pride and humility. It is clear from a study of the history of ethical thought that the individual treatment of the affections is coloured by the philosopher's ethical standpoint, whether utilitarian or intuitionist. The hedonistic ethic of Hume, *e.g.*, is in violent contrast with the Kantian theory that the ends at which duty has to aim exclude all consideration of personal happiness—a theory which has powerfully influenced all subsequent schools of thought, Hegelian, neo-Hegelian, and Pragmatist alike. Kant places all inclinations and desires under the single term 'self-regard,' distinguishing between *philautia*, excessive fondness for oneself, and *arrogantia*, satisfaction with oneself (see *DPHP*, *s.v.* 'Pride').

It remains to add that in most of the great modern dramas of the soul pride has a prominent place as a passion destructive of the moral order. Both the Satan of Milton's *Paradise Lost* and the Mephistopheles of Goethe's *Faust* are incarnations under different phases of the pride of the evil will, the former taking the form of an obstinate hostility to good which will not brook defeat, the latter that of a conscious versatility in evil suggestion which is utterly scornful of the weakness of its instruments. If we pass from dramatic creation to actual history, we shall be reminded of the popular estimate of the character of Napoleon as one who was the embodiment *par excellence* in modern times of Dante's pride of dominion. Nor can it be denied that, as the result of scientific

progress and our increasing control of the forces of nature, a pride of efficiency has developed in the civilized nations. Pre-eminently is this the case with Germany, whose consciousness of power, fostered by the philosophies of Nietzsche and Treitschke on the intellectual side and on the material side by an era of unexampled prosperity, is at the root of the militarism which plunged Europe into war in 1914. Scientific efficiency need not be divorced from ethics; but the progress of the war has shown that civilization is no safeguard against a recrudescence of barbarism when pride of power dominates the ideals of a nation. To sum up, pride, whether in an individual or in a nation, is an anti-social passion which disregards the rights of humanity.

LITERATURE.—There is a useful art. *s.v.* in the *DPHP* (see also bibliography under 'Emotion and Feeling,' vol. iii. pt. ii. p. 1040 ff.), and reference may be made to the *DAC* for an article on pride as treated in early Christian literature. The following works, some of which have been quoted in the course of the art., may be consulted: A. Grant, *The Ethics of Aristotle*, 2 vols., London, 1886; Theophrastus, *Characters*, tr. R. C. Jebb, London, 1870, new ed. by J. E. Sandys, do. 1909; Thomas Aquinas, *Summa Totius Theologiae*; E. G. Gardner, *Dante*, London, 1903; W. Boyd Carpenter, *The Spiritual Message of Dante*, do. 1914; J. Butler, *Fifteen Sermons Preached at the Rolls Chapel* (esp. x. 'Upon Self-Deceit'), do. 1726; Lord Shaftesbury, *Inquiry concerning Virtue or Merit*, do. 1711; F. Hutcheson, *An Essay on the Nature and Conduct of the Passions and Affections*, do. 1728; D. Hume, *A Treatise of Human Nature*, 3 vols., do. 1739-40; D. Stewart, *The Philosophy of the Active and Moral Powers of Man*, 2 vols., Edinburgh, 1828; T. Brown, *Lectures on the Philosophy of the Human Mind*, 4 vols., do. 1820; I. Kant, *Kritik der praktischen Vernunft*, Riga, 1788, tr. T. K. Abbott, London, 1879; E. Caird, *The Critical Philosophy of Kant*, Glasgow, 1889, esp. bk. ii. ch. vii. p. 390 f.; W. McDougall, *Introd. to Social Psychology*, London, 1912.

PRIEST, PRIESTHOOD (Primitive).—Priesthood among uncivilized races includes not only the priests proper, who conduct the religious rites and communicate with the gods, but also magicians, sorcerers, etc., who practise magic, *i.e.* utilize impersonal supernatural forces acting in accordance with certain fixed rules. 'Priests' or 'magicians' of some kind or other appear among all peoples of whom we have adequate knowledge, and also among those of a very rude type (Australians, Bushmen, Hottentots, Andaman Islanders, Veddas, Fuegians, etc.). The origin of priesthood therefore goes back to a very early stage of social evolution; the first indications of a priest's or sorcerer's office can be traced back almost to the very origin of religious and magical practices. When comparing the origin of priesthood with that of social ranks generally, we become aware that priests and sorcerers everywhere differ from the mass of the population at an earlier period of culture than any of the lay classes: priests and sorcerers are, as a rule, found among all peoples, whereas among a number of peoples at a low stage of development no distinction whatever of social ranks exists.

1. The need of mediators with the supernatural world.—Priesthood, broadly speaking, owes its origin to the universal need felt by mankind of superhuman assistance in the struggle of life.

Among all peoples the belief exists that, under certain circumstances, advantages of some kind or other are obtainable from the supernatural world. Man endeavours to influence by propitiation the powers which govern the universe, or to control the course of events by magical means. Not all the benefits supposed to be obtainable in either of these ways consist of positive blessings; on the contrary, they may in the first place imply the prevention of an evil. The desire for guidance in these matters has given rise to the various kinds of religious and magical practitioners among savage peoples who are to be considered as pioneers of an organized priesthood. But even among civilized peoples surviving traces of the same need characterize the authority of the priesthood. In spite of the universal belief in the existence of more or less infallible means of influencing fortune, certain persons are, as a rule, supposed to possess greater knowledge and power than others to secure the proper results. These appear to us in the form of priests and magicians.

In many cases savages think themselves unable to communicate directly with the gods. Acknowledging their inferiority in this respect, they regard the priests as the only mediators between them and the supreme powers. The priests are their only protectors; without them the ignorant population would be abandoned to the misfortunes

arising from the anger of the gods or from witchcraft (instances from the Kafirs, some American Indians, Eskimos).

The principal duty of the priests is to administer, or give advice as to, the worship of the gods. As all gods do not stand in the same relation to men, the assistance of the priests must often be called in to point out the special deities to whom the people should offer their sacrifices. Very generally the gods are believed to bear ill-will to men, and therefore it is also the duty of the priests to give directions as to the proper offerings. It is all the more necessary to know how to please the gods, as they are among certain peoples held to be very particular about the form of prayer and sacrifice (tribes in E. Russia and Siberia, Lapps, natives of Nias).

In short, the need of priests appears in the most various respects: they are required to influence the wind and rain, to cause good growth, to ensure success in hunting and fishing, to cure illness, to foretell the future, to work harm upon enemies, etc.

2. The first types of priests.—The worship of deified men is confined, as a rule, to the kindred group, and in the first place to the separate families. Owing to the exclusive character of ancestral gods in this respect, a regular priesthood, in the sense of universally acknowledged mediators with the gods, hardly occurs on the basis of mere family-worship. The authority of that member of the family who conducts the worship for his nearest relatives does not extend beyond the group worshipping the god to whom he is related, viz. the family itself.

Deification of ancestors, however, is not confined to families. Whole tribes also frequently worship the spirits of departed men, but in such cases the ancestral gods tend, in a way, to amalgamate with other classes of generally worshipped deities.

Whilst ancestor-worship originally tends to centralize the cult within families, or kindred groups, no such tendency is manifested by worship of gods in nature. Depending on the more or less general occurrence of the phenomena which give rise to the belief in gods of nature, such gods are likely to be worshipped within larger or smaller divisions of mankind, with little or no precedence given to certain kindred groups. Therefore the origin of the priesthood connected with the gods of nature is not influenced by any regard to family ties. These two forms of religion, however, are intermingled to a very great extent among most peoples.

In the earliest history of cult no proper priesthood existed. Although various kinds of priestly practitioners belong to a very early period of religious evolution, all conclusions point to the rule that originally everybody invoked the gods each for himself. Cult therefore existed in some form or other before there were any professional men entrusted with the duty of conducting the different religious observances. Among some peoples every individual still performs his religious or magical rites for himself without the assistance of professional priests (certain Papuans, Melanesians, Australians, and many more).

Among the people who in the early ages attempted to interpret the wishes of the gods and practise magical art the more expert who managed to gain the confidence of their fellow-tribesmen seem, in the course of evolution, to have attained a certain pre-eminence. Some men, more fortunate and more cunning in their predictions, acquired a local celebrity in the art; such men would soon be consulted by their neighbours, pupils or apprentices would be attached to them, and thus would be gradually formed a special class, which would

assume the functions of intermediaries between the people and the gods.

Within the separate families, in which, as has been pointed out, ancestral gods are particularly worshipped, one member is generally invested with the duty of sacrificing for the whole family. As a rule, the priestly functions are put into the hands of the paterfamilias, and the reason seems to be that he is the oldest and most experienced male member of the family, who is generally believed to stand in closer communication with the ancestors than the other members (tribes in India, Africa, and Polynesia). Sometimes the oldest female member of the family may also officiate as priest (Serers in W. Africa). Among the Barais in India the deities are worshipped only by that member of the family who is under the influence of the special divinity—a fact shown by his getting into a state of ecstasy and uttering oracles. Among some lower Dravidian tribes the family-worship is conducted either by the head of the household or by the son-in-law or the brother-in-law. In the Tarawa and Apamama islands, of the Kingsmill group, every family that has a tutelary divinity has also a priest whose office may be filled by any young man of free birth able to recite prayers.

As regards the first appearance of priests, we can distinguish among some peoples certain classes of men who, owing to their unmistakable priestly affinities, seem to be forerunners of a regular priesthood.

(1) One group of persons who occasionally exercise priestly functions without being priests are those who, when in a state of ecstasy, are believed to be inspired by the gods. During their convulsive fits such persons are sometimes interrogated by the people as to the will of the gods, future events, etc., and the gods are believed to speak through them. These ecstatic individuals thus act as mediators with the supreme powers (peoples in India and Polynesia). From the idea of occasional inspiration it is an easy step to the conviction that certain persons are able to put themselves into communication with the gods whenever they like. On the whole, facts show that in the early ages of priesthood men often retain the office only for a specified time or with intermissions. Among some rude tribes, we are told, the priests take up their office and leave it, as they like (Todas, Khotas, Bodos and Dhimals, Dophlās, Munda Kols).

(2) Another beginning of priesthood may be seen in the observance of 'sacred places' or other kinds of sanctuaries which, for some reason or other, are held in high veneration by the peoples in the neighbourhood. As a rule, they are thought to be the abodes of a god, and the men charged with guarding the sacred rooms naturally tend to become mediators between the people and these gods (Gonds in India, natives in Madagascar and Yap, certain Arabs, certain priests in ancient Greece).

(3) We have further to regard as a kind of forerunners to a regular priesthood the 'holy men' who, without being real priests, exercise a certain religious authority among some peoples. This class of men make themselves renowned by occasional miracles, or acquire the religious veneration of the people by their eccentric habits (Muhammadan peoples).

In early stages of cult the rites are naturally very simple, and consequently almost any one is able to undertake the performance of the priestly functions. In general a simple cult and a superficially-instructed, mutable priesthood seem to go together. And it is clear that, where every one is qualified to assume the priestly office, priesthood as such is not likely to be held in great veneration.

Of many peoples we are told that the priests do not form any distinct class, and that almost any man may become a priest (Maoris, tribes in India and Madagascar, Galla, some American Indians).

As ritual observances and magical practices gradually became too complicated for the average man to master, a professional priesthood became necessary. When the people were uncertain about the proper ceremonies, they applied to the more experienced practitioners, asking them to perform the ceremonies on their behalf (Cheremisses). Kindred customs seem to be one reason for the old men officiating as priests and sorcerers among several tribes (Kiangans in Luzon, tribes in India, Africa, and Australia). Certain facts show how, especially on important occasions, the task of performing religious or magical ceremonies seems to have been put into the hands of priests, or of those possessing most experience in the tribe; at the same time every one was supposed to know how to sacrifice for ordinary private purposes (Kafirs, Ostyaks, Lapps, ancient Teutons, and Finns).

The authority of the first semi-priests and semi-sorcerers evidently varied to a great extent. While some exercised only a local influence, the more fortunate and cunning among them gradually extended their fame over wide districts. In this way a class of priests and sorcerers common to whole tribes originated (tribes in Africa and Siberia, certain Eskimos and American Indians).

It is a remarkable fact that among many peoples the sorcerers of neighbouring races are held in greater awe than those of their own tribe. Whole tribes are in certain regions known as powerful wizards, whose services are frequently sought after by their neighbours. E. B. Tylor's¹ explanation is that nations with some education, who, however, believe in the reality of the magic art, cannot shut their eyes to the fact that it more essentially belongs to races less civilized than themselves. This theory, interesting as it is, does not explain the cases where, e.g., certain tribes attribute to each other reciprocally a superior power of magic. The superstitious fear in which peoples in many parts of the world hold other tribes seems also to be connected with a universal belief that the secret powers of strangers are greater than those of well-known people.

3. King-priests.—A remarkable feature in the history of priesthood is the combination of priestly functions with royal authority. Instances of king-priests are met with throughout Polynesia and Melanesia, in India and other Asiatic countries, among many Negro and American Indian tribes, and in ancient Europe. J. G. Frazer² thinks that the priestly king has developed out of the public magician, the latter being a personage of such influence that under favourable circumstances he may easily attain to the rank of chief or king. When once a special class of sorcerers has been segregated from the community and entrusted by it with the discharge of duties on which the public safety and welfare are believed to depend, these men gradually rise to wealth and power, till their leaders blossom out into sacred kings. We may add that ancestor-worship also tends to invest the king or chief with sacerdotal authority. Similarly, as patriarchs of families conduct the worship on behalf of the family, so patriarchs of villages and provinces are the persons likely to perform the sacred offices on behalf of their respective clans or tribes. In the opinion of their followers they are often more intimately connected with the gods than any other individuals, being their nearest living relatives, and therefore all the more naturally can mediate between the gods and men.

¹ *PC* 3. 1. 122 ff.

² *GB* 3, pt. 1, *The Magic Art*, London, 1911, 1. 375.

Besides the union of a royal title and priestly offices there are instances of kings being worshipped as gods, which indicates the highest potentiality of the sacerdotal character of rulers. Frazer has called attention to various instances in which the divine king or priest is put to death by his worshippers, which he explains in the following way.¹ Primitive people sometimes believe that their own safety and even that of the world is bound up with the life of one of these human incarnations of the divinity. They therefore take the utmost care of his life. But no amount of precaution will prevent the divine king from growing old and feeble and at last dying. And, in order to avert the catastrophe which may be expected from the enfeeblement of his powers and their final extinction in death, they kill him as soon as he shows symptoms of weakness, and his soul is transferred to a vigorous successor before it has been seriously impaired by the threatened decay. But some peoples appear to have preferred to kill the divine king while he is still in the full vigour of life. Accordingly, they have fixed a term beyond which he may not reign, and at the close of which he must die, the term fixed upon being short enough to exclude the probability of his degenerating in the interval. E. Westermarck² has a somewhat different explanation, according to which the new king is supposed to inherit, not the predecessor's soul, but his divinity or holiness, which is looked upon as a mysterious entity, temporarily seated in the ruling sovereign, but separable from him and transferable to another individual. See, further, art. KING (Introductory).

4. Qualifications for priesthood.—Priesthood is generally a hereditary institution, although the rules of inheritance can rarely be strictly followed (Polynesians, Melanesians, Australians, peoples in the Malay Archipelago, India, Siberia, Africa, and America). Among certain peoples who have a hereditary priesthood the sacerdotal dignity is not assumed by the son of a priest; one generation is passed over, and the grandchildren are selected (Kafirs, tribes in W. Africa). Of other peoples we learn that priesthood is hereditary, but that the aspirant must in addition be qualified by certain necessary endowments. Thus the faculty to 'see the spirits' and converse with them is in some cases a further condition (Tlingits, Sioux); and the like power is often required of the priests where priesthood as a strictly hereditary institution is not heard of.

As the principal duty of the priests is to mediate between mankind and the higher powers, so the chief qualification requisite for entering the priesthood is the faculty of communicating with the gods. This faculty, however, may be proved in different ways. Thus, when certain wonderful things happen to a person—especially when he falls into a state of ecstasy—the people may think that he is under the influence of some spirit; and such a man is competent to become a priest (Kafirs). Among other peoples the supposed connexion between the priests and the spirit-world appears more particularly in the belief that the priests have one or more tutelary deities of their own, who always give them assistance when required. In some cases it is even stated to be a necessary qualification for priests to have such gods at their disposal (Eskimos, Algonquian Indians).

As the faculty of conversing with the gods is so very generally confined to the priests (other people being excluded from communication with the spirit-world), it is an easy step to the conclusion that the gods themselves have selected their repre-

¹ *GB* 3, pt. iii., *The Dying God*, London, 1911, p. 9 ff.

² *MI* ii. 607.

sentatives among mankind. In conformity with notions of this kind, many peoples believe that the gods confer divine powers upon certain men, and that the only way in which a person can become a priest is by being chosen by the gods (Eskimos, American Indians, Kafirs, tribes in Siberia, India, Borneo, Australia). Generally the gods communicate the necessary secrets to the priests in dreams (Australians, Sea Dayaks, Tunguses), but there are various other means by which the gods are believed to choose their favourites for the priestly vocation. Sometimes they intimate their wishes in a more or less peculiar way.

The Moxo in Brazil think it necessary that the aspirants to the priestly office should have been attacked and wounded by a jaguar, this animal being the visible object of their worship; they believe that he sets his mark upon those whom he chooses to be his priests. The Buriats in Siberia regard men who have been killed by lightning as chosen by the gods, who have thereby conferred a certain distinction on the family of the dead man; he is considered a shaman, and his nearest relative enjoys the right to shamanhood. In ancient Peru and among the Apache we meet with a kindred idea regarding lightning. The Munda Kols find out the proper *pahan*, or priest, to perform their sacrifices by such means as watching a frightened bull which stops before a certain house. When an additional priest is wanted in a village on the Gold Coast, a general meeting of the inhabitants is held, and a number of young men and women are made to stand in a circle. The fetish-priest, after weird and gruesome ceremonies, places on the head of each candidate a bundle of herbs and leaves. In most cases it happens that one or more of the youths and girls fall straightway into a kind of fit and appear to be possessed by some strange influence. This is taken as a sign that the fetish has spoken, and that the deity has chosen the person or persons so affected for his service.

Among the endowments requisite for aspirants to priesthood a very important one is the faculty of wonder-working. We are told in fact of many peoples that the would-be priests are expected to perform miracles, and that the candidate has to manifest his powers in that respect before he is admitted to the sacerdotal order. A person ambitious to become a priest will, *e.g.*, profess to have been told of future events by some spirit; should any of his predictions relating to something which greatly interests the people happen to come true, he is regarded as a duly inspired priest (Fijians, natives of the Isle of Pines, Mälers in Bengal, Siberian tribes, Greenlanders).

Some peoples judge from mere outward signs that certain persons possess mysterious powers and are able to act as sorcerers or priests.

Among the Ojibwa Indians individuals gain a reputation for witchcraft without making any pretensions to the art, merely because they are deformed and ill-looking; all esteemed witches or wizards among these Indians are, as a rule, 'remarkably wicked, of a ragged appearance and forbidding countenance.'¹ The Congo natives are said to number dwarfs and albinos among the priesthood.

Outward peculiarities in children are in certain cases believed to denote that they are bound to become priests—*e.g.*, being born with the eyes open (Australians), or bleeding at the nose or mouth (Tunguses in Siberia).

The mental disposition which is supposed to qualify a person for the priestly office reveals a very important feature of early priesthood. Among a great number of peoples the priests must display a considerable excitability of temperament; consequently certain qualifications of a pathological and psychological nature generally characterize the priests and sorcerers of uncivilized races. From several parts of the world we are informed that individuals of an eccentric disposition are considered to be specially apt for the sacerdotal vocation.

The Siberian shamans are recruited from a class of men distinguished by their habits of contemplation and insight into mysteries as well as by their ardent imagination, and their qualifications for shamanhood are further thought to appear in frequent fits of giddiness and fainting, besides other signs. Certain tribes in those parts believe that the influence of the

evil spirit which compels a person to become a shaman makes itself known by continual yawning, shrieking, and leaping round, etc. The incipient shaman begins to see visions, endeavours to throw himself into the water or fire, and seizes knives to hurt himself, after which he declares that the spirits have ordered him to become a shaman. See artt. POSSESSION (Introductory and Primitive), SHAMANISM.

Instances of similar ideas are furnished by Polynesian, American Indian, and African tribes.

Among certain peoples the mere faculty of falling into convulsions or into a state of unconsciousness seems to be almost all that is required for becoming a priest.

It is stated, *e.g.*, of the Fijian priests that the power of receiving inspiration and of announcing the will of the deity during a violent fit of muscular or nervous shaking, supposed to betoken the possession of his body by the spirit, is a necessary qualification for the priestly office. Before a Fijian is acknowledged as priest, he has to undergo a trial and is required to show publicly that the spirit is entering into him. The proof of this is supposed to lie in shiverings, which appear to be involuntary, and in the performance of which none but an expert juggler could succeed.

Statements to the same effect refer to native tribes in Australia, Africa, S. America, India, N. Asia, etc.

The great importance attached to ecstasy as a symptom of divine visitation also appears in the numerous cases when priests before or at their initiation reduce themselves by special means (such as fasting or narcotics) to a state of delirium or trance which is supposed to indicate their sacred calling.

Would-be priests among the Eskimos, several American Indian tribes, as well as peoples in Africa, Asia, and Oceania, withdraw for a longer or shorter period to a solitary place, where they subsist without food until they begin to 'see into futurity.' Of narcotic or fiery drugs Siberian shamans use the fly-bane (*Amanita muscaria*), while the medicine-men of certain Indians in Guiana drink potions of strong tobacco-juice. The sorcerers of the Guaraní Indians during their period of preparatory retirement live on pepper and roasted maize only.

It is natural to the savage mind to ascribe ecstasy to spiritual agency. The convulsive gestures and incoherent utterances of the inspired seem to show that his own will is absent, and that some strange being has taken possession of his body. A spirit or god is therefore supposed to speak through his mouth and to command his actions. This faculty of falling into an ecstatic condition is all the more necessary for would-be priests, as among savage peoples manifestations of a prophetic or divine delirium do almost universally accompany religious ceremonies.

The observation that an ecstatic disposition is universally associated with priesthood draws attention to the fact that in many cases insane persons are looked upon with superstitious awe. The main distinction between insanity and ecstasy seems to be that the former is generally ascribed to a permanent, the latter to a more casual, possession by a spirit. Some people believe the insane to be under the influence of demons, while others assume that they are inspired by good spirits. In conformity with the latter idea, great veneration is paid to the insane, who are also sometimes thought to possess the spirit of prophecy (Arabs, natives of Celebes, Polynesians, Melaneseans, certain American Indian and Siberian tribes).

5. Initiation of priests.—As a rule candidates for the profession of priest or sorcerer have to undergo a preparatory instruction which is imparted by an expert practitioner (African, Siberian, Polynesian, American Indian, and Eskimo tribes). Not always, however, is instruction necessary, and it seems that those who have been inspired by the gods are less in want of information than those who are self-chosen. Among some tribes people assume the office of fetish-man after suitable training, but the priestly order is said in addition to be augmented by persons who can prove that the spirits have suddenly seized upon them (certain tribes in Africa, India, Siberia, Australia, and N. America).

¹ P. Jones, *Hist. of the Ojibway Indians*, London, 1861, p. 145 f.

The preparation of the novices in many cases begins at an early age.

Among the Eskimos and Aleuts the priests are brought up to their calling from their infancy. The Ojibwa Indians encourage their youths from the age of ten to manhood to fast, for in this way they obtain the favour of the gods. Boys destined to be *pieces* among the Panama Indians are taken at the age of ten or twelve to be instructed in the office.

Similar examples come from the Apurina Indians, and tribes in W. Africa and Borneo. It seems to be the rule that, where the priests are subjected to a regular course of instruction, the preparatory period commences early in life, whereas the more impulsive assumption of priesthood, with little or no previous training, is liable to take place at any age.

As a rule we can draw a distinction among most peoples between two different phases of the priestly education. (1) During one period the novice is generally under the care of some experienced priest who imparts to him the necessary religious instruction and initiates him into the practices of the profession. (2) Another phase of the preparation includes a course of self-training, during which the aspirant has to place himself in proper correspondence with gods.

(1) As regards the knowledge imparted to the candidates, mere theoretical learning is little thought of; according to our scanty reports, most importance is attached to practical knowledge which may be of use in the magical and religious performances.

In Greenland the teacher seeks, in the first place, to make the pupil entirely fearless and to direct his mind towards the spirit-world, to the horrors of which he must be rendered insensible. In the Mosquito tribe of Central America the sorceresses, during their preparation for the office, learn various tricks from their predecessors, such as allowing poisonous snakes to bite them, and handling fire. The priestly novice among the Indians of British Guiana is taught the traditions of the tribe, the medical qualities of plants, and to find where game is to be had. During his novitiate the medicine-man of the Bororo in Brazil has to learn certain ritual songs and the languages of birds, beasts, and trees. The priests of the Kukis in India first of all seem to have been taught the secret language which they have among themselves, while the rest of their knowledge is probably picked up during their practice. The instruction of the priests among some African tribes is said to comprehend a good deal of empirical knowledge and other secrets of the craft.

(2) The self-training of a candidate for the priestly office evidently has for its object the preparation of his mind for intercourse with the gods. During this period he generally lives for a longer or shorter time in retirement, whilst in some cases a rigorous asceticism is also prescribed, such as fasting or subsisting on a scanty diet. In certain tribes the novices are required strictly to refrain from connexion with the opposite sex.

With the Eskimos this phase of the priestly education consisted in strict fasting and invocation of the deity while dwelling alone in solitary places, until the soul became independent of the body and of the external world; finally the god appeared and provided the novice with a helping or guardian spirit.

Of a similar description is the self-preparation of the priests among certain American Indians as well as tribes in Africa, Australia, Siberia, and India. In some cases the neophytes use narcotics or stimulants in order to work themselves into a passion of excitement, during which they are supposed to hold converse with the spirits.

Among certain peoples candidates are admitted to the sacerdotal order through a special initiatory ceremony (Negroes, Waraus Indians, Siberian tribes, Laplanders). It is also stated that in certain cases the consecration of a priest takes place several times in succession as he rises from lower to higher degrees of the order (Buriats in Siberia, Moxo Indians).

6. The social position of the priest.—One circumstance which has powerfully tended to distinguish the priesthood from the community at large has been the fact that the priests and sorcerers are, as a rule, recruited from the most

intelligent elements of their peoples. The scanty learning of savage races is almost exclusively confined to the priests, who are generally the only preservers of tribal traditions; they alone possess the knowledge of certain useful arts, and the whole character of their functions tends to develop their intellectual powers and to give them a superiority over their fellow-tribesmen.

It is frequently reported that the priests distinguish themselves from the rest of the people by a more or less considerable knowledge of certain natural phenomena, by means of which they secure the popular confidence in their powers. They have studied the use of medicines, the properties of herbs and other plants, the changes of weather, and the habits of animals; and this knowledge materially assists them in the maintenance of their authority (Negroes, Hottentots, Dayaks, Tahitians, Araucanians, Eskimos).

In order to preserve the faith of the people in their prophetic powers the priests often collect all kinds of information, and whatever they learn in this way they ostentatiously foretell as future events. In many cases they are also said to act in collusion with each other, in keeping the people under their influence (tribes in W. Africa, American Indians, etc.). When the priests exercise the precarious art of prophecy, great significance is attributed to their utterances. Hence we often hear that, in order to ensure that their predictions shall prove true, they make them sufficiently ambiguous or uncertain to admit of a variety of interpretations (tribes in Africa, some American Indians). If, in spite of all precautions, they fail to produce the effects promised by them, they generally have recourse to various excuses. The non-success is attributed, *e.g.*, to some defect in the medicine, or the applicant is labouring under the displeasure of the gods, who refuse to be appeased unless renewed and richer offerings are made (certain American Indians, Negroes, Hawaiians). A very general excuse is the counteracting influence of some demon (Dayaks, Oceanians, natives of Victoria, Hottentots). No less frequently priests and sorcerers who fail in performing miracles save their reputation by accusing other persons of having, by secret necromancies, frustrated their endeavours (tribes in N. S. Wales, India, N. America).

The respect which the priests and sorcerers enjoy is increased by the mystery in which they generally envelop their proceedings. They do their best to inspire the people with fear, if they think such a course necessary for the strengthening of their power. Thus they may threaten to send the spirits or some magic substance into those who disbelieve them (Tlingits, natives of Victoria), or in some other way let the spirits avenge even the slightest neglect or disobedience (Tahitians, Fijians). The bizarre external appearance of most priests among savage races also serves to a great extent to impress the popular imagination. By painting their bodies in all colours and dressing themselves in the most fantastical manner they inspire their tribesmen with feelings of mystery and awe, and sometimes this effect is expressly sought (Indians of Virginia, Siberian tribes). It is likewise beyond dispute that a strong impression of fear is produced upon the people by the ecstatic orgies which so often form an essential part of the rites of savage priesthood. The gestures and other morbid manifestations of the priests, vivid descriptions of which are given by numerous eye-witnesses, necessarily strike the bystanders with awe and terror. It is in this connexion interesting to note that the religious and magical rites of savages very generally take place in the dark, and in some cases darkness is even repre-

sented as a necessary condition for success. The Siberian shamans perform their ceremonies in some gloomy place and generally at night, in order to appear more mysterious and terrible in the darkness; and the same is said regarding the sorcerers of the Eskimos, Waraus Indians, Congo natives, etc.

Among certain peoples the priests strengthen their authority by attaching themselves to the kings and noble classes in a community, while at the same time they are said in return to support the ruling system (Polynesians, Khonds in India, Kafirs, certain American Indians).

One of the most important methods by which the priests increase their influence is by convincing the people of their supernatural endowments through various miracles. There are reports from many peoples that confidence in the priests and sorcerers depends upon their supposed faculty of performing miracles—one successful instance often causes all previous failures to be forgotten. Priests and sorcerers strengthen their reputation through delusive demonstrations of their invulnerability—*e.g.*, by stabbing themselves with knives in different parts of the body (Ostyaks), by throwing themselves into the fire or seizing live coals with their hands (certain Tatar tribes), by allowing poisonous snakes to bite them, etc. (Mosquito Indians). How essentially the influence of the priesthood depends on their presumed power of wonder-working is shown by the fact that among several tribes priests who fail in their efforts, or otherwise lose the confidence of their people, at the same time forfeit their office and sometimes are subject to punishment (tribes in India and Africa, Andamanese). They are even liable to be killed by the enraged people; this may be due to the idea that worthless priests are of no use and therefore cannot hold the sacerdotal office, but, as they possess dangerous powers, they must be made away with. There are also grounds for connecting the killing of priests with the killing of the divine king.

The methods by which the priests and sorcerers of savage races acquire confidence and reputation among their countrymen raise the question whether, on the whole, we are to look upon them as a class of impostors or not. The opinion predominant in theoretical literature is that we cannot suppose that the priests and sorcerers of the uncivilized races are, generally speaking, impostors (Lord Avebury, J. G. Frazer, A. Réville, R. de la Grasserie, Julius Lippert). The opinions of travellers, again, are divided, but many of them have considered the question from different points of view. There is no reason to condemn the priests and sorcerers as deceivers because their proceedings seem meaningless to European observers, or because some travellers have ascertained, by experiments, that the savage mystery-men are not endowed with those miraculous powers which they claim to possess. The principal point is whether they believe in their own powers or not; this they very generally seem to do, although, on the other hand, impostors are undoubtedly met with among the priests at all stages of early beliefs. Cf. art. POSSESSION (Introductory).

7. *Observances, etc., distinguishing priesthood.*—Numerous practices and observances are among many peoples obligatory upon the priests and tend to separate them from the rest of the community, as they cannot in general be combined with the circumstances of ordinary life.

(1) There are certain ascetic regulations which apply to sexual life. The fact that persons devoted to religion are often obliged to live a single life has been ascribed to the notion that there is something impure and sinful in marriage, as in sexual relations generally. Among many peoples the members of the priesthood are forbidden to marry, and must

keep themselves pure (several American Indian tribes, Kalmuks, Todas, etc.). Celibacy and chastity are, however, by no means universally required of the priests; on the contrary, they seem in some cases to be distinguished from the people as a whole by extraordinary liberties in sexual respects. The *ius primæ noctis* accorded to the priesthood among certain peoples exemplifies the sexual privileges which are sometimes enjoyed by the sacerdotal order. Among certain peoples the priestesses must not marry, for the reason that, belonging to the god, they cannot become the property of a man. But this prohibition extends to marriage only, and a priestess is not debarred from sexual commerce (tribes in W. Africa).

(2) Other ascetic regulations concern fasting and prohibited articles of food. Fasting generally seems to be observed when a person wishes to put himself in correspondence with the spirits performing some religious rite (Santals, Siberian tribes, some Melanesians and American Indians), and sometimes for the same purpose the priests reduce themselves by artificial means to a state of mind which is supposed to indicate their close communion with the supernatural world. Food restrictions of various kinds are imposed upon the priests.

(3) Among many peoples the priests are distinguished by a special costume and also by the colour of their dress.

The priests of the Sinhalese and in Siam are clothed in yellow; and in the Malay Peninsula the priestly magician shares with the king the right to make use of cloth dyed the royal colour, yellow. The priestesses of the Manipuris in India dress in white. Among the Peruvians the priest wore white when invoking the gods. The ordinary dress of the Zapotec priests was a full white robe, that of the Toltec priests a long black robe, and the common Totonac priests wore long black robes of cotton. In ancient Mexico a class of priestesses called 'maids of penance' ordinarily wore a habit all white.

(4) It is rather a general custom for priests to distinguish themselves by the length of their hair (certain tribes in N. America, India, and Africa). Frazer explains the custom of sacred persons leaving their hair long by referring to the dangers which, in the primitive view, beset the cutting of it.¹ Such dangers are common to all, but sacred persons have more to fear from them than ordinary people; the simplest way of evading peril is not to cut the hair at all.

(5) A remarkable fact is that the priests almost universally distinguish themselves from the community at large by means of a separate language which they use in the divine service or in intercourse with each other.

The *angakoks*, or priests, of the Greenlanders have a peculiar language, altogether different from the ordinary tongue of the country, and words of the general language they use in an opposite or metaphorical sense. This particular idiom they make use of only at their practices of witchcraft and when they are consulted by the people.

Similar reports are given of the priests among several tribes in N. and S. America, Africa, India, the Malay Archipelago, and Oceania.

8. *Classification of priests.*—Of the two classes of supernaturalistic practitioners the priests are those who represent the religion of a people; they exercise the duties incumbent on them by invoking the aid of the supernatural beings, and their power consists in influencing the will of the latter. Magicians, on the other hand, act independently of the supreme rulers, with whom they have no communication in the sense in which the priests have. By their magic they are themselves able to bring about the desired results, and the same means of coercion may be applied by them even to the gods.

But, although theoretically separated, the types of priest and sorcerer among uncivilized and semi-

¹ GB², pt. II., *Taboo and the Perils of the Soul*, London, 1911, p. 258 ff.

civilized peoples almost inextricably blend into one another. Communication with supernatural beings is in no way confined to the 'priests,' nor do the 'sorcerers' monopolize the practice of magic. Very frequently it happens that practitioners in whom the priestly type preponderates have recourse to magic also, and that representatives of the type of sorcerer maintain a religious communication with spirits.

Certain writers associate the difference between priests and sorcerers with the occurrence of a benevolent and a malevolent class of priests among many peoples, the one group of functionaries helping the people, the other exercising a pernicious influence (Eskimos, certain American Indians, Kafirs, Buriats). There is on the whole a tendency to identify priests with protectors of the people, whereas magicians or sorcerers are represented as evil-doers who endeavour to inflict distress upon others. Facts go to prove, however, that the distinction between well- and ill-disposed classes of priests is often very arbitrary; sometimes 'priests,' e.g., forfeit their sacerdotal dignity and are transferred to the class of 'sorcerers,' merely because they have lost the popular confidence in their goodwill (American Indians, Eskimos, tribes in Central Africa).

In a few cases distribution of function makes the types of priest and sorcerer distinct from each other. Thus weather-doctors, fortune-tellers, exorcists, and physicians, who form special professions of their own among certain peoples, also supply, in some cases, instances of the typical magician. Examples of such practitioners acting solely by magical means are, however, extremely rare—which can also be said of the occurrence of the unadulterated priestly type.

To a certain extent the numerous functions are performed by special classes of priests. Although the regular priests almost universally also practise divination, yet among many peoples the diviners form a distinct profession within the priesthood, and in a great number of such cases the performance is stated to take place through other means than consulting the gods.

In the Kafir tribes the *amatola*, who practise augury by burning certain roots, are distinct from other classes of the priesthood. In Uganda the *bahuma*, who foretell the future from the entrails of fowls, constitute a separate class of diviners. Among the Malagasy there is a class of men called *panandro*, 'astrologers,' who calculate and declare unlucky days and hours and foretell the destiny of children. The natives about the Altai mountains in N. Central Asia, besides shamans and weather-makers, have four separate classes of augurs distinguished from each other by different names and different methods of procedure.

Instances of a similar kind are given by the Kirghizes and several American Indian tribes.

The priests and physicians are very generally the same men, but cases of physicians forming a profession of their own in association with the priesthood are not rare among uncivilized races (Polynesians, Melanesians, tribes in India, Negroes, American Indians).

Weather-making is among the lower races universally associated with priesthood, although it is sometimes difficult to ascertain when this function refers to the regular priests and when to a special class of individuals. Among certain peoples, however, the weather-doctors are clearly identical with the priests (Greenlanders, some American Indians, Negroes, and Siberian tribes). In other cases the profession of a weather-maker is kept distinct from ordinary priesthood.

Among the natives of the Altai district there is a special class of shamans who profess to manage the weather by means of a magic stone. The Kirghizes have a class who not only foretell the weather but also have the power to cause or avert rain, wind, and lightning. Among the Yagas in Congo the *seingili*, or rain-makers, form an inferior class under the *gansas*, or fetish-men. The Okanda Negroes have priests to whom the people apply for producing rain when a bad year is impending,

and these have a special name. The rain-doctors of the Ganguelas in S. Central Africa are pronounced distinct from other classes of the priesthood. Among the Apache and certain other Indian tribes, weather-making and other priestly functions are distributed among different classes of the priesthood. A few peoples even make a distinction between different branches of weather-making as represented by different groups of priests (Maoria).

To the offices associated with the priesthood belongs the judicial authority with which its members are often invested. As a rule the rights of the priests in this respect are closely connected with their religious duties, their supernatural endowments being called into requisition for the administration of justice in the various communities. From the Congo, Loango, and other African countries, as well as from Hawaii, we hear that on such occasions the priests are the chief officers at ordeals. Similarly, when a person is accused of practising witchcraft, the priests are the most competent to conduct the case (Greenlanders, E. African and Congo tribes). Thieves and other evil-doers are often detected by the assistance of the well-informed priests (Apache, Tlingits, E. African tribes). In a few cases the priests are entrusted with a regular judicatory dignity, as, e.g., in Hawaii, where some appearance of judicial forms was preserved in cases of litigation.

Among the Badagry in Guinea 'the fetish-priests are the only judges of the people, and the statutes of their country are recorded in their own breasts only; yet the people are said never to murmur against their decisions.'

From almost all parts of the world where uncivilized peoples live come reports that women also officiate as priests and sorcerers; in general no very great distinction seems to be made between the sexes as regards their qualification for priesthood. Often, however, men take precedence in the sacerdotal profession. Female priests or sorcerers are met with among the Greenlanders, American Indians, Negroes, some Siberian tribes, Fijians, Dayaks, etc. From some peoples we learn that all the great ceremonies must be conducted by men, or that the women are not admitted to the priesthood at all (certain Siberian tribes, Chippewa Indians, Andamanese, Australians).

The priestly offices to which women seem principally to devote themselves are foretelling the future (certain American Indians, Kamchadales) and healing diseases (Negroes, American Indians, Papuans). It is a widely-spread notion that women are endowed with mysterious powers in a much higher degree than men (Arabs, Negroes, tribes in India, Australians). Such ideas of the spiritual propensities of women account for the inclination displayed by many peoples to attribute witchcraft particularly to the female sex (Eskimos, certain American Indians, Hottentots, Siberian tribes, Arabs). In a few instances some peoples who have both male and female priests confine special classes of priestly functions to one or other of the two sexes exclusively.

LITERATURE.—W. W. Baudissin, *Die Gesch. des alttestamentl. Priesterthums*, Leipzig, 1889; J. G. Bourke, 'The Medicine-men of the Apache,' in *9 RBEW* (1892), p. 451 ff.; A. W. Howitt, 'On Australian Medicine Men,' in *JAI* xvi. (1886-87) 23 ff.; G. Landman, *The Origin of Priesthood*, Ekenaes, 1905; J. Lippert, *Allgemeine Gesch. des Priesterthums*, 2 vols., Berlin, 1883-84; S. Maybaum, *Die Entwicklung des altisraelit. Priesterthums*, Breslau, 1880; A. Réville, *Hist. des religions*, 3 vols., Paris, 1883-86; H. Spencer, *Principles of Sociology*, London, 1893-96, vol. iii. pt. vi. 'Ecclesiastical Institutions.'

GUNNAR LANDTMAN.

PRIEST, PRIESTHOOD (Babylonian).—In view of the great antiquity of their religion, going back, as it does, to over 4000 years before Christ, there is no doubt that the priesthood of the Babylonians, in most if not all of its numerous orders, was very ancient. It is impossible, however, to

¹ R. Lander, *Records of Captain Clapperton's Last Expedition to Africa*, London, 1830, i. 281.

estimate the dates of the institution of these orders, the more especially as they must have grown up rather than come into such sudden existence as founding by any power of the State or the people would imply. There seems to be no doubt that the remote antiquity of the Babylonian priesthood had brought to its members great influence and wealth, as well as the veneration of the people.

The number and the nature of the priestly offices and orders in Babylonia were determined by the requirements of their religion. Theology, mythology, legends of the gods and heroes illustrating their faith, and temple history were probably taught by the scribes (*ṭupšarru*), or by such of them as had been educated at and received orders through the temple schools. But the superstitions contained in their creed necessitated not only a full staff of sacrificial priests, conductors of special ceremonies, etc., but also numerous conjurers, soothsayers, magicians, etc., each with his special domain, which, however, in case of need, overlapped the others. The sacrificer, therefore, might perform incantations, and the spell-maker might interpret a dream.

1. **Priests in general.**—In all probability the most usual term for 'priest' in Babylonian was *šangū*, possibly a nasalized form of the Sumerian (non-Semitic) *sag*, 'head.' The Sem. plural was *šangē*, though the plural for professions of men, *šangūti*, was probably not excluded. The last would coincide in form with the abstract *šangutu*, 'priesthood' in general—i.e. a man's priestly character, as in the case of a Babylonian or an Assyrian king, or the priestly body to which a man might belong. The Sem. form, *šangū*, seems to have been borrowed by the Sumerians, who attached it to the character *mes*, 'hero,' 'man of worth.'¹ It is this root that is found in the Sem. rendering of the Sum. *pa-te-si*, namely, *iššakku*, from the Sum. *ig-sag*, 'he who is at the head,' a word often rendered by 'priest-king.' Though probably often a priest, the *iššakku* was generally a kind of viceroy, under a royal ruler (*lugal-šarru*, 'king'), and took his title from the place which he governed, as *Gudea patesi Lagaš*, 'Gudea, viceroy of Lagaš.'

2. **The high-priest.**—Several words which may be thus rendered are known. A *šangū rabū* (so L. Delaporte), 'great priest,' is shown on the cylinder-seal published in his 'Cylindres orientaux' (*AMG* xxxiii. [1909]). This object, which is a talisman rather than a seal, shows *Assur-nimeli*, the personage in question, standing before *Ištar*. His costume is that of an Assyrian of the higher class, and he wears wig and beard.

In what way the *šangū rabū* differed from the *šangū dannu*, 'mighty priest,' and from the *šangū-mahhu*, 'supreme priest,' is uncertain. In the *Surpu*-series of incantations² (v./VI. 173) the last-named is spoken of as kindling the fire and the brazier, and throwing therein the means of loosing the spell. He is also spoken of as the holy libation-priest (*ramku ellu*) of *Ēa*, and the messenger of *Merodach*. As a result of this and similar acts, the man on whose behalf the ceremony was performed would be saved and freed from his sin that very day. Evidently these high-priests had not the power of releasing a man from the effects of his sin, and uttering words of pardon, without these magical ceremonies.

During the period of the Sumerian dynasty of

Ur the high-priest, or a similar temple magnate, was called *en*, 'the lord,' and was seemingly appointed by an oracle and invested by the king. Thus the 11th colophon-date of King *Dungi* records the proclamation of the lord true prince (*en nir-zi*) of *Anu* and the lord (*en*) of *Nannar* (the moon-god).¹ These two temple officials were invested two years later (*The Amherst Tablets*, London, 1908, vol. i. p. xiv). Other examples of similar investitures are *Dungi's* 31st and 46th dates, as calculated by H. Radau, and *Būr-Sin's* 4th, 5th, 8th, and 11th, etc. *En* was apparently Semiticized as *ēnu*, fem. *entu*, written in Sum. *nin-dingir*, 'lady of the god' = 'priestess.'

3. **The subordinate orders.**—Unfortunately no trustworthy list of these exists, so that their rank and consequently their order of precedence are difficult to determine. Certain priests were attached to the palace of the Assyrian king, but, as their order does not coincide with what is given elsewhere, this list is of doubtful authority. We find in it seers, incantation-priests, magicians (?), and, apparently, 'inquirers.' Another short list in a letter mentions the *aba*, probably 'temple scribe,' and then 'secretary' in general; the seers; the incantation-priests; the *dse*, or 'physicians'; and the *dagil issurē*, or 'bird-prognosticators.' Here the order of their importance seems to be roughly indicated.

4. **The priests' clothing, and the perfection of their persons.**—Though the priests shown in the early cylinder-seals wear dresses practically identical—a fringed cloak reaching to the feet, leaving the right arm uncovered and therefore free, with bare feet and (generally) shaven head—there seems to be no doubt that distinctive clothing was worn. Thus the British Museum letter K. 626 (R. F. Harper, *Assyrian and Babylonian Letters*, Chicago, 1910, no. 24) describes the *mašmašu* as wearing a red robe and a mitre of the same colour (Behrens, *Assyrisch-babylonische Briefe kultischen Inhalts*). Details as to priestly clothing are meagre, but apparently the right garments had to be used, or the ceremony would be a failure. A list (*WAI* v. 28) gives the words *puliamu-tēdiq bēli*, 'robe of a *bēlu*' (chief priest, Sem. for *en*, above), *šubat niki*, 'dress of the sacrifice,' etc.

To appropriateness of dress was added, at least in the case of the higher orders, the highest perfection of birth and of person. He who aspired to the office of seer (*bārā*) and who was of the everlasting seed of *Enweduranki* (*Euedoreschus*, *ERE* vi. 642), 'the king with the woollen garment of *Samaš*,' should be the offspring of a parent whose forbear was holy, and he himself should likewise be perfect in form and feature. Such a one only might approach the presence of *Samaš* and *Adad* (the sun-god and the wind-god), the place of the vision and the oracle. One not being thus holy and perfect, defective as to eyes (? squint-eyed), wanting teeth, mutilated of finger, with earth-grey flesh, filled with leprosy, etc., could not be keeper of the decrees of *Samaš* and *Adad*, approach the place of *Ēa*, *Samaš*, *Merodach*, or *Nin-ēdina*, or join the brethren at the decision of the seers. They could not reveal to him the word of the oracle, and he could not hold in his hand 'the cedar beloved of the great gods.'

5. **Consecration and tonsure.**—There are many references to priestly consecration, but nothing is known as to the distinctive marks which the priests bore. The seal-impressions show that they were often clean shaven, and it seems certain that this was part of the rite of consecration, which was performed by the priestly tonsure-cutter, *sui* (Sum.) or *gallābu* (Sem.). His work was probably performed before the statue of the deity to whom the

¹ For a parallel cf. the use of the Heb. מִלֵּךְ in Gn 14¹⁸ etc.

¹ 'Priest' also seems to be expressed by the simple word *awēlu*, 'man'; cf. *Assurbanipal's* Cylinder A (col. vii. 48), where *Nabū-gāta-sabat* is called *awēl šin*, 'man (priest) of the moon-god.' *Awel-Marudak* (*Evil-Merodach*) and many similar names may express the same idea.

² H. Zimmern, *Beiträge zur Kenntnis der bab. Religion*, pt. i., 'Die Beschwörungstafeln *Surpu*,' Leipzig, 1896.

neophyte was to be dedicated (*PSBA*, 1893, pp. 417-420). The importance of the ceremony is indicated by the fact that even the king might perform it:

¹At the beginning of the tonsuring,¹ according to what was their command, (as for) the priest of the house of the junior food-distributor, Sennacherib tonsured him (*ugdallib-su*)' (Letter K. 122, Harper, no. 43).

This was apparently followed by the giving of the priestly tiara. In another inscription Assurbani-Apli, after referring to the appointment of his eldest brother, Šamaš-sum-ukin (Saosduchinos), to the kingdom of Babylon, states that his younger brother, Aššur-mukin-palēa, was consecrated to be *uru-gallu* before Aššur, and his third brother, Aššur-ētil-samē-ēršiti-balāṭi-šu, to the same office before the god Sin. The word used is *ugdallib*, 'I (or he) tonsured.'

6. The priesthood and the king.—All the higher priests were naturally in close communication with the court, as many documents, especially the Babylonian and Assyrian letters, show. As has been foreshadowed in § 1, the king himself was (perhaps always) the great high-priest. His position as head of the State, however, must have prevented him from fulfilling many of his priestly functions, except those which had to do with his royal position. Specialists among the various orders of priests had naturally to instruct him with regard to the things which he could not go into thoroughly—lucky and unlucky days, celestial and terrestrial omens, the tablets to be used at the various ceremonies, and the time required for the performance of the rites, which sometimes extended over many days. The tall tiara which the king wore, and the cord behind, which, arising from its highest point, descended, in the case of the Babylonian rulers, to the hem of his robe, were also, probably, priestly signs or necessary portions of their dress. The cord probably has some analogy to that worn by the Parsis under their clothing.

7. The priesthood and the people.—Not less important was the connexion of the priesthood with the people, who were not only its justification, but also its main support. As intermediaries between the gods and the people, in sacrifice, propitiation, penitence, prayer, and oracle, they were the interpreters of all the religious texts, expounders of omens, and indicators of lucky and unlucky days and seasons. It is uncertain whether the judges were of priestly rank or not, but the priesthood had also much to do not only with the interpretation of moral and religious law, but also with many of the civil enactments.

That laymen, and even slaves, could take part in the temple services is shown by Harper's Letter no. 368, where we read that Ninqaya, the hand-maid of the king's mother, is not suitable for the service (worship):

²'She shall not enter (therein). As the mother of the king, my lord says, let her open the (money-) chest, let her perform the service.'

In other words, she had money, and could make a gift; let her do so, and then take part in the worship. Another letter asks the king whether certain women might enter the temple and take part in the worship, and, if so, would the king's instructions apply to a slave-woman who was with them. It seems probable that the ordinary citizen was merely a tithe-payer, and that the very poor and the landless gave labour. It is not impossible that certain of the more intelligent of the laity were initiated into the mysteries which the tablets show to have been common in the higher orders of the priesthood.

Besides offering sacrifices, the priests conducted

¹*Gallubu*; but perhaps this word here means the whole ceremony, in which case the rendering would be 'consecration.'

the services, and arranged the *lectisternia*, or table-of offerings to the gods. It was also the duty of some of them to receive the tithes, and to certify that they had been paid (the tablets referring to these are very numerous during the early period). Some of them looked after the temple itself, while others arranged for the services and the processions. What proportion of the offerings the priesthood took for itself is uncertain, but, as the temples became enormously rich, there is no doubt that the priests who served them lived on the fat of the land, and even grew very wealthy. In their position, however, the possession of private means must have been a matter of indifference for all but the most avaricious, but many passed on what they could not use themselves to their family, relatives, or friends (cf. Bel and the Dragon, 1957).

8. The *māšu* and *mašmašu*.—That these two classes of priests were closely allied is proved by the fact that the Sum. *maš* and *mašmaš* were both reproduced by the Sem. simple form *māšu*. The *mašmašu* was the priest who had especially to do with ceremonies and ritual. He anointed the king's head, consecrated his couch, and drove forth the evil which had made its home in the royal abode. After this ceremony a procession was formed, in which torches and a lamb for sacrifice were carried, and it was the custom on these occasions to offer likewise many natural products. After the sacrifice came the purification of the palace. It was also the duty of the *mašmašu* to pronounce numerous incantations on these ceremonial occasions. The order seems to have been classed with that of the *bārē*, 'seers,' and the *āsē*, 'physicians.'

In Letter no. 23 of Harper a *mašmašu* is referred to as not having taken the tablets of the series 'the unpropitious day, the day not good: hand-raising,' i.e. 'act(s) of prayer.' These were apparently documents which he should have used in certain ceremonies. In Letter no. 118 *mašmašē* seem to be spoken of in connexion with the instruction of certain persons in the ceremonies. The writer, Arad-Gula, may have been a member of this order.

9. The *asipu*.—Like the *māšu* and the *mašmašu*, the *asipu* was also one of the most important priests of the Babylonian hierarchy. The duty of the order was to make incantations, either for imposing a spell or for releasing a man therefrom. The latter is referred to in the book of the Babylonian Job, 'Lidul the Sage,' and from the same work it seems that he was able to diagnose in cases of illness (Jastrow, *Dis Rel. Babyloniens und Assyriens*, ii. 129. 5)—an indication that he belonged to the physician class. Another form of his name, apparently, is *isippu*, from the Sum. *isib*, and under that title the tablets refer to the *isippu ša ašnan*, 'grain- (or wheat-) magician.' The incantation-series Šurpu seems to indicate that there were priestesses of this class (*sal isib* = *asiptu*, viii. 52). The lists indicate that the *asipu* was also a *pašišu*, 'anointer,' as well as a *bārā*, 'seer.' *Asipu* is represented in Heb. by *qws*, *assāph*, from the same root (Dn 1²⁰, etc.). See *HDB* iii. 210.

10. The *uru-gallu*.—As this word translates the Sum. *mašmaš*, which is also rendered *māšu*, the priest indicated seems to have been one of the same class. The meaning of the word is 'great protector,' and it seems to indicate several groups. A portion of his duties (those connected with the New Year festivities) had to be performed during the night:

³'In Nisan, day 2nd, for an hour (double hour) of the night the *uru-gallu* shall rise up, and shall pour out the waters from the river (the Euphrates). He shall enter before Bel (Merodach). He shall let down the curtain (*gadalatu*)—he shall utter this prayer before Bel.'

Here follow the words of the supplication, in couplets, the first line Sumerian, and the second Babylonian in each case (see *ERE* vii. 3^a). As priest of the temple of Belus (Ē-sagila, Merodach's temple), the *uru-gallu* glorified this god as 'the fortunate king, lord of the world, glorying in his strength,' etc. He ends his prayer by asking the god's favour on his city Babylon, and on Ē-sagila, his temple. As indicated above (§ 5), Aššur-banī-āpli's younger brother, Aššur-mukin-palēa, was appointed to the position of *uru-gallu* of (apparently) the god Aššur.

11. The *ša'ilu*.—There is much doubt as to the real meaning of this word. Interpretations given are 'man of god' and 'man of the spell.' In both cases, however, a phrase like *dwel ša'ilu* would be expected, at least for the second alternative. Another word for this priest was *ensi* (Sum. and Sem.), rendering the characters *en-me-gub*, 'lord of the holy incantation,' or the like. His special province seems to have been the interpretation of dreams (see Zimmern, *ZA* iii. [1888] 233). His duties, however, as indicated by Lidlul the Sage, included offerings:

'The *ša'ilu* did not bring forward my cause by an offering.'

Modifications of the ideographic writing expressed the Sum. *engima* and *endib*, translated by *ša'ilu* and a word which Zimmern completes as *nuhatimma* and translates 'baker.' This, however, is doubtful, the more probable rendering being 'food-distributor,' or the like. The feminine is *ša'iltu*.

12. The *pašisu*.—This was the 'anointing priest,' though the duty of anointing was apparently not confined to any one class. That early type of Noah, Zi-šuddu (Σουθδης in Lucian, *de Dea Syria*, xii.), is described as having belonged to this order, as did Adapa (*ERE* vi. 644). Jensen renders the word as 'the anointed one,' but there is no doubt that the real meaning is 'anointing priest,' or the like.¹ Divine priests of this class were regarded as dwelling in the Abyss (*pašiš apši*, 'anointers of the Apsū'). As it was the custom to cleanse with oil the foundation-memorials of the Assyrian kings when restorations of buildings were made, the king himself, to judge from the inscriptions, acted as anointer, and may have been regarded, like the pre-historic rulers, as belonging to this same priestly order. Whether the *pašisu*, who was not of royal race, anointed the palace foundation-stones or not is uncertain and unlikely.

The above deals with the Sum. group provisionally read *ah-me*, but *pašisu* also renders the Sum. *lah* and *mar-mah*. *Lah* (*lahba*) apparently means 'cleanser,' and then also 'anointer' for the purpose of producing some undesirable effect on a person believed to be hostile (see K. L. Tallqvist, *Die assyr. Beschwörungsserie Maqû*, Leipzig, 1895, vi. 102 ff., 110 ff., where the fem. *pašistu* occurs). These, however, were probably not the priestly anointers, but belonged to the sorcerer class.

13. The *sukkallu*.—This word, which comes from the Sumerian, is generally translated 'messenger' or 'minister' (of a god, etc.). There were many classes of *sukkallu*, with duties correspondingly various. As the ideograph expressing this office is *lah*, his work may have been originally analogous to that of the *pašisu*, and, for this reason, he was regarded as an 'anointer.' The Babylonian physician, *āsu*, also called himself *sukkallu*, probably because anointing formed part of the medical treatment. In the sense of 'minister,' numerous gods bore the title or the name of *Sukkallu* (see § 23, below).

In W. Hayes Ward's *Seal Cylinders of Western Asia*, Washington, 1910, no. 52b, Uru-Nanpar appears as the *sukkallu* of the Babylonian (Urite) king Šu-Sin (c. 2500 B.C.). The seal shows him shaven, thus indicating his priestly position.

¹ An 'anointer,' however, would probably be himself 'anointed' at (it may be supposed) his consecration.

14. The *kisal-lah*.—Semiticized as *kisal-lahhu*, this may be classed among the minor orders. The etymology of the word is *kisal*, 'oil-place,' and the above-named *lah*, 'to cleanse.' His duties must therefore have been similar to those of the *pašisu* and the *sukkallu*, and he may have assisted the king on the occasion of his official building-consecrations.

15. The *surru*.—Priests bearing this title apparently belonged to one of the most important of the Babylonian sacerdotal classes, and might even aspire to the high-priesthood, as is indicated by the fact that the *sura-mah* is once rendered in Bab. as *šangamahhu*, 'high-priest' (see § 2). The lists give also the word *sura-gal* (Sum.), 'great *surru*' (*WAI* ii. 21. 41, 46, 47c). The *surru* probably belonged to the highest class of the musician priests, as represented by the *kalû* (see § 16). Though read *šangamah(h)u*, it is really the *suramahu* who is spoken of as kindling the fire and the brazier (§ 2). In the list of priests, *WAI* ii. 32. 9, either as *suramahu* or as *šangamahu*, he is mentioned between the 'libationer' (*ramku*) and the *mašmašu* (see § 8).

16. The *kalû*.—A Semiticized form of the Sum. *gal*, dialectic *mulu*, this, like *surru*, stood for a variety of offices. From the inscriptions and the bilingual lists it is clear that he was, like the *surru*, a singer, a worker (of ceremonies, *ga-ga*, dialectic *ma-ma*), an utterer of lamentation (*ir*), Anu's (or god's) fortress (*bad ana* or *bad dingira*), and the invoker of the oracle (*nunuz-pû=lamû pirišti*). *Kalû* also explains the Sum. groups *sura* and *sura-gal*, 'great *surru*' (see § 15).

Besides being the temple singer, the *kalû* wrote astrological reports, with, probably, the forecasts derived therefrom; and the ceremony of making offerings was also part of his duty. In connexion with his musical duties, it is noteworthy that the god Ēa, as patron of their order, bore the name of *Lumha*, the ideogram expressing which is regarded as a wedge-formed picture of a musical instrument, the lyre.

17. The *nâru*.—This was apparently the musician-priest *par excellence*. The god Ēa is said to have had a special *nâru* of his own named *Hasisu*, 'the wise one,' and as the god of the *nârê* Ēa bore the name of *Dunga*. They seem to have joined in the lamentations, and thus were classed with the mourners.

For representations of priests of this class (they were shaven), see Earl of Southesk's *Catalogue of Collection of Antique Gems*, London, 1908, ii. 64, and L. de Clercq, *Catalogue*, Paris, 1887 ff., no. 101. The *nârê* and *nârâte* of the historical inscriptions, like those sent to Sennacherib by Hezekiah, were evidently not connected with the temple services. See *Musio* (Babylonian).

18. The *gallâbu*.—For the work of this priest see § 5, from which it would appear that the rite performed by him, which formed an essential part of priestly consecration, was sometimes, either wholly or in part, undertaken by the king. The *gallâbu* and the *āsu* carried the implements of their profession in cases of skin or leather (*WAI* v. 1. 2 ff.).

19. The *bârû*.—This was the most important or one of the most important of the orders of seers. Their duties are indicated shortly by Lidlul the Sage:

'The *bârû* forecast not the future by soothsaying.' 'The *bârû* has taken my forecasts away' (Jastrow, *fl.* 125, 169, 129, 4).

The Sum. corresponding word is *gaššu*, attached to a character with the general meaning of 'to pierce,' 'to open.' The bilingual lists give, as the groups which may express this word, the Sum. *uzu*, *azu*, 'physician'; *azu*, *zuzu*, *mezu*, meaning respectively 'water-knowing,' 'oil-knowing,' and 'voice-knowing,' the last referring, probably, to supernatural vocal revelations. Another group

means 'he who explains an oracle (or vision).' As indicated by Lidlul, his duty was to direct men by visions—*bārū ina bīri ul ušēšir-su*, 'the seer has not directed him (the troubled one) by a vision' (*WAI* iv. 22, 42b). To all appearance the *bārū* corresponds with the 'seer' of the Hebrews (*hozeh, roeh*).

The above descriptions of his duties corresponded with those of the *חַרְטֻמְמִין*, *hartummim*, of the OT (*Gn* 41⁸, etc.), but he had other duties of greater importance and dignity. Thus Martin's *Textes religieux* pictures him to us in the assembly of the other members of the order, when, raising a branch, he intoned the incantation beginning

'Šamaš and Adad, arise. In my supplication, the raising of my hands, whatever I do, let the invocation which I offer be the truth.'

When the presages were not satisfactory, and the god did not answer, he had to perform the ceremony of 'washing the mouth,' pronouncing afterwards the following prayer:

'Šamaš, lord of judgment, Adad, lord of the oracle, I bring you, I offer you, a pure fawn, the young of the gazelle, whose eyes are bright, face perfect, hoofs without defect.' (Here follows a list of the innocent pleasures which the fawn has enjoyed.) 'He does not yet know the stag's desire, and I offer him to you.'

Samaš, Adad, arise, and in my supplication, in the raising of my hands, whatever I do, let the invocation which I offer be the truth.'

Priestly supplication was generally accompanied by the lifting of the hands. They seem not to have been raised on high, but simply to the level of the face, with the finger-tips approaching.

The rites accompanying the duties of the *bārū* were very numerous, as might be expected from priests of such ancient origin and important functions.

20. The *abarakku*.—Closely connected with the functions of the *bārū* were those of the *abarakku*, of whom, however, very little can be said. The word is written with the same character as is used for *ittu*, 'sign,' 'omen,' and the like, and was pronounced in Sum. *isikim*. A mutilated explanation implies also that it was rendered by *bārū*, 'seer.'

Abarakku is probably the *אַבְרָקָה*, *abrek*, of *Gn* 41⁴³, and, if so, the proclamation made by the Egyptian heralds did not mean 'bow the knee,' but 'the (great) seer,' or the like. The existence of the word in Hebrew is due to Babylonian influence. It is doubtful whether the similar word *abriggu*, from the Sum. *abrig*, has anything to do with this; but it may be noted that the last is expressed by the characters *nun-me-du*, 'prince (divine), command bringing,' or the like.

21. The *āšū*.—There may be some doubt as to this being a priestly order, but the leech in ancient times was so important that the Babylonian priesthood can hardly have failed to include the professors of the healing art among them. Nevertheless, in Hammurabi's Code, they came under the severest clauses of the *lex talionis*—a fact which may be taken to show that priests in general were not a privileged class before the law.

The etymology of *āšū* is interesting, as it comes from the Sum. *azu*, meaning, probably, 'water-knowing,' either from the medical 'waters' that he used or from the knowledge that he was supposed to have of the fluids of the body. Other Sum. words translated by *āšū* were *nizu* or *zalu*, 'oil-knowing,' and *mezu* or *išizu*, 'voice-knowing' or 'incantation-knowing' (see § 19). As *azu* also stands for *bārū*, 'seer' (§ 19), it is clear that he belonged to the same class of temple-official.

The severity of the *lex talionis* under which they practised proves that a knowledge of surgery was expected of them (see *ERE* iv. 259 f.). Herodotus (i. 197) says that the Babylonians made no use of physicians, as the people trusted to the advice of those who had already suffered from the maladies which afflicted them. The inhabitants of the capital at least therefore seem to have had unsatisfactory experience of their healing powers. The

Assyrians, however, had not come to this conclusion, as many tablets (some of them letters) show. *Asū* has passed into Heb.-Aramaic as *אָסָא*, *asā*, with derivatives.

It is possible that the *mugu* was also a physician (Harper, no. 108, rev. 8). The *rab-mugu* is probably the *rab-mag* of Jer 39 (Gr. 46³).

22. Other priestly classes.—Whether the *aba*, which is a similar formation to *asu*=*asū*, was a priestly class or not is uncertain. It might be translated 'water- [i.e. medicine-] giver.' As a rule, he was a scribe or secretary (in Harper's 33rd Letter he heads a short list of priests). It is probably on account of his apparently secretarial duties that he has been regarded as one of the classes of scribes, *tuššarru*, the *tišsar* of Jer 51²⁷ and Nah 3¹⁷. Notwithstanding their various secular occupations, the scribes were often priests. Considerations of space prevent notice of various other priestly titles, but it is necessary to add to the list the temple-officials designated by the Sum. *tu-ē*, 'temple visitor,' or the like (*tu*, 'to enter' + *ē*, 'house' or 'temple'). They had apparently considerable power, but it is not known in what their great influence originated. One of these, Nabūsum-ukin, attached to the great temple of Nebo at Borsippa, married Gigitum³, daughter of Neriglissar (see *RP* II. iv. [1890] 101 ff.).

23. The heavenly hierarchy. — Though the priestly titles of the gods of the Babylonian pantheon were imitated from those of their earthly priesthood, it is probable that the Babylonians regarded the reverse as being the case. Thus Engur, mother of Ēa, was the true *abrakkatu* (§ 20) of the heavenly (and the earthly) *ē-kura*, or temple; Nin-šah was the supreme messenger or minister (*sukkal-mah*) of Anu, the god of the heavens; Eninna-ni-zi was the *sukkalu* of En-Urta ('Ninip'), one of the gods of healing; Azagasad was the *sura* (§ 15) of Enlilla, etc. All, or nearly all, of the great deities had their *sukkalē*, and Šamaš, the sun-god, had several—he of the right, he of the left, the one who was supreme (*mah*), and two *sukkal sa-kussa*, 'heart-resting.' He had also a *gallābu* (§ 18), one who shore him (of his rays), either when he set or when he was eclipsed. The name of this deity was Engana, 'lord of repose,' or the like.

The great god of the various orders of priests seems to have been Ēa, who was patron of the *kalē*, 'chanters,' *nārē*, 'musicians,' *āšipē*, 'incantation-makers,' *bārē*, 'seers,' *tuššarrē*, 'scribes,' *asē*, 'physicians,' and *gallābē*, priestly tonsure-cutters.

The abode of Ereš-ki-gal or Allatu³, goddess of the under world, was regarded as similarly organized. Namtar, or 'Fate,' was the goddess's *sukkalu*, and she had, as well, a divine (?) and priestly food-distributor (*mu* or *mu-haltimmu*). The lists of gods also give certain divine titles, which may be priestly, but are not represented on earth.

LITERATURE.—Morris Jastrow, *Die Religion Babyloniens und Assyriens*, Giessen, 1905–12; E. Behrens, *Assyrisch-babylonische Briefe kultischen Inhalts*, Leipzig, 1906; and the special lexical articles in F. Delitzsch, *Assyrisches Handwörterbuch*, Leipzig, 1890; and W. Muss-Arnolt, *Concise Dict. of the Assyrian Language*, Berlin, 1905. As the subject is a very extensive one, notes on priestly titles are scattered throughout recent Assyro-Babylonian literature, the most noteworthy being F. Martin, *Textes religieux assyriens et babyloniens*, 1st ser., Paris, 1903.

T. G. PINCHES.

PRIEST, PRIESTHOOD (Buddhist).—For all purposes, ecclesiastical and social, the priesthood in Buddhism is coterminous with the order of monks (*Saṅgha*). Every ordained member of the *Saṅgha* is qualified to act as priest, and to perform those duties which in Buddhism may be considered to attach to the office. Of priestly function, however, in the narrower, more restricted sense of the term with which Western ecclesiastical

history is familiar, Buddhism knows nothing. The monk or priest, in so far as he has obligations and duties towards the laity, is the servant of all, for their edification and conversion. His relation to them is that of a minister to their religious necessities, and a confidant and guide on all the critical occasions of life, as they on their side serve his temporal needs and provide him with the requisite minimum of food and clothing. In neither of the great schools of the North and the South is there any suggestion of the thought that through a human intermediary man may or must approach unto God; and Buddhism has no order or ritual of sacrifice to require the services of an officiating priest with expert knowledge of the modes and significance of the rites. Whether, as in the Hinayāna, in theory at least a man must rely solely upon his own endeavours and virtues to achieve salvation, or, as in the Mahāyāna, upon the merits and assistance of powerful *bodhisattvas* to sustain his faltering and wayward steps and to bring him to his goal, in neither case is deliverance through or by a human priest.

This was the view consistently adopted and enforced by Gautama Buddha himself, if the Pāli books rightly interpret the tenor of his directions and teaching. After his death the Law which he had given to his disciples was to be their guide. Each man might gain a knowledge of the truth by his own insight and exertions, as the Buddha himself had done; and there was no other road to emancipation and rest. If, however, the Mahāyānist teachers are right in maintaining the fundamentally mystical and esoteric character of his later instructions, he himself made provision for effectual external aid to be at the disposal of all who sought deliverance from suffering and wrong; but that deliverance was from a superior divine source and not mediated through a man.

The offices, therefore, which the Buddhist priests undertake for the laity are chiefly those of reading and exposition of the Scriptures. In most of the monasteries also, especially in Burma, instruction is given by the older monks or those appointed for the purpose in the elements of secular learning and the simpler doctrines of the faith together with narrative of the life or lives of the Buddha. In this service the Buddhist priests have been for many centuries the national schoolmasters; and in most Buddhist countries, except as undertaken and forwarded by European government authority or missionary enterprise, no other teaching has been available. On all important occasions, moreover, in the private life of the people, at marriages and births and especially in cases of sickness, the priest is summoned to perform ceremonies and prophylactic rites, to pronounce incantations, and by recitation of sacred texts to expel and keep at a distance evil influences. In some instances simple remedies may be applied. For the most part it is only in Vassa that formal exhortations or orations are made. The practice varies, however, in the different lands in which Buddhism prevails. Usually also the sermons or discourses are delivered not in the temples, which the laity are not expected to frequent for that purpose, but in private houses or in halls erected or lent for the occasion. The preaching work of the early itinerating monks seems to have been done to a large extent in the open air; but this practice obtains little if at all at the present day.

The services within the temples themselves can hardly be said to call for the exercise of any priestly function. They consist for the most part of invocation and recitations, in which all the resident members of the monastery share, but the laity are not present, unless as accidental spectators. The latter frequent the temples for worship

and to present their offerings individually or in small groups. There are no general assemblies or combined devotional services. At the principal service of the day the senior monk or another to whom the duty is delegated will deliver a sermon or exposition on Buddhist doctrine or ethics; he acts, however, less by virtue of his position or office as priest than on account of the superior knowledge with which he is credited. From him the junior monks may expect to receive instruction in the right way of life. In his private capacity also the priest will give advice, and receives confessions.

The most elaborate ceremonial and suggestive ritual is to be found in Tibet. Here, at a service that has derived some at least of its main features from Christian example and the commemorative observance of the Last Supper, the Buddhist Lāma officiates as priest. Formal Buddhism, however, owns no doctrine of sacrifice or propitiatory offering. The Lāmaism of Tibet is Buddhist in little more than name, and the Lāma priest of high rank is endowed with more of priestly function and consideration than the Buddhist monk of other lands. The services in the temple include formal and elaborate liturgies, in addition to the ordinary recitations and instruction. At the frequent festivals the ritual observed is often intricate as well as highly ornate. Extra services also are held at the request of laymen, for which payment is made in the form of gifts to the monastery, the merit of which accrues to the donor. To a considerable extent these practices have been derived from the West through the agency of early Nestorian missionaries. The monks also visit the houses of the laity to perform ceremonies and to read portions of the Buddhist sacred books.

Among the various peoples professing the faith there is no great difference in the offices thus undertaken by the Buddhist priests. Recitation of the Scriptures and more or less formal and regular discourses in the temples on the topics of the Buddhist religion form the larger part of their recognized duties. Moreover, in all the northern countries at least Buddhist usage and ceremonial have been to a considerable extent modified, as in Tibet, by indigenous beliefs and practices. With this one exception the process has advanced farthest perhaps in China, where Buddhist and Taoist priests interchange facilities and mutually officiate in the temples of either faith. Chinese monks conduct the services and perform their duties in a very perfunctory manner. The Japanese priests, on the contrary, are alert and intelligent, often well-read and interested in the history and doctrines of their sect, and punctiliously observant of the duties that are incumbent upon them. In some sects they add to their other services that of an active missionary propaganda in defence of the faith. Between the Shintōist and Buddhist priests no interchange of ministry or office takes place at the present time, and the demarcation in manners and appearance, as in duty and ceremonial, is complete. The relations formerly must have been much more intimate and friendly, and Buddhism has taken over from the national faith functions which would seem to be entirely incompatible with its principles and creed. At funerals especially Buddhist priests are summoned to officiate; on the other hand, at marriages and births, on the more joyous occasions of the family life, the services of the Shintō clergy are in request. In the presentation of the ancestral offerings also the Buddhist priesthood takes an active and recognized part. The equipment and dress of the monks is similar to that found in China, and the same practice of branding at initiation into the order prevails. Whereas,

however, in China the branding is upon the shaven head, in Japan the mark is made upon the arm of the monk.

It is in Korea that the priesthood holds a position of least prominence, having maintained little authority or dignity. It was otherwise in the earlier centuries of the history of the country, when Buddhist priests took a leading part in the political as well as in the religious control of the people. More recently their influence diminished, and for a long time they have had little interest or concern in the national life. Their numbers do not increase, they live apart from the people, and are little honoured or consulted.

The service of the priest or monk therefore in Buddhism has been closely determined by the origin and early history of the faith, and, except where other conditions have been imposed by its environment, has not travelled beyond those limits. The absence of a doctrine of sacrifice, or of any recognized belief in a future life beyond this world, has necessarily placed a hindrance in the way of the development of a priestly office, and has retarded or altogether checked the growth of any felt need for the ministry of the priest. Notwithstanding, the Buddhist priest, although to a less extent than in Christianity or Hinduism or some other faiths, has a real place among his people, and his office carries with it prerogatives and an influence that are of much importance. It is true that the honour paid to his office has not always, any more than in other countries, been transferred to his person; and the order is sometimes recruited, as in China, from the lower classes of the population. There can be little doubt, however, that the ascendancy of the priest or monk has been a real and perhaps decisive factor in the history and development of the Buddhist religion.

MONASTICISM (Buddhist).

A. S. GEDEN.

PRIEST, PRIESTHOOD (Chinese).—The statement, which is so commonly made, that there are three religions in China is apt to convey a very misleading idea of the religious state of that country. Setting aside the members of the various Christian churches, and the adherents of Judaism and Islām, and perhaps the Buddhist monks and nuns, it would be hard to describe the average Chinaman as being an exclusive adherent of any of the three systems which are usually called the three religions of China—Confucianism, Buddhism, and Taoism. It would scarcely be too much to say that the basis of his religion is practically the same as that of his ancestors in the days before any of the three teachers from whom these systems professedly derive their origins had been born. As a clearly defined physical type of man has been in occupation of Eastern Asia since pre-historic times, so certain elements in the religious stratification of that area appear to have remained unchanged for an immense period. These elements are shamanism (*q. v.*) and ancestor-worship (see art. COMMUNION WITH THE DEAD [Chinese]). When we first meet with the Chinese, we find them practising shamanistic rites and paying honour to their ancestors, though in addition there appears to have existed belief in a supreme being. Under the Chou dynasty (1122–249 B.C.), when we are beginning to touch firmer ground, there appeared two remarkable ethical teachers, Confucius (551–478 B.C.) and Lao-tse, his elder contemporary, and a

somewhat more shadowy personality, whose teaching exercised a great influence on the subsequent development of Chinese religion. It became separated into two currents: Confucianism, which is more correctly described as a moral than as a religious system, becomes the basis of the state cultus (for the sacerdotal functions performed by the emperor before the fall of the Manchu dynasty in 1912 see art. CONFUCIAN RELIGION); and Taoism, the more popular current, becomes to a large extent identified with the shamanistic substratum of Chinese religion, which de Groot terms 'universal animism,'¹ or the worship of the *shen*, departmental spirits animating the various parts of the universe. In the 1st cent. of the Christian era Chinese religion became profoundly modified by the advent of Buddhism, which now became influential in its northern form, the Mahāyāna, or 'Great Vehicle,' during the reign of the emperor Ming-ti (A.D. 58–76), though the first missionaries of the Indian faith may have reached China as early as 217 B.C. From Buddhism the national religion of Taoism borrowed the conception of monasticism, which now became acclimatized on Chinese soil by the votaries of the two faiths.

1. Primitive shamanistic priesthood.—From the earliest times there appear to have existed in China persons of both sexes credited with the possession of *mana*, or spiritual power (see art. MANA), of a kind found all over the world, which enabled them to wield extraordinary powers in the spirit-world. These shamans are for the most part to be identified with the *wu*, exorcists, mentioned in very early literary records. From the *Shu king*, or 'Canon of History,' it appears that they were entirely possessed by spirits of *yang* material, which represents the principle of light and warmth, according to the primitive dualist philosophy of the Chinese (see art. COSMOGONY and COSMOLOGY [Chinese]). Their functions appear to have been threefold: (a) invocation of the spirits of the dead for the purpose of inducing them to partake of offerings; (b) prophecy by means of knowledge obtained from the possessing spirits; (c) exorcism of all evil; this they accomplished in virtue of the *yang* power which resided in them and enabled them to neutralize the *yin* element, or element of darkness. In this capacity they would accompany potentates when entering a house of death. Ch. xii. leaf 46, of the *Li ki*, or 'Treatises on Ceremonial Usages,' says:

'When a ruler goes to the funeral rites of a minister, he has with him a *wu* and an invoker, holding respectively a piece of peachwood and reeds.' (The peach-tree was believed to be a source of terror to ghosts, and the bundle of reeds has a magical significance, being employed for the purpose of sweeping away evil.)

The *Chou li*, or 'Book of Institutions of the Chou Dynasty,' ch. xxv. leaves 30 and 39, says:

'When the sovereign pays a visit of condolence, the invoker for the funeral rites marches in front of him, in company of the *wu*'; and 'the male *wu* on the same occasion walks ahead of him with the invoker.'

In the time of the Shang dynasty (1766–1122 B.C.) these *wu* appear to have been a kind of order of singing and dancing dervishes. They danced at sacrifices to secure rain.

'At the altars raised to pray and sacrifice for rain,' says de Groot, 'the priestesses, representing the Yin or female part of the Universal Order, to which clouds and water belong, performed dances; and when disasters prevailed, they conjured the gods by means of chants expressive of grief and distress.'²

The early texts appear to suggest that the *wu* were the Chinese representatives of a primitive animistic priesthood found all over Asia, such as the dervish of Muhammadan countries, the Indian *fagin*, and the shaman of the Siberian aborigines. When 'possessed,' they suffer convulsions and distortions. The possessing spirit is believed to endow them with the power of second sight and of

¹ *The Religious System of China*, vi. 1188.

² vi. 1190.

exorcizing spectres. Some ancient texts refer to the male *wu* as *hih*. They also mention a class of persons called *chuh*, i.e. invokers or conjurers. In texts of the Han dynasty (c. 200 B.C.—A.D. 200) the expression *wu-chuh* occurs, thus indicating that the functions of the two classes had become assimilated. The *wu* were frequently employed by the emperors of this dynasty. Since disease was popularly ascribed to demoniacal possession, the *wu*, being exorcists, were much sought after as physicians. In this capacity they were employed in the 4th cent. A.D. to chase away foxes and lizards, which were believed to bring disease. What gave the *wu* their greatest influence, however, appears to have been the fact that in their mediumistic capacity they claimed to reveal to their clients the wishes of their departed ancestors. The southern provinces have always been the great stronghold of *wu*-ism. Its influence with women was enormous, and probably in early times there were more female than male *wu*. Any woman, married or unmarried, who felt herself capable of becoming a medium could do so. A state of ecstasy was induced by dancing, and perpetuated by monotonous music and the beating of drums. At certain periods *wu*-ism constituted a grave political danger, and, under the influence of its representatives, mandarins were induced to plot against the emperor. Its social influence was, moreover, so great that it led to the complete transgression of the canons of Confucian morality, by which women were forbidden to appear in public in the presence of men. Repressive edicts against *wu*-ism were therefore not infrequent. The *wu* were often employed as exorcists by the Tatar dynasty of Liao, but under the Ming dynasty which succeeded it (1368–1643) vigorous measures were adopted against them. Texts of the Ming period make it clear that the *wu* had temples and images of their own gods, to whom they offered sacrifice. They were no doubt the same as the thousands of village-temples existing in China at the present day. In all ages the *wu* appear to have been paid for their services in employing spells, and also for the crime of 'life-plucking,' i.e. dismembering a living body for the purpose of sorcery. At the present time their functions fall into three classes: (1) clairvoyance and soothsaying; (2) exorcism; (3) sacrificial work, with invocation and conjuration. Formerly there existed a division of labour, one class exercising each of these three functions separately, and this condition still exists in the province of Fukien and on Amoy Island. All over China, however, there is found a class of so-called *sai-kong*, which is almost exclusively occupied with sacrificial work and magical exorcism. In popular estimation this class is the most important branch of the *wu*-ist priesthood. The *sai-kong*, who are permitted to marry, wear no distinctive costume. Their houses are indicated to clients by sign-boards, on which are written the characters, 'There is a Taoist altar here,' showing that they regard themselves as Taoist priests.

In practice the *wu*-ist priesthood is more or less hereditary; it is usual for every *sai-kong* to design one of his sons for his own profession, as he does not like to initiate strangers into its *arcana*.

Before initiation the prospective *sai-kong* undergoes a fast or vigil. When the hour for the ceremony arrives, attired in clean underwear beneath a sacrificial robe, and with bare feet, he is carried on some one's back to the temple in which it is to take place. The reason for his being carried is that the earth is a great repository of *yin* substance, and contact with it might therefore be dangerous, as it might neutralize the *yang* substance within him. The ceremony of initiation is performed by a *wu* of advanced age, who is known as a *kao tsai*, 'chief of religion.' The chief portion of the ceremony of initiation consists in the candidate undergoing the ordeal of climbing a *ts'ui*, or ladder which has swords with the blades placed upwards

for its rungs. While he undergoes this ordeal, a bundle of baby-clothes and some paper charms are fastened on his back; the latter he throws down when he reaches the top of the ladder, and the former are restored to their owner at the conclusion of the ceremony. After the ordeal of ladder-climbing is over, the neophyte kneels before the chief to receive the joyful news that he is now a fully qualified *sai-kong*. His influence will be proportionate to the number of rungs which he has mounted.

No *sai-kong* may adopt more than one pupil to succeed him in his profession. Each has a State diploma granting him permission to exercise its functions. This must be registered by the prefect and a fee must be paid. In Amoy the *sai-kong* belong to a club to which each member is bound to contribute, and has the privilege of drawing upon it in time of illness. A *sai-kong* will call himself a *tao shi*, or Taoist doctor, and most of his ritual is Taoistic in character. The work of the *sai-kong* is the propitiation of the gods, who constitute the *yang* part of the universe. The line of demarcation between *wu*-ism and Taoism is ill-defined. It was from the *wu* that the *tao shi* derived the art of exorcism.

'The difference between the *tao shi* and the *wu* class,' says de Groot, 'was finally effaced entirely when the older part of the function of the *tao shi*, viz. assimilation with the Tao by mental and bodily discipline in seclusion, was discarded, being incapable of being maintained by them against the competition of Buddhist monasticism, and against the oppression of ascetic and conventual life by the Confucian State.'

A respectable *sai-kong* accepts what his employer offers him in the shape of money or kind in return for his professional services, but never demands payment. In officiating at religious ceremonies the *sai-kong* wears a square silk garment, resembling a chasuble in being without sleeves, and embroidered on the back. It is of magical significance, representing the shape of the earth according to primitive Chinese philosophy, and invests the wearer with the power of the order of the world or *Tao*, and enables him to restore that order. It is called *t'ô p'ô*, 'gown of the *Tao*.'

There exists also a class of youths known popularly as *ki-tong*, 'divining youths.' They are believed to possess *shen*. They usually acquire it at a religious ceremony in a temple, at which they suddenly begin to hop and dance, making strange gestures. When a youth behaves in this way, the bystanders realize that he has become 'possessed.' The case is investigated by a *sai-kong*, and the possessed youth begins to form a clientele, who employ him as a medium. The *ki-tong* are employed as exorcists. When an epidemic prevails, they are organized into processions, in which, stripped to the waist, and covered with blood flowing from self-inflicted wounds, they indulge in frantic dancing. They have even been seen carrying heavy pewter lamps, fastened to hooks thrust through their arms. Female *wu* are frequently mentioned in Chinese texts subsequent to the Han dynasty. De Groot knows of no female *sai-kong* in the Amoy district. Women, however, participate in other kinds of *wu*-ist work.

2. The priesthood in the State religion.—We learn from the *Chou li* that at the time of its composition the *wu* were not the only priesthood in China; there was also a body of officials charged with the performance of rites and ceremonies, among which those connected with the State religion were the most important.

'Under the direction of a Minister, entitled Ta tsung poh or Superintendent of the Ancestry, . . . those officers had to direct the erection and conservation of the temples and altars of the State and the mausolea and tombs of the reigning House, furthermore, the celebration of sacrifices with music and dances, victims and implements, besides the funeral rites in the royal family, divination and auguration, etc. This ministerial department was undeniably a priesthood of Universal Animism, the gods whose worship they had to maintain and regulate being the *shen* which animate Heaven and Earth and their constituent parts and phenomena, as also the spirits of the dead.'

¹ vi. 1254.

² De Groot, vi. 1188.

This priesthood was in its inception an official creation, not a spontaneous development of the animistic substratum of Chinese religion.

It was probably the prototype of the *li-pu*, 'board of rites,' which in later ages supervised the ceremonial aspects of the State religion. The board of rites was the fifth in order of precedence among the eighteen boards to which the administration of the empire was entrusted prior to the Revolution of 1911, when it was suppressed, its functions being absorbed into those of the ministry of the interior. The *Chou li* (xvii.-xxvii.) gives a list of the officials who served under the ministry of rites, with a description of their functions. They include the superior of the sacred ceremonies and his assistant, a master of the sacrifices, an officer in charge of the vases containing the libations and of the preparation of the sweet-smelling wine, an officer charged with providing the sacrificial cocks, an official who sets in their places the cups containing the libations at sacrifices, one to set in order the mats, a keeper of the ancestral hall of the imperial family, a keeper of the seals, a keeper of the imperial wardrobe, annalists and imperial secretaries, musicians, a grand augurer, invokers, and sorcerers. The last were the *wu*, who were already at that period incorporated into the State religion. The board of rites cannot, however, be regarded as a priesthood, since it was charged with the supervision of the State sacrifices merely, and was not a body charged with the task of mediating between God and man.

3. The Buddhist priesthood.—There is not in Buddhism any clearly marked distinction between the priest and the monk as in Catholic Christianity. In the latter religion the priest is one whose duty it is to officiate at the holy mysteries, while the monk is one who seeks to sanctify his soul by a life of retirement from the world, it being unusual during the earlier period of Christian monasticism for monks to be priests. In Buddhism, however, there is only one type of religious official whom we may call priests or monks, some of whom live in communities and some of whom do not. In the earliest form of Buddhism, which was agnostic, the idea of mediation was of necessity completely absent. In the first two and a half centuries after the introduction of Buddhism into China Buddhist monks were all foreigners, as it was not till the 4th cent. A.D. that Chinese subjects were permitted to adopt the monastic life. At the present time Buddhist monasteries in China are usually situated outside the cities in the open country, the ideal situation being a wooded height. Their inmates are for the most part recruited from the ranks of children, who are frequently sold to them by a necessitous mother after the father's death. Hackmann mentions a case in which twenty-five Mexican dollars (40s.) were paid for a child.¹ Only a few monasteries receive any appreciable number of adult novices. When in their seventh year, these children begin to be initiated into their religious duties. Their heads are completely shaved, and a special teacher is appointed to each. When the final consecration takes place, the novice is branded on the head as a sign of his willingness to endure hardship. Sometimes this branding is voluntarily repeated in later life. Nine vows are usually taken—to abstain from taking life, stealing, adultery, slander, reviling, lying, and feelings of jealousy, hatred, or folly. Sometimes others are added. Devotional exercises, which consist of invocations, praises, and the reading of extracts from the scriptures, usually take place three times a day. They are frequently accompanied by a sacrifice, in which the oblation usually consists of rice or tea. Meditation, both

ambulatory and sedentary, is still continued in some monasteries, but it has widely fallen into desuetude. A moderate-sized community consists of about thirty to forty members. There is a well-organized domestic economy. All owe obedience to the abbot (*fang-chang*). The community is divided into an eastern and a western hall. The eastern deals mostly with secular matters. It includes a book-keeper, guest-master, commissioner of stores, superintendent of field labour, superintendent of water-supply, overseer of the kitchen, manager of the clothing department, another for giving out tea, superintendent of repairs, and others. The western division deals with the religious side of life, and includes sacristans, chanters, lecturers, and monks, who expound the sacred science to laymen. Chinese monks wear trousers, stockings, and shoes, besides an undergarment extending from the waist to the knees, and a garment covering the whole body. A wide garment is worn over this for full equipment. Poverty has ceased to be enforced, and monks freely accept gifts. The average monk has no real knowledge of the Buddha's teaching. Penalties are imposed on those monks who commit ritual offences, but moral offences often go unpunished. Punishment is generally administered by flogging on the naked back by lay-brothers. The monks are for the most part at a low stage of intellectual culture, though a thousand years ago, when Europe was in the Dark Ages, the monasteries of China were filled with philosophers and scholars. A person of good family rarely becomes a monk. When he does so, however, he speedily attains to abbatial rank. Immorality is wide-spread, and this led to the suppression of all the monasteries in Fuchow in the years 1830-40. It is, however, unwise to generalize on this point, as the reputations of individual monasteries vary very greatly; that of the celebrated monasteries of Chiu-hua and Puto stands high. The use of opium is also prevalent among the monks. Individual monks of ascetic life are found, and even in recent times a monk has sometimes been voluntarily burnt alive on a funeral pyre. Monks are usually cremated at death. Besides the cenobitical communities, Buddhist hermits are found in China. They dwell in poor huts or in holes in the mountains, and are maintained by alms or by a neighbouring monastery. The hermits do not shave their heads, but wear their hair long. Some who are more ascetic than their fellows live in small mountain caves, into which the sunlight never penetrates. When such a one dies, his body is embalmed in a special manner, and, after being painted and gilded, is set up in a temple as an object of veneration. There is no supreme authority over all the monks in China, each monastery being self-contained. The government has, however, bestowed an official status on some of the abbots, who act as intermediaries between it and the monasteries. These abbots are responsible to the government for the conduct of the monks. Any ordained monk may move at will from one monastery to another, on showing a pass issued by his abbot, or he may adopt an itinerant mode of life. Buddhist monks are usually known as *bonzes*, a Japanese term introduced into China by Roman Catholic missionaries.

4. The Taoist priesthood.—The indigenous religion of Taoism, which, though it professes to be founded on the ethical teaching of Lao-tse, nevertheless in some of its manifestations appears to merge imperceptibly into the popular animism of the country, began under the influence of Buddhism to evolve an organized priesthood and ritual soon after the opening of the Christian era. At

¹ *Buddhism as a Religion*, p. 218.

present there are two orders of Taoist priests, one celibate and one married, the latter, however, being composed of priests married before ordination. They reside in their own dwellings and wear the ordinary dress of the country. The Taoist priests do not shave the head like the Buddhist ones, but bind the hair on the top of the head. Many lead an itinerant life, and derive a livelihood from the sale of charms. They are for the most part as ignorant of the teaching of Lao-tse as are the Buddhists of the teaching of Śākya-muni. They study instead the pseudo-sciences of astrology and alchemy. Candidates for the Taoist priesthood study for five years. Before initiation they fast for three days, and bathe in water scented with orange-leaves; then, going into the presence of an image of Lao-tse, they seek his blessing. A licence has then to be obtained from a mandarin. The abbots of Taoist monasteries are called *sze-sze*. At the head of the Taoist Church is a patriarch who lives in the temple known as Shang-ch'ing-kung, on the Dragon and Tiger mountains in Kiang-si. He is descended from Chang-ling, a noted healer, who flourished in the province of Sze-ch'wen under the Han dynasty. His cures obtained for him a great reputation, and he healed a number of sick persons by inducing them to write down a confession of their sins on paper and swear not to sin again. When this had been done, he threw the confessions into the water. Chang-ling's cures attracted a great number of followers to him, and he instituted a semi-clerical caste, which appears to have been the genesis of the Taoist priesthood. His work was continued by his son Heng and his grandson Lu. It is said that the patriarch is chosen in the following manner. When one dies, all the male members of the clan assemble, and the names of each are engraved on pieces of lead, which are deposited in an earthenware vessel full of water. Priests then invoke the deities of the Taoist triad, to cause the piece on which the name of him whom the gods have chosen is inscribed to float to the top.¹ The services of the Taoist and Buddhist clergy are for the most part made use of quite indiscriminately by the population. The late empress-dowager once employed Buddhist priests to pray for rain at one altar and Taoists at another. At the funeral of Li Hung Chang priests of both religions officiated. Owing, however, to the elaborate eschatology evolved by Buddhist theologians, the priests of this religion rather than the Taoists are generally employed for the purpose of offering sacrifices to alleviate the sufferings of the departed.

5. **The clergy and the State.**—The monastic ideal was naturally alien to the Chinese temperament, with its deep inbred respect for the ties of family life, and this antipathy showed itself in the hostility of official Confucianism towards Buddhism on its arrival in the country. In A.D. 714 a fierce persecution broke out, during which 12,000 religious of both sexes were compelled to return to the secular state, while in a still more bitter persecution in the following century 4600 religious houses were closed and 200,000 monks and nuns were secularized. Buddhism, however, survived these persecutions and was very powerful in the 10th and 12th centuries. The Taoist church also felt the hand of the State, celibacy being enforced upon its clergy by the first emperor of the Sung dynasty. The legislation affecting the convents and clergy is embodied in the *Ta Ts'ing kuh li*, 'Fundamental and Supplementary Laws of the great Ts'ing Dynasty.'² Many of the laws contained in this work are also found in the Ming

code. It provides that, if any Buddhist or Taoist priest is ordained without a State diploma, he shall receive eighty stripes with a long stick. No abbot may administer the rite of ordination without governmental permission. Since this has been frequently refused, there has grown up a large body of unconsecrated clergy, who wear clerical dress. A Buddhist or Taoist priest is permitted to adopt one pupil on attaining the age of forty.

Hung-Wu, the founder of the Ming dynasty, who ascended the throne in 1368, ordained that all the clergy demanding State recognition should pass a competitive examination in the Confucian classics, thus creating an intellectual link between them and the national culture. Various edicts were issued by the Manchu emperors, restricting the growth of the clergy, though their services were often made use of during the rule of that dynasty. In the southern provinces Buddhist priests have frequently been employed by mandarins in rain-making ceremonies and in exorcizing swarms of locusts. Of late years, however, monasticism has declined rapidly, and the clerical profession is universally despised. A census taken by the Peking police in 1908 revealed the fact that there were in the capital only 1553 Buddhist and 133 Taoist priests. It seems most probable that one of the chief causes which have operated in checking the growth of a powerful sacerdotal caste in China has been the system of making admission to public offices dependent on the results of competitive examinations.

PRIEST, PRIESTHOOD (Egyptian).¹—I. **INTRODUCTION.**—All the numerous communities that occupied the Nile valley just before the dawn of history possessed their respective local divinity or divinities.² Civilization had already so far advanced that the members of each political group would have been severally engaged in agricultural, industrial, or administrative occupations. Consequently the task of performing the services which every community as a whole owed to its gods would have devolved upon, or been deliberately deputed to, a special body of men. An Egyptian priesthood, therefore, may be described as a body of men separated from the rest of the community for the service of a god. At the head of the local priesthood or priesthoods was the local chief, members of whose family held all or some of the more important priestly offices.

This is presumed from what we know to have been the prevailing practice of the historic period, in accordance with which the nomarch, or chief official in a district, seems *ipso facto* to have been 'superintendent of the prophets' (*imy-r', hmw-ntr*) of the local divinities.³

II. **THE POSITION OF THE KING.**—I. **The king as high-priest.**—In historic times, under the strongly centralized form of government instituted by Menes or his immediate successors, all the religious functions of the local chiefs, along with their political functions, were united in one person, the king. Thus the king became in theory the high-priest of all the local divinities. The

² The Manchu dynasty, which gained possession of the throne in 1644.

current beliefs about the divine nature of the king facilitated his assumption of all the high-priest-hoods. He was not merely looked upon as the earthly representative of the god Horus, who, originally the local god of Buto, was early identified with the sun-god Rē of Heliopolis,¹ but he was actually regarded as a form or manifestation of that god.² The king was therefore a god, and indeed was commonly spoken of as the 'good god.'³ Moreover, by the time of the Vth dynasty the king was believed to be the physical son of the sun-god, the State god of Egypt.⁴ The king was thus the natural mediator between the gods and mankind—he was in fact the high-priest *par excellence*. In this capacity he built the temples; and in the reliefs which adorn their walls he alone is depicted as worshipping the gods and making offerings to them.⁵ But it was impossible for the Egyptian king, who was the responsible head of a highly complex system of government, to exercise his high-priestly functions except on rare occasions; he accordingly was obliged to depute them to the heads, or higher members, of the various local priesthoods,⁶ who were conceived of as the Pharaoh's representatives, or else to special emissaries.⁷

(a) The foregoing statement explains why a priest of Harshuf of Herakleopolis Magna is called 'king of Upper Egypt' (*nyswt*).⁸ One of the formulae used in the daily service in the temple distinctly states that the officiating priest represents the king: 'I am a prophet (*hm-nfr*), the king has sent me to behold the god.'⁹

(b) The king always appears to have retained the right to appoint the high-priest of the temple, who was his deputy in a special degree (see § XII. x).

2. The king as son of the divinity.—The king, as we have seen, was Horus, and also the son of Rē, the State god. Many of the local gods, in order to enhance their prestige, were identified with Rē.¹⁰ Hence the king would not only be the high-priest of these local gods but also be regarded as their son. This idea of the sonship of the king would soon affect the relationship of the king with all divinities, male or female.¹¹ The living king, according to the characteristic theological conception of him, was Horus. But Horus was son of Osiris (=the dead king). Under the influence of the Osiris myth the relationship of the king with any god or goddess was conceived of as that of Horus with Osiris; accordingly every divinity was an Osiris for cult purposes.¹² The high-priests, or leading members of the local priesthoods, were, as we have seen, the king's deputies, and as such impersonated the king in the temple services. Occasionally, therefore, as will be seen in the two following sections, the priest appeared in the rôle of the son of the god whom he served, or he displayed some of the characteristics of sonship.

III. THE PRIEST AS SON OF HIS GOD.—1. The 'son whom he loves.'—A priest with the title

⁶ E.g., H. Schäfer, *Die Mysterien des Osiris in Abydos unter König Sesostri III.*, Leipzig, 1904, p. 10 ff.; see also § III. x.

⁷ H. Brugsch, *Dictionnaire géographique de l'ancienne Egypte*, Leipzig, 1877–80, p. 1377; Sethe, *ZÄ* xlix. [1911] 83. The title of a priest of Min in the Denderah list (Brugsch, p. 1374) which looks as though it were *btly*, 'king of Lower Egypt,' is probably, in view of W. M. F. Petrie, *Koptos*, London, 1896, pl. viii. line 2, the word generally determined with the seal-sign *Q* and translated 'treasurer' or 'chancellor.'

⁸ A. Moret, *Le Rituel du culte divin journalier en Egypte*, Paris, 1902, p. 42 f., and cf. p. 55. Cf. also Davies-Gardiner, p. 87 f.

¹¹ *Ib.* p. 52.

'son whom he loves' figured in the 'Opening of the Mouth,' a ceremony performed on behalf of statues in what the Egyptians called the 'House of Gold,' i.e. the sculptor's studio.¹ The 'son whom he loves' represents Horus,² while the statue from the ritual standpoint is Osiris. At a very early date the use of this ceremony may possibly have been restricted to the statue of a dead king (= Osiris). In such a case the 'son whom he loves' would naturally have been the living king (= Horus). When the use of the ceremony was extended to all statues, the office of 'son whom he loves' necessarily devolved upon a deputy.

Thus Sethepeibre,³ a high official under Sesostri III., informs us that he 'acted as son whom he loves in the procedure of the House of Gold' at Abydos—i.e., he took the part of the king at the consecration of a new statue of Osiris.⁴ So also Ikhnoret, who was commissioned by the same king to superintend the making of a statue of Osiris and other accessories of the Osirian cult.⁵

The fact that the *sem*, a title of the high-priest of Memphite Ptah, plays a prominent part in the 'Opening of the Mouth,'⁶ suggests that the ceremony originated in the sculptors' workshops, which, from an early date, were closely connected with Memphis and the great temple of Ptah.⁷ The *sem* figures not only in the 'Opening of the Mouth' but in all the funerary ceremonies (see § XIV. [e]), which, as is now generally recognized, were originally performed on behalf of the kings of the Memphite dynasties.⁸

'Son whom he loves' was also a title of one of the priests of Harshuf, the god of Herakleopolis Magna.⁹ It was not a distinctively high-priestly title, for it was held by a *wēeb* of Harshuf.¹⁰ Herakleopolis, it should be remembered, was the seat of the IXth and Xth dynasties, the successors of the feeble kings of the VIIth and VIIIth dynasties, who were Memphites.¹¹ That probably accounts for the presence of a 'son whom he loves' and a 'king of Upper Egypt' (see § II. [a]) among the priests of the Herakleopolitan god Harshuf.

For the mortuary priest as Horus, son of Osiris, see below, § VI. 2.

2. The *thy* priest of Hathor.—Hathor, the goddess of music and dancing, is often depicted with a small boy rattling a sistrum in front of her. This boy is her son, Harsamtowi the child, also called 'thy' or 'great thy.'¹² The king, in the capacity of Hathor's son, similarly rattles a sistrum in front of her and is called 'goodly thy' of the golden one of the gods, i.e. of Hathor.¹³ Like the king whom they represented, Hathor's priests also impersonated her son Harsamtowi, for *thy* occurs in the list of titles of the priests of Hathor of Denderah.¹⁴ A variant form, *thwy*, is applied to priests of Hathor, represented as dancing and clattering castanets, in the tomb-chapel of a Cusite nomarch¹⁵ and in that of a Theban official.¹⁶ The inscription attached to a similar scene in another tomb-chapel at Meir clearly shows that the *thwy*-priests there depicted belonged to the temple of Hathor of Cusæ.¹⁶

IV. THE PRIEST EXERCISING THE FUNCTIONS OF THE GOD.—In human families the functions of the parent often descend to the son. Does that

account for the titles of the high-priest (a) of Ptah of Memphis, (b) of Rē-Atum of Heliopolis?

1. The high-priest of Ptah.—Ptah was the craftsman of the gods¹ and the patron of craftsmen.² His high-priest was entitled 'he who is great at directing the craftsmen,' *wr hrp hmw*; one of his duties was to supervise the work of the royal craftsmen, who were closely associated with the Ptah temple.³

2. The high-priest of Rē.—The chief title of the high-priest of Rē was 'he who is great at seeing,' *wr m*. He was also described as being 'over the mysteries of heaven,' or as 'he who sees the mysteries of heaven.'⁴ A. H. Gardiner has suggested to the writer that the sun-god's high-priest bore these titles not because he was permitted to gaze upon the god, but because the god's function of unrestricted vision was transmitted to him as deputy of the king, to whom, as 'son of Rē,' this and other functions and qualities of Rē were frequently assigned.⁵

V. HONORIFIC PRIESTHOODS.—A somewhat similar conception to that discussed in § IV. lies, perhaps, at the back of the honorific priest-hoods of the Old Kingdom,⁶ the holders of these priest-hoods reflecting in their functions the character of the divinity whom they served. Thus the 'prophet of the great morning-god,' *hm-ntr diw-wr*,⁷ seems to have been the king's barber, the god in question being the royal beard personified.⁸ The 'prophet of Mēet,' the goddess of righteousness and truth, was a judge;⁹ the 'prophet of Hike,' magic personified, a magician;¹⁰ the 'prophetess of Hathor,' the goddess of music and dancing, a dancer.¹¹

VI. IMPERSONATION OF DIVINITIES BY PRIESTS AND PRIESTESSES.—Egyptian priests and priestesses not merely exercised the functions of divinities; they sometimes actually impersonated them.

The classic example of this is of course the Pharaoh himself. The primitive kings of Buto and Ombos were originally no doubt high-priests of their respective local gods, Horus and Seth. The historic Pharaoh actually was Horus and Seth (see above, § II.),¹² and his queen is called 'she who sees Horus and Seth.'¹³ Similarly the king is the embodiment of the Upper Egyptian vulture-goddess of El-Kab and of the snake-goddess of Buto, and as such is called *nbtj*, 'the two mistresses.'¹⁴

1. Iun-mutef, 'pillar of his mother,' as is clearly shown by a number of inscriptions, is a name for the young god Horus.¹⁵ Most of the representations of Iun-mutef, however, depict not the god, but a priest impersonating him.¹⁶ Iun-mutef is

¹⁶ An exception, perhaps, is Lepsius, iii. 123a.

always associated with the king, and he seems to represent Horus in the rôle of tutelary god¹ of the Egyptian Pharaohs.² In this capacity he officiated at the coronation,³ and at the jubilee, or *sed-festival*,⁴ walked in front of the king in the procession to the temple,⁵ and acted as intermediary between the king and the gods.⁶

(a) The divine status of Iun-mutef is strongly emphasized in his relations with the dead king, in whose presence he is often seen pronouncing the *hotp di nisut*⁷ formula and making offering. Since Iun-mutef was Horus and the dead king Osiris, the latter would naturally be expected to appear in the rôle of the former's father. The reverse, however, is the case, and the dead Pharaoh is spoken of as Iun-mutef's son.⁸

(b) Iun-mutef represents Horus as a youth in Khemmis,⁹ the supporter and protector of his widowed mother Isis. Iun-mutef, therefore, generally wears the side-lock of hair. Compare the name 'pillar of his mother' with the expression 'staff of old age,' used of a young man who is associated in office with his aged father in order to lighten the burden of his responsibility.¹⁰

2. In the funerary ceremonies as originally performed¹¹ in the early Memphite age the parts of Osiris and his son Horus were duly filled by the dead and the living king. Since the king could not possibly officiate in the funerary temples of all his dead predecessors, the part of Horus the son would be deputed to the chief mortuary priests¹² (cf. §§ II. 2 and III.). When the funerary rites came into general use and all dead persons were identified with Osiris, every mortuary priest, when making offering to the dead, impersonated Horus.¹³ Again, the embalmer (*wt*) impersonated Anubis—the god who embalmed Osiris, and hence the prototype of all embalmers—and accordingly often wore a jackal mask.¹⁴

(a) A funerary priest is therefore actually entitled 'Anubis the embalmer,' *ḥnpw wt*.¹⁵ The same title is also borne by Defaihap, ruler of the Lycopolite nome of Upper Egypt,¹⁶ at whose capital Asyût there was a temple of Anubis as well as one of Upwawet.¹⁷ Defaihap held this title in his capacity of high-priest of Anubis, whom, in certain religious performances, he must have impersonated. In a funerary scene in a tomb-chapel at Meir a priest, instead of being labelled *wt*, 'embalmer,' is called 'he who presides in the god's booth,' a regular epithet of Anubis.¹⁸ Similarly a priest, who seems to have officiated at the 'Opening of the Mouth' (see above, § III. x), is entitled on his friend's stele¹⁹ 'Anubis in the House of Gold.' Another priest (mentioned in the same stele), who was 'chief of the lectors in his town,' bears the appellation 'Anubis in the Good House,' i.e., this priest impersonated Anubis in the embalmer's workshop (see below, § XIV. b).

(b) The officiants who wash the corpse during the process of embalming impersonated Horus and Thôth.²⁰

3. (a) Two priests, impersonating Horus and Seth, or Horus and Thôth, and wearing appropriate masks,²¹ sprinkled the king with water before he officiated in a temple.

(b) Atum and Month, or Rē-Harakhte and Amūn, may have been similarly impersonated by priests at the purification of the infant heir to the throne.¹

(c) So probably also was the god Yahes, who officiated at the coronation.²

4. The priestesses of Hathor, who danced in her honour, consciously impersonated her.³ They partook in consequence of the nature of the goddess, and were able to impart her qualities to her devotees.⁴

5. Two female mourners, called the 'great kite' and the 'little kite', impersonated Isis and Nephthys in the funerary ceremonies.⁵

In two passages in the *Pyramid Texts* Isis and Nephthys are spoken of as two birds—the form which they assumed when they set out to seek for the missing corpse of the murdered Osiris.⁶

VII. FURTHER RELATIONSHIPS OF PRIESTS AND PRIESTESSES WITH DIVINITIES.—1. 'Father of the god.'—The relationship of the priest with the god could be other than that of son. A very common priestly title in the New Kingdom and subsequent age is 'father of the god,' *it ntr*; the holders of this title, in the enumerations of priests of those periods, come between the prophets and *we'eb*-priests.⁷

The appellation 'father of the god' primarily belonged to the king's father-in-law.⁸ As a priestly title it probably meant that the holder had one or more daughters in the god's *harim*.⁹

2. The god's concubines.—Human concubines were assigned to certain gods—e.g., Amūn of Thebes.¹⁰ Onuris,¹¹ Iun-mutef;¹² also possibly Upwawet of Asyūt¹³ and Khnum of Hermopolis.¹⁴ These concubines are in a special degree a feature of the cult of Amūn, probably owing to his markedly sexual character; they are frequently referred to in the texts of the New Kingdom and subsequent period.¹⁵

It should be noted that the name of the great temple at Luxor is 'southern *harim* of Amūn,'¹⁶ and that the inscription on the statue of Ibe¹⁷ mentions Amūn's *harim* of concubines (*ipit-f n hnt*).

At the head of Amūn's concubines was the wife of his high-priest, her title being 'chief concubine of Amūn.'¹⁸ The concubines were doubtless the female musicians (*sm'wt*)¹⁹ who were attached to his, as apparently to every other, temple (see below, 3 [b], and § VIII. 3 [d] i.). The view that the female musicians of Amūn formed his *harim* is further supported by the fact that in one instance the wife of a high-priest of Amūn, instead of the

regular title 'chief concubine,' bears that of 'singer (*hnt*) of Amūn.'²¹

3. 'The god's wife.'—(a) From the Vth dynasty onwards²² the king was regarded as the physical offspring of the sun-god (*s' R' n htf*, 'son of Rē of his body').²³ According to the scenes and inscriptions in the XVIIIth dynasty temples of Deir el-Bahri and Luxor,²⁴ Amūn, then identified with the sun-god,²⁵ assumed the form of the reigning Pharaoh,²⁶ had intercourse with the queen, and so begot the heir to the throne. The queen was therefore called 'the god's wife,' with the additional title of 'votaress of the god.'²⁷

Possibly the union of Amūn and the queen was supposed to take place in Luxor temple, 'the southern *harim* of Amūn' (see above, 2);²⁸ that would explain the presence in this temple of the scenes depicting the birth of Amenophis III., by whom the greater part of the present building was erected. A statuette in the Cairo Museum²⁹ represents 'the god's wife,' 'the god's votaress,' Amenirdis, sitting on Amūn's lap; the pair mutually embrace.

(b) 'The god's wife' acted as chief priestess of Amūn,³⁰ and her duties, as we know from inscriptions, consisted in rattling the sistrum 'before his beautiful face.'³¹ In performing this service she would be assisted by the concubines,³² over whom she presided in her capacity of Amūn's legitimate consort.³³ The concubines, as we have seen, were probably the female musicians of Amūn (*sm'wt n Imn*), who are specifically stated to have been attached to the house of 'the god's votaress.'³⁴

Perhaps the statement in Herodotus, i. 182, about the woman who 'lies in the temple of Theban Zeus,' refers to 'the god's wife' or to the chief concubine of Amūn.³⁵

(c) 'The god's wife' is first mentioned in inscriptions of the early XVIIIth dynasty.³⁶

After the fall of the XXth dynasty Thebes became a spiritual principality ruled by the high-priests of Amūn. But from the reign of Osorkon III. of the XXIIIrd dynasty to that of Psamtik III. of the XXVIth, Thebes was governed, not by the high-priest of Amūn, but by a succession of five 'god's wives.' 'The god's wife' was now no longer the queen, but a daughter of the ruling house, and she had to adopt a daughter to succeed her.³⁷

(d) While Thebes was governed by these sacerdotal princesses, the high-priest of Amūn was merely a religious figure-head, all power being vested in the hands of individuals of minor sacerdotal importance, such as Menthemhēt,³⁸ who was only fourth prophet of Amūn. Finally, upon her adoption by 'the god's wife,' Nitokris II., the first prophetship (high-priesthood) of Amūn was bestowed upon Psamtik III.'s daughter, 'Enkhnesneferibre'.³⁹

4. 'The god's hand.'—Below 'the god's wife' in rank, but above the chief concubine, was the priestess called 'the god's hand,' *drt ntr*.¹

The fact that 'the god's hand' was also called 'the daughter of Amun of his body, whom he loves,'² suggests that this title was perhaps originally assigned to a daughter of the queen.³ Both titles were borne by 'Enkhesneferibre', a 'god's wife' in the Saitic period. Since, however, 'god's hand' comes last in her titulary,⁴ it was possibly the title which she bore as the adopted daughter of Nitokris⁵—i.e. before she became 'god's wife' at Nitokris' death.

VIII. THE CONSTITUTION OF THE PRIESTHOOD.—1. The general term for 'priest.'—In ancient Egypt purity was considered to be essential in all persons and things associated in any way with the cult of the gods (see art. PURIFICATION [Egyptian], § V. 1, 5-8). Accordingly the general term for 'priest' is *wb*, 'pure person.' The word was retained in Coptic to denote the Christian priest, and is written *ⲱⲃⲏⲃ*; hence *wb* is to be vocalized *wēeb*. The verb *wb*, 'officiate as *wēeb*,'⁶ is used also to denote the service of the highest grades in the hierarchy.⁷

2. The two main classes of the priesthood.—The priesthood consisted of two main classes—the prophets, *hmw-ntr*, being the higher, and the *wēeb*-priests, *wbu*, the lower.

(a) The word *hm-ntr* (Coptic *Ⲫⲟⲛⲧⲣ*),⁸ which, after the Greek custom, is usually rendered 'prophet,' literally means 'servant of the god.'⁹

(b) *Wēeb*, besides being the name for a member of the lower class of the hierarchy, was also, as already stated, a general term for 'priest' (cf. the general application of the verb *wb* discussed above). Defaihap, a nomarch of the Lycopolite nome, and a 'superintendent of the prophets,' in an address to the governing body (*knbt*) of the temple of Upwawet,¹¹ asserts that he is the son of a *wēeb* like each one of them, though Defaihap's father and the fathers of some of the members of the *knbt* almost certainly must have belonged to the higher order of priests.

(c) From the time of the New Kingdom onwards the members of the priesthood were roughly classified as 'prophets, fathers of the god, and *wēeb*-priests.'¹² The 'fathers of the god' are to be regarded as belonging to the same class as the 'prophets,' the title 'prophet' being reserved for the higher members of that class. As Gardiner¹³ points out, the rare titles, 'first father of the god' and 'second father of the god,' are synonymous with 'first prophet' and 'second prophet.'¹⁴

(d) The Decree of Canopus (hieroglyphic text, line 2 ff.=Sethe, *Urkunden*, i. 126) gives the following correspondences between the Egyptian and Greek titles of priests: 'the superintendent of the temple' = ἀρχιερεύς, 'high-priest';¹⁵ 'the servants of the god,' *hmw-ntr* = προφῆται, 'prophets';¹⁶ 'those who are over the mysteries,' ἱερω-σῆϛ, = σολιστῆς;¹⁷ 'the learned scribes of the god's book' = περὶ ὁροῦ καὶ ἱερογραμματοῦ, 'feather-bearers and sacred scribes';¹⁸ while 'the fathers of the god and the *wēeb*-priests in their entirety' = οἱ ἄλλοι ἱερεῖς, 'the rest of the priests.' For the παστοφόροι, 'shrine-bearers (?)' = ἑγρ. *wnw*, '(shrine) -openers,'¹⁹ who were functionaries below the class of *wēeb*-priests,²¹ see Otto, i. 96 f.

(e) A priest had to begin his career as a *wēeb*, becoming a

'father of the god' before he passed on to the rank of 'prophet.'¹ Even a king's son had to serve as a *wēeb* before he could be appointed to a prophethood.²

3. The staff of the temple.—The priesthood in each temple was called the 'staff' (*wnwt*, lit. 'service') of the temple, *wnwt nt ht-ntr*. The *wnwt* seems to have included the 'prophets' as well as the *wēeb*s. We find mention of the *wnwt* of royal mortuary temples.³

The word *wnwt* means 'regular service.'⁴ According to the generally accepted view,⁵ the *wnwt* consisted of 'lay priests.' But Defaihap of Asyūt speaks of the members of the *wnwt* as *wēeb*-priests;⁶ moreover the expression 'the entire staff' (*wnwt*) of the temple often sums up a preceding enumeration of priests among whom are prophets and *wēeb*-priests.⁷

(a) The phylæ, or courses, of priests.—The temple staff with one or two exceptions (see below (b)) was divided into four courses (Egyp. *s;w wnwt*, 'courses or gangs of the service'), or, as the Greeks called them, *φύλαξ*.⁸ The priests of royal mortuary temples were also divided into phylæ.⁹ Each phyle served one lunar month on end by rotation; thus every priest had an interval of three months between two periods of service.¹⁰

This system, probably already established under the Old Kingdom,¹¹ remained unaltered, except for the addition of a fifth phyle in the reign of Ptolemy III.,¹² till the middle of the 3rd cent. A.D., and probably till the fall of paganism.¹³

(i.) In the small temple of Amūn at Teuzoi each phyle consisted of twenty priests.¹⁴ In Græco-Roman times each phyle in the comparatively small temple of Soknopaios numbered thirty-one members.¹⁵

(ii.) Middle Kingdom papyri from Illahūn show that every outgoing phyle drew up an inventory of the temple property; this was handed over to the ingoing phyle. Both parties verified the list, and the members of the incoming phyle appended their names to the document in token that it was found correct.¹⁶

(iii.) Over each phyle, in dynastic as in Græco-Roman times,¹⁷ there was a phylarch, who changed every month with the phyle.¹⁸ In the XIIIth dynasty the phylarch was called *nty n s*, 'regulator of a phyle.'¹⁹ In the New Kingdom the usual term for 'phylarch' is *hr s*, 'over a phyle.'²⁰ In the Decree of Canopus the phylarch is called 'great one of the phyle.'²¹ The office of phylarch could be held by a prophet,²² a *wēeb*,²³ or even the high-priest himself.²⁴ According to the Decree of Canopus,²⁵ the phylarch must be a prophet. We have therefore good grounds for supposing that, in dynastic as in Græco-Roman times, the priests both of the higher and of the lower grades belonged to the phylæ.²⁶

(b) The permanent officials of the temple.—From a Middle Kingdom papyrus found at Illahūn we learn that the 'superintendent of the temple' of Anubis (like the ἐπιστάτης of the Græco-Roman period)²⁷ and the 'chief lector' were permanent functionaries and not members of a rotating phyle.²⁸

²¹ Griffith, *Demotic Papyri*, p. 79 with note 6.

The superintendent of the temple apparently often was identical with the high-priest (cf. *ἐπιστάτης καὶ ἀρχιερεὺς*),¹ who also frequently held the office of chief lector or lector.²

Minor officials, such as the door-keepers and the temple-sweeper (*k'wtj*),³ were also permanent.⁴

(c) *The governing body.*—(i.) *During the Middle Kingdom.*—The administration of an Egyptian temple at this time seems to have been in the hands of a small committee. The temple of Upwawet at Asyūt, e.g., was administered by a body of ten priests called the *knbt* ⁵ *nt ht-ntr*, 'governing body of the temple,' at whose head was the nomarch in his capacity of high-priest or 'superintendent of the prophets.'⁶

(1) The members of this governing body are given their administrative, not their priestly, titles,⁷ so that we do not know whether they were all prophets, or whether included among them were priests of the rank of *w'eb* only. But they were certainly members of the priesthood.⁸ Compare the list of members of an incoming phyle,⁹ in which each individual is denoted not by his priestly rank, but by his special priestly function.

(2) The governing body of the XIIth dynasty might be compared with the committee of councillor priests (*βουλευταὶ ἱερείς*) of the Ptolemaic period,¹⁰ who assisted the superintendent of the temple or high-priest (*ἐπιστάτης καὶ ἀρχιερεὺς*) in the administration of the temple. The councillors, who changed every year, belonged to the phylae of priests, by whom they were elected, each phyle contributing five members.¹¹ We have no information as to how the governing body of the temple was chosen in the Middle Kingdom.

(ii.) *Under the Empire.*—During the New Kingdom the high-priest had supreme control of the often great wealth of the temple, and was responsible for the administration of its estates, for the care of its buildings, and for the erection of new ones. He had a great host of officials of all grades serving under his almost autocratic rule.¹²

(iii.) *In the Roman period.*—Though there were still superintendents of the temples (*ἐπιστάται*) in the Roman period,¹³ the temple administration generally was in the hands of the college of *πρεσβύτεροι* or *ἡγούμενοι*, who, like the *βουλευταὶ ἱερείς*, changed every year.¹⁴ After A.D. 202 the temples lost all that still remained of their once specially privileged position and were placed under the administration of the municipal senates.¹⁵

(d) *Priestesses and the position of women in the temple.*—Women played a by no means unimportant part in the worship of the Egyptian divinities, and the assertion of Herodotus¹⁶ that no woman could serve as a priestess is incorrect, and indeed does not agree with his own statements elsewhere.¹⁷

(i.) *Musician priestesses.*—All temples, apparently, had a number of priestesses attached to them, at the head of whom was a chief priestess with a special title,¹⁸ followed by the attribute 'playing with the sistrum in front of him (her),' i.e. the

divinity.¹ The chief priestess was doubtless in most cases the wife of the high-priest.² Evidently the principal duty of these priestesses was to rattle sistra and to dance and sing in honour of the deity whom they served.³

The musician priestesses in the Middle Kingdom were called *hwt*, var. *hwt*,⁴ but from the New Kingdom onwards generally *sm'wt*; both words mean 'musicians.' In the New Kingdom women of all classes, from the highest to the lowest, were musicians at some temple or other.⁵

The functions of the priestesses of the Ptolemaic and Roman periods were doubtless mainly musical.⁶ *The Decree of Canopus* (hieroglyphic text, line 33=Sethe, *Urkunden*, ii. 151) gives the title *w'eb* to musician-priestesses (*sm'wt*), in the light of which, perhaps, are to be explained the *w'eb* of Upwawet⁷ and the *w'eb* who was the wife of a soldier.⁸ *ἱερεῖαι* are commonly mentioned in Græco-Roman documents.⁹

(ii.) *Prophetesses.*—In the Old and Middle Kingdoms women of important families often bear the title 'prophetess.' It was nearly always the goddesses Hathor and Neith¹⁰ that they served in this capacity.¹¹ Occasionally during the Old Kingdom we meet with prophetesses of a god or king; e.g., the queen Meres'onkh was a prophetess of Thoth.¹² The royal acquaintance Hephres was prophetess of King Kheops.¹³ Upon a certain Nitemhê, the wife of a priest who lived in the XXVth dynasty, was bestowed 'the share of the prophet of Khons.'¹⁴ Griffith,¹⁵ referring to Herod. ii. 85, presumes that Nitemhê did not act as prophet of Khons, but that 'she only received the stipend while the duty would be performed by her husband.' But in the Vth dynasty we find the sons and daughter of a noble and high-priest all serving as prophet of their local divinity,¹⁶ by rotation, and apparently exercising exactly the same functions.¹⁷ In the reign of Psamtik III. the first prophetship (high-priesthood) of Amūn was held by the sacerdotal princess of Thebes (§ VII. 3(d)). In the Ptolemaic period we meet with the daughter of a 'father of the god' who is described as a *w'eb*-priestess of Amūn and a prophetess of Zēmi.¹⁸

(iii.) *Phylae of priestesses.*—In the New Kingdom the musician priestesses, like the priests, were divided into phylae with a priestess as phylarch.¹⁹ The phylae of the priestesses are often mentioned in Ptolemaic and Roman documents.²⁰ A priestess who married a priest remained in her original phyle.²¹

IX. *PAYMENT OF PRIESTS.*—The priests derived their incomes from two sources—the temple estates,²² and 'all that enters the temple,' i.e. the daily and incidental offerings.²³

i. *The temple estates.*—The revenue produced by the lands belonging to the temple of Amūn at Teuzoi was divided into 100 equal portions. Twenty portions, a fifth of the whole revenue,²⁴ went to the chief prophet, while one portion was assigned to each of the 80 priests who served under him.²⁵ These stipends seem to have been paid yearly.²⁶

the Old Kingdom as in Ptolemaic times (A. Kamāl, *Annales du Service*, xv. [1915] 214, 238; Brugsch, *Dict. géogr.* p. 1361).

¹⁶ *Ib.* 85.

¹⁷ *Ib.* 54, 56, 171, 132; cf. i. 132.

¹⁸ The antiquity of these titles is attested by the fact that the title of the chief priestess of Hathor of Cuse was the same in

In Roman times the temple estates became Crown property, which the priests could hold on lease from the State.¹ The temples were also supported by taxes and voluntary contributions.²

2. The offerings.—The offerings, or, as in the temple of Anubis at Illahun (see below), a portion of them, seem to have been divided every day³ among the priests proportionately according to their status.⁴ On this principle the chief prophet of the temple of Hathor of Reḥnet (Tehneh) received as his share a tenth of 'all that enters the temple.'⁵

The priest's daily rations consisted of bread, beer, and meat.⁶ According to Herodotus,⁷ they included 'a great quantity of beef and geese' and also wine. With this agrees a document of the Saitic period.⁸ In the above-mentioned temple of Anubis at Illahun the greater part of the daily offerings of bread and beer, 'after the gods were satisfied with them,'⁹ was handed over to the *ka*-servants (see § XIV. (a))—of course in return for adequate remuneration¹⁰—for presentation to the dead, the priests getting what remained over.¹¹

3. Other sources of income.—The priests could increase their incomes by performing periodical or daily services for the dead.¹²

4. Special perquisites of the high-priest.—In addition to receiving the largest annual stipend and daily rations, the high-priest of a temple evidently had special perquisites.

At Asyūt, e.g., the superintendent of the prophets of Upwawet was entitled to a roast of meat for every bull slaughtered in the temple and a *stj*-measure of beer for every *ds*-vessel of beer offered on a day of procession.¹³

5. Stipends of the wives and daughters of priests.—According to the *Decree of Canopus* (line 35 = Sethe, *Urkunden*, ii. 152 f.), an allotment from the temple revenue was due to the daughters of priests from the day of their birth. The same authority also informs us that the wives of priests received an allowance of bread.

X. PRIESTLY PRIVILEGES.—I. Immunity from forced labour.—The fact that a man was a *wēb* did not necessarily bring him exemption from compulsory State labour, such as work in the quarries or on the dykes and canals.

Thus the phylæ of *wēb*-priests of the Hermopolite nome are among those depicted dragging the colossal statue of Dhuthotep from the quarries of Hatnub to its appointed resting-place.¹⁴

Perpetual immunity from all such labour was granted to the priests of certain temples by special royal decrees.¹⁵

In the later Ptolemaic period the priests seem to have been immune from all compulsory State service. In Roman times they forfeited more and more of their old privileged position, being sometimes taken off by force for the cultivation of Crown land.¹⁶ Only priests of important temples (ἀρχιερεῖς) enjoyed immunity from compulsory labour.¹⁷

2. Immunity from taxation and imposts.—In the Old Kingdom the temples were liable for imposts, such as the furnishing of government officials

with supplies.¹ It appears that in the Saitic period the 'great temples of Egypt' at least were exempt both from the above-mentioned imposts and from taxation.²

Under the Ptolemys the majority of the temple estates were liable to taxation. Only the estates made over as a gift to the god and administered by the priests themselves were immune.³ For the position of the temple estates in Roman times see § IX. x.

3. Immunity from poll-tax.—The priests were free from poll-tax under the Ptolemys.⁴ Under Roman rule all but a specified number of priests at each temple had to pay this tax.⁵

4. Right of asylum.—All temples possessed the right of asylum in the later Ptolemaic period.⁶ Under Roman rule this right was severely curtailed.⁷

XI. ADMISSION TO THE PRIESTHOOD.—I. Tendency of the priesthood to become hereditary.

—The priestly status, i.e. that of *wēb*, seems in some cases⁸ to have been hereditary as early as the XIIIth dynasty. But there are no grounds for supposing that then, as in Roman times, the priesthood was denied to all but persons of priestly descent.

(a) In the Middle Kingdom numbers of *wēb*-priests appear to have been the sons of non-priestly parents.⁹ As late as the XXth dynasty we find that out of six sons two are priests and the rest officials.¹⁰

(b) It is not till after the XXth dynasty that the purely priestly families seem to have begun to come into being.¹¹

(c) By the time of the early Ptolemys admittance to the priesthood seems to have been restricted to persons of priestly descent.¹² Possibly this restriction was already in force in the Saitic period.¹³

2. Tests for admittance to the priesthood.—In Roman times these were very strict.

(i.) No one could be admitted unless it was satisfactorily demonstrated that the applicant belonged to a priestly family;¹⁴ he had to show that both his father and grandfather were priests.¹⁵ It may here be noted that a priest the purity of whose birth had been challenged was considered to have satisfactorily proved his claim by being able to read a hieratic book produced by the *tepyoua* priests.¹⁶

(ii.) An aspirant to the priesthood had to be free from all bodily defects as well as of priestly birth.¹⁷ Cf. perhaps the instructions of Psamtik I. with regard to the appointment of Petesii as *wēb* in various temples: 'Let Petesii be priest in them if it were fitting.'¹⁸

(iii.) By a law of Hadrian only priests might be circumcised.¹⁹ If a candidate proved his priestly descent and his freedom from blemish, permission was granted to circumcise. Until he had been circumcised, no person could exercise the priestly office.²⁰ For full particulars of the procedure to be followed in order to obtain permission to circumcise see Grenfell, Hunt, and Goodspeed, no. 292, p. 58 f. See also art. CIRCUMCISION (Egyptian).

(iv.) It is probable that admission to the priesthood entailed circumcision as far back as the Old Kingdom, for even *ka*-servants, who probably were not as a rule *wēb*-priests (see

§ XIV. (a) i.), were circumcised.¹ Griffith suggests that the descriptive label attached to one of the two groups in the scene in question, viz. *sbt hm-k*, should be rendered: 'qualifying the ka-servants by circumcision.' For a full discussion of the circumcision of Egyptian priests see art. CIRCUMCISION (Egyptian).

With the scene in the temple of Khons at Karnak,² depicting two mothers presenting each a son to be circumcised, we might well compare Grenfell, Hunt, and Goodspeed, ii. no. 292.

(v.) We learn from the *Decree of Canopus* (hieroglyphic text, lines 14, 34 f.), that it was the king who admitted new priests. This seems to have been the custom also in Saitic times.³ We know nothing about the regulations for admittance to the priesthood in the earlier periods.⁴ In Roman times it was the *idolōgos*, or high-priest of all Egypt (the representative of the emperor in all religious matters), who, after the necessary particulars had been laid before him, granted permission to circumcise the candidate and then admitted him to the priesthood.⁵

(vi.) In Roman times a new priest, on being admitted to the priestly order, had to pay a fee to the State called τὸ τελεστικόν.⁶

XII. APPOINTMENT TO PRIESTLY OFFICES.—

1. High-priesthoods.—High-priests were regularly to have been appointed to their office by the king.⁷ See below, 2 (f), and above § II. 1.

(a) When the central power was weak, the high-priesthoods, along with the local governorships, tended to become hereditary;⁸ and in all periods, too, the high-priesthoods of certain famous temples seem frequently to have become vested in one family for several generations.⁹ But even so the actual appointment to the high-priesthood seems still to have rested with the sovereign.¹⁰

(b) We have two instances of the high-priest of Amūn of Thebes being chosen by an oracle of the god himself.¹¹ In the first case the king confirmed the choice of the god; in the second we may presume that the king ratified the choice, as the new high-priest was his son.

2. Priestly offices below the rank of high-priest.

—Such offices could be (a) assigned by the king, or (b) by his representative, the local governor and high-priest, (c) purchased, (d) conveyed by deed of transference, (e) bequeathed to descendants.

(a) A king of the XVIIIth dynasty promoted a certain Amenemhêt from the rank of *wēb* to that of 'father of the god.'¹² He was perhaps later appointed prophet by the king.¹³

(b) The local governor and high-priest, as Pharaoh's representative, seems to have appointed persons to vacant priesthoods.¹⁴

(c) Priesthoods were bought and sold from the earliest times onwards.¹⁵ Appointments to priestly offices in Roman times were usually obtained by purchasing them from the government.¹⁶

(d) Priesthoods could be conveyed by the holder while living to another person by deed of transfer.¹⁷

(e) Priestly offices were frequently obtained by inheritance.¹ In the case of mortuary priesthoods it is often specifically stated in the deeds of appointment that the offices are to be transmitted to the children.²

(f) In Roman times a person, on entering upon a priestly office, whether obtained by inheritance or otherwise,³ This tax suggests that perhaps even in the dynastic periods all such appointments had to be ratified by the State—i.e. the king (cf. [a], [b]).

3. Investiture and installation of priests.—

Ramesses II., on appointing Nebwenenef to the high-priesthood of Amūn, invested him with two gold signets and a gold (*d'm*) staff.⁴ At the installation of the chief priestess (*ihyt*) of Amūn of Napata a silver pail for libations of milk⁵ was placed in her right hand and a silver sistrum in her left.⁶ Perhaps on his appointment or at his installation the high-priest of Ptah of Memphis was invested with his curious chain of office.⁷

At the installation of 'the god's wife' and high-priestess of Amūn, 'Enkhnesuferibre', 'the prophets, fathers of the god, *wēb*-priests, lecturers, the staff (*uwnw*) of the temple of Amūn, were behind her and the great companions were in front thereof, performing for her all the customary ceremonies of the induction of the god's votaries of Amūn into the temple. The god's scribe and nine *wēb*-priests of this house fastened on for her all the amulets and ornaments of the god's wife and god's votaries of Amūn.'⁸ The newly-appointed prophet of Amūn of Teuzoi had to 'anoint the hands' at his induction.⁹

XIII. THE FUNCTIONS OF THE TEMPLE

PRIESTS.—The temple was the 'house of the god,' *ht-ntr*, and the priesthood in certain aspects was regarded as domestic service.¹⁰ The word *hm-ntr* (Coptic *ϣONT*),¹¹ which we, following the Greeks, render 'prophet,' means 'servant of the god.' Similarly the tomb was the 'house of the ka,' *ht-k*, and the mortuary priest was the 'ka-servant,' *hm-k*.¹²

1. Accordingly in the daily services the priest sprinkled the god with water—a ceremony derived from servants bathing their master¹³—fumigated him with incense,¹⁴ clothed and anointed him,¹⁵ applied cosmetics to his eyes,¹⁶ and arrayed him in his various ornaments.¹⁷

(a) The formulae that were repeated during the performance of these ceremonies are full of allusions to the legendary tales about Osiris and Horus, and brought every one of the priest's manual acts into relation with some episode in the Osiris myth.¹⁸ The god was regarded as Osiris, and the priest (=the king) as his son Horus.¹⁹

(b) The daily duties of the prophet, or, as the chief daily officiant was sometimes called, the 'great *wēb*,'²⁰ involved opening the doors of the shrine containing the god's statue and taking the statue out of it.²¹ He is therefore described as 'entering in upon' such and such a god or goddess, 'seeing him 22 or

¹ W. Max Müller, *Egyptological Researches*, Washington, 1906, p. 61 f.; J. Capart, *Une Rue de tombeaux à Saqqarah*, Brussels, 1907, pl. lxvi.

²¹ 'Her' in the actual inscription quoted, as the divinity in question is Hathor.

his beauty,¹ and 'performing the ceremonies for him with the two arms.'²

(c) Another duty of the priests was to carry in procession the image of the divinity, placed in a boat-shaped shrine, on the occasion of a festival.³

2. The temple priests, in addition to the ordinary appellations prophet, father of the god, and *wēeb*, which denoted their rank in the hierarchy, bore a number of titles,⁴ many of which convey very little meaning to us or are quite unintelligible. These additional titles denote special administrative or special religious functions.⁵

(a) *Scribe of the temple*.—A very important functionary in each phyle was the scribe of the temple, who, during his term of office, kept all the temple accounts and made all the entries in the temple day-book.⁶ He was certainly of priestly rank.⁷

(b) *Lector* (*hry-hb*).—There were 'ordinary lectors' (*hryw-hb* 'w) and a 'chief lector' (*hry-hb hry-d*) on the temple staff.⁸ The chief lector was on the permanent staff; ordinary lectors were members of the rotating phylæ.⁹

(i.) The chief lector ranked third on the staff of the Middle Kingdom temple of Anubis at Illahun, only the phylarch coming between him and the superintendent of the temple, i.e. the high-priest.¹⁰ The office of high-priest was often combined with that of lector or chief lector.¹¹

(ii.) The priestly grade of the ordinary lectors seems generally to have been that of *wēeb*.¹² A lector could also be a phylarch.¹³

(iii.) The duty of the lector was to recite the formula, to the accompaniment of which the rites in the temples were performed.¹⁴

(iv.) For the lector as a mortuary priest see under § XIV. (c); as a magician, see art. Magic (Egyptian), § 9, and Gardiner, *PSBA* xxix. [1917] 81; as a physician, see under § XVI.

(c) *Dancers and musicians*.—Probably male as well as female dancers and musicians were attached to all temples;¹⁵ they seem to have figured especially at festivals.¹⁶ In the Middle Kingdom many of them were foreigners—chiefly Amnu—¹⁷ and perhaps slaves.¹⁸

(d) *Door-keepers, etc.*—The temple staff included minor functionaries such as door-keepers and sweepers.¹⁹ In the temple of Anubis at Illahun these were permanent functionaries, not members of phylæ.²⁰ But a temple door-keeper could be a *wēeb* and a second prophet of the endowment of the altar.²¹

XIV. THE MORTUARY PRIESTS.—The cult of the dead in many respects resembled that of the gods (see above, § XIII.). The officiants most commonly represented as performing the services required by the dead bear the titles 'ka-servant,' 'embalmer,' 'lector,' 'chief lector,' 'treasurer of the god,' *sem*, *imy-khant*.

¹ Cf. Moret, *Rituel*, p. 55.

² Kamāl, *Annales du Service*, xv. 218; Lange-Schäfer, no. 20359. For further descriptions of the priest's daily duties see Breasted, *Anc. Records*, iii. 564; Lange-Schäfer, nos. 20359, 20580; cf. Schäfer, *Die Mysterien des Osiris in Abydos*, pp. 18, 19 with note 1.

²⁰ Borchardt, *ZÄ xxxvii*, 94.

²¹ Sethe, *Urkunden*, iv. 30.

(a) *Ka-servant* (*km-k*).—The ka-servant was responsible for the maintenance of the services (daily or periodical) performed on behalf of the dead in the tomb-chapel or 'house of the ka,'¹ as was the prophet, or 'servant of the god,' for those performed on behalf of a divinity in a temple;² and the same methods were employed to secure the services of both.³ The daily or periodical services consisted mainly in the pouring out of libations, the burning of incense, and the presentation of offerings of food and drink to the deceased.⁴ 'It is a man's ka-priest,' says Defaihap, 'who maintains his possessions (*ihtwt*)⁵ and his offerings.'⁶

(i.) Not unnaturally ka-servants were on the staff of the temple of Osiris at Abydos⁷ and of Anubis at Illahun;⁸ but the impression gained from the majority of texts is that the ka-servants formed an organization distinct from the temple priesthood, as did the *choachytæ* (*χοαχύται*) of the Græco-Roman period.⁹

(ii.) The *choachytæ* (= Egypt. *wḥ-mw*, 'water-offerer')¹⁰ fulfilled in the Ptolemaic and Roman periods the same functions as the ka-servants in earlier times. They were responsible for the upkeep of the tombs and for the safety of the mummies within them.¹¹ As their name shows, one of their chief duties was to pour out libations to the dead,¹² the ancient funerary offering having degenerated into little more than a periodical libation accompanied by the repetition of the prescribed formula.¹³

(iii.) Like the *choachytæ*,¹⁴ the ka-servants were divided into phylæ,¹⁵ and were under the direction of 'superintendents' and 'inspectors'.¹⁶

(iv.) Judging from the determinatives of *kmw-k* (ka-servants) in Sethe, *Urkunden*, i. 11 ff., 36 (cf. 27 f.), the ka-servants, in the Old Kingdom at least, seem, like the *choachytæ*,¹⁷ to have been of both sexes.

(v.) Both ka-priests and *choachytæ* were in the habit of disposing of their offices and the attached emoluments by will (or deed of transference) or by sale.¹⁸ In Old and Middle Kingdom documents it is sometimes stipulated that the ka-servants are not to dispose of the endowments by sale or by will (*imy-pr*)¹⁹ to any people, but are to transmit them (of course with their attendant responsibilities) to their children.²⁰ Or, again, the ka-servant is to choose one particular son as his heir, and that son in his turn is to do the same.²¹

(b) *Embalmer*.—The embalmer (*wt*) is a familiar figure from the earliest times in the representations of funerals and other mortuary ceremonies.²² The laboratory in which he exercised his art was called the 'place of purification' (*w'bt*),²³ or 'good house',²⁴ or, more fully, the 'place of purification of the good house'.²⁵

(i.) From the inscriptions accompanying a series of scenes in the tomb-chapel of Pepi-onkh at Meir,²⁶ the embalmers in that locality seem, like the *paraschistæ* and *taricheutæ* of Græco-Roman times, to have formed an organization or guild of their own under the direction of one or more 'inspectors' (*shd-wt*) and a superintendent (*imy-r* *wt*). In the temple of Anubis at Illahun, however, each phyle of priests appears to have contained one embalmer,²⁷ who therefore must have been at least a *wēeb*.

(ii.) In the Ptolemaic and Roman periods the embalmers were called *paraschistæ* (*παρασχιστᾶς*) and *taricheutæ* (*ταρικήευτας*), the former making the necessary incisions, etc., in the corpse, the latter carrying out the embalming and wrapping.²⁸ At

Memphis they and the *choachytæ* were united in one large group and their functions were interchangeable.¹

For the embalmer's impersonation of Anubis see § VI. a.

(c) *Chief lectors and lectors*.—These figure as prominently in the funerary as in the temple services. As mortuary officiants their duty was to direct the ritual of the embalmer's workshop and of the tomb-chapel, and to recite the accompanying formulae. The functions of the lector and embalmer were not sharply differentiated. Thus a chief lector is described as being 'over the mysteries of the good house,'² and an ordinary lector is entitled 'Anubis in the good house, chief of the lectors'³ or 'treasurer of the god, Anubis the embalmer.'⁴

This explains, perhaps, why Diodorus calls the chief embalmer a scribe, *γραμματεὺς*,⁵ and why the Greek rendering of *kry-hb*, 'lector,' is *ταψευτής*, 'embalmer.'⁶

(d) *Treasurer of the god*.—The presence of a functionary bearing this title at funerary ceremonies⁷ is a legacy from the time when they were performed for the Pharaoh only.⁸ The 'treasurer of the god' was closely associated with the acquisition of precious commodities⁹ such as turquoise,¹⁰ the produce of Byblos and Punt,¹¹ stone from Hammanat for monuments,¹² incense, etc., from the Sudān;¹³ he would naturally, therefore, play an important part in the royal obsequies, for he would have to supply many of the articles required for the embalming and burial of the king. 'Treasurer of the god,' as a mortuary title, could be combined with those of 'lector' and 'Anubis the embalmer.'¹⁴

(e) *Sem-priest*.—The funerary officiant with this title represents, of course, the high-priest of Ptah of Memphis.¹⁵ That ecclesiastic naturally pronounced the offering formula,¹⁶ and burned incense and offered libation,¹⁷ at the burial of a Memphis king. As was to be expected, the *sem* was the chief officiant in the 'Opening of the Mouth'¹⁸—a rite originally performed, perhaps, on royal statues,¹⁹ and therefore in early times a function of the Memphite high-priest in his capacity of chief artificer, *wp hpy hmwyt* (lit. 'great in directing the craftsmen').²⁰

(f) *Imy-khant (imy-hnt)*.—This priest is frequently figured in representations of funerary ceremonies, especially those of 'a Middle and New Kingdoms.'²¹ Sethe²² thinks that *imy-hnt* means 'festival priest.' Connected with the Osiris cult at Abydos there was a 'great *imy-khant*' who was also entitled 'prophet' and 'great *wē'eb*.'²³

XV. PRIESTS OF THE REIGNING KING.—The *wē'eb* priests and prophets of the reigning Pharaoh²⁴ were a prominent feature of the Old Kingdom priesthood. We also meet with them later.²⁵

XVI. PRIESTS AS DOCTORS.—The professions of physician and priest (*wē'eb* or lector) were often combined.²⁶

A *wē'eb* who is also a physician (*swnu*) pronounces the sacrificial victim pure.²⁷ Priests of the goddess Sakhmet were regarded as especially skilled in the art of medicine.²⁸ The business of the priest of Sakhmet depicted with cattle in a scene in the tomb-chapel of a Cusite nomarch at Meir²⁹ was thus evidently to decide whether they were fit for sacrificial purposes or not. There was apparently a medical school at Sais attached to the temple of Neith. It was restored in the reign of Darius

by a 'chief prophet of Neith' who was also styled 'great in medicine' (*wp swnu*).¹ In a Ptolemaic bilingual an embalmer, *ταψευτής*, is termed *syn*, 'physician,' in the Demotic version.²

XVII. PRIESTS AS MAGICIANS.—See art. MAGIC (Egyptian), vol. viii. p. 268; supplemented by A. H. Gardiner, *PSBA* xxxix. 31 ff.

XVIII. PRIESTS AS JUDGES.—Priests acted in this capacity in the New Kingdom. Of a board (*knbt*) of ten judges who sat on one day, six were prophets (including the high-priest of Amūn, who presided), and three *wē'eb*-priests. Only one, a scribe, was a layman.³

XIX. PURIFICATION AND PURITY OF PRIESTS.

—See art. PURIFICATION (Egyptian), § V. 7.

XX. CLOTHING, ETC., OF PRIESTS.—See art. PURIFICATION (Egyptian), § V. 7 (g), (h).

XXI. THE PRIESTHOOD AS A CIVIL FUNCTION.

—The higher priestly offices were sometimes evidently civil appointments; i.e., the holders of them were not professional priests.⁴

Defaithap, e.g., a Middle Kingdom ruler of the Lycopolite nome and therefore *ipso facto* high-priest (superintendent of the prophets of the local divinity),⁵ cannot have exercised his priestly functions for a considerable part of his career, as he was resident governor of the newly acquired territory in the Sudān, the administrative centre of which was the modern Kerma.⁶ The same may be said of a local prince like Ameney of Beni Hasan, who, in addition to being very active as civil administrator of the nome, went on military and mining expeditions.⁷ Similarly Seti, an important official in the reign of Ramesses II., combined with a number of important civil and military appointments several priesthoods, which must surely have been sinecures.⁸ Cf. also the case of Petesef, a busy civil servant of the Saitic age, to whom was assigned 'the share of the prophet of Amūn of Teuzoi and his ennead of deities,' but who, apparently, never once officiated in this capacity.⁹

The offices of *sem*, 'son whom he loves,' and *smj* (?), in the case of Ikhnofret, were practically civil appointments, and were doubtless only temporarily held by him in his capacity of special envoy and representative of the king;¹⁰ he was, as we can see from his titles,¹¹ not a professional priest. The same may be said of Sehetepibre;¹² also of Menthotep,¹³ who, though he bore several priestly titles,¹⁴ was vizier and chief justice,¹⁵ and held several other posts of secular administration.

LITERATURE.—This has been sufficiently indicated in the article.

AYLWARD M. BLACKMAN.

PRIEST, PRIESTHOOD (Greek) (*ιερεύς, λέρεα, ιερωσύνη*).—I. General characteristics.—The

Greeks did not possess a priesthood, in the sense of a sacred caste or class of men through whose medium alone the gods could be approached. Priests and priestesses existed everywhere among them in great numbers, but their significance is quite other than that of a sacred order, such as was seen among the most highly developed of the surrounding nations. It is true that there are in Greece also considerable traces of ideas of a kind that might have led to similar hierarchic institutions. For the Greeks were familiar with the idea that certain individuals or classes of people possessed some inherent capacity for particular sacred functions—that women, e.g., were the chosen medium of communication between gods and men at certain oracular seats, or that some men possessed inherent mantic powers, and the like; but this does not greatly affect the general Hellenic attitude, which was on the whole to refuse to define any department of life as tabu, but on the contrary to throw open all its possibilities to any and every individual claiming the name of citizen. This is true also of the Homeric

²⁹ Blackman, *Rock Tombs of Meir* iii. pl. iii.

poems, which, while admitting the claim of, e.g., Kalchas to special mantic endowment (*Il.* i. 72), and indicating the high honour in which priests of various deities were held (*Il.* v. 78: θεὸς δ' ὡς πλεο δῆμῳ; cf. xvi. 605), exhibit Nestor sacrificing to Athene with the assistance of his sons only, no priest being mentioned, and none, so far as we can see, finding any place in the ceremony (*Od.* iii. 430 f.). This accords with the facts of historical times. Priests and priestesses alike throughout the Greek world enjoy considerable social and civic distinction, which tends to increase rather than to diminish as Greek civilization develops, yet Isocrates can say, with but slight exaggeration, that any man might be a priest (*ii.* 7: *ὅτι βασιλεὺς ὡς περ ἱεροσύνην παντὸς ἀνδρὸς εἶναι νομίζουσιν*).

Whatever may have been, among the Greeks, in the ages below the historical horizon, the relations existing between priest, king, and community, in historical times the priesthood, like everything else, has had to submit to the all-embracing sway of the idea of the State, and has become to a very considerable degree secularized and is regarded almost purely from the politico-social point of view. This is clearly and emphatically asserted not only in regard to the administrative activities of the priest, but also in regard to his purely sacerdotal functions (*Eschin.* iii. 18: διδάτω δ' ὑμᾶς πρῶτον ἐπὶ τὴν παραδόξον, ὅλον τοὺς ἱερεῖς καὶ τὰς ἱερείας ὑπερβύτους εἶναι κελύει δ' ὁ νόμος, καὶ συλλήβδην ἀπαντας καὶ χάρις ἐκάστου κατὰ σῶμα, τοὺς τὰ γένη λαμβανοντας καὶ τὰς εὐχὰς ὑπὲρ ὑμῶν πρὸς τοὺς θεοὺς εὐχομένους, καὶ οὐ μόνον ἰδίᾳ ἀλλὰ καὶ κοινῇ τὰ γένη; cf. *Dem. in Neair.* 116; *Plut. Quest. Gr.* 38). Only the actual sacred rites which priests perform escape from this secular control, simply because, being traditional, they dated from an age anterior to the birth of the historical State itself, and owed much of their force to that very fact. Hence the so-called *leges sacrae* are found to be confined to regulations touching qualifications for office, priests' perquisites, the establishment of additional ceremonies, etc.—just such details as fell to be regulated in connexion with purely secular offices; they teach us nothing of the details of ritual. In this sense, then, it is not incorrect to describe the Greek priest as in some sort a State official. The ultimate authority in a question concerning τὰ ἱερά is not a synod of priests, but the council and the assembly (*Ar. Ath. Pol.* 43).¹

The Greek priest or priestess, then, is one who is charged with certain specific religious functions or ritual acts, directed godwards, in the due performance of which the State, either as a whole or through its organic groups (*gentes*, phratries, families, etc.), is vitally interested. These functions, based as they were mainly upon a traditional ritual, demanded a certain, often a high, degree of professional or technical knowledge, just as did many other departments of civic life; the priest is simply one who is 'skilled in the rules of sacrifice, prayer, and purification.'² Practically, therefore, the *ἱερεὺς* implied the existence of a temple or some form of holy place dedicated to the particular deity in whose service he ministered. For the Greek priest was always the servant of a particular deity, and that at a particular shrine,³ and at none other. There was no such thing as a priest with a general competence of sacerdotal functions at any and every shrine, or as minister to any and every deity, simply by virtue of his priesthood as such. For there was in fact no general or universally applic-

¹ This is true even in cases where reference was made to an oracle, for such reference could be made, in a matter of State, only by properly accredited representatives; nor was such reference absolutely essential, though it was in harmony with Hellenic, and especially Athenian, sentiment to refer such matters to Apollo (*Cf. Plat. Rep.* 427 C: οὗτος γὰρ δῖον δὲ θεὸς περὶ τὰ τοιαῦτα πάντων ἀνθρώπων πάρος ἐξηγήτης ἐν μᾶσι τῆς γῆς ἐπὶ τοῖς βυβάλοις καθήμενος ἐξηγείται).

² *Stob. Eccl. Eth.*, ed. Gaistford, ii. 562: τὸν γὰρ ἱερεῖα εἶναι δεῖν ἔμπειρον νόμων τῶν περὶ θυσίας καὶ εὐχὰς, καὶ καθαρῶν, καὶ ἰδρύσειν καὶ πάντα τὰ τοιαῦτα. Perhaps the best definition is given in *Plato, Pol.* 290 C: καὶ μὴν καὶ τὸ τὴν ἱερόν αὐ γένος, ὡς τὸ νομικὸν φησι, παρὰ μὲν ἡμῶν δωρεὰς θεοῖς διὰ θυσίων ἐπιστημὴν εἶναι κατὰ νόμους ἐκείνους διωρεῖσθαι, παρὰ δὲ ἐκείνων ἡμῶν εὐχὰς ἔπην ἀγαθὸν αἰτίσασθαι: ταῦτα δὲ διακόνου τέχνης ἐστὶ πᾶσι μὲν ἀμφοτέρω.

³ *Cf. Plat. Laws*, 759 A: λέγομεν μὲν δὴ τοὺς μὲν ἱερεῖς νεοκρόους τε καὶ ἱεράς καὶ ἱερείας δεῖν γίνεσθαι. Large temples would have more than one priest, but one was the rule; cf. *Diod.* i. 78. 5: οὐ γὰρ, ὡς περ παρὰ τοῖς Ἕλλησιν, εἰς ἀνὴρ ἡ μία γυνὴ τὴν ἱεροσύνην παρέλκεν, κτλ.

able use or style of worship, notwithstanding the large common element in the manner of making prayers and offerings.¹

The existence of a priesthood, however, by no means abrogated the religious functions exercised by, and as a matter of course demanded from, laymen, such as magistrates of the State, heads of families or other organic groups within the State. It was, in fact, hardly possible to say where the layman stopped or the priest began. Nor, on the other hand, did the holding of a priesthood necessarily involve the surrender of all other occupations and interests on the part of the priest. Certainly this was not the case with many of precisely the highest and most distinguished priesthoods. In this respect there seemed, indeed, some room for improvement, as a matter of mere civic organization, and Aristotle proposes that one and the same individual citizen shall assume successively the functions of soldier, statesman, and priest, according to his time of life—the priesthood thus tending to be regarded as a dignified sinecure for men no longer able to serve the State in a more active capacity (*Pol.* iv. [vii.] 9. 4 f. = 1329 A).

The combination of sacerdotal functions with royal authority is as familiar as it was normal in the ancient world. In Homer the king with his own hand strikes the victim on behalf of the whole people (*Il.* ii. 249 f., 271 f.). In this sense the king was head of the State religion, as being capable of and responsible for the proper performance of the ritual acts designed to secure the favour of the deities that were in the strict sense national. Thus in Sparta, almost the only purely Greek State retaining monarchical government in historical times, all State sacrifices were offered by the kings, as descendants of the god (*Xen. Rep. Lac.* 15. 1: ἔθηκε γὰρ θύειν μὲν βασιλεὺς πρὸ τῆς πόλεως τὰ δημόσια ἀπαντα, ὡς ἀπὸ θεοῦ ὄντα; *Ar. Pol.* iii. 14. 3 = 1285 A: ἐπὶ δὲ τὰ πρὸς τοὺς θεοὺς ἀποδίδουσι τοῖς βασιλεῦσιν), one of the two kings holding the priesthood of Zeus Lakeldaimon, the other that of Heavenly Zeus, with the usual perquisites (*Herod.* vi. 56; cf. *Hom. Od.* iv. 65). Sometimes, on the decay and abolition of the royal office, the descendants of the old kings were allowed to retain these immemorial sacred functions and privileges, and even at times also the honorary title of king (e.g., Ephesus (*Strabo*, p. 633), Cyrene (*Herod.* iv. 161)). Or, again, the title and the functions might pass to one or other of the republican magistracies. Thus in Athens the second archon was called king (*βασιλεὺς*), and his wife queen (*βασιλίσσα*), both with religious functions, the king archon superintending the Eleusinian mysteries and the Lenaian Dionysia, there being assigned to him, as Plato says, 'the most solemn and most truly ancestral rites of the ancient sacrifices' (*Pol.* 290 E; cf. *Dem.* ix. 1370; *Lysias, Andoc.* 4: ἀν . . . λαχὼν βασιλεὺς, ἄλλο τε ἡ ὑπὲρ ἡμῶν καὶ θυσίας θύσει καὶ εὐχὰς εὐχεται κατὰ τὰ πάτρια).²

Within the family itself, which had been in fact its starting-point, this primitive coincidence of sacred function (*θυσία* *πάτριος*) and physical or legal headship continued undisturbed,³ and was reflected in the larger groups, of phratries and *gentes*, which purported to be merely the family 'writ large,' and, indeed, in every sort of organization within the State, by the institution of priests of the particular association, that is to say, by the endowment of certain of its members with religious functions; for all such corporations had a religious as well as a political or social aspect,

¹ Though traces are not wanting of the tendency towards such universalism or panhellenic use. *Cf. Ar. Pol.* viii. (vi.) 8. 20 = 1322 B: ἐχομένη δὲ ταύτης ἡ πρὸς τὰς θυσίας ἀφορισμένη τὰς κοινὰς πάσας, ὅσας μὴ τοῖς ἱερεῦσιν ἀποδίδωσιν ὁ νόμος, ἀλλ' ἀπὸ τῆς κοινῆς ἐστίας ἔχουσι τὴν τιμὴν: καλοῦσι δ' οἱ μὲν ἔρχοντας τοὺς τοῖς, οἱ δὲ βασιλεῖς, οἱ δὲ πρυτάνεις. For the sacred functions of the Athenian archons see *Ar. Ath. Pol.* 56-58.

² We merely mention here the curious religious politics found in Asia Minor in the Roman age, ruled by hereditary high-priests, or by royal and hierarchical families, sometimes of a not very religious type—e.g., Komana (*Strabo*, pp. 559, 574). For these see J. P. Mahaffy, *The Greek World under Roman Sway*, London, 1890, p. 225 f. They, of course, fall outside the purely Hellenic institution here treated, just as the deities worshipped in such communities were Asiatic in character, though called by Greek names.

³ Strictly taken, Plato's language (in *Laws*, 909 D: ἱερά μὲν εἰς ἐν ἰδίᾳ οἰκίᾳ ἐκτίσθω: θύειν δ' ἔστω ἐπὶ νόμῳ τῇ γυνὴ, πρὸς τὰ δημόσια ἔτω θύον, καὶ τοῖς ἱερεῦσι τε καὶ ἱερείαις ἐπιχειρήστω τὰ θύματα, ὡς ἀγγεῖα τούτων ἐπιμελῆς) would indicate a desire to abolish these domestic worshipers. See W. L. Newman, *Politics of Aristotle*, i., Oxford, 1887, p. 179.

and had their special deities, rites, and religious observances.

Perhaps this very multiplicity of individuals invested with priestly or quasi-priestly functions did as much as anything to check the rise of a definite priestly class, the conception of sacerdotal function being too inextricably intertwined with that of civic life in general. Undoubtedly, also, much was due to the general sanity of Greek institutions, from which it resulted that the rites performed by the priesthood were, as a rule, not of such sort as to enthrall the intellect by extravagant claims to a specially recondite or mysterious character. It was, in fact, partly by way of reaction against this somewhat threadbare simplicity that Orphic and Dionysiac mysteries won such vogue. A further powerful factor making against the rise of a priestly caste was the fact that temple funds were, as a rule, not controlled by the priests of the temple themselves; and at the same time the interpretation of sacred law was almost entirely beyond their control, being, at Athens, in charge of a special secular board of interpreters (*ἐξηγηταί* [see P. Ehrmann, *De iuris sacri interpretibus Atticis*, Giessen, 1903]). The significance of the last feature can hardly be overrated in this connexion. It meant that nothing of the nature of a school or course of training for priesthood could arise.

2. **Qualifications for priesthood.**—Plato, following doubtless the universal requirement, lays it down for his ideal State that a priest must be sound and perfect in body, and of pure and genuine civic pedigree (*Λαίος*, 759 C: *δοκιμάζειν δὲ τὸν ἀεὶ λαγχάνοντα πρῶτον μὲν ὁλόκληρον καὶ γνήσιον*, κτλ.). No alien could hold an Athenian priesthood or perform its rites—a rule that was probably general.¹

The tendency was not to be content with this, but to put priesthoods into the hands of men of leisure and substance (just as, in Athens, the State services, or *leitourgies*, naturally fell to the same class). So Aristotle would have no husbandman or mechanic appointed, but only citizens, who, in his scheme, would be the sole landed proprietors (*Pol.* iv. (vii). 9. 9=1329 A: *οὔτε γὰρ γεωργὸν οὔτε βάνανσον ἱερέα κατασπατέον· ὅπερ γὰρ τῶν πολιτῶν πρέπει τιμᾶσθαι τοὺς θεοὺς*. Cf. Paus. vii. xxvii. 3: *κατὰ δόξαν γένους μάλιστα αἰρούμενοι*, at Pellene; D. 594. 10: *ὠνείσθω δὲ ὅς καὶ ἡ ὁλόκληρος καὶ ᾧ δαμοργίας μέτεστι*, at Chalkedon). At Halicarnassus the priestess of Artemis Pergaia must be of full citizen pedigree on both sides for at least three generations (D. 601. 6: *ἀστὴν ἐξ ἀστῶν ἀμφοτέρων ἐπὶ τρεῖς γενεάς γεγεννημένην καὶ πρὸς πατρός καὶ πρὸς μητρός*). Good looks were a recommendation, in some cases an essential (Paus. vii. xxiv. 4 [the boy *νικῶν* κάλλει, priest of Zeus at Aigai]; cf. ix. x. 4 [Thebes]). Notorious vice naturally disqualified,² and Plato insists upon purity from the stain of blood and the graver offences. On the whole, the insistence is upon somewhat external or formal qualifications, identical with those demanded of candidates for purely secular offices; no great stress is laid on moral, and none at all apparently

¹ Cf. Dem. lix. 1369: *εἶδεν ἂν οὐ προσήκειν αὐτὴν ὁρᾶν ξένην οἶσαν*; W. Dittenberger, *Sylloge Inscriptionum Graecarum*², 3 vols., Leipzig, 1898-1901 (hereafter cited as D., followed by a number to indicate the running number of inscriptions quoted), 665. 3: *μη ξένοινα καταργεῖσθαι εἰς τὸ Ἥραϊον ξένω μηδὲν (Amorgos)*; Herod. vi. 81: *βουλόμενον δὲ αὐτὸν θύειν ἐπὶ τοῦ βαμοῦ ὁ ἱερεὺς ἀπηγόρευε, φᾶς οὐκ ὅσον εἶναι ξένω αὐτόθι θύειν*—of the Spartan king Kleomenes at the Heraion of Argos. Foreign cults and religious associations authorized by decree would, one supposes, be served by their native priests (cf. inscr. from Peiraeus [A. Wilhelm, *Jahreshefte der Ost. Arch. Inst.* v. (1902) 127: *ἐπειδὴ τοῦ δήμου τοῦ Ἀθηναίου δωδωκότος τοῖς Ὁραξί μόνους τῶν ἄλλων ἑθνῶν τὴν ἐκκλησίαν καὶ τὴν ἱερῶσιν τοῦ ἱεροῦ, κτλ.*]).

² Cf. Aeschin. i. 188: *καὶ ὁ αὐτὸς οὗτος ἀνὴρ ἱερῶσιν μὲν σὺδενός θεοῦ κληρούσεται, ὥς οὐκ ὦν ἐκ τῶν νόμων καθαρὸς τὸ σῶμα*, κτλ.

on intellectual qualifications. In regard to the last point, it is to be remembered that a Greek priest was not called upon to deliver ethical teaching of any kind or to handle any problems of interpretation.¹ The case of the Delphian priesthood and that of the priests of certain great oracular healing shrines are somewhat special and do not affect the general validity of what is here said.

There was naturally great variety in the special qualifications for priesthoods of the different cults. These special qualifications are hardly referable to general principles. The hierophant at Eleusis, e.g., must, in the time of Pausanias at any rate, be celibate; not so the hierophant at Phleious, although the latter mysteries professed to be based upon the Eleusinian (Paus. ii. xiv. 1: *λαμβάνων, ἢν ἐθέλῃ, καὶ γυναῖκα· καὶ ταῦτα μὲν διάφορα τῶν Ἐλευσίνι νομίζουσι, τὰ δὲ ἐς αὐτὴν τὴν τελετὴν ἐκείνων ἐστὶν ἑς μίσην*). The foremost place here must be assigned to ceremonial purity, especially chastity. In its strictest form the demand is for absolute virginity,² the priesthood being held by *παῖδες* or *παρθένοι*. There is no attempt to violate nature, as in the eunuch priesthoods of Kybele and the Ephesian Artemis and other Asiatic cults, which do not call for further consideration here. 'The same end was more wisely pursued by the selection either of the age when the passions are yet dormant, or that in which they have subsided' (C. Thirlwall, *Hist. of Greece*, London, 1835-47, i. 204). Examples are the priestess of Herakles at Thespiæ (Paus. ix. xxvii. 6: *ἱεράται δὲ αὐτοῦ παρθένοι ἐστ' ἂν ἐπιλάβῃ τὸ χρεὼν αὐτῆς*); of Poseidon at Kalauria (ib. ii. xxxiii. 3: *ἱεράτα ἰδὲ αὐτῶ παρθένοι, ἐστ' ἂν ἐς ὥραν προέλθῃ γάμον*); of Athene at Tegea (ib. viii. xlvii. 3: *ἱεράται δὲ τῇ Ἀθηνᾷ παῖς χρόνον οὐκ ὀλῶ ὅσον τινά, πρὶν δὲ ἡβάσκειν, καὶ οὐ πρόσω, τὴν ἱερῶσιν*). Or, again, chastity during the term of office might be held sufficient, and this could be secured with care (cf. Plut. *de Pyth. orac.* 20: *νομίζεται τὸν ἱερῶμενον ἐν τῷ ἐνιαυτῷ γυναῖκι μὴ ὀμιλεῖν διὰ καὶ πρεσβύτας ἐπικαὶς ἱερεῖς ἀποδεικνύνουσι*—at the temple of Misogynia Herakles in Phokis). So Artemis Hymnia in Arcadia was served by a priestess *ὁμιλίας ἀνδρῶν ἀποχρώντως ἔχουσα*, a temple legend accounting for the change from a priesthood held by a *κόρη παρθένη* (Paus. viii. v. 12; cf. what is told about the Pythia, Diod. xvi. xxvi. 6). Yet another form of this qualification is found in the condition that no woman more than once married could be priestess of Gē at Aigai (Paus. vii. xxv. 13—a curious test, by drinking bull's blood, applied to candidates). What proportion of Greek cults demanded a celibate priesthood, as compared with those which permitted marriage, is not known. It is to be remarked that the requirement of chastity stands in no sort of relation to the nature of the divinity, as is clear by comparison of *IG* ii. 550, married priestess of Athene, and Paus. ii. x. 4, virgin priestess of Aphrodite of Sikyon (whose *νεώκορος* also may no more *παρ' ἀνδρα φοιτῆσαι*). Nor, again, is there any necessary argument from the sex of the divinity worshipped to that of the minister (e.g., Paus. ii. xxxiii. 3 [*παρθένης* priestess of Poseidon], viii. xlvii. 3 [boy priest of Athene]).

3. **Regulations concerning age.**—These were, of course, closely connected with the foregoing, and there is no general rule. Some cults demand ripe age in their ministers, especially in the case of priestesses (Paus. vi. xx. 2: *πρεσβύτις ἡ θεραπεύουσα* in temple of Sosipolis at Olympia). In many temples the priesthood was held by a girl, until she reached an age for marriage (ib. ii. xxxiii. 3 [Poseidon at Kalauria], vii. xix. 1 [Artemis Triklaria], xxvi. 5 [Artemis at Aigeira]), or by a boy, up to the age of puberty (ib. viii. xlvii. 3 [Athene at Tegea], ix. x. 4 [Apollo at Thebes], x. xxxiv. 8 [Athene Kranaia, near Elateia]). In such cases the qualification of the holder of the priesthood must have been purely ceremonial, carried out under the guidance of a permanent temple staff which controlled also the administration of the temple. Under such a system abuses would be possible. Hence in a decree of Kos a stipulation of a minimum age is found (*Leges Græcorum Sacrae, e titulis collectæ*, ed. I. de Prot and L.

¹ Cf. F. de Coulanges, *La Cité antique*², Paris, 1885, p. 195: 'La doctrine était peu de chose; c'étaient les pratiques qui étaient l'important.' It should also be noted that there must have been a tendency, especially on the part of priests of limited tenure and priests by purchase, to lean upon the knowledge and experience of the permanent temple staff, just as the head of a government department must rely upon the trained experience of the civil service. This in part, doubtless, explains the importance of the neocate in Asia Minor, where purchase of priesthoods was in vogue.

² No doubt this demand was reinforced by the idea, in some cults at any rate, that the priestly function implied in some sense union (*συνουσία*) with the divinity. Cf. Ar. *Ath. Pol.* iii. 5, for the marriage of the wife of the Athenian king archon with Dionysos.

Ziehen, pars altera, fasc. i., Leipzig, 1906, no. 133): 'ἀ δὲ πρῆμῆνα ἔστω ὄντης καὶ δόκλος καὶ μὴ νεωτέρα ἔτων δέκα' *Ierásetai δὲ διὰ βίον*; cf. 135, also of Kos, where the minimum age is laid down at fourteen years). It is to be remembered that this was not a matter of caprice, but that in many cases youth, and sometimes extreme youth, on the part of the priest or priestess was demanded by the cult itself (cf. the demand for a *παῖς ἀμφιθαλής* as essential in certain ceremonies). Often, no doubt, the temple legend would profess to explain such regulations, but these legends have mostly perished. Plato, naturally, has no patience with all this, and, going to the opposite extreme, would have all priests to be not under sixty years of age, and would allow them to hold office for a year only (*Laws*, 759 D).

4. Modes of access to priesthood.—(a) *Inheritance*.—Originally, perhaps, all cults were family worships, whether or not they were all cults of dead ancestors. In historical times many cults which have come to be national are demonstrably still closely connected with particular families,³ which retain their priesthoods as a hereditary possession guaranteed by an appeal to legend. Some are perhaps really cases of blending, so that several families or clans maintain their representatives side by side, though not all on the same level, as hereditary cult officials (cf. Paus. IV. xv. 7, I. xxxvii. 1).

Such hereditary national priesthoods can be seen in the making. Thus the family of Gelo of Syracuse claimed to be hereditary hierophants of Demeter and Persephone at Gela because their ancestor Telines had originally possessed the sacred symbols (*ιερά*) of the cult (Herod. vii. 153). So Maian-drios of Samos proposed to lay down his sovereignty on condition of his family being allowed to retain in perpetuity the priesthood of Zeus Eleutherios, whose cult he founded and endowed (ib. iii. 142; cf. the Battadiadai at Cyrene [ib. iv. 161]). Inscriptions furnish examples of private foundations of this type (e.g., the will of Epikteta of Thera [CIG ii. 2448, § 5: τὰν δὲ ἱερατεῖαν τὰν Μουσῶν καὶ τὸν ἥφωον ἔχοντα ὁ τὰς θυγατέρας μου νίδος Ἀνδραγόρας, εἰ δὲ τί καὶ πάθῃ οὗτος, αἰὶ δὲ πρῶσβύτατος ἐκ τοῦ γένους τοῦ Ἐπιφειάδας—the latter her daughter]).

How succession was arranged within the family itself in respect of these hereditary priesthoods is not always clear. Obviously, the ordinary rules of inheritance might sometimes give an unsatisfactory result. An inscription of Halicarnassus (D. 608) shows us that the priesthood of Poseidon had passed from brother to brother, thence to sons of the eldest brother in succession according to seniority, and so to sons of the next brother, and back again to grandsons of the eldest brother. Naturally, a priesthood arranged on principles of hereditary succession was just as liable as any other property to give rise to disputes. Such in Athens were settled in the court of the king archon (Ar. *Ath. Pol.* 57: *κάν τις ἱερωνύστης ἀμφισβητῇ πρὸς τινα διαδικάζει δὲ καὶ τοῖς γένεσι καὶ τοῖς ἱεροῖσι τὰς ἀμφισβητήσεις τὰς ὑπὲρ τὴν ἀπόσας οὐκ οὖν*). The oldest cults seem in general to retain this method of filling their priesthoods. The tenure under this system was naturally for life, subject to the proviso of sanity and a conduct that did not fount public opinion.

(b) *Election*.—Possibly the earliest example of this method occurs in Homer, where it is said of Theano that the Trojans had 'made' her priestess of Athene (*Il.* vi. 300: *τὴν γὰρ Τρώες ἔθηκεν Ἀθηναίης ἱερεῖαν*)—but the inference is not very rigid. The mutilation of the inscription D. 911. 5 instituting a priestess of Athene Nike (460–446 B.C.) ἐξ Ἀθηναίων ἀπάντων does not allow us to say whether pure election was employed in that instance. More commonly the practice was to elect by means of the lot (cf. D. 558.9: *ὁ εἰληχὼς ἱερεὺς Ἀσκληπιοῦ καὶ Τηλέας*, at Athens; and often in inscriptions). Often a mixed method, of election and lot, is used, the sortition being preceded by a selection from among the candidates (cf. Dem. lvii. 1313: *προ-*

εκρίθη ἐν τοῖς εὐγενεστάτοις κληροῦσθαι τῆς ἱερωνύστης τῷ Ἡρακλεῖ. For Syracuse, Cic. *Verr.* ii. 126: 'lex est de religione, quae in annos singulos Iovis sacerdotem sortito capi iubeat, quod apud illos amplissimum sacerdotium putatur; cum suffragiis tres ex tribus generibus creati sunt, res revocatur ad sortem'; cf. Paus. vii. xxv. 13). In some cases a method of election seems to have replaced the older hereditary priesthood—e.g., in the great inscription of Andania relating to the mysteries (D. 653), where the representative of the old sacerdotal family seems to have surrendered his rights to the State. In course of time lack of suitable candidates for election led to a partial revival of the older method (cf. D. 592 [priesthood of Asklepios of Pergamum confirmed to Asklepiades and his seed for ever by decree of the people]; *L.S.* 56 [decree of Gythion confirming the priesthood of Apollo to Philemon and his son and their descendants—*εἶναι αὐτοὺς ἱερεῖς τοῦ Ἀπόλλωνος καὶ ἐκγόνοις αὐτῶν διὰ βίον καὶ εἶναι παραδόσιμον τὸ προγεγραμμένον ἱερὸν τοῖς ἐκγόνοις αὐτῶν αἰὶ διὰ βίον*, in recognition of their munificence in restoring the cult and temple fallen on evil days]).

Even when reliance was placed upon the lot alone, it is probable that, in Athens at any rate, its frequent use, and perhaps not infrequent manipulation, in connexion with secular official life much impaired its significance as an indication of divine will, though that way of looking upon it might linger in formal expression (e.g., Plato, *Laws*, 759 C: *τὰ μὲν οὖν τῶν ἱερῶν τῷ θεῷ ἐπιτρέποντα αὐτῷ τὸ κεχαρισμένον γίνεσθαι, κληροῦν οὕτω τῇ θεῇ τύχῃ ἀποδιδόντα*—but, he continues, the successful candidate must [subsequently?] be duly approved as ceremonially pure and of proper age, and the like; that is to say, in the eyes of Plato also the priesthood is on all fours with any ordinary secular office).

Under this method limited tenure was usual (cf. D. 609, 610), a year being the general term. Longer tenures, short of a life tenure, are found (e.g., five years [Paus. x. xxvii. 8: *τὸν δὲ ἱερέα ἐκ παίδων αἰροῦνται τὸν ἀνέβητον, πρόνοιαν ποιοῦμενοι πρότερον τῆς ἱερωνύστης ἐξήκειν οἱ τὸν χρόνον πρὶν ἢ ἡγήσασθαι ἱερούται δὲ ἐπὶ συνεχῇ πέντε*—boy priest of Athene Kranaia]). Such longer tenures are probably in all cases connected with the festival cycle of the particular deity, as is expressly asserted of the priesthood of Demeter at Keleai (Paus. ii. xiv. 1: *ἱεροφάντης δὲ οὐκ ἐς τὸν βίον πάντα ἀποδέδεικται, κατὰ δὲ ἐκάστην τελετὴν ἄλλοτὲ ἔστιν ἄλλος σφίον αἰρετός*—the celebration taking place δι' ἐνιαυτοῦ τετάρτου, every third year).

(c) *Purchase*.—This method was especially in vogue in the coast cities of Asia Minor and in the islands.¹ The earliest examples belong to Miletos, the home of Ionic free-thought; but it is unknown in Athens, the reputed mother of the Ionic colonies. The method does not necessarily imply the abandonment of older methods (e.g., at Halicarnassus the priesthood of Poseidon Isthmios is held *κατὰ γένος* [D. 608; see above]). Possibly it is not unconnected with the general financial distress of the age after Alexander, though its origin undoubtedly lies much farther back.²

A long list of priesthoods sold at Erythrai, with the prices paid for each, is extant (D. 600; 3rd cent. B.C.), distinguishing several varieties, showing that the method was carefully organized from both a fiscal and a legal point of view. Three species are recorded—*ἱερατεῖαι πραθεῖσαι*, priesthoods sold as then vacant, with immediate possession; *ἱερατεῖαι ἐπιπραθεῖσαι*, eventual succession upon death of the existing occupant; *διασίστασις*, where the priest in occupancy purchases the right to appoint his own successor, that is to say, generally his own son. Prices show great variety, the highest being that paid for the priesthood of Hermes Agoraios, probably because it carried with it a claim to market dues (4610 dr.; the lowest price is 10 dr., for the priesthood of Gē; several run to over 1000 dr.). It is clear that purchase of a priesthood was simply one method of making an investment for a livelihood, or provision for one's family, with a sound title. Inferences as to a general decay of

¹ Proved, by inscriptions, for Erythrai, Miletos, Sinope, Chios, Priene, Magnesia, Mylasa, Chalkedon, Halicarnassus, Kos. It is to be observed that the vendor is always the State itself, which consequently takes a certain percentage (*ἐπώνιον*) of the purchase money, according to a sliding scale.

² The inscription given by Otto, in *Hermes*, xlv. [1909] 594 f., from Miletos, belongs to the 5th cent. B.C., or at latest to the beginning of the 4th cent., and certainly refers to the purchase of priesthoods. Nor is this the only example to be referred to a date before that of Alexander. Whether the origin of this traffic lay in Eastern, non-Hellenic influences cannot as yet be determined, but it seems likely.

³ Hereafter cited as *L.S.*, followed by the number of the inscription.

⁴ An excellent example of the process involved is afforded by *L.S.* 112, of the 4th cent. B.C., a decree relative to the transference of the *ιερά* of the Klytidiadai of Chios—*τὰ ἱερά τὰ κοινὰ ἐκ τῶν ἰδιοκτητῶν οἰκῶν εἰς τὸ κοινὸν οἶκον ἐνεγκεῖν*; cf. Ar. *Pol.* viii. (vi.) 4. 19=1319b: *φύλαξ καὶ γὰρ ἑταίρα ποιηταὶ πλείους καὶ φράσιαι, καὶ τὰ τῶν ἰδίων ἱερῶν συνακτέον εἰς ὀλίγα καὶ κοινὰ, κτλ.*; see Newman, iv. 524.

religious sentiment are beside the mark. Naturally, under this system the tenure was for life (cf. D. 595, 603, and many examples).

5. Duties of priests.—These were partly liturgical, partly administrative. The Greek priest was in no sense a teacher, or expounder of dogma. His duties for the most part began and ended within the precinct of his own temple. Firstly, he must conduct, or at least superintend, the sacrifices and other ceremonies offered by the State or by private persons, making or indicating the proper prayers and invocations as being the duly appointed expert (cf. the parody in Aristoph. *Birds*, 865 f.: *λερεῦ, σὸν ἔργον, θύε τοῖς καινοῖς θεοῖς, κτλ.*; D. 594, 601. 9: *θύσει τὰ λερά τὰ δημόσια καὶ τὰ ἰδιωτικά*).¹ Secondly, the priest, like the dean of a cathedral nowadays, was personally responsible for the care of the fabric of the temple and the cultus image and contents of the shrine, and for conservation of the precinct (cf. D. 594. 24: *κοσμεῖν δὲ τὸν ἱερὴ τὸν ναὸν κατ' ἀμέραν* ἐπιμελεσθαι δὲ αὐτὸν καὶ τὰς στοῶς τὰς πύλιν τῷ Ἀσκληπιεῖ ὅπως καθαρὰ ᾗ—at Chalkedon). Where there was a νεωκόρος the priest's duties would be lightened (cf. D. 589. 6: *καὶ ἐπαναγκάζειν τὸν νεωκόρον τοῦ τε ἱεροῦ ἐπιμελεῖσθαι*). Illicit use of the precinct by trespassing stock, and mutilation of the trees within it, evidently caused much trouble (cf. D. 568; Paus. II. xxviii. 7). The priest was also responsible for decent and orderly conduct on the part of visitors to his temple,² and for observance of its special regulations (D. 592. 24: *ἐπιμελεῖσθαι δὲ καὶ τῆς εὐκοσμίας τῆς κατὰ τὸ ἱερὸν πάσης τὸν ἱερέα ὡς ἂν αὐτῷ δοκῇ καλῶς ἔχειν καὶ ὁσίως*, i.e. he is empowered to make by-laws. Cf. Herod. v. 72 [priestess of Athene Polias at Athens forbids the Spartan king Kleomenes to enter her temple—*οὐ γὰρ θεμύτων Δωριεῶσι παρίεναι ἐνθαῦτα*], vi. 81 [a similar scene at the Argæian Heraion]). In the smaller temples and country shrines the financial administration also fell to his care (Ar. *Pol.* viii. (vi.) 8. 18 f. = 1322b), but in general this belonged to State officials or boards (*ταμίαι, ἱεροποιοί, ἐπιμέληται*, etc.). These took over most of the active administrative functions that once perhaps had been solely in the hands of the priests—repairs, provision of victims and accessories, disposal of skins and offal, disbursements from the temple treasury, etc.³

Just as the administrative competence of the priesthood was much diminished in historical times, so also its ritual side in certain respects survived only in a somewhat mutilated form. In certain festivals it was still the duty of the priest or priestess

of particular cults to don the garb and mask and to impersonate the divinity (cf. Paus. vii. xviii. 12 [priestess of Artemis impersonates the goddess in the procession in honour of Artemis Laphria at Patrai—*ἡ ἱεραμένη παρθένος ὀχεῖται τελευταία τῆς πομπῆς ἐπὶ ἑλάθων ὑπὸ τὸ ἄρμα ἐξευγμένῃ*], viii. xv. 3 [priest wears mask of Demeter at Phenoss]). Sometimes also the priest must resume his primitive character as magician, and work spells, especially for rain (ib. II. xii. 1 [wind spells at Titane], viii. xxxviii. 4 [rain spells by the priest of Zeus on Mt. Lykaion]). Both these occasional rôles are survivals of the primitive conception and the once normal duties of the priesthood.

A similar gradual narrowing of functions is observable when we consider more definitely what it was that the priest actually did in connexion with the act of sacrifice and worship.

In historical times his participation does not appear to have been essential on purely religious grounds, so as to make the sacrifice ritually effective; for many inscriptions specifically guard against the practice, not infrequent on the part of economical worshippers, of performing the ceremonies without invoking the assistance of the priest, in order to save his perquisite (cf. *L.S.* 38. 8: *μηδὲ καθαρμὸς ποιῶσιν μηδὲ πρὸς τοῖς βωμοῖς μηδὲ τὰ μέγαρον προσώσιν ἀνεὺς τῆς ἱερέας*; ib. 41. 7: *παραβάμα δὲ μὴ θύειν μηδὲνα ἐν τῷ ἱερῷ*—a fine being imposed for breach of this regulation). He would, in the larger shrines at least, use his own discretion about participation, whether invited or uninvited, according to the importance of the occasion. In Herondas, 4, where two women offer the poor man's offering of a cock in the Asklepieion of Kos, we hear nothing of the priest, but only of the νεωκόρος (cf. *L.S.* 65 [Oropos]). The perquisite, however, must always be given.

Originally, there is no doubt, the priest must actually have performed the sacrifice, slaying the victim with his own hand and dismembering it for offering, assisted by the worshippers and the temple servants. So in Hom. *Il.* iii. 271 f. the king both initiates the sacrifice by the ritual cutting of hair from the victims' heads (*τρίχας ἀπάρχεσθαι*) and subsequently himself slays them (so also in *Il.* xix. 252 f.; Eur. *El.* 791 f., where Aigisthos performs the sacrificial slaying, but by way of compliment invites Orestes to show his skill in flaying and dismembering the animal. Cf. Eur. *Iph. Taur.* 40: *κατάρχομαι μὲν, σφάγια δ' ἄλλοισιν μέλει*, and 623 f.: *ὁ δὲ σφαγεὺς τίς; . . . εἰσω δόμων τῶνδ' εἰσὶν οἱ μέλει τάδε*, where the poet seems at pains to explain a departure from normal procedure). In the smaller temples the priest perhaps continued to perform this office; in others there were apparently special slaughterers (Paus. viii. xlii. 12: *ἱεροθύται*, at Phigaleia; D. 553. 19: *τοῦ λητουργούντος θύτου τῇ πόλει*, at Magnesia).

The special function of the priest was thus reduced, it seems, in general, to the preliminary ceremony of dedication by cutting the hair from the forehead of the victim, and to the formal prayer or invocation (*κατευχή*) and the placing of the parts of the sacrifice in due ritual manner upon the altar (cf. Aeschin. iii. 18, already quoted; Herond. iv. 79 f.). The temple law of the Amphiaræon at Oropos in fact thus expressly defines the duty of its priest (*L.S.* 65. 26: *κατεύχεσθαι δὲ τῶν ἱερῶν καὶ ἐπὶ τὸν βωμὸν ἐπιτιθεῖν θύαν παρεῖ, τὸν ἱερέα, θύαν δὲ μὴ παρεῖ, τὸν θύοντα, καὶ τεῖ θυσίαι αὐτὸν ἐαυτοῦ κατεύχεσθαι ἕκαστον, τῶν δὲ δημορίων τὸν ἱερέα*).¹

6. Privileges of priests.—Greek priests do not seem to have been able to claim any special privileges simply by virtue of their office, but such were freely bestowed. The inscriptions on the extant seats in the theatre of Dionysos (Athens) illustrate the grant of *προεδρία*; for special place in religious processions cf. D. 653. 29: *ἐν δὲ τῇ πομπῇ ἀγείστω Μυσιστράτος, ἔπειτεν δ' ἐπειθὲ τῶν θεῶν οἷς τὰ μυστήρια γίνεταί μετὰ τὰς ἱερέας, κτλ.* Freedom from taxes (*ἀτέλεια*; cf. D. 592. 20), from war-service (D. 603. 14), right of *σίστησις* ἐν πρυτανείῳ, were some of the more highly prized privileges that might be bestowed upon particular priests.

¹ In Homer the two designations of a priest are *ἱερεὺς*, as sacrificer, and *ἀρητήρ* (*Il.* i. 11, v. 78: *ἀρητήρ ἐτένεκτο, θεὸς δ' ὡς τίετο δῆμον*) as invocant, showing the importance of the latter aspect. So these two functions are pitched upon by Plato in his definition quoted above from *Pol.* 290 C.

¹ How far a priest had an exclusive right of sacrifice and prayer in his own temple is not quite clear; on the whole it would appear that he had no right of exclusion, as a rule, against ordinary decent people, subject of course to such by-laws as were locally in force. A worshipper would always be well advised in inviting the co-operation of the recognized expert, under pain of finding his private sacrifice vitiated through neglect of some ritual detail (cf. D. 633. 8: *καὶ μηδὲνα θυσιάς ἀνεὺς τοῦ καθιερούμενον τὸ ἱερὸν ἂν δέ τις βιάσθαι, ἀπρόδεκτος ἡ θυσία παρὰ τοῦ θεοῦ*—where note the absence of any sanction). In 896 B.C. Agesilaos of Sparta, on his way to Asia, attempted to sacrifice to Artemis at Aulis (Plut. *Ages.* 6: *καὶ καταστῆρας ἑλάθων, ἐκέλευσεν ἀπάρχεσθαι τὸν ἐαυτοῦ μάντιν, οὐχ' ὥσπερ εἴωθε τούτῳ ποιεῖν ὁ ὑπὸ τῶν Βοιωτῶν τεταγμένος*). The Boiotarchs sent men to forbid it (*ἀπαγορεύοντες τῷ Ἀσκληπιάδῃ μὴ θύειν παρὰ τοῦς νόμους καὶ τὰ πάτρια Βοιωτῶν*), and scattered his sacrifice from the altar. Here the ritual was confessedly irregular; and political considerations also came in—the Boiotians had no very tender conscience in regard to Panhellenic sentiment in this domain (cf. Thuc. iv. 97: *παραβαίνοντες τὰ νόμιμα τῶν Ἑλλήνων*) in 424 B.C.

² On the other hand, in the case of the temple of Aphrodite Pandemos in Athens this duty fell upon the *astynomot* (D. 556); but there the circumstances were naturally somewhat special.

³ For inscriptions relative to Athenian administration of temples see E. L. Hicks and G. F. Hill, *Manual of Greek Historical Inscriptions*, new ed., Oxford, 1901, p. 88 f. (Delos), p. 124 f. (inventories of the Parthenon treasures—of which lists there is an almost complete series extending from 434 to 404 B.C.). The financial management of great temples like that of Delos, with their vast accumulations of capital, was a matter of great importance; see W. S. Ferguson, *Hellenistic Athens*, London, 1911, p. 346 f.

Even more substantial, and more universal, were the rights of perquisite (ιερώσιμα, γέρα).

These are carefully defined and enumerated in a large number of inscriptions. In general, the priest had a right to a leg (σκέλος or κωλή) of each victim, and very often to the skin;¹ to the skin not always, even in private sacrifices (cf. D. 601, 14), and in the case of the great State sacrifices, in Athens at least, the *δερματικόν* was an important item of State revenue (cf. D. 820). In some instances the priest receives also, from the worshippers, a small fee at each sacrifice, probably to cover incidental expenses,² for wood, oil, etc.—all of which small accessories it was his duty to provide for those who wished to sacrifice (cf. Paus. v. xiii. 2f. of the *ἐυλαίς* at Olympia; D. 734. 39 [Kos]; *παρεχέτω δὲ καὶ ῥύλα ποτὶ τὰν θυσιῶν*). The priests of certain cults had also the right of *ἀγερμὸς*, street collection of alms (D. 666: *ὅτι οὗτοι δὲ ἱερεῖς τῆς Ἰσῆος ἔθοντο τὴν ἱκετηρίαν ἐν τῇ βουλῇ καὶ ἀγνώστη ἔνομος εἶναι ἄξιον τῇ θεῷ καθῆσθαι καὶ πρότερον ἀγείρειν, κτλ.*—evidently a case of appeal against restricting legislation; cf. Plat. *Rep.* ii. 364 B, and 381 D: *Ἦσαν ἡλλοιωμένην ὥς ἱερεῖαν ἀγείρουσαν*). This was mainly an Eastern custom which received little encouragement among the Greeks, and is somewhat strictly regulated—e.g., in the case of the cult of Artemis Pergaia at Halicarnassus (D. 601. 26: *ἐν ᾧ δὲ ἀπὸ τῆς θυσίας συντελείται ἡ δημοκτελής, ἀγερνέτω πρὸς τῆς θυσίας ἡμέρας τρεῖς ἐπ' οἰκίαν μὴ πορευομένη· ὁ δὲ ἀγερμὸς ἔστω τῆς ἱερείας*).

As a salaried office the priesthood is known in very few cases, notably in that of the priestess of Athene Nike in Athens, who receives fifty drachmai a year, together with the usual perquisite (*L.S.* 11; D. 911; Hicks and Hill, p. 59 f.). How far, if at all, the priest enjoyed the income from the temple endowment of lands, etc., is not known. The variety of the sources of wealth open to priests, as revealed to us from inscriptions, is very great (cf. Paus. i. xxxviii. 1). This, of course, gave them the means of enhancing the pomp of their processions, and of spending large sums upon the adornment of their temple, for which liberalities they were duly honoured, as appears from numerous decrees (e.g., D. 558).

7. Minor points.—(a) *Tabus*.—These apparently did not differ from those imposed upon all who would use the temple—avoidance of impurity from contact with the dead (cf. Paus. iv. xii. 6 [Messene]; law of Kos, in *ARW* x. [1907] 400 f.), and avoidance of certain foods, either permanently or for a season (cf. D. 638. 3: *καταλείτω δὲ ἐπὶ σκόρδων καὶ χοιρέων, κτλ.* See the curious regulation forbidding the priestess of Athene Polias to eat fresh Attic cheese [Strabo, p. 395: *τὴν ἱερεῖαν τῆς Πολιάδος Ἀθηνῶν χλωρὸν τυρόν τοῦ μὲν ἐπιχωρίου μὴ ἀπείσθαι, ξενικὸν δὲ μόνον προσδέσθαι, χρῆσθαι δὲ καὶ τῷ Σαλαμινίῳ*]; cf. Porphyry, *de Abst.* iv. 6: *τοῖς τοῖνυν ἱεροῖσι τοῖς μὲν τὰν ζώων πάντων, τοῖς δὲ τινων προστέτακται ἀπέχεσθαι βορᾶς, ἃν τὴν Ἑλληνικὴν ἔθος σκοπῆς, ἃν τὴν βαρβάρων*). The priest of Poseidon at Pylos might not eat fish (Plut. *Quæst. Conv.* viii. 8. 4), nor might the priestess of Hera at Argos eat red mullet (Plut. *de Solert. Anim.* xxxv. 11; cf. the reluctance of the Homeric Greeks to eat fish [*Od.* iv. 363 f., and J. G. Frazer, *Comm.* on Paus. vii. 22. 4]). Probably similar *tabus* were operative to a much greater extent than is revealed by our literary sources. Yet regulations of the severity imposed upon the priest and priestess of Artemis Hymnia (Orchomenos) do not seem to have been in accord with general Hellenic practice, apart from the imported cults (Paus. viii. xiii. 1).

(b) *Dress*.—Priests and priestesses wore no uniform distinctive dress, except that priests seem all to have worn the long ungirded *χιτών* that once had been the ordinary civic dress (Thuc. i. 6; cf. sculpture, and especially vase-paintings). Fillets and chaplet were also probably worn by all, at least when officiating. Of the numerous titles borne by priests, according to the local usage, those of Stephanephoros and Daphnephoros are derived from distinctive accessories (Paus. ix. x. 4: *ἐπὶ κληῖσιν δὲ ἔστιν οἱ δαφναφόρος· στεφάνους γὰρ φύλλον δάφνης φοροῦσιν οἱ παῖδες [sc. the priest of Apollo Ismenios at Thebes]*). The wreath, however, was as much a mark of the magistrate as of the priest. White was the usual colour of the dress, but purple is not infrequent—white being held appropriate for the heavenly powers and purple for chthonian deities (Plato, *Lysis*, 956 A: *χρόματα δὲ λευκὰ πρόποντι· ἂν θεοὺς εἴη καὶ ἀλλοθι καὶ ἐν ὕψι· βάρματα δὲ μὴ προσφείναι ἄλλ' ἢ πρὸς τὰ πόλεμον κοσμήματα*). So the archon at Plataiai, who was also a priest, always wore a white dress, and was forbidden to touch iron, but exchanged his white for purple, and a sword, on the day on which he offered the great sacrifice to the spirits of those who fell in the Persian war (see Plut. *Arist.* 21 for the very striking ceremony). For various interesting regulations concerning dress see the Andania in-

scription (D. 653; cf. 939). The hair was worn long (Herod. ii. 36: *οἱ ἱερεῖς τῶν θεῶν τῇ μὲν ἄλλῃ κομέουσι, ἐν Αἰγύπτῳ δὲ ἐνυῶνται*; cf. Plut. *Arist.* 5).

(c) Something of the nature of an enthronement, with accompanying festivities, seems to be alluded to in D. 594. 22: *ἐπεὶ δὲ κατὰ τὰς τιμὰς πάσαν καταβῆλθαι, ἀναρῶσθαι τὸ δὲ ἀνάλομα τὸ ἐς τὰν ἀντίστον παρεῖαι αὐτοῖς ἑαυτῶν, but we know nothing further of any ceremony of consecration or inauguration.*

W. J. WOODHOUSE.

PRIEST, PRIESTHOOD (Hebrew).—1. Date of institution.—Those portions of the OT which are most priestly in tone are latest in point of time. When we lay these aside and try to get a historic view, we discover that the earliest legislation¹ does not mention priests at all. It may be said that, where firstfruits and festival offerings are spoken of,² a priest is implied; but this is not necessarily the case. The earliest offerings, including tithes and firstfruits, were brought directly to the Divinity and presented to Him in a feast in which the worshipper and his family, with their invited guests, consumed the whole. For sacrifice it was not deemed essential to have any official. Many passages of the OT show that the ritual was familiar to every adult male of the clan and that any man could perform the ordinary acts of worship.

It does not follow, however, that priests were unknown even in the earliest stages of Israel's religion. For other purposes than sacrifice a priest is implied even in the earliest documents. When the Covenant Code provides that cases of dispute shall be brought before God,³ it thinks of the sanctuary as a place where the will of the Divinity is made known. But this clearly implies that there is some person to interpret that will to men. When the narrator speaks of the perplexed Rebecca going to 'seek Jahweh,'⁴ he has in mind an oracle and its interpreter. From this point of view we understand the primitive priest-hood.

2. Designations.—The Hebrew word for 'priest' is *kôhen*, and the corresponding Arabic word (*kâhin*) means 'a soothsayer'—more exactly, as we learn from the Arabic lexicographers, one who has a familiar spirit to tell him things otherwise unknown. This 'priest' is the familiar friend of a god or demon, and his interpreter to those who seek him.

The priestly caste, however, is designated by another word in Hebrew, the explanation of which is not so easy. To understand it, we must think of the many sacred places in the land which offer an asylum to fugitives or criminals. It would easily happen that the broken man, who was outlawed by his kin, one who had survived the massacre of his family, would settle in such a place under the protection of the god as his client. Gradually he would become acquainted with the customs of the place; if susceptible, he would receive intimations of the god's will in dreams of the night or visions of the day, and would serve as guide to strangers who resorted to the place. Thus the man would become an attaché of the

¹ So in Sparta the kings receive as perquisite the skins of all State sacrifices (Herod. vi. 56: *τῶν δὲ θυομένων ἀπάντων τὰ δερμάτια τὴν καὶ τὰ νότα λαμβάνειν σφέας*. Cf. Hom. *Od.* iv. 65).

² In D. 591 (Kos) certain categories of worshippers apparently receive the privilege of paying a lump sum of five obols to cover all such incidental charges—*πέντ' ὀβολὸς διδούσας ἐπολεῦσθαι τῶν ἄλλων ἀναλωμάτων πάντων*.

¹ The Covenant Code, Ex 20-23.

² Ex 2319; the occurrence of tithes in the story of Bethel (Gn 2822) is parallel.

³ Ex 227ff.

⁴ Gn 252ff.

place, a slave of the god, as he would doubtless delight to call himself. The Hebrew word for 'one attached to another' is *lēwt*, which we translate 'Levite,' but which originally meant one 'joined' to a person or place.¹ The Levite is the priest viewed as an attaché of a sanctuary; the *kōhēn* is the same person ministering as the interpreter of the oracle.

We may illustrate the state of things in Israel 3000 years ago by what is found in Syria to-day. That country, we are told, is full of local shrines dedicated to saints—Christian or Muhammadan. Each shrine has one or more attendants who are supported in part at least by the sacrifices, generally receiving the hide and one of the quarters of the slain animal. The office is usually hereditary, though cases are known where a boy is given to the saint and becomes his slave. Holy men connected with the shrines claim prophetic power.² So priests and prophets were both found at the sanctuaries in Israel. Samuel was a boy who was presented to the Jahweh of Shiloh, and he would have succeeded to the priestly office had the sanctuary not been destroyed. At the same time he developed prophetic powers which made him the vehicle of the divine will, though not bound to any one place.

Of the two Hebrew words *lēwt* and *kōhēn*, one came to designate the man qualified to act in divine things, the other described him as officiating at a sanctuary. This is well brought out by a narrative in the book of Judges (ch. 18).

Here we read of a man named Micah who had an idol of precious metal. At first he set apart one of his sons as its attendant. But one day a stranger announced himself as a Levite from Bethlehem. Micah recognized his opportunity and engaged him. The way in which he congratulated himself on having a Levite for priest shows the light in which the professional was looked upon. There was nothing illegal in the ordination of the layman who had first undertaken the office, but it was in every way better to have a man who belonged to the gild.

If we may argue from this case, the Levite was often obliged to seek his living by entering the service of strangers, and we can see how the decline in the popularity of a sanctuary might force its attendants, or some of them, to emigrate.

3. Functions.—The earliest priests, then, were not sacrificers, but guardians of the sanctuary and its treasures—gold or silver images or utensils would need such—and interpreters of the oracle. The last point must be borne clearly in mind. It comes out in the story of Micah, for, when the Danites came to the house of Micah, they asked a response from Jahweh. So favourably were they impressed by this experience that they carried off image and priest and settled them in their new possession. In the history of Saul we find a priest with an ephod in the camp,³ and no step was taken without the approval of the oracle. When the priests of Nob were massacred, the one who escaped brought the ephod to David and gave him counsel in the same way.⁴ Whatever theory we may adopt concerning the ephod, we must recognize in it the instrument by which the priest ascertained the divine will. The ephod remained the property of the priest down to the latest time, as did the *Urim* and *Thummim*, which we know to have been the sacred lot.

The technical name for the instruction given by the priest is *tōrah*. From the earliest to the latest period of Israel's history, it is assumed that *tōrah* belongs to the priest. The severe arraignment of the priests by the older prophets specifies their

neglect of the teaching function as their most serious crime.¹ The priests of other nations were supposed to have the same duty as those in Israel. When the Philistines were at a loss how to treat the Ark, they consulted their priests, who told them the proper method.² Jeremiah speaks of the priests as those who handle *tōrah*, and, when Haggai wants to know about a matter of ritual cleanliness, he seeks *tōrah* from the priest.³ Even the Priestly documents, which lay stress on the sacrificial duties of the priest, speak of imparting *tōrah* as one of his offices. The activity of the priest at the examination of the leper and at the ordeal of jealousy⁴ is therefore in line with his earliest duties. From giving responses in answer to such legal questions as were brought before him, the priest easily assumed the office of judge. Both Deuteronomy and Ezekiel indicate that the priests act as judges, and the earliest picture drawn of Moses shows that he was as much priest as prophet in making known the decisions of Jahweh.⁵

4. Priestly and prophetic ideals.—The Levites early traced their origin to a common ancestor. Whether there was a clan or tribe that bore the name 'Levi' before the rise of the priesthood is a question on which scholars are not agreed. (a) In the *Testament of Jacob*⁶ we find such a tribe spoken of in terms used of its brother tribes. It is coupled with Simeon in a denunciation which ends with the threat to scatter them in Israel. Of Simeon we know that he was ground to pieces in the struggles between Israel and the frontier Bedawin. It is natural to think of Levi as scattered in a similar way. But this is not a necessary inference. The author of the poem, living in the time of Solomon, may have inferred the threat from the scattered condition of the gild—a fact which must attract attention from its singularity.

(b) The next mention of Levi shows a considerable advance in the esteem in which the tribe was held. It is contained in the poem called the *Blessing of Moses*. Here we read:

'Thy Urim and thy Thummim belong to the man of thy friendship
Whom thou didst prove at Massah,
For whom thou didst strive at the waters of Meribah;
Who says of his father and his mother: I have not seen them;
He does not recognize his brothers and does not know his sons;
For they keep thy word
And they guard thy covenant;
They teach Jacob thy judgments
And Israel thy *tōrah*;
They bring fragrance into thy nostrils
And whole burnt-offerings upon thine altar' (Dt 33:8-10).

The change of tone between this and the preceding must be evident. Here the tribe or gild is said to be isolated because its members have chosen to ignore father and mother, brothers and sons, for the sake of Jahweh. The priesthood is the reward of this disregard of the ties of kindred. And the great leader and prototype of this calling is Moses, who was tried at Massah and Meribah. We recall that Moses was an outcast for the sake of his devotion to his mission, and that he was priest as well as prophet. One thing more comes into view in this poem. This is that the Levites are now the ministers of the altar. They not only teach the *tōrah*, but also burn the sacrifices. It is not asserted that they have an exclusive right to do this, and in fact it is very doubtful whether an exclusive right could have been established in the face of early example. The earliest legislation makes it the duty of every Israelite to erect a

¹ The writer of Nu 18:27 and 38:10 is aware of the original meaning of the word *lēwt*, and plays upon it (see A. Kuenen, *National Religions and Universal Religions* (HL), London, 1882, p. 83 f.).

plain altar of earth or unhewn stone in every place where he discovers traces of God's presence, and there to offer his sacrifices. The exclusive right could hardly have been established where this law was distinctly in mind. But it is clear that at the more conspicuous sanctuaries the ritual would, as it became more complicated, fall more and more into the hands of the official ministers.

(c) The *Blessing of Moses* was written some time after the division of Israel into two kingdoms. It shows that at that time the Levites were regarded as an organism, and that to them belonged preferential rights to minister at the altar as well as to manipulate the sacred oracle. The next document of importance is the book of Deuteronomy. To understand its position we shall have to recall the sharp polemic of the prophets against the popular worship. These preachers of righteousness believed that the cultus was useless because Jahweh required something very different, viz. righteousness between man and man; or else they believed it to be an abomination to Him because it was really offered to another divinity. In the condemnation which the prophets so emphatically utter the priests have their full share. The sanctuaries are represented as centres of moral corruption, and the priests are active fomenters of what by their calling they ought to oppose. The people perish for lack of knowledge, because the priests, whose business it is to teach the will of God, neglect their duty. This state of things is not confined to the northern kingdom. In Judah also we hear of priests who are drunken, ignorant, profane, violent, and addicted to lying.¹ Hosea, Isaiah, and Jeremiah are the witnesses to these charges.

The author of the book of Deuteronomy was a practical man. He was in sympathy with the prophetic ideas, but he saw that the cultus could not be dispensed with. Vested interests were on its side, and the craving of the heart for religion needed the traditional ordinances. His book therefore represents a compromise between prophets and priests. We learn from him that all priests belong to the class of Levites and that all are entitled to the same rights and privileges. In fact he usually speaks of them as 'Levite-priests.'² Although in some cases he uses the simple term 'Levite,' he nowhere intimates that there was any difference of function between a Levite and a Levite-priest. The Levites are called carriers of the Ark (the carrying of the Ark is elsewhere assigned to the priests); the Levite-priests have charge of the curious expiatory rite over the body of a man found slain; disputes are to be brought to the central sanctuary, there to be decided by the Levite-priests, such decision being, as we have seen, a distinctively priestly function. In a passage in Jeremiah, which is in the tone of Deuteronomy, we learn that the Levite-priests shall have the privilege of offering burnt-offerings and of performing sacrifice for ever; and in the same connexion we find the Levites described as the priests who minister to Jahweh.³

The thing that comes prominently into view in reading this author is the poverty of the class as a class. While we may suppose that the great sanctuaries, especially those which had kings for their patrons, gave an adequate support to their officials, the mass of the Levites connected with the village high places were dependent on the charity of their neighbours. They are mentioned along with the widow and the fatherless, and commended to the benevolence of the people. The

Levite is to be invited to the family feast, for 'he has no portion or lot with thee.' Tithes and free-will offerings are to be shared with the Levite, and every third year the tithe is to be wholly distributed among the needy, the Levite being expressly mentioned. This care for the Levite extends to the time when, as the author intends, the country sanctuaries shall be done away in favour of the exclusive right of the Jerusalem Temple. The privation that will thus be inflicted on the priests of these shrines is in the author's mind, and he directs in so many words that the deprived Levites shall be admitted to the service at Jerusalem on the same terms as the priests already in possession. This provision was never carried out, but the enactment shows what now interests us—that the author knew no difference between priests of one sanctuary and those of another.¹

(d) As Deuteronomy exerted a great influence by its union of priestly and prophetic ideals, so the next step was taken by a man who united the two offices in his own person—Ezekiel, a priest by birth and a prophet by calling. He was fully possessed by the idea of the earlier prophets that the calamity which had overtaken Israel was the punishment for sin. But his priestly training made him look upon sin as a trespass upon ritual requirements. Ritual and ethical transgressions were alike violations of the holiness of Jahweh. The problem of the future was to prevent the intrusion of either on the isolation in which the Deity lives. The problem was solved in the programme drawn up by the prophet, the foundation principle of which is that only consecrated persons and consecrated things shall approach the place of worship.

The distinctness with which this matter is formulated shows that Ezekiel was conscious of introducing something new. In fact, the kings of Judah had been accustomed to have the inferior offices of the sanctuary performed by slaves of foreign origin, whom they presented to the Temple or to the priests. Ezekiel's statement and his correction of the abuse are combined in the following passage:

'Enough of all your abominations, house of Israel, that you have brought foreigners uncircumcised of flesh and uncircumcised of heart into my sanctuary to pollute it when you offered my bread, the fat and the blood, and broke my covenant by all your abominations! You did not keep guard over my sacred things, but set them as guards over my sacred things in your stead. Therefore thus says Jahweh: No foreigner uncircumcised in heart and uncircumcised in flesh shall enter my sanctuary. . . . But the Levites who departed from me when Israel wandered away after their idols—they shall bear their guilt; they shall be in my sanctuary, serving in the place of sentinels at the doors of the House and serving the House. They shall slay the burnt-offerings and the sacrifices and shall stand to serve them. . . . They shall not approach me to act as my priests to approach the most sacred things. . . . But the Levite priests, the sons of Zadok, who kept watch over my sanctuary when the sons of Israel wandered from me, they shall come near to serve me, and they shall stand before me to present fat and blood, says the Lord Jahweh. They shall come into my sanctuary, and they shall approach my table to serve me' (Ezk 44:6-16).

The innovations which are thus made part of the new law are two. (1) The entrance of any but consecrated persons into the Temple is strictly prohibited; even the worshipping Israelite is debarred, as we learn elsewhere. (2) The consecrated persons are divided into two classes. For the first time the family of Zadok receives special duties and privileges. Below them stand the Levites, who are to have the menial offices once in the hands of the Temple-slaves. With regard to the promotion of the sons of Zadok, we may say that Ezekiel only sanctioned a *status quo*. This family was in hereditary possession of the Jerusalem priesthood. The book of Deuteronomy had

¹ Dt 18:6-8 12:12. 18:7. 14:27. 16:11. 14 26:11.

¹ Hos 4:12 6:9, Zeph 3:4, Is 28:7, Jer 28 6:13 8:10.

² Dt 17:8 18 24:8; cf. Jos 6:38, Jer 33:18.

³ Cf. Dt 31:28, where the Levites are called carriers of the Ark, with Jos 22, 1 S 6:16, 2 S 15:24; further, Dt 21:8, Jer 33:17-22, and b. 18:5.

demanding that the Levites from the country sanctuaries be admitted on an equality with those already in possession. But the most that the immigrants had been able to secure was admission to the lower offices. Ezekiel gave the stamp of his authority to this arrangement and thus introduced a new period of ecclesiastical history.

(e) What took place in Jerusalem in the time of Darius at the rebuilding of the Temple is not very well known to us, but one thing stands out distinctly: the chief priest at once assumed a prominent position in the community. This was inevitable, because the unity of the Jews was no longer political but ecclesiastical. There are, indeed, indications that Joshua, the chief priest, was the object of enmity on the part of some—whether rival claimants to the office or defenders of the rights of the secular authority cannot distinctly be made out. While Zerubbabel, a scion of the house of David, was civil governor, the community seems to have cherished the hope that the civil and ecclesiastical powers would work harmoniously¹ for the introduction of the Messianic kingdom. Perhaps for this very reason the Persians thought it unwise to retain Zerubbabel in office. His removal left the chief priest the highest Jewish dignitary in the country, and there was no check to the growth of his influence. This prominence of the chief priest was quite apart from Ezekiel's thought, for he makes no mention of such an officer.

(f) Nevertheless the ideas of Ezekiel did work. The evidence is found in the two documents which are dominated by the priestly ideal—the Priest Code, now embedded in the Pentateuch, and the books of Chronicles. They differ from Ezekiel in that he located his ideal commonwealth in the future, while they place theirs in the past. The divergence of their picture from the one drawn by earlier historical writers did not trouble them. They were not writing history, even when they seemed to themselves to be doing so; they were embodying an idea. That idea was Israel, not as a political community, but as a Church whose only business was to carry on the worship of God.

The central object in the wilderness wandering is therefore the Tabernacle, and the Tabernacle as nearly like the historic Temple as a movable building could be like one of stone. Its plan was exactly the same as that of the Temple, the dimensions being reduced one half. In ornamentation it was not inferior, for the imagination of the author was able to furnish gold and gems and the finest stuffs even in the desert of Sinai. This dwelling of Jahweh in the midst of His people is exactly the ideal of Ezekiel, though Ezekiel did not suppose it had been actual in the past. What immediately concerns us is that the staff of attendants assigned to this sanctuary also realizes Ezekiel's idea.

The Tabernacle has the whole tribe of Levi assigned to it to care for it, and the tribe is divided into the two classes of priests and Levites. In the representation made by the author the historic process is exactly reversed; i.e., instead of the whole tribe being taken and then the family of Aaron being separated to their special duty, the family of Aaron is first consecrated to the priesthood and then the rest of the tribe is assigned to this family as helpers. The enormous number of Levites finds an ostensible justification in the necessity of taking down the Dwelling and transporting it. Yet the discrepancy between the three priests and the 22,000 Levites remains surprising and even grotesque.

Ezekiel ordains that the Levites shall camp about the Temple; so our author makes them camp around the Dwelling in the desert. The

importance of having consecrated persons in this position to guard the sanctuary from the danger of pollution is seen in the consecration of the Levites. They are purified by the triple rite of sprinkling with holy water, washing of clothes, and a purificatory sacrifice. Thus prepared, they are 'waved' by Aaron in imitation of the presentation of a sacrifice. The significance of the whole is to indicate that the Levites are given to Jahweh by the Israelites, and by Him in turn given to Aaron and his sons to assist in the service.

The priesthood is the prerogative of Aaron and his sons. How Aaron came to take the place of Zadok, to whom Ezekiel gave the office, is still a mystery. Earlier indications are that Aaron was connected with the calf-worship of Bethel. Between Ezekiel and the time of the Priestly writer some influence of the northern kingdom must have made itself felt in Jerusalem. The fact stands out quite clearly that in the Priest Code Aaron and his sons are fully established in the priesthood. The whole responsibility for the service is theirs; they bring the blood of the sacrifice to the altar, burn the fat, offer the unbloody gifts. It is their duty to light the lamp in the sanctuary, to eat the 'bread of the presence,' and to burn incense within the Dwelling. For them the ritual of the great festivals and of the daily offerings is laid down.¹ For them also the author includes in his book the so-called Holiness Code²—a body of regulations drawn up in the Exile for the government of the priests in their daily life.

It will be seen that the office of the priest has now become mainly sacrificial. But the old theory of his duty as interpreter of the will of God still remains in such cases, e.g., as the inspection of leprosy. Here the priest appears as examiner and judge of the kind of infection, and director of what is to be done for the ritual restoration of the afflicted person to the community. The difference between the present system and the earlier administration of the oracle is that now everything is laid down in a book by which the official must be guided. The result of thus formulating the cultus is to deprive it of its old character as an expression of joy and gratitude on the part of the worshipper, and to emphasize it as an *opus operatum* by which alone the relation between Jahweh and His people is kept intact.

The prominence of the chief priest in the post-Exilic community has already been spoken of. In the Priestly document his position is made sure by divine appointment. In him, in fact, the culmination of the sacerdotal system is found. It is he who represents the people before God, and whose ministration secures them the divine grace. He it is who once a year goes alone into the Most Holy place to restore the purity of the dwelling and of the people. No part of the OT is more familiar to Christian and Jewish students than the ritual of the great Day of Atonement. Its solemnity indicates the intercessory value of the high-priest. But the sacerdotal head of the community is also in this writer's mind the political head. His vestments are regal, and they are meant to be so. He wears a tiara which cannot be distinguished from a kingly crown, a robe of royal purple, gold and gems of untold value. In the theory of the code there is no one above him in rank. Moses, indeed, may be said to be his superior, in the sense in which the king-maker is above the king. But this is because Moses was the necessary inaugurator of the new state of things—a special organ of divine grace, who is to have no successor. The civil ruler in his relation to the high-priest is represented by

¹ Lv 1 and 2; Nu 28 and 29.

² Lv 17-26, based no doubt on earlier tradition.

¹ Zec 3 and 4; cf. 6:1ff.

Joshua in his relation to Eleazar, and it is plainly one of inferiority.¹

The book of Chronicles is wholly of the mind of the Priest Code in recognizing the difference between priests and Levites. But the author, who was perhaps himself a Levite, takes great interest in the lower clergy. In a part of his work we find (perhaps under the influence of tradition) the post-Exilic community divided into Israel, priests, Levites, Nethinim, and the sons of Solomon's servants. In another place the door-keepers and singers are found between the Levites and the Nethinim.² The Nethinim (*q.v.*) we know to be descendants of those Temple-slaves to whom Ezekiel objected, and the sons of Solomon's servants were one particular class of the same order. Ezekiel's regulation had not been able to overcome the traditional claim of these men to a place in the hierarchy. What actually took place was the absorption of all classes of lower clergy into that of the Levites. The Chronicler shows a purpose to defend this absorption and establish its legitimacy. This he does by dating the organization of the Levites (into guilds of singers and door-keepers) in the time of David.³ His desire to magnify the office of the Levites leads him to vindicate for them the function of teaching the Law. He pictures them also as having in charge the sacred vessels of the Temple as well as preparing the shewbread and the sacred ointment.⁴

The Levites never assumed the importance in actual life which they had in the system of the scribes. The inferior offices fell into the hands of the priests, while the high-priestly family formed an aristocracy which arrogated the higher functions to itself. In Maccabæan times and later we hear of higher and lower orders of priests, but scarcely any mention is made of Levites. The reason for this is not far to seek. The income of the Temple was never sufficient to support the large body of attendants provided by the Law; and what came to it was seized by the higher orders of the clergy. The economic situation is revealed by the list in the book of Ezra, which gives one in seven of the population of the restored commonwealth as priests. It was impossible for a poor people, who had to pay taxes to the Persian power, to support so large a body of Temple-servants.

5. Revenues.—In conclusion a word must be given to the matter of priestly income and support. In the earliest times there was no fixed income for the priest. Some portion of the sacrifice was given to him by the offerer, and the hide of the slain animal came to him from the nature of the case. Deuteronomy goes so far as to 'legislate on this as on some other subjects. It gives the priest the shoulder, the cheek, and the maw of the sacrifice.⁵ In this book we also have mention of the firstfruits and the tithe. These were not given to the priest directly, but were brought to the sanctuary, where they were consumed in a joyful feast by the one who brought them—the priest being invited to share, no doubt. Every third year, however, this author directs that the tithe be distributed to the needy classes, among which the Levites were counted, as we have seen.⁶

The advance in ideas is seen in the Priest Code, which ordains distinctly that a tenth part of the produce of the land is to be given the Levites for their support. The firstfruits are also disposed of in the same way, the sin-offerings and trespass-offerings become the property of the priests, and a yearly tax of half a shekel is laid upon each male

Israelite for the support of the sanctuary.¹ In fact the provision, if carried out, would have given adequate support to the whole sacerdotal caste. But the difficulty in collecting so heavy a tax must be evident. The theory of the Law gave the priests a tenth of the tithes collected by the Levites, and logically the high-priest would receive the tenth of what came to the priests, but this is nowhere enjoined.

A purely ideal construction is the assignment of cities with pasturage, though without farms, to the Levites, a certain number of them going to the priests. Almost all the towns of importance in the country are thus given to the Levites by the Priestly writer. The earlier historical writers know nothing of any such arrangement, and in fact to them the most striking mark of Levi is that he received no territory at the conquest and settlement of Canaan.

LITERATURE.—An enormous literature exists on this subject. The older view is to be found in J. H. Kurtz, *Sacrificial Worship of the OT*, Eng. tr., Edinburgh, 1863; K. F. Keil, *Handbuch der bibl. Archæologie*², Frankfurt, 1875, pp. 166–196; and A. Köhler, *Gesch. des AT*, Frankfort, 1875–85, i. 375–385. The critical view is indicated by J. K. W. Vatke, *Die Religion des AT*, Berlin, 1835, and is more fully developed by A. Kuenen, *The Religion of Israel*, Eng. tr., London, 1873–76, ii. 202–307. The best discussion is that of J. Wellhausen, *Proleg. zur Gesch. Israels*³, Berlin, 1905, Eng. tr., *Prolegomena to the Hist. of Israel*, Edinburgh, 1885, pp. 121–164. More elaborate, but not more convincing, is W. W. Baudissin, *Die Gesch. des alttest. Priesterthums*, Leipzig, 1889. A. van Hoonacker attempts to establish an unhistorical view in a work of great learning entitled *Le Sacerdoce lévitique dans la loi et dans l'hist. des Hébreux*, Louvain, 1899. Mention may be made also of S. Maybaum, *Die Entwicklung des alttest. Priesterthums*, Breslau, 1880; and the *Hebrew Archaeologies* of W. G. H. Noyack (2 vols., Freiburg, 1894), and I. Benzing (2do, 1907). Special points are treated by J. Braun, *Vestitus Sacerdotum Hebraeorum*, Amsterdam, 1890; J. Selden, *De Successione in Pontificatum Hebraeorum*, London, 1636; S. I. Curtiss, *The Levitical Priests*, New York and London, 1877 (a reply to Kuenen); further, a discussion on the origin of the Aaronite priesthood by R. H. Kennett and A. H. McNeile in *JThSt* vi. [1904–05] 161–186, and vii. [1905–06] 1–9. Recent discussions are luminously reviewed by Kuenen in an essay entitled 'Die Gesch. des Jahwepriesterthums und das Alter des Priestergesetzes', in his *Gesammelte Abhandlungen zur bibl. Wissenschaft*, tr. K. Budde, Freiburg, 1894. The Jerusalem priesthood in the time of Christ is described by A. Edersheim, *The Temple: its Ministry and Services as they were at the Time of Jesus Christ*, London, 1874, pp. 88–78; and by E. Schürer, *GVJ*⁴ ii. 224–305, Eng. tr., *HJP* ii. i. 195–272.

HENRY PRESERVED SMITH.

PRIEST, PRIESTHOOD (Hindu).—1. Rigveda.—As a collection of sacred poetry covering in all probability the period from 1200 to 1000 B.C., the *Rigveda* cannot be expected to afford any complete picture of the actual position occupied by the priests in the age in which the hymns composing it came into being. It represents only the priestly activity of a limited number of families among a certain body of Vedic tribes settled for the most part in the country later known as Madhyadesa, and there is no probability that it completely mirrors that activity on all its sides. But the information which it does afford is consistent and, so far as it goes, gives a clear picture of the sacerdotalism of the period.

The priestly function appears to have lain entirely in the hands of a special class, to which appertained the duty of acting as the instrument of securing the divine favour. There is nothing in any hymn of the *Rigveda* to suggest that it was composed by a man of other than the priestly class, though of course it is impossible to prove that the authors were all priests. Later tradition² indeed asserts that the author of one hymn (X. xcvi.) was Devāpi Arṣiṣeṇa, a prince of the Kuru family, but the hymn itself makes no such statement, and Devāpi appears in it in a purely priestly capacity. The tradition of the *Brāhmanas* treats occasionally as of royal origin great priests of the *Rigveda*, such as Visvāmītra and the more

mythic *Prthi Vainya*, and, still later, tradition ascribes several hymns to royal authorship, but none of these traditions has any support in the actual text of the *Saṁhitā*. On the other hand, the collection is full of references to the activity of the priests under the generic title of *brahman*, and to several different kinds of priests, and the hereditary character of the priesthood is attested by the word *brāhmaṇa*, 'descendant of a *brahman*.' Moreover, there is abundant proof in the *Saṁhitā* itself that, as in the immediately following period, the *brahmans* worked in the service of kings or wealthy nobles, whose generosity in sacrificial gifts is celebrated in the *dānastutis* appended to several hymns; the amounts of the gifts recorded are too great to be accepted as genuine records, but they at least prove that the priests already set upon their services the highest value. Side by side with these praises of the generosity of patrons and with broad hints to others to follow their example in the form of encomia on generosity, there are many proofs of the extremely good opinion of themselves entertained by the *brahmans*, though it is not clear in any passage that they had yet arrogated to themselves the description of gods on earth which they claimed shortly afterwards. They seem to have adhered as strictly as possible to their own occupation; if priests like *Vasiṣṭha* and *Viśvāmitra* appear as assisting their princes in battle, doubtless it was by their priestly power, not by their prowess in arms. But the priestly sphere included in all probability medicine, for one poet declares (IX. cxii.) that his father is a physician—an occupation in which, to judge from all analogy, the use of spells would be of the highest importance. Naturally enough, the *Rigveda* contains very little of this side of priestly activity, but in its tenth and latest book there are found certain spells which touch on the medical art, one against the disease *Yakṣma* (X. clxiii.) and two to preserve the life of a man lying at the door of death (X. lviii., lx. 7 ff.). These hymns, with a few others, containing spells to procure offspring, to destroy enemies, and to oust a rival wife from a husband's affections, constitute, in conjunction with the funeral and wedding hymns, practically the only sign in the *Rigveda* that the activities of the priests extended to the ordinary affairs of human life, the domestic ritual which is of so great importance in modern India. It is probable that, as in the next period, the activity of the priests was confined in the main to the greater sacrifices and to such only of the domestic rites as had begun to assume special importance; the wedding hymn (X. lxxxv.) bears clear marks of comparatively late origin and is not primitive in character, and the funeral hymns exhibit a decidedly complicated and refined religious belief.

It has proved impossible to trace to the *Rigveda* the full sacrificial liturgy of the following period, but the hymns abundantly prove that there already existed much complication of ritual and subdivision of function among the priests. The main subject-matter of the *Rigveda* is clearly the *soma*-sacrifice, and it was precisely in this sacrifice that the greatest number of priests was required. In one passage (II. i. 2) to the god *Agni* are assigned the offices of *hotṛ*, *potṛ*, *neṣṭṛ*, *agnīdh*, *praśāstr*, *adhvaryu*, and *brahman*, as well as that of the lord of the house for whom the sacrifice is being performed. We hear also of an *upavakṛ*, who is doubtless to be identified with the *praśāstr*, as his business is to give directions to the *hotṛ*, of an *udagrābha*, and a *grāvagrābha*, and of two *śamīṭṛs*. The latter are doubtless the slayers of the victim, who in the later literature rank merely as attendant priests, their function of killing probably having tended to lower them in rank compared with the ordinary priests,

while the two former, whose functions, to judge from their names, must have been the drawing of the water and the taking of the pressing stones required for the sacrifice, disappear as special priests from the later ritual. There are also mentioned *sāman*-singers in general and the *praśotṛ* and *udgātṛ* in particular. These various priests fall clearly into three divisions, according as their main business was the recitation of hymns to accompany the offering, or the actual manual acts of sacrifice, or the singing of songs. It is probable enough that the original ritual was of simpler character, and that the actual sacrifice and the uttering of prayer were entrusted to one priest; this conclusion, based on *a priori* grounds, is strongly supported by the fact that the name for the reciter of hymns is *hotṛ*, a term which denotes the 'offerer' of the oblation, but the evidence of the *Avesta* agrees with that of the *Rigveda* in showing a multiplicity of priests, so that it is fair to conclude that the specialization of the ritual is prior to the separation of the Iranians and the Vedic Indians. At any rate in the *Rigveda* the *hotṛ* is the reciter of hymns celebrating the feats of the gods who are to partake of the offerings, and to him also we must assign the verses to accompany the actual offering, series of which occur in the *Saṁhitā*. Closely associated with the *hotṛ* was the *praśāstr*, at whose instigation the *hotṛ* recited his litanies; doubtless it is he who is meant when in the *āpri* litanies of the animal sacrifice the two *hotṛs* are referred to. The *brahman* of the *Rigveda* is probably the name of the priest later called *brāhmaṇāchchhamsin*, an assistant of the *hotṛ*. Of the second group of priests the *adhvaryu* is in the later ritual, and probably enough in the *Rigveda*, already the chief of the officiants at the actual sacrifice; the *potṛ*, or cleanser, is paralleled by the *Avestan āsnatere*, the *agnīdh* by the *ātarevakhsha*, who, like him, is charged with the care of the sacred fire, while the *neṣṭṛ*, or leader, may already have had the function from which he, later at least, derives his importance as the leader up of the wife of the sacrificer to play her part in a fertility ritual in the course of the *soma*-sacrifice. The *sāman*-singers had even in the *Rigveda* a double duty: on the one hand, they had to recite the addresses to *Soma Pavamāna* which are collected in the ninth book of the *Saṁhitā*, and, on the other, they had to sing songs addressed to the deities to which the *hotṛ* recited the hymns. The singing of *sāmans* was doubtless, in the form in which it occurs in the *Rigveda*, a much elaborated form of the ritual, and it is worthy of note that the list of priests given in II. i. 2 does not include any singer.

In addition to those priests who were engaged in the performance of special sacrifices for which they were selected by the sacrificer as occasion required, the *Rigveda* mentions the *purohita*, the domestic priest of the king or of some wealthy noble. It may be assumed that he himself performed the domestic ritual of the king, but at the great sacrifices he probably merely superintended the whole rite. There is, however, clear evidence that he might act as the chief of the priests, the *hotṛ*. *Agni* is both the *hotṛ par excellence* and the *purohita*; the two divine *hotṛs* of the *āpri* litanies are also called (X. lxx. 7) the two priests—the *purohitas*. Unlike the other priests, the *purohita* was not merely in the constant and intimate service of the king, but he was closely concerned with the king in his more worldly functions. *Viśvāmitra*, *Vasiṣṭha*, and others appear to have taken part in their priestly capacity in the wars of their kings, and the hymn X. xcviij. records the activity of *Devāpi* for his master *Santanu* and its success. It was rather from the *purohitas* than from the

ordinary sacrificial priests that the high claims of the *brahmins* to priority in the State proceeded.

Great as the position of the priest clearly was in the Vedic community, he does not claim as yet to be powerful enough to constrain the gods to his will; it is probable enough that in his own view and that of the people he was possessed of magic powers; we have indeed in the *Rigveda* (x. cxxxvi.) the mention of a *muni*, one of those divinely inspired ascetics who figure in all the life of India. But on the whole the relation of the priests of the *Rigveda* to the gods is that of devout worshippers who seek by skilful song and well-paid offering to win the favour of the god for the sacrificer, in whose service they are.

2. *Brāhmanas*.—In the *Brāhmaṇa* literature, which covers the period up to the 6th cent. B.C., the priesthood appears quite definitely as a separate class, contrasted with the Kṣatriya, or warrior class, the Vaiśya, representing the main body of the people whether engaged in agriculture or trade, and the servile Śūdras. The priesthood was normally hereditary, but the class system at this period and much later still allowed marriages between priests and women of inferior castes, and, though priests might be despised, as were Kavaśa Ailūṣa and Vatsa, for descent real or alleged from slave-girls, still they would not thus necessarily be regarded as excluded from priestly functions. Nevertheless, much stress is laid on descent from a *ṛṣi* and on purity of origin, and certain ceremonies could be performed only by priests who fulfilled the prescribed condition of birth in a family which for a number of generations had practised the rite. On the other hand, there are assertions (e.g., *Kāthaka Samhitā*, xxx. 1) that what matters is not descent but learning, and we actually hear in the *Chhāndogya Upaniṣad* (iv. iv. 4) of Satyākāma Jābala, who was allowed to be taken as pupil, though his parentage was uncertain, his mother being a slave-girl who had been connected with several men. This evidence, however, merely shows that the class was not absolutely closed by the rule of heredity. Nor was the practice of priestly functions absolutely restricted to the members of the priestly class. The legend which treats Viśvāmitra as a king of the Jahnuṣ (Pañchaviṃśa *Brāhmaṇa*, XXI. xii. 2; *Aitareya Brāhmaṇa*, vii. xviii. 2) is supported by the occurrence in the *Brāhmaṇas* of the terms *devarāja* and *rājan-yaṛṣi*, referring to a seer of royal origin; all the stories which mention such kings are of a legendary character, but that does not alter their significance as evidence that the view of the priestly class of the time did not see any impossibility in kings composing poetry for the sacred rites.

As in the period of the *Rigveda*, the sacrifice is carried out for the profit of an individual, even in the case of the horse-sacrifice, which is formally an offering of the king alone, although intended to secure the prosperity of all classes of the people. To this rule the only exception is in the case of a *sattra*, or sacrificial session, which might last from twelve days to any number of years, and of which the most important form is the *gavāmayana*, lasting a whole year; in that offering all the participants must be consecrated and thus made for the time being priests, and the sacrifice is for the benefit of all and not merely of the sacrificer. The *sattra* is known as early as the *Rigveda*, and it is possible that we may have in it a trace of an earlier period when the sacrifice was a clan sacrifice, but of that we have no proof. As in the *Rigveda*, the sacrifice is conducted by priestly families, but the separate traditions of these families, though they are often recorded, are of relative insignificance in comparison with the general uniformity of the sacrifice throughout the texts, which indicate that

a steady process of assimilation of customary usage was in progress. This assimilation was doubtless helped by the lack of temple worship and by the absence of any close connexion between the State and the cult, such as is so marked in the growth of early Greek religion.

The number of priests mentioned is greater than in the *Rigveda*, and more specific information as to those required for each type of offering is given. The *adhvaryu* alone is required for the *agnihotra*, the daily offering to Agni; for the *agnyādheya* and the new and full moon offerings the *agnidh*, the *hotr*, and the *brahman* are required besides the *adhvaryu*; for the four monthly offerings also the *pratiprasthātṛ*, and for the animal offering, in addition to the *śamitṛ*, who does not rank as a priest in the full sense, the *maitrāvaruṇa*. In the *soma*-sacrifice the number rises to sixteen, classified in the ritual texts as *hotṛ*, *maitrāvaruṇa*, *achhāvāka*, and *grāvastut*; *adhvaryu*, *pratiprasthātṛ*, *neṣṭṛ*, and *unneṭṛ*; *udgātṛ*, *prastotṛ*, *pratihartṛ*, and *subrahmanya*; *brahman*, *brāhmaṇāchchham-sin*, *potṛ*, and *agnidhṛa*. To this list the Kauṣītakin school added a seventeenth—the *sadasya*, who was charged with the duty of general surveillance of the sacrifice. The arrangement of priests does not, however, correspond to their actual employment in the ritual, in which the three assistants of the *brahman* and the *neṣṭṛ* are really assistants of the *hotṛ*, and not of the *brahman* and the *adhvaryu*. Of the priests the *maitrāvaruṇa* is identical with the *prasāstr* or *upavaktṛ* of the *Rigveda*, and bears his name because of his reciting litanies to the gods Mitra and Varuṇa: the *achhāvāka* is clearly a later addition, the *Brāhmaṇas* themselves (*Aitareya*, vi. 14; *Kauṣītaki*, xxviii. 4-6) emphasizing his exceptional character. The functions of the *unneṭṛ* and *subrahmanya* are unimportant. On the other hand, the *brahman* is a priest of great importance, whose task it is to take charge of the whole rite and by his silent presence to make good any errors which may be made in the carrying out of the sacrifice. He is actually declared to be as important for the sacrifice as all the other priests put together, and the tendency to multiply the priestly functions evidenced in his appointment is curiously indicated by the addition by the Kauṣītakins of the *sadasya*, who would seem to have merely duplicated the work already performed by the *brahman*. The existence of the *brahman* in this capacity has been seen¹ even in the *Rigveda*, but the evidence for this view is extremely doubtful, unless perhaps in one of the latest hymns (x. cxli. 3). On the contrary, the evidence of tradition supports the view that the *brahman* as a special priest was an innovation of a comparatively recent period in the history of the ritual by the Vasiṣṭha family, and that for a time only one of that family could perform the duties of the office, doubtless because such a priest alone would be in possession of the special knowledge which constituted the characteristic of the post.

At the same time, the *purohita* steadily increased in importance; even the *Brāhmaṇas* are sufficient to show that he had become in temporal matters the constant adviser of the king; in some cases at least the same *purohita* acted for two or even three tribes, which placed him in a position of quite exceptional consequence and influence. The relation between king and *purohita* is most effectively described in the *Aitareya Brāhmaṇa* (viii. 27), where the formulæ of appointment are given; they are based literally on those of the marriage ceremonial; the *purohita* thus becomes for practical affairs the alter ego of the king, and

¹ See R. Pischel and K. F. Geldner, *Vedische Studien*, Stuttgart, 1888-1901, ii. 144.

the duty of the *purohita* is made out to be the defeat of the king's enemies and the securing of the prosperity of the realm. The importance of the aid of the *purohita* in war is indicated by the fact that the gods in their struggles with the *asuras* repeatedly are worsted until they are able to summon to their aid *Bṛhaspati*, who is *par excellence* the *purohita* of the gods. The *Atharva-veda* (iii. 19) shows us the *purohita* engaged in a spell for success in battle. When a king, as often, is sent into exile by his people, it is his *purohita* who is expected to extricate him from his misfortune. In one respect, however, there is a change in the position of the *purohita* from that occupied by him in the earlier period: when in a sacrifice he takes the part of any special priest, it is not, as formerly, that of the *hotṛ*, but that of the *brahman*, as is proved by the concurrent testimony of two texts (*Taittiriya Samhitā*, III. v. 2. 1; *Aitareya Brāhmaṇa*, vii. 26)—a fact which stands in accord with the clear indications that the *hotṛ* has ceased to be the chief priest in the ritual.

The *Brāhmaṇas* claim for the *brahman*s high privileges. A priest deserves respectful reception and hospitable entertainment wherever he goes, and no limits are set to the amounts of the gifts which should be made to him at the several rites or portions of rites, one specially excellent sacrifice being that in which a man bestows all his wealth upon the sacrificial priests. On the other hand, the value of their services was maintained by the rule that no priest could accept gifts which another priest had rejected. The sacrificial offerings also fell to be consumed by the priest, as he alone was holy enough to partake of them; even in the royal consecration the king cannot partake of the *soma*, but only of a special drink prepared for the purpose. The priest also claims to be superior to the royal jurisdiction; when the king is proclaimed to the people, the proclaimer adds that the king of the *brahman*s is *Soma*. The king may not censure a *brahman*; when he gives away all the earth with what is in it, still he cannot include in that gift the property of a *brahman*. The crime of slaying a *brahman* is the only real form of murder, and it can be expiated only by the expensive horse-sacrifice. The fine for an insult to him is 100 cows or coins; for a blow, 1000. In a civil case the arbitrator must give his decision in his favour as against a non-*brahman*. But there is evidence in the *Pañchaviṃśa Brāhmaṇa* (XIV. vi. 8) that a treacherous *purohita* might pay for his sin with his life, and it appears from the *Aitareya Brāhmaṇa* (vii. 29) that, as regards his place of abode, the priest was not exempt from the general power of the king to remove his subjects from their settlements at pleasure.

In return for their special position the priests were expected to show such qualities as kindness and gentleness, devotion to duty, and knowledge of the ritual. Intellectually their outlook on the sacrifice with which they were busied has undergone a profound change since the period of the *Rigveda*, and presents a curious admixture of magic and speculation. The principle of the sacrifice is not merely that of giving in expectation of a return; the priests assume that the return is compelled by the gift, and that they are complete masters of the universe through the mechanism of the sacrifice, if only that is duly performed. This power enables them not merely to assure to the sacrificer for whom they act what he desires, but at their pleasure, by the slightest error in the rite, to bring him to ruin. They are powerful by the sacrifice to heal dissent between the people and their princes; they are equally powerful to produce such dissent—a fact which explains clearly enough the rise of their

influence in the land. On the other hand, the priests are theosophists, and find in the sacrifice the explanation and cause of the universe, which is daily renewed in the performance of the piling of the sacred fire, and from this speculative side of their efforts comes into being the priest of the schools which oppose themselves to the sacrificial ritual.

3. *Upanisads, Buddhism, and Jainism.*—From the time of the earliest *Upanisads*, dating about 600 B.C., a new function of the priest comes clearly into view, which differentiates him more and more from the sacrificial priest. The sacrifice ceases to be for some priests the chief object of their interest, which centres in the attempt to explain the nature of the universe and its relation to the self. The philosophy of the *Upanisads* is not in any sharp manner differentiated from the philosophy which commences with the doctrine of the unity of the universe in the sacrifice, but it is carried far beyond its first beginnings and to a certain extent the earlier *Upanisads* in particular hold aloof from the study of the Veda and the sacrifices; the former is shown not to be the true means of knowledge; thus in the *Chhândogya Upaniṣad* (vii. 1) Nārada confesses that all his Vedic learning has not taught him the true nature of the self, and in the same text (vi. 1) Śvetaketu, despite his study of the Veda for the prescribed period, is merely conceited and not well instructed. The *Bṛhadāraṇyaka Upaniṣad* contains (I. iv. 10, III. ix. 6, 21) several distinctly hostile references to the sacrifice, and the same spirit may be traced more faintly in the *Chhândogya Upaniṣad* (I. 10f.). At the same time, these *Upanisads* show no complete approval of the rival method of holiness, which undoubtedly existed at this time and was much in favour—asceticism. For the sacrifice, for Veda study, and for penance they substitute knowledge as the all-important thing, and the life of the *brahman* becomes concentrated upon study on the one hand and the teaching of pupils on the other. Stress is also laid on the fact that knowledge can be gained from others than *brahman*s; if the stories which ascribe the teaching of *brahman*s to kings like Janaka, Pravāhana Jaivali, Aśvapati Kaikeya, and Ajātaśatru cannot be pressed into proof of the derivation of the doctrines of the *Upanisads* from the Kṣatriya class, as has been maintained, still they do show that intellectual activity was encouraged by free discussion, and the mention of women in the *Upanisads* as taking part in such discussions reveals a new feature in religious life; the sacrificial ritual knows of no woman priest, and the functions permitted to the wife of the sacrificer are even more limited than his own. The later *Upanisads*, however, show a distinct attempt to reconcile the claims of the study of the Veda, the sacrifice, and asceticism with the search for true knowledge, and, without making these things adequate means of discovering that knowledge, they treat them as a useful or necessary propædæutic. The same view is in effect already enunciated in the *Bṛhadāraṇyaka Upaniṣad* (IV. iv. 22), where we find the germ of the theory of the four *āśramas*, or stages of life, which an Aryan or at least a *brahman* should follow: the first is study of the Veda, the duty of the *brahmachārin*; the second sacrifice and almsgiving, the lot of the *gṛhastha*, or householder; and the third is asceticism, the lot of the *vānaprastha*, which later ingenuitously justifiably divides into two states—that of the forest-dweller and that of the wandering and homeless beggar, *bhikṣu* or *parivrajaka*. The *Chhândogya* (II. xxiii. 1) carries the matter a little farther: it ranks as three branches of duty sacrifice with Vedic study and the giving of alms, asceticism, and studentship with a teacher, and

then sets over against them the abiding in *brahman*, which is later developed into the fourth *āśrama*. The *Kena* (33) and the *Kaṭha Upaniṣads* (I. ii. 15) are equally clear in their recognition of the value of study and asceticism, and the *Kena* also mentions sacrifice expressly as a condition of true knowledge. The significance of these requirements is clear: in face of the tendency of the day to resort to asceticism and to abandon the use of sacrifice, which indeed in the Buddhist texts is regarded with much contempt, the Brāhmins were anxious to find due place and room for the different sides of human activities, even if their doctrines of the nature of the *ātman* were such as logically to deny all value whatever to Vedic study, asceticism, and sacrifice.

It is clear that great importance attached to the relation of pupil and teacher, especially as the doctrines of the philosophic schools were held to be specially sacred, such as could indeed be imparted in some cases only in the seclusion of the wild, whence the title *Aranyaka*, 'Forest Book,' for portions of the philosophic literature. The teacher is bound to impart all his knowledge to the pupil, who stays with him, and in return the pupil is bound to afford all possible assistance in the affairs of daily life to the teacher—to tend his cattle, to collect fuel, to guard the sacred fire, and to beg. The giving of payment for teaching is not approved by the texts, but the practice seems to have grown up under which at the termination of his studentship, which might extend over any period, twelve years being a common time, the pupil took leave of his teacher by presenting him with a gift proportioned to the pupil's means. Not only Brāhmins might go as pupils; the *Sūtras* formally contemplate members of the Kṣatriya and the Vaiśya class studying, but doubtless these cases were comparatively rare, just as the normal ascetic was the Brāhman, not one of the other two classes. The teacher was expected to perform for his pupil the formal rite of initiation by which his spiritual training commenced—an event which is the refined form of the puberty rites of new birth which are found wide-spread throughout the world. The relation of pupil and teacher is of special interest, as it forms the root of the Hindu veneration and deification of the *guru*.¹

The relationship of the pupil and teacher doubtless led in many cases to the formation of schools of thought in which the views of a distinguished teacher gradually spread and attained considerable vogue, as we may judge from the frequent reference to teachers such as Āruni or Yājñavalkya. In two famous cases, however, the influence of the teacher has far surpassed normal limits, and given rise to the formation of a sect which has created a form of religion differing in essentials from Brāhmanism. The older and the more closely akin to Brāhmanism is undoubtedly Jainism, which represents a definite tendency to develop systematically the ascetic side of Indian views of life. The ideal is to reach the condition of perfection, which is the end of existence, by means of rising superior to all the needs of the ordinary life of man, and by laying aside all the passions which man feels. Hence the regulations which applied in the Brāhmanic system, and which enjoined abstinence from the taking of life, honesty, chastity, and the speaking of the truth, appear in Jainism in forms exaggerated out of all reality. The doctrine of *ahiṃsā* was a natural enough revolt from the absurd prodigality of life in the ordinary sacrifice, and its growth can be traced in the Brāhmanic literature; in Jainism it degenerates into an objection to the destruction of even the most infinitesimal insect life, which compels the most ridiculously minute precautions

to be taken against harm to such life or even to the air itself. The doctrine against the taking of another's property is carried by Mahāvira to a prohibition of attachment to any object or person, which counts as the fifth of the great vows of the priesthood. The Digambara sect of the Jains go farther, and carry out the principles of the school to the logical conclusion, which seems to have been adopted by Mahāvira, of wearing no clothes.

It was inevitable that the success of Mahāvira and the spread of his doctrines among a far wider class than the followers of any particular Brāhman teacher should lead to the formation of a community with some distinctly original features. Such a community followed the lines of the pre-existing system of pupilship; a formal initiation by a priest of the order acts as a preliminary to the adoption of the life of the Jain monk, who then becomes a homeless wanderer like the Brāhman ascetic, forbidden to possess any property, and compelled to beg his food, to live on what he thus obtains, to wear at most the rags that he can gather, and to avoid dwelling long in any one place save in the time of the rains. The necessity for fixed dwellings during the three or four months of the rainy season gave the impulse to the development of the quasi-monastic life, more or less permanent dwelling-places, though of the simplest kind, being allotted to the monks by the kindness of laymen. But the rule of wandering is still applicable. The essential duty of the monk is meditation and spiritual exercises, life being supported by begging, but in the course of its development the intellectual part of the discipline has become of less importance than the devotion of effort to avoid the destruction of life, and the provision of food. Moreover, from an early date, perhaps as early as the 2nd cent. B.C., a definitely Hindu element has been introduced in the form of idol-worship, accepted by both the Śvetāmbara and the Digambara sects, but rejected by the reforming sect of the Sthānakavāsī from the 15th cent. onwards. The introduction of this new element has added to the duties of the Jain monk a temple worship, consisting in the main of mental devotion and contemplation of the idol of the Tirthaṅkara, accompanied by the singing of hymns in his honour. There has also arisen a temple priesthood, who in the case of the Digambaras must be Jains, and who perform to the idol the ordinary Hindu rites of washing, dressing, and adorning it, the waving of lights before it, the burning of incense, and the giving of offerings of fruit, sweetmeats, and rice. The Jain priest does not, however, eat the food thus presented, differing in this from the Brāhman priest and the Hindu temple-priest. In the temples of the Śvetāmbaras men who are not Jains, even Brāhmins, may be employed.

Besides the monks the Jains recognize an order of nuns, subject to the same general rules of life as the monks, and, what has been of the first importance for the persistence of the faith, orders of lay male and female adherents, *śrāvakas* and *śrāvikās*. This recognition gives the laity definite duties and obligations, based upon but modified from those binding on the monks and nuns. Among the vows undertaken by the laity are those of from time to time observing for a brief period the full restrictions incumbent on the *sādhu*, and of constantly helping the monks by gifts to them of the food and other articles which they are allowed to have, and the lending of such articles as they may not take for their own. Probably from the first these adherents have been largely of the mercantile class—a result contributed to by the fact that the Jain restrictions on the taking of life shut many avenues of profession even to the lay community (cf. art. MONASTICISM [Hindu]).

¹ See K. Glaser, *ZDMG* lxxi. [1912] 1-37.

Tradition, probably correctly, ascribes Mahāvīra to a Kṣatriya family, and the Buddha was undoubtedly not of Brāhman birth. Moreover, in the eastern country in which he preached there is evidence¹ that the Brāhmanical system was much less rigidly determined than in the west, and that the practice of Kṣatriyas and Vaiśyas becoming ascetics was far more widely spread. But the Buddha in his precepts of life for his followers differed essentially from Mahāvīra in laying stress on avoiding extremes of asceticism, such as the religious suicide encouraged by Jainism; greater freedom was accorded to the monks to receive the aid of the laity, and no attempt of any kind was made to organize the laity into a community formally dependent on the order of monks. The admission of women as a special order of nuns was only grudgingly conceded, and subjected to such restrictions that the spiritual effect of the community of nuns on the faith cannot be discerned. But from the death of the founder there entered into the duty of the pious monk the obligation of paying reverence to the four places of special importance in his life—that where he was born, that in which he obtained enlightenment, that in which he decided to set going the wheel of the law, and that in which he entered *nirvāṇa*. The actual reverence of the relics of the departed Buddha was perhaps at first reserved to the lay adherents, but it passed naturally enough into that idol-worship which assimilated the worship of Buddha to that of a Hindu god. Moreover, the doctrinal development of Buddhism in the Mahāyāna school displaced the historical Buddha as the centre of Buddhism by mythological figures essentially divine.

In one important point both Buddhism and Jainism agreed—the introduction of the formal confession of sin as an essential part of the duty of the monk and in Jainism also of the laity. In both cases the fortnightly gatherings and the great yearly meeting of the monks were the specially fit occasions for the confession, but great stress was laid in Jainism on immediate confession to the *guru* in order to avoid by repression the accumulation of *karma*. For such systematic confession there was no place in Brāhmanism with its lack of defined tenets, though the importance of confession for certain ritual purposes was recognized. In these formal assemblies there was the possibility of the development of an ecclesiastical organization, but such an organization never developed itself any more than Hinduism has been able to produce a regularly organized hierarchy.

The Indian ascetic, whatever his religious belief, is credited with the attainment of magical powers of every kind, and this is true of both the Jain and the Buddhist—indeed in even a higher degree of the latter faith, for one of the four rules for monks in that belief is not to boast of the possession of such powers as they do not enjoy. This is the better side of the magical powers which ordinary Indian belief ascribes to the priest, and of which so much is made in the Brāhmanical literature.

4. Early Hinduism.—The two great epics of India, the *Mahābhārata* and the *Rāmāyaṇa*, taken in conjunction with the early law-books and with the Buddhist and Jain scriptures, present us with a form of religion and custom to which the name of Hinduism can fairly be given as distinguishing it from the doctrines of the *Brāhmanas*. The religion of these texts is only in part the natural development of the religion of the *Brāhmanas*; it contains many elements of faith, doubtless as old as that religion, but appealing to different sections of the people; it is essentially a more

popular faith than that which was concerned with the sacrificial ritual and the speculations arising out of it. Hence the priest of the sacrificial ritual is of less prominence, while the *purohita* comes forward. The priests of the epic may be divided into the ordinary priests, whose life is spent amid simple surroundings in the performance of their functions, and the spiritual advisers of the kings, who of course were often also the spiritual teachers of their youth. The office was one which tended to be hereditary in the same degree as the monarchy, and the mere fact that a priest might be at once the *guru* of the king and his *purohita* naturally exalted the claims to importance of the latter office. The boast of the *Brāhmanas* that the priests are the gods on earth is repeated with increased force; the gods are made out to be dependent on the priests, who, if need be, could create new gods. The power of the king is really derived from the priests, and they have the power to destroy a king who proves unwilling to meet their demands for gifts which have now grown beyond all measure; cows and land are expected as matters of course and even villages and districts, i.e. the revenues derived from these places. The assembly of the people, which is a real thing in the *Rigveda* and still seems to have lingered on in the age of the *Brāhmanas*, disappears in the epic, passing through the forms of the council of warriors and of priests, and finally becoming in effect the secret conclave of the king and the priest, who gradually was able to persuade the king that his advice was worth much more than that of the people or even of the warriors. Naturally enough, this view of the comparative value of the two elements for the purposes of State affairs was not accepted always by the warriors; the legends of disobedient kings like Viśvāmitra and Nahuṣa show, indeed, the terrible fate of those who were bold enough to question the position of the priests, but also indicate that there were kings impious enough to doubt the all-sufficiency of the priesthood. Naturally enough, the claims of immunity to punishment made by the priests are of the most wholesale character; even for the gravest crimes they insist that no corporal punishment of any kind can be inflicted on a priest, though, as in the *Brāhmanas*, kings seem to have felt themselves entitled to punish treachery by death. In return for this privileged position, the priests were evidently conscious of the need of providing themselves with all the learning possible to help them in the guidance of the king in his administration of justice and his executive government, as well as in the conduct of his sacred duties of sacrifice; the horse-sacrifice, as especially an imperial sacrifice, revealed the value of the skilled assistance of the priests. A priest, however, might also actually perform feats of arms, though the general rule is opposed to any active participation in fighting by the priest; of this there is a classic example in Droṇa, who combines, with the greatest success in each, spiritual and warlike functions, while his son, who was a warrior of no small fame, was taunted with impropriety in bearing arms against the rule of the priesthood. But it was not only by the legitimate arts of statesmanship that the *purohita* commanded so fully the obedience of the king; he was an expert in astrology and a sooth-sayer and magician, all of which features are given prominence in the tales of kings and their *purohitas* narrated in the *Jātakas*. Further, his position at court lent itself to intrigue of every kind, as is evidenced by the semi-mythical account of Chāṇakya's relations to his sovereign.

It is probably to this period that we must attribute the beginning of the division of the Brāhman class into different sub-classes divided by occupa-

¹ See Fick, *Die sociale Gliederung im nordöstlichen Indien*, p. 117 ff.

tion, though probably as yet still theoretically and in feeling one. The Buddhist texts show us Brāhmins as agriculturists, as engaged in pastoral occupations and in trade, and the *Dharma-sūtras* (*Āpastamba*, I. vii. 20. 12; *Gautama*, vii. 1 ff.) confirm this account to the extent of permitting these occupations, in certain circumstances of pressure, to the Brāhmins. It is possible also that in the eastern country, such as Magadha, Brāhmins went farther and undertook professions of a class never approved by the stricter schools: in the *Jātaka*s (iv. 361 ff.) we find suggestions that they could act as hunters, and fulfil other menial tasks. It does not appear that Brāhmins who occupied themselves in these unpriestly functions at the same time devoted themselves to any priestly offices, whether sacrificial or intellectual; and we may therefore see in this adoption by priests of other than their appropriate functions the beginning of the breaking up of the unity of the class into castes determined in the main by hereditary occupation.

The attitude of the priesthood towards the gods as depicted in the epic is what might be naturally expected as the outcome of the theorizing of the *Brāhmaṇa* period. The priests then degraded the gods from all real importance except in their connexion with the sacrifice, and the priests of the epic have likewise no real respect for or belief in the minor deities of the pantheon, and to this rank even Indra and Varuṇa have sunk. The great gods of the epic are in the first place Viṣṇu, and in the second place, as the result of later working over, Śiva; both these gods are of essentially popular origin, but in the epic that popular worship has been overlaid by the philosophic pantheism which is most congenial to the temperament of the Brāhmaṇ. Even the devotion of the worshipper to the divinity, which was clearly prevalent in some sects, as reproduced in the epic, is overlaid with pantheistic elements.

5. Mediæval and modern India.—The priest of the middle age of India as revealed in the *Purāṇas* and in the classical Sanskrit literature presents essentially the same features as the priest of modern times. The chief distinction between this period and the epic age is that of the growing complexity of life and the progressive Hinduization of the centre and south of India. As a result the priestly class becomes split up more and more into different subdivisions which in effect constitute castes within the main class, between which there is no marriage possible and sometimes not even complete freedom of intercourse and commensality. The tendency of the Brāhmins to adopt very diverse modes of life, of which there are only traces in the earliest period, becomes more and more marked, and, combined with geographic differences, this fact has contributed to the growth in the number of the castes. Further support has been given to the development by the practice by which aboriginal deities have been taken over bodily into the Hindu pantheon, doubtless, at least in some cases, together with the priesthood attached to the deity, just as the ruling family of the tribe was taken into the rank of the Kṣatriyas. Hence arose innumerable subdivisions among the ten great divisions into which the Brāhmins are popularly divided—the Śārasvatās, Kānyākubjās, Gauras, Utkalās, and Maithilās north of the Vindhya range; and the Mahārāṣṭras, Andhras or Tailāṅgas, Drāviḍas, Karnāṭas, and Gurjaras south of that range. But of these castes many have no priestly functions at all, and have devoted themselves to occupations of the most diverse type, ranging from the learned professions to the humblest duties of agriculture, and even trade. Even within the sphere of religion the differences

between the different classes of Brāhmins is most marked. At the lowest level stands the village-priest, who is, however, of great importance in the life of the village, as his presence is requisite for the due performance of the religious ceremonies which make up so great a part of the life of a Hindu; at initiation, at marriage, at birth, and at death his presence is essential, even if other priests may be allowed to take part in the more important of these functions; and in return for his services he receives a fixed allowance of grain, with special presents on important occasions. The village-*purohita* is often also the astrologer, who prepares horoscopes, predicts the days for sowing and reaping, tells fortunes, and often as a magician averts disease and controls evil spirits. The important science of omens is also in the hands of the astrologer. Other Brāhmins, again, are engaged in the performance of the temple worship, though many of the functions of that worship are performed by men of lower caste. In its normal form the ritual of a great temple is mainly centred in the ceremonial treatment of the idol of the god whose temple it is. The daily round involves the awaking of the god from slumber, his dressing and undressing, bathing, anointing, and painting, and frequent feeding; the priests partake of the food, which through its consecration by the eating of it by the god is holy, and which is therefore sometimes given or sold in part to the people. Further, incense is burned, lights are waved, bells are rung, and flowers and other offerings as well as food are presented. During these performances Brāhmins often recite texts taken from the holy books of the religion of the god in question, mainly, in the case of Kṛṣṇa, the *Bhāgavata Purāṇa*, in the case of Śiva, the *Līṅga Purāṇa*, Śiva's most potent representation being in the form of a *līṅga*. The priests, however, while they superintend and control the performance of the temple ritual, do not claim for themselves the sole power to perform the acts of which it consists. The layman, on payment of the due fees, may be permitted to perform most if not all of the acts of worship.

As opposed to the Brāhmins who concern themselves with the temple worship, a far higher intellectual rank is occupied by those who are members of one of the religious schools, the abundance of which is attested throughout the period. These schools have naturally undergone numerous changes in the course of time; the devotees of the *guru*, who appear to have flourished in the time of Saṅkara (9th cent. A.D.), have disappeared, and the Vaiṣṇava sects have attained much greater prominence since the revival of Vaiṣṇavism by Rāmānuja in the 11th cent. A.D. In the Vaiṣṇava schools the traditional respect for the teacher, which is seen in the claim of the Brāhmins in the Vedic age to be gods on earth, reveals itself in its highest form in the sect of Vallabhāchārya, in which the *gurus* are even in life treated as living embodiments of the god, and receive the formal marks of respect which are accorded to the images of the god whom they serve. But, even in the sects that carry the process of deification of the *guru* less far, the greatest importance is placed upon him, as he is the source from which alone the saving knowledge which will procure the heaven of bliss open to Vaiṣṇavas can be derived. The Sikh *guru* baptized the disciple and taught him the name of Hari, which alone can procure him salvation, and in return demanded and received the implicit obedience which raised the Sikh to so high a pitch of military power when its bent was definitely turned under Govinda to warfare with the Muhammadans. Common again to all sects of Vaiṣṇavism is the stress laid on the sacramental meal, which is decidedly a development of the

giving or selling of the sacramental food, by the temple priests to outsiders, and which is the most definite sign of the belief, more or less clearly held by the Vaiṣṇava teachers, that caste divisions were not ultimately in accord with the principles of their faith. Both in the practice of the sacramental meal and in the respect paid to the *guru* there has been seen the influence of Christian doctrines, but in the latter case at least the supposition is gratuitous, the respect being a natural Indian development.¹

The teaching of the schools is not normally antagonistic to idol-worship, which it allows as a mode of approaching the divinity; even the Sikhs, who are in theory opposed to idolatry, make a fetish of the *Granth*, the sacred book of their scriptures, and guard it in a shrine, paying to it the same rites as are offered to Hindu idols. There is therefore no necessary incompatibility in the combination of the duties of priest in a temple and spiritual teacher, and the two functions are sometimes united. This is essentially the case with the priests of the Tantric rites, who themselves take a part in the performance of the rites which they approve, and to which they give in their theoretic teaching a symbolical signification. These priests are reckoned as gods by their followers, for their command of *mantras*, or spells, makes them superior to the gods, on whom again the whole world depends. The possession of magic power by the priest is a commonplace of later as of earlier Indian belief, but it is carried to its farthest extent in Tantrism, which in this aspect is closely allied to the Yoga philosophy. Another side of the same element of priesthood is seen in the varied classes of ascetics, who undergo severe penances of all kinds in order to produce ecstatic states, and many of whom are doubtless connected in origin with the ascetics of whom we hear in the Buddhist texts. The better side of asceticism shows itself in the persistence of the practice by which, after the performance of the duties of life as a householder, in old age the Brāhman, be he priest or politician, ends his days in the meditation of the *sannyāsin*.

In one respect there is a clear distinction between modern and epic and, still more, Vedic India. The Vedic sacrifice is all but extinct at the present day, and has clearly been moribund for centuries; in its place have come the temple worship on the one hand and the great popular festivals on the other. These festivals, such as the *Makarasaṅkrānti*, the *Vasantapachami*, the *Holi*, and the *Dipali*, are of essentially popular origin, and traces of them can be seen in the Vedic ritual, but in that ritual they have been deprived of their original nature and brought into the scheme of sacrifices performed by and for the profit of the sacrificing priests and their employers only. Doubtless outside the Brāhmanical circles they persisted in their simpler form, which can often be recognized in the ceremonials of the present day, though many elements of sectarian religion have found their way into these.

A certain distinction in the religious methods adopted by the priesthood may be observed between this and the earlier periods. In place of the schools of the Brāhman ritual or the wandering monks of the Buddhists or the Jains, we find the wandering monk of the type of Sāṅkara, Rāmānuja, and Madhva, who go here and there challenging others to discuss the new theories of the *Vedānta Sūtra* which they have to propound, and retiring from time to time to a monastery for study and literary composition; these are obviously in spirit and in method a natural development of the philosophers of the *Upaniṣads*, but with their intellectual activity definitely directed by the authority of the

Vedānta Sūtra and of the *Upaniṣads*. A very different method of religious propaganda appears in the Tamil south, at an undefined but certainly early date, in the shape of the itinerant poet, devotee, and musician, who wanders hither and thither with a large retinue, singing his own compositions in the vernacular in honour of the god whose shrine he frequents; this is a type of priest corresponding to the conception of *bhakti* and differing entirely from the type of theologian produced by the Brāhman schools, and of more popular origin. Rāmānanda, to whom is due the spread in N. India of the doctrine of Rāmānuja and the more definite rejection of the importance of caste, introduced the type, at once intellectual and popular, of the wandering theologian who could dispute with the most learned opponents, but was anxious to preach in their own tongue to the people and to express in vernacular verse the tenets and principles which he sought to inculcate. An attempt to strengthen this appeal to the popular mind was made by Chaitanya at the beginning of the 16th cent. by introducing from the south its ecstatic religious dancing and singing. The older method of Rāmānanda was, however, followed by Nānak (A.D. 1469–1538) and Tulsī Dās (A.D. 1537–1622); both of these were married men, as opposed to Rāmānanda, who was a monk—a fact which distinguishes the adherents of the *bhakti* cults from the Buddhists or Jains.

Since the beginning of the 19th cent. the influence of Christianity has produced considerable effects in the Hindu conception of priestly methods and ideals. Apart from the effects on doctrine, the general result of this influence has been, on the one hand, to create for Hinduism a feeling of unity and individuality hitherto not to be discerned; there has even been created a society, the *Bhārata Dharma Mahamāṇḍala*, for the defence of Hinduism as such. It is, however, characteristic of the nature of Hinduism that no effort has been made to create a controlling spiritual centre, such as would assimilate Hinduism to the great Churches of the West. On the other hand, the minor reforming bodies have some conception of church organization, and in practically all aspects of Hinduism a strong impulse has been given to the priesthood to undertake the direction and support of various forms of social service.

6. Animistic tribes.—The primitive tribes have from the beginning of Indian history been continually falling under the influence of the higher culture of the tribes among them, and their conceptions of priesthood have been affected by the views and practices of these tribes. There are still, however, abundant traces of a more primitive view in which the priest is mainly a medicine-man, whose strength lies in his magical powers and his ability to become the subject of divine possession. In this view the priesthood is not, as in Vedic India, a hereditary profession based on sacred learning and knowledge of tradition, but a spiritual exaltation which betrays possession by the divinity. Thus among the Kols, when a vacancy occurs in the office of village-priest, the next holder of the office is determined by a process of divination. A winnowing-fan with some rice is used, and the person who holds it is dragged towards the man on whom the office of priest is to be conferred. A similar practice is observed among the Orāons. In N. India in addition to the professional exorcists there are others who do not learn their work from a *guru*, as do the professionals, but are naturally inspired by a spirit. In accordance with this view is the practice of the semi-Hinduized Dravidian tribes of the Vindhya range, who often worship Gansam or Raja Lakhan. The shrine of the god is in charge of the village-*baiga*, who is

¹ See H. Garbe, *Indien und das Christentum*, Tübingen, 1914, p. 276

invariably selected from among some of the ruder forest tribes such as the Bhuiya. Much of the work of the *baiga* is sorcery pure and simple, and for this purpose no doubt the most uncivilized person is the best adapted, as being in closer touch with the spirits in nature. Similarly the Kurumbas in the Nilgiri Hills are employed by the Badagas, who are much above them in culture, for the sake of their special powers. So it is with the ordinary axe carried by the dweller in the jungle that the victim is slain at the shrine, the *baiga* then taking as his share the head, while the rest of the meat is consumed by the male members of the tribe. When the *baiga* in villages of the hill-country south of the Ganges desires to exorcize a disease-ghost, he attains the necessary divine possession by beating himself with the iron chain which hangs from the roof of the shrine of the village-god, and which among the Gonds is considered to be in itself divine. The same principle of divine possession is exhibited in the worship of Bhiwāsu, the regular Gond deity, who is identified with Bhīmasena, one of the Pāṇḍavas; once a year a special feast is held in his honour, at which the god inspires the priest, who, after leaping frantically round, falls in a trance. In an analogous manner throughout S. India priests in fantastic attire, often with masks human or animal, dance in order to cause the entry into themselves of some spirit, possessed by whom they can predict the future for those who make inquiry. Moreover, even the sacrifices in which the priests take part in large measure are obviously mere fertility-charms, as in the case of the famous human sacrifices of the Kandhs. The cult which they performed was simple in the extreme; the elaborate temples and formal worship of the Hindu gods is unknown in aboriginal religions, where the temple is often of the simplest possible formation, consisting merely of a heap of stones, while even in more advanced communities at most a small hut forms the abode of the priest of the god, who is aniconic. Of the development of higher religious conceptions among the aboriginal priesthoods we have no clear proof, as the occasional appearance of what may be considered higher beliefs may easily be explained by borrowing from the surrounding tribes which have fallen under Hindu influences. Among the Kandhs there are priests who have no other occupation than their sacred functions; others, again, can engage in other employments, but are forbidden in any event the profession of arms, just as in theory this profession was closed to the Brāhman. The Todas in the south have a celibate priesthood, but it is uncertain whether this conception is borrowed from Hinduism or is merely one instance of the superiority of the celibate for the exercise of functions connected with divinity, of which there are traces in the Vedic period itself, though the principle is not carried very far. In many cases, however, the penetration of Hindu practice goes very far; thus the out-caste tribe of the Tiyas in Malabar have since A.D. 1890 created for themselves a temple worship modelled on the ordinary Hindu type but served by non-Brāhman priests. A much older example of the same principle is probably to be seen in the growth of the Līṅgāyat (*q.v.*) sect of Śaivas in S. India, whose priests, *jāṅgamas*, are not Brāhmanas, but may belong to any other caste.

LITERATURE.—For the Vedic period the chief authorities are: J. Muir, *Original Sanskrit Texts*, i.3, London, 1890; H. Zimmer, *Altindisches Leben*, Berlin, 1879; A. Weber, *Indische Studien*, Berlin and Leipzig, 1849–84, ix., x., and xiii.; H. Oldenberg, *ZDMG* li. [1897] 287–290, *Religion des Veda*, Berlin, 1894; A. Hillebrandt, *Ritual-Lit.: Vedische Opfer und Zauber* (= *GIAP* iii. 2), Strassburg, 1897; M. Bloomfield, *The Religion of the Veda*, New York, 1908; A. A. Macdonell and A. B. Keith, *Vedic Index*, London, 1912; S. Lévi, *La Doctrine du sacrifice dans les Brāhmanas*, Paris,

1898; P. Oltramare, *L'Hist. des idées théosophiques dans l'Inde*, do. 1907; P. Deussen, *The Philosophy of the Upanishads*, Eng. tr., Edinburgh, 1906. For Buddhism see H. Oldenberg, *Buddha's*, Stuttgart, 1906; T. W. Rhys Davids, *Buddhist India*, London, 1903; R. Fick, *Die soziale Gliederung im nordöstlichen Indien zu Buddha's Zeit*, Kiel, 1897; L. de la Vallée Poussin, *Bouddhisme: Opinions sur l'hist. de la dogmatique*, Paris, 1909; for Jainism, Mrs. S. Stevenson, *The Heart of Jainism*, London, 1915; J. G. Bühler, *On the Indian Sect of the Jainas*, Eng. tr., do. 1903. The epic material is dealt with by E. W. Hopkins, *JACS* xlii. [1889] *The Religions of India*, London, 1896; the latter work deals also with Hinduism, as does A. Barth, *Religions of India*, Eng. tr., London, 1892; for Hinduism see also M. Monier-Williams, *Brāhmanism and Hinduism*, do. 1891; R. G. Bhandarkar, *Vaiṣṇavism, Śaivism and Minor Religious Systems* (= *GIAP* iii. 6), Strassburg, 1913; J. N. Farquhar, *Modern Religious Movements in India*, New York, 1915. On the animistic tribes there are important notices in W. Crooke, *PR*, London, 1896, and E. Thurston and K. Rangachari, *Castes and Tribes of Southern India*, Madras, 1909.

A. BERRIEDALE KEITH.

PRIEST, PRIESTHOOD (Iranian).—I. Pre-Zarathushtrian times.—That the religious beliefs and practices of the Iranians before the reform of Zarathushtra necessitated and actually commanded the services of a priestly class scarcely admits of any doubt, though, in the absence of direct records, the proof of this, as of so many other facts relating to the early life of the Iranians, rests upon indirect evidence. In the Avesta we find that the generic term for 'priest' is *āthraavan*, clearly derived from *ātar*, 'fire'—a fact which is significant alike of the early origin and of the principal function of the sacerdotal office in Irān. That reverence for fire was a marked feature of the religious life of the Iranians in the most primitive period is well established;¹ and, when taken in conjunction with the fact that the word *āthraavan* in the *Rigveda* has, among other related senses, the same connotation as the Iranian form *āthraavan*, the inference becomes irresistible that both the office and its Avestan name are derived from Indo-Iranian days. Moreover, although *āthraavan*, as the common appellation of the priests, suggests that they had as their chief care the maintenance and guardianship of the sacred fire, nevertheless it can hardly be supposed that even in the pre-Zarathushtrian period their duties were not more extensive. The old Iranian pantheon enshrined other highly venerated divinities,² whose cults would naturally require the mediation of priests. The cult of Haoma, to name only one, involving, as in all probability it did, in the earliest times a somewhat elaborate ritual, would afford a special opportunity for priestly intervention. Later tradition also, as reflected in *Ys.* ix. 1 f., lends support to this contention. In that passage the poet describes Haoma approaching Zarathushtra in the morning while he was chanting the *Gāthas* in the presence of the sacred fire, and entreating the prophet to pray to him, to consecrate his juice for libations, and praise him as the other sages or priests were praising him. Nor can there be any doubt that prayers, invocations, and sacrifices offered to all their gods at this period were mediated by their priests.³

Regarding the organization of the priesthood and the relation of the priests to the laity and to other classes in society at that period, we have but little data from which to draw any conclusions with absolute certainty. Although Firdausi's attribution of the establishment of the three orders of priests, warriors, and husbandmen to Yima belongs to the sphere of legend rather than to that of history, still the division itself represents an early stage in the development of the Iranian commonwealth. Moreover, the position of the priests at the head in every enumeration of these orders in the Avesta, suggesting the venera-

¹ See art. ALTAR (Persian), vol. i. p. 347, with the references.

² See art. GOD (Iranian), vol. vi. p. 291.

³ Cf. Herod. i. 132.

tion in which they were held, is in perfect accord with what we know of the deep moral earnestness and marked religious susceptibilities of the ancient Iranians.¹ There is no evidence, however, that the *āthravans* of Irān were regarded or claimed to be regarded with the same superstitious awe and reverence as the Brāhmans of India arrogated to themselves. No superiority as regards descent or higher nature was ascribed to or demanded by the priests of Irān. That priestly families² existed at this period, who handed down to their descendants the secrets of correct sacrificing and the approved forms of invocations, may very well have been the case, though nothing in the nature of a close priestly caste resulted in Irān—at least during the period now considered. The high regard in which agriculture came to be held at an early period and the constant dependence of the community for its defence upon the warrior-class would in themselves militate against the development of castes in Irān.³ Moreover, the fact that, according to the Avesta,⁴ Zarathushtra was the first priest, warrior, and agriculturist indicates that tradition at least did not regard the gulf between those classes in the earliest times as an impassable one.

2. The Zarathushtrian reform.—In the nature of things it was very unlikely that the great spiritual movement which is associated with the name of Zarathushtra should leave the priesthood unaffected. What its influence actually proved to be, so far as it is ascertainable, must be learnt from its reflexion in the hymns, or *Gāthas*, of the Avesta. In those hymns the *āthravans* are not once mentioned by name. In one passage,⁵ it is true, the prophet applies to himself another old Aryan term for 'priest,' namely *zaoatar* (Skr. *hotar*), which may serve to show that, however insignificant the sacerdotal element in the new movement proves to have been, he did not entirely renounce priestly functions. But the character of his reform helps to account for the recession of the *āthravans* into the background. It was a change in the basal truths of the religion more than in its external symbols. It was a question not of the manner of expressing their devotion to the deities, but rather of the object to whom their worship should be directed. It was a great prophetic and religious revolution, not a priestly transformation. New and more spiritual conceptions of deity were born, which were only afterwards to be clothed and expressed in ritualistic forms.⁶ Still, no doubt the *āthravans* of the old religion, at least those of them who yielded themselves to the great reform, found a place in the religious life and ministry of the new Mazdæism; for the sacred fire continued to burn and was jealously guarded during the new and more spiritual epoch, even if it found a higher meaning and significance in the reformed religion. That all the old Iranian priests did not conform, as might naturally be expected, can be proved from the frequent references to the bitter opposition of the *kavis*, *ustj*, and *karapans*.⁷

It should be observed that all that has been said so far has application, in all probability, to only eastern Irān, our knowledge of the religious institutions of the west during this period being practically nil. On the other hand, in reference to the succeeding periods, matters are entirely reversed.

3. The Magi and the Iranian priesthood.—

¹ See W. Geiger, *Civilization of the Eastern Iranians in Ancient Times*, tr. D. P. Sanjānā, London, 1885–86, ii. 158.

² See M. W. Duncker, *Hist. of Antiquity*, tr. E. Abbott, London, 1877–82, v. 186; cf., however, J. H. Moulton, *Early Zoroastrianism*, do. 1913, p. 194.

³ For other reasons supporting this contention see F. Spiegel, *Iran. Alterthumskunde*, Leipzig, 1871–78, iii. 546 ff.; also Geiger, ii. 76 ff.

⁴ Yt. xiii. 88 f.

⁵ See Moulton, p. 118.

⁶ Ys. xxxiii. 6.

⁷ Cf. Ys. xlv. 20, etc.

When we turn to Greek and Latin authors, the other important source for Iranian history, we find no evidence of any acquaintance whatsoever, on their part, with the priesthood under any equivalent of its Avestan name.¹ According to all the classical writers from Herodotus to Agathias, the sacerdotal office in Irān was occupied by a tribe or caste of Medes called Magi (Old Pers. *Magu*, Gr. *Máγos*, Lat. *Magus*); and no suggestion is given that any other sacerdotal class shared with them the priestly functions at that period, or that they were the heirs of an earlier order of priests. But it should be observed that these writers speak mainly, if not exclusively, of Iranian religious rites as they existed among the Medes and Persians, or, speaking geographically, as they were found in western Irān. Furthermore, with the exception of Herodotus, the classical authors in question wrote of events and at a date posterior to the condition of things represented by the earlier part of the Avesta.

Nevertheless, an additional explanation of the difference of nomenclature in the Avesta as compared with the writers of Greece and Rome is felt to be necessary when it is remembered that much of the so-called Later Avesta was written under the influence of, and probably by, the Magi themselves, and at a period contemporary with several of the Greek authors.

In this connexion it is to be remembered that even in late Achæmenian times the Magi had not outlived the prejudice which had become associated with their name in the mind of Persians since the revolt of Gaumata, and hence they had a strong motive to avoid the use of the term *magus* under all circumstances; while the preservation of the old term *āthraavan* throughout the Avesta, besides being a convenient substitute for the offensive ethnic designation, may have been prompted by the desire to further establish the claim of the Magi to the succession of the ancient *āthravans* in the Iranian priesthood.

That the Magi were the recognized priestly order in western Irān in the earliest Achæmenian times (and, probably, in pre-Achæmenian days, i.e. during the ascendancy of the Medes) cannot be doubted. What influence or authority they achieved and exercised later in eastern Irān as a result of the conquests of Cyrus in Bactria we have no means of determining; and for the remainder of this article, therefore, *magus* and priest will be convertible terms,² and Irān, in the main, coincident with Media and Persia.³

4. The organization of the Magian priests in late Avestan and post-Avestan times.—It is sufficiently established that the priesthood during this period possessed a more or less definite inner organization, though probably varying much in character and completeness at different epochs. Even in Achæmenian days the Magi seemed to have recognized a chief or head of their order. Diogenes Laërtius,⁴ quoting Xanthus the Lydian, speaks of a long succession (*διαδοχή*) of Magi between the time of Zoroaster and that of Xerxes, and names Ostanēs, Astrapsychus, Gobryes, and Pazates. These, there can be little doubt, were among the chief priests who stood at the head of the sacerdotal order during that period.⁵ In his succinct account of the Magi Ammianus Marcell-

¹ The one probable exception is Strabo, who says (xv. iii. 15) that in Cappadocia the Magi were also called *Pyraethi* (Πυραῖθι), which is, there can be little doubt, a Greek rendering of the Iranian *āthraavan*.

² Cf. Apuleius, *de Magia*, xxv.: 'Persarum lingua Magus est qui nostra sacerdos.'

³ See art. MAGI, vol. viii, pp. 242–244.

⁴ *Proem.* ii.

⁵ It should be stated, however, that Pliny (*HN* xxx. 1 f.) regards these, and others whom he mentions, merely as distinguished teachers and not necessarily superior in priestly rank.

linus¹ says that the Magi tribe was at first a small one, and that the Persians, who were politically in the ascendancy, availed themselves of their services for the conduct of public worship. Gradually they increased in number and founded an exclusive class, with a special area for their dwelling-place and a proper constitution.

But the Later Avesta itself contains clear indications of the existence of a priestly organization, although there is much uncertainty as to the time to which they have reference. In Ys. i. 3-7,² where the names of the *gāhs*, or divisions of the day, are mentioned, the priestly writer proclaims his purpose to bring offerings at each *gāh* to a special divinity, and also to the *fravashi*, or spirit of a chief or holy person. One of the chiefs whose spirit is invoked is the *zarathushtrótēma*³—i.e. the one most like Zarathushtra, or the successor of Zarathushtra. Now, the *zarathushtrótēma*, as we learn from other passages,⁴ being the spiritual (and, in Ragha, also the secular) head of the community, the Pahlavi commentators have inferred that the other chiefs whose *fravashis* are associated with the other *gāhs* also represented members of the same organization. These were *dagyuma*, or lord of the province; *zantuma*, or lord of the tribe; *visya*, or lord of the village or clan; *nmaniya*, or lord of the house. The interpretation is no doubt entirely fanciful, but it has served a valuable purpose in that it has preserved for us some vestiges of the organization of the priesthood as it seems to have existed at least in Sasanian times. At the head, according to the tradition embodied in this interpretation of the *Yasna* passages, we have the *zarathushtrótēma*, who was a kind of supreme pontiff at Rai. Under him each satrapy or province (*dagyum*) had, as Darmesteter surmises, a superintendent of the cult, or *andarəpat*.⁵ In each district (*zantu*) there was a bishop—*rat* or *ratu*; in each borough (*vis*) a *mobed* or *magupat*.⁶ Beneath the *mobeds*, and yet belonging to the priestly race, were the civil judges (*dātōbar*,

Mod. Pers. داور). We know that the priesthood underwent a thorough re-organization under the Sasanians and at that period attained its fullest development.⁷ Another classification of the priests is known to the Avesta,⁸ not according to social or ecclesiastical rank, but according to their functions in regard to certain parts of the Mazdean ritual. On this basis they were divided into eight classes, and their names for the most part indicate their special functions. The *zaotar* (now called *zōt* or *zōti*) had the supremely sacred duty of reciting the *Gāthas*. The *hāvanam* pressed out the juice of the *haoma*-plant, which was such a marked feature of the ritual in all ages. The *atarevakhsha* had as his primary charge the nourishing of the sacred fire, but in addition he was responsible for the washing of three sides of the fire-altar and making the responses to the *zaotar*. The *frabaretar*, besides his duties of preparing and handing the utensils to the *zaotar*, washed the fourth side of the fire-altar. To the *asnatar* was assigned the work of filtering and washing the *haoma*, while the *rathwiskare* made the mixture of *haoma* and milk. The *aberet*, in keeping with his name, brought the water necessary for all the priestly

ceremonies. He bears also the name *dānazvāza*.⁹ The eighth was the *sraoshavarez*, who seems to have superintended the whole ceremony. At the present time the functions of these eight priests are all performed by only two: the *zōt*, who has much the same functions as in earlier times (see below also), and the *rāspi* or *rathwi* (Pahl. *rāspig*), who is in attendance upon the *zaotar*, while discharging the duties devolving upon the seven ancient assistant priests. Though taking his name from the Avestan *rathwiskare*, his chief functions correspond more nearly to those of the *atarevakhsha*.

This great reduction in the personnel of the priesthood resulted, there can be little doubt, in the first instance from the Arab conquest in the 7th century. The change is reflected in the tone of the *Bahman Yasht* and the *Dāristān-i Dinik*.

5. The functions of the priesthood.—The principal functions have already been touched upon incidentally. Performing the sacrifices, so long as they were practised,² mediating the offerings and all public worship, constituted the central and most characteristic parts of the priestly duties. No sacrifice, Herodotus³ tells us, could lawfully be made without the presence of a Magus. Still the extent of the priestly intervention at these sacrifices, on the one hand, and of the lay-assistance⁴ at these and other parts of ritual, on the other, seems to have varied at different epochs in Iranian religious history. In the days of Herodotus the part of the Magus in the sacrifice was confined to merely chanting the theogony or hymn; the person who brought the sacrifice both prepared it and disposed of the flesh after the ceremony. In Strabo's days the priestly duties at such sacrifices were more extended.⁵

The purifications constituted another primary function of the priesthood, and formed the most fruitful source of their revenue. Duncker maintains that even the purifications could be performed by a layman.⁶ It is expressly stated in the *Vendidad*,⁷ however, that none could perform these ritualistic cleansings unless they had learnt the law from one of the purifiers or priests. It is scarcely probable that the priests would impart to many laymen the qualification which would enable them to share with themselves their already slender means of subsistence. It becomes very clear from the *Aērpatastān*,⁸ that the priestly revenue did not suffice to maintain the whole of their tribe, and as a result the participation in secular pursuits was legalized. It is true, their fees were substantially augmented by what they obtained from the practice of medicine. The art of healing was a priestly function in very early times in Irān, and, if not originally, yet ultimately fixed dues were attached to such services.⁹ The priesthood, as we have already stated, was intimately associated with judicial functions in the Iranian commonwealth. 'To the Magians,' Duncker says,¹⁰ 'belonged the judicial power.' It is quite legitimate to infer that the *zarathushtrótēma*'s position at Ragha, referred to before,¹¹ would entitle him to high legal authority among his other prerogatives. During the ascendancy of the Arsacids the Magi together with the members of the royal race formed the Council of the Empire,¹² and during the Sasanian period the Grand Magian performed the coronation of the kings.¹³

¹³ See Agathias, ii. 26.

6. Qualifications and symbols of the priestly office.—However much or little at different periods racial or tribal descent may have counted as affording a right to exercise the priestly functions, the primary qualifications clearly and strongly insisted upon in the Avesta were of a moral and spiritual character. According to the *Vendidad*, the priest must be patient, contented, satisfied with a little bread, and should eat what is offered to him.¹

¹ Call him a priest, O pure Zarathushtra, who enquires of the pure intelligence the whole night of the wisdom which purifies from sin and makes the heart wide. . . . He who sleeps the whole night without praising, or hearing, or reciting, or learning, or teaching—call not such an one a priest.²

The *Aērpatastān* speaks in the same tenor:

'Which member of the house shall proceed to the sacred calling? He who has the greatest thirst after righteousness, that is, he who is the truest friend unto the soul whether he be great or humble.'³

Diogenes Laertius,⁴ after Sotion, says that the Magi were forbidden to wear ornaments or jewellery; their resting-place was the ground; vegetables, a little cheese, and bread their food. Nevertheless they possessed certain outward symbols of office. The first was the *paitidāna* (Parsi *penōm*), a cloth or napkin⁵ with which they covered, and still do cover, the lower part of the face as they recited the Avesta and especially when tending the sacred fire, lest perchance any pollution of the fire should result therefrom. Secondly, they had the *khrafstraghna*, a leathern thong or strap with which they killed insects and other unclean creatures. They also carried the *urvara*, or staff, and the *astrā mairi*, or knife, with which to kill snakes. But perhaps the most characteristic symbol was the *baresma*, or *barsom*, a bundle of slender rods or twigs of a specially sacred tree, but now substituted by a bundle of metal wires, which are held before the face at the prayers and sacrifices (see art. *BAR SOM*, vol. ii. p. 424 f.; cf. Ezk 8⁷).

7. The priesthood in modern times.—To-day the priesthood is a hereditary privilege, though it does not seem always to have been so.⁶ All priests in India at the present time claim to be descended from a single priest, Minuchihr, who came from Persia with the first settlers in the 7th century. The unity of the priesthood is a cardinal doctrine among the Parsis. Every son of a priest, however, is not *ipso facto* himself a priest able and entitled to officiate. Although no consecration can make a layman a priest, still every acting member of the priestly family must pass through a series of symbolic actions to initiate him into the different grades of the sacerdotal office. There is in India a preliminary function called *nōzūd* (really meaning 'new zaotar'), which, although not a door to any stage of actual priestly grade, is essential to every aspirant to such dignity, and by which he becomes a recognized member of the Zoroastrian church or community—a *bīhdin*, a status corresponding to full membership in Christian churches, or, as Darmesteter observes, a *magus* among the Jews. In Persia this ceremony is called *sudrah va kūstī dādan*, i.e. the investing with the *sudrah*, or sacred shirt, and *kūstī*, or holy girdle, which are the outward distinctive marks of the Zoroastrian. The term *nōzūd* is employed by the Zoroastrians of Persia for the ceremony termed *nābar* by the Parsis of India, and is the function that makes a *mōbed's* son into a priest of the lower grade called

*herbed*¹ (Avestan *aithrapaiti*) and qualifies him for performing the ceremonies of the second grade. Before he is allowed to perform the *nābar* ceremony the candidate must have completed his fourteenth year, and must know by heart all the texts and formulæ connected with the sacrifices of the *Yasna*. *Vispārād*, and *Khurda Avesta*. He twice undergoes the great purification of nine nights called *bareshnum*, after which he is conducted to the temple by a *dastūr* and his patron, followed by his friends and other guests. He carries the *gurz i gavyāni*, or club, a reminder of that which was in the hand of Faridun, and a symbol of spiritual authority over the demons. The head of the assembly asks if they admit him as a candidate for the holy office, and, taking their silence for assent, he enters the *Izāshnah Gāh*, where he celebrates the *Yasna*—the *sōt*, or head priest, who initiates him, acting for the time being as his *rāspi*, or ministering priest. He performs the purification of *nirang* and water for four successive days, and on the fourth day he has attained the degree of *herbed*, with a right to celebrate all the ceremonies of the *Khurda Avesta*. For exercising the more important ceremonies of the *Vendidad* together with that of initiating other candidates to *nābar* it is essential that he should be a *mōbed*, or fully qualified priest. To attain the *mōbed*-ship he must have passed through the ceremony called in India

marātib (pl. of Arabic مرتبة, meaning 'grade' or 'degree'). This consists of another nine nights' purification. On the morning of the succeeding day he performs the *Yasna* with a fully qualified priest. On the following or second day again he performs the sacrifice of the *fravashis* or that of the *srosh*; at midnight the *Vendidad* is performed and henceforth the candidate is a *mōbed* and entitled to all the privileges of a fully qualified priest.

Another frequent designation of the chief priest in India is *dastūr*. The name and office probably arose, as Darmesteter observes,² after the Arab conquest of Persia. The origin of the term is not altogether clear.³ It is used in the translations to render the Avestan *ratu*. In the *Shāh-nāmah* it sometimes denotes a high ecclesiastical functionary; at other times a minister of State. To-day in India many *mōbeds* assume and are accorded the title without any real or moral right to it. But it is frequently applied as a title of honour to a learned *mōbed* who knows his Zend or Avestan and Pahlavi. But it specially and more correctly designates the priest attached-in-chief to a fire-temple of the highest order, i.e. an *ātash i bahrām*. The office is generally hereditary, but not necessarily so, inasmuch as the patron or founder of such a temple may choose his own *dastūr*. See, further, artt. *SACRIFICE* (Iranian) and *WORSHIP* (Iranian).

LITERATURE.—In addition to the works referred to in the article the following may be consulted: Anquetil du Perron, *Zend-Avesta*, Paris, 1771, ii. 529-619; A. Rapp, 'Die Religion und Sitte der Perser und übrigen Iranier,' in *ZDMG* xx. [1866] 68-77. Much further additional material may be found in the *Aērpatastān*, ed. S. J. Bulsara, Bombay, 1915, which could not be included in the compass of this article. Darmesteter's excellent Introduction to vol. i. of his *Le Zend-Avesta* already referred to, to which in the treatment of the modern period this article is greatly indebted, may be further profitably consulted.

E. EDWARDS.

PRIEST, PRIESTHOOD (Jewish).—i. Exclusiveness of the priesthood.—According to the Levitical code, the Hebrew priest is born, not made. This principle has always been so rigorously upheld that, after the return of the Jews from the Babylonian captivity, all those who

¹ *Herbed* did not originally designate a priest of inferior as opposed to one of superior degree, but only the master or instructor as opposed to *hāvishia*, or disciple. See *Dāstistān*, xlv. 4.

⁴ *Prooem.* vi.

⁵ In Strabo's time we read that the Magus's headgear consisted of a high felt turban reaching down on either side of the face so as to cover the lips and cheeks (xv. iii. 15).

⁶ D. F. Karaka, *Hist. of the Parsis*, London, 1884, ii. 235, says that the Parsi religion does not sanction the hereditary character of the priesthood, 'which is, indeed, contrary to the ancient law. The custom is merely derived from usage,' Duncker also (p. 189) strongly contends that the priesthood was not a closed caste in earlier Iranian times.

claimed priestly rank but were unable to produce documentary evidence of their descent from Aaron were disqualified (Ezr 2²³, Neh 7⁶⁴). In order to safeguard the purity of lineage for future generations, the Biblical laws regulating priestly marriages were not only strictly enforced, but also strengthened in various directions. Priests were forbidden to marry a *ḥalūṣāh* (childless widow whom the brother of the deceased husband had refused to marry), or a woman who had spent some time in captivity, or a freed slave, or the daughter of a proselyte, unless the mother was of Jewish descent (Mishnāh, *Bikkūrim*, i. 5). The high priest was bound to be wedded to a pure virgin, who, however, was allowed to be of lay origin. These restrictive regulations, added to ancestral pride, gradually converted the priestly class into an exalted theocracy which, from the nature of public affairs, at the same time formed the social aristocracy. The priestly family of the Hasmoneans acquired royal dignity. Later the high priest was the president of the Sanhedrin. Thus power, both spiritual and temporal, and wealth accumulated in some priestly families.

2. Classification.—(a) The principal duties of the priests were those connected with the sacrificial service of the Temple in Jerusalem. It was also their business to prepare and kindle the 'perpetual lamp' daily and to arrange the shewbread on the golden table every Sabbath. From Biblical sources we know that the number of priests had in the course of time increased to such an extent that only a limited number could be employed in the Temple at the same time. The four clans mentioned by Ezra (2⁶³⁻⁶⁹, Neh 7⁴⁰⁻⁴²) numbered more than 4000 male members. It was, therefore, necessary to fix a rota of attendance, in order to give every priest an opportunity of discharging his duty at the service. For this purpose the whole priestly tribe was divided into 24 companies, probably irrespective of the 22 families mentioned in Neh 12¹⁻⁷. At what time this division was first made is uncertain, but the most reliable tradition seems to be that preserved in the Tōseftā (*Ta'anith*, ii. 1; *Talm. Jer.* fol. 68a) to the effect that the classification was undertaken by the prophets. As both Jeremiah and Ezekiel were priests, it is not unlikely that they, especially the latter, had a voice in the constitution of the priestly order. Each section was called upon to do duty in the Temple for one week. Each company, officially called 'watch,' or *mishmār*, was again subdivided into several 'houses of Fathers,' each of which was probably composed of the members of one family. The *mishmār* was presided over by a 'head,' and the 'house' by the eldest member. Besides these there was a number of officers, but much uncertainty prevails as to their status and functions. In the older sources (Mishn. *Shekalim*, v. 1; *Yōmā*, ii. 1, iii. 1; *Tōs. Shek.* ii. 14) they are described as *m'munnēlm* (sing. *m'munnēh*). One of them superintended the daily morning offering, determining by lot the share which each priest had in the ceremony. He also gave the signal for the beginning of the morning prayer. Others were keepers of seals, keys, stores, vestments, tapissierie, overseers of the manufacture of shewbread and perfume, musicians and choirmasters, criers and constables. Their number was 15, but not all of them seem to have held equal rank. Thus *m'munnēh* is a general description of office-holder rather than a fixed title.

(b) *'Amarkelīm*.—Of somewhat higher status seem to have been the seven *'amarkelīm* (*Shek.* v. 2; *Tōs. ib.* 15). The exact meaning of the word is doubtful, but it seems that they were the keepers of the keys to the sanctuary itself. The Targum uses the term for the translation of the

'keepers of the door' in 2 K 12⁹ and similar passages. The Tōseftā remarks that all seven *'amarkelīm* had to be present when the door was opened. We might infer from this that each one had a different key, so that the door to the Temple could never be opened without a certain amount of publicity, strict control being kept over every one who wished to enter. As the word is also employed in connexion with secular supervisors, it does not really describe any priestly function, although the officers who bore this title were priests. Together with the *'amarkelīm* are mentioned three *gizbārīm*, or treasurers, who were probably responsible for the golden vessels and the Temple funds.

(c) *S'gan*.—One of the highest offices was that of the *s'gan*, commonly believed to have been the high priest's lieutenant. Here, however, it should be noted that the Mishnāh (*Yōmā*, i. 1), when speaking of the appointment of a deputy high priest for the Day of Atonement, does not use the term *s'gan*, but simply says 'another priest.' Other passages (*Yōmā*, vii. 1; *Sōtāh*, viii. 7f.) have it that the *s'gan* stood next to the high priest and handed the scroll of the Law to him. The Talmud (*Yōmā*, fol. 39v) records a tradition on the authority of R. Ḥaninā, himself a *s'gan*, that, if the high priest was suddenly disqualified from ministration on the Day of Atonement, the *s'gan* took his place. Now this Ḥaninā is always called '*s'gan* of the priests' (in plural), which cannot mean that he acted as deputy to a priest of lower rank, or to one high priest only. It seems rather that he did duty to several high priests either by fixed appointment or by re-election. It stands to reason that at a time when many high priests were ignorant or neglectful of their duties an experienced assistant had to be near at hand to prevent them from making mistakes. The frequent change of high priest was most likely of less importance as long as a tried *s'gan* looked after the proper execution of his duties. He was probably also meant to be in constant attendance on the high priest in order to give greater dignity to his office. According to the Mishnāh (*Tāmid*, vii. 3), one of his duties was to assist the high priest whenever the latter ascended the staircase to burn the perfume. Then he took the flags and gave the Levites the signal to start singing.

(d) *High priest*.—The office of the high priest is characterized by his title. He was the spiritual head of the people, but since the period of the Hasmoneans he added the regal crown to the ecclesiastical mitre. His participation in the sacrificial duties during the year was left to his discretion, but he was supposed to act as offering priest on the Day of Atonement. There is no reason to assume that even on this day he nominated any other priest for his work, as otherwise the Mishnāh would have had no cause to describe the preparations which began a week beforehand, when he had to make himself familiar with the details of his task for the holy day. Even an emergency wife was appointed for the event of his wife's sudden death. His evening meal was restricted, and sleep was denied him entirely. Before entering the Temple hall he was solemnly warned by the lay heads of the Sanhedrin not to alter anything of the Pharisaic teachings. The service itself, which claimed his undivided attention and included the fast, five baths, and ten lavings of hands and feet, must have made great demands on his physical strength. When we add to this the anxiety not to commit a mistake, we can understand the Mishnāic allusion to the satisfaction expressed at the close of the day (*Yōmā*, vii. 4) which is reflected in the glowing tribute given to the high priest by an eye-witness

in the person of Ecclesiasticus (ch. 50). Poetic descriptions by various authors form an integral part of the present liturgy for the Day of Atonement.

3. Rules for the priesthood.—There was one condition which all priests, high or low, had to fulfil, viz., they must be free from bodily defects, and the rules were as elaborate as their enforcement was strict. It made no difference whether the blemishes were chronic or temporary (Mishn. *Bekhoroth*, vii.). The Mishnah even forbade a priest whose hands were stained with dye to pronounce the blessing over the people (*M'gillāh*, iv. 9). A careful compilation of these blemishes (amounting to 140) is given in Maimonides, *Mishneh Tōrah* (*Hilkhoth bi'ath hamiqdashim*, viii.). Needless to say, the Biblical prohibition against drinking wine or any other intoxicant was most strictly enforced. The Talmud (*Ta'anith*, fol. 17v) strengthens these rules considerably for the company whose turn it was to attend the Temple service. A similar rule holds good for the present time as far as the public blessing is concerned.

4. Remuneration.—As the priests were allowed no share in the land (Nu 18³⁰), the Levitical law (vv. 8-19) assigned certain emoluments to them in compensation. These originally formed their sole source of income. On the basis of the passages just mentioned, the Tosefta (*Hallah*, ii. 7 f.) enumerates 24 classes of priestly 'gifts,' viz., 10 to be partaken of in the Temple premises, 4 within the precincts of Jerusalem, and 10 within the borders of the Holy Land. These 'gifts' consisted in the first instance of the flesh of sin-offerings and trespass-offerings, which was eaten by such male priests as were not debarred from so doing by Levitical uncleanness. None of it could be eaten outside the Temple. The officiating priests were also entitled to the skins, including those of the burnt-offerings. In view of the large number of 'heavy' sacrifices, the income derived from the skins must have been considerable. Of the lighter kind of sacrifices, such as peace-offerings and festival-offerings, the priests received only the breast and the right shoulder. These not only could be eaten within the boundaries of the holy city, but also could be shared with women, children, and even slaves. Another source of revenue was the cereal offerings, viz., the part of the meat-offerings which was not burnt on the altar, the shewbread, the *omer*, etc. Priests who lived in the provinces were recipients of the *terumah*, the gift of fruits from field and garden. From the Levites they claimed the tithe of the tithes due to them from the people. To these were added the firstfruits and first-born domestic animals suitable for sacrifices. First-born sons had to be redeemed by the payment of five shekels, which belonged to the priest who performed the ceremony. The first-born of unclean animals were likewise subject to redemption according to the priest's estimate. To these were added gifts of the 'first dough' of wheat, barley, spelt, oats, and rye, and of the first cut of wool from a flock consisting of at least five sheep. All these regular imposts were occasionally supplemented by vows and free gifts either in kind or in the form of money. Lastly must be mentioned things 'devoted' (*he'rem*), which no layman was allowed to touch.

Such was the income of the ordinary priest. If he was free from any physical blemish, he shared the emoluments of the sacrificial service twice a year. Priests who lived in Jerusalem benefited by the influx of the people for the celebration of the three festivals of pilgrimage. It may be assumed therefore that the majority of priests lived in or near the holy city, as the care of their families

forced them to be in touch with clients who bestowed dues and gifts on them. In the nature of things there must have been a great disparity of income, and the social status of priestly families must have varied. The greater number probably remained poor. Many, as alluded to above, were obliged to practise some trade, in spite of the fact that the imposts seem to have been regularly paid (Neh 10³⁵ f.). This is vividly illustrated by the Mishnah (*Bikkurtim*, iii.), which gives an account of the cutting and conveying the first-fruits to the Temple. Rich and poor joined in the festival procession, every one carrying his basket, and even the king, probably Agrippa I., handing his gift in person to the officiating priest, whilst reciting the prayer prescribed in Dt 26⁵⁻¹⁰.

The revenue of the high priest was placed on a different level. His position demanded that he should be wealthy. If he came from a poor family, it was the duty of his brother priests to make him rich. Josephus (*Ant.* XX. viii. 8, ix. 2) speaks of the violent conduct of some high priests who sent their servants into the threshing floors of the people to take away the tithes so that their poorer brethren died from starvation. Unfortunately he mentions no names, but attaches this remark to the paragraph in which he tells of the appointment of Ismael b. Phabi II. as high priest. This, however, is the priest of whom the Mishnah (*Sotah*, ix. 15) relates that with him the lustre of priesthood came to an end. It is therefore probable that the censure of Josephus (who was himself a priest) was meant for Ismael's predecessor, the avaricious Ananias, son of Nedebaios, who was removed from office, and later met with a violent death at the hands of the people.

5. High priest's legal status.—Notwithstanding his exalted position, the high priest did not stand above the law, at least in theory. Both the Mishnah and Tosefta point out that, in the event of his committing breaches of the religious or moral laws, he was liable to be called before the court. No such case is recorded in the sources. High priests were occasionally removed from office, but for personal and political motives rather than for religious ones. In flagrant cases of defiance of the traditional teaching the people acted independently. The Mishnah (*Sukkah*, iv. 9) relates that one high priest (whose name is not given) who endeavoured to introduce Sadducean practices during the ceremony of pouring out water on the Feast of Tabernacles was done to death by the people, who pelted him with their citrons.

6. Decline of the priesthood.—The destruction of the Temple by the Romans not only put an end to the sacerdotal service, but also deprived the priests of their chief source of income. Although the laws connected with land-tenure remained in force, the Jewish population was so reduced in numbers and so impoverished that their tithes and gifts could not have amounted to much. The priests living in the Diaspora were reduced to a number of empty privileges, and only the redemption of first-born sons, which is practised to this day, preserved a remnant of monetary gift due to them. In the storm and stress of the times the real control of priestly pedigrees has been irretrievably lost, and is replaced by family tradition. Certain family-names, some of them being of considerable age and literary renown, carry an indication of the priestly descent of the bearers with them. In modern times the claim of priesthood has lost its title to social distinction. The religious duties of priests are limited to pronouncing the blessing (Nu 6²⁴⁻²⁶) over the people during the public worship on festival days. The ancient rules of disqualification are still in force, with the exception of the preservation of Levitical cleanli-

ness, since the means of re-establishing the same no longer exists, and are merely intimated by the ceremony of washing of hands with the assistance of Levites. The prohibition of coming in contact with a dead person or a grave, with the exceptions mentioned before, is likewise still in force. There is still one privilege specified in the Mishnâh (*Hôryôth*, iii. 8) to be mentioned, viz., the precedence of the priest over a Levite or an ordinary Israelite in every religious ceremony, especially in the order of persons 'called' to the reading of the lessons from the Pentateuch during public worship. The same paragraph holds up to contempt those high priests who held office not by virtue of learning and piety, but from worldly motives. It places them beneath the *mamzer* in the Rabbinical sense (*Mishnâh*, *Yebhâmôth*, iv. 13). The historical background of this is undoubted.

H. HIRSCHFELD.

PRIEST, PRIESTHOOD (Mexican).—In ancient Mexico the priestly office had arrived at a condition of high complexity, the various grades of the priesthood being sharply differentiated. At first the priest was merely the tribal medicine-man, and in nomadic times had charge of the tribal god, the image of which he carried from place to place. The temporal and religious authorities were never quite distinct, the *tlatoani*, or king, being necessarily a man conversant with hierophantic as well as military practice. In the Mexican hierarchy proper, as apart from those of the surrounding and subject peoples, were two chief priests, each of whom was entitled Quetzalcoatl (the name of the god who was the founder of religious orders), but who were distinguished from one another by the titles of *toteo tlamacazqui* and *tlaloc tlamacazqui*, and who were respectively the leaders of those castes which especially served the gods Huitzilopochtli and Tlaloc. These pontiffs were equal in grade and held their positions in virtue of their piety and general fitness. Occupying a lower rank was the *mexicatli teohuatzin*, head of the *calmecac*, or priestly college, and interpreter of ritualistic difficulties, in which duties he was assisted by the *huitzenauac teohuatzin* and the *tepan teohuatzin*, the latter being executive educational officer. The rank and file of the priesthood consisted of two grades—the *tlānamacac*, or upper grade, and the *tlamacazqui*. Beneath these were the *tlamacazon*, or neophytes. The first grade included many special functionaries who served various deities or performed definite rites.

The costume of the priesthood in general consisted of a black mantle, the body being painted black, relieved, in some cases, with yellow designs. The hair was allowed to grow long, and the ears were torn and ragged from the practice of penitential blood-letting. The priest who performed the act of human sacrifice was garbed in red.

The offices of the Mexican priesthood were numerous; and, besides sacrifice, the care of the temples, and ritualistic labours, they were employed in astrological observation and divination. The *amamatini*, a special class, were engaged in the preparation of the painted MSS which served the Mexicans as written records; and others were employed as singers and dancers. Ritual practice, however, occupied most of their time, especially incense-burning, which was performed several times a

day. The education and preparation of a priest were severe. The neophyte commenced his priestly life at about the age of seven by sweeping the temple buildings and preparing the body-paint for the priests from pine-soot, gathering aloe spines for blood-letting, and making adobe building bricks. Later he made night pilgrimages to a holy mountain in the vicinity as a test of austerity.

The Mexican priests were, however, above all, diviners, and their practice in this respect is minutely outlined in the works of Sahagun. The basis of their calculations was the astronomical calendar known as the *Tonalamatl* ('Book of Days'), from which they cast horoscopes and foretold lucky days and seasons (see DIVINATION [American], CALENDAR [Mexican]).

PRIEST, PRIESTHOOD (Muhammadan).—

In the Muhammadan system there is properly no caste, class, or profession which monopolizes the performance of religious rites; when these were at first performed in public, the leader was properly the chief of the community, and the name *imām*, 'leader in prayer,' is therefore used for 'sovereign,' 'chief authority,' and the like. Taking the lead in the religious service of the mosque was therefore the duty of the sovereign in the capital and of his representative in the provinces; but in 'Abbāsid times we find the *ṣalāt*, or 'public prayer,' occasionally separated from the governorship and combined with another office—e.g., the judgeship (Tabari, *Chronicle*, Paris, 1867-74, iii. 378 [anno 156], 458 [anno 158]) or the headship of police (*ib.* iii. 469 [anno 159]). As mosques multiplied it became customary to make provision for an *imām*, and, if there was a Friday sermon, for a *khatib* ('preacher'). Such a man was supposed to be of good character (*Aghāni*, Būlaq, 1868, xvii. 11), and of course had to possess sufficient learning to discharge his functions.

The legal aspect of the matter is treated by Mawerdi, *Constitutiones Politicæ* (ed. M. Enger, Bonn, 1853, pp. 172-185). A distinction is there made between royal and civil mosques; in the former the minister must normally be appointed by the sovereign, in the latter by the congregation; if there are more than one candidate, a majority are to appoint; if votes are equal, the sovereign is to do so. The founder of a mosque has not the right to lead prayer in it himself, but on this point there is a difference of opinion. Prayer may not be led by a woman, if there are any men in the congregation. D. S. MARGOLIOUTH.

PRIEST, PRIESTHOOD (Roman).—

Under the old Roman monarchical system the office of king included religious as well as secular functions. The ruler was both king and priest. But on the establishment of the Republic a line of cleavage was drawn, and, although religion remained a branch of the general State administration, all its technical phases were assigned to priestly organizations. The relation of the priestly colleges to the secular authorities was one of the characteristic features of Roman religion. The powers of the priests were not co-ordinate with those of the senate and the magistrates, but were subject to their control. They performed the routine duties of their office without special instructions, but, when unusual circumstances arose, it was only at the command of the State authorities that they became active. Neither *pontifices* nor *haruspices* took measures in

regard to prodigies until the senate had ordered them to do so; the *quindecimviri* were not permitted to inspect the Sibylline books except at the express command of the senate.

Of the numerous priestly organizations (*sacerdotes¹ publici populi Romani Quiritium*) four were of special importance (*sacerdotum quattuor amplissima collegia*): the *pontifices*, the *augures*, the commission in charge of the Sibylline books and of all ceremonies conducted 'ritu Graeco' (*quindecimviri sacris faciundis*), and the college which supervised the sacred banquets (*septemviri epulones*). Next to these in rank came the priestly *sodalitates*: the *fetiales*, the *sodales Titii*, the *sodales of the divi imperatores* (modelled on the *sodales Titii*), the *Salii*, and the *fratres Arvales*. There is evidence that the rank of the *fetiales* and of the *sodales Augustales* approached very closely that of the four great colleges; of the relative ranking of the *Arvales*, *Titii*, and *Salii* we have no definite indication. The runners of the Lupericalia (the *Luperci*) were inferior to the others. The *sodales Augustales* were founded A.D. 14; but all the other priesthoods mentioned, with the exception of the *septemviri epulones*, go back to the regal period. This fact is significant of the conservatism of the Roman national religion. Moreover, the *septemviri epulones* were organized (196 B.C.) merely for the purpose of relieving the *pontifices* of one of their functions; the priesthood did not represent any new religious ideas. There were, however, some minor priesthoods organized during the Republic to take care of the rites of some god or gods belonging to communities which the Romans had assimilated (*sacerdotes Lanuvini*, *sacerdotes Tusculani*, etc.). The Greek and Oriental cults introduced during the Republic and the Empire brought their own priests with them.

The qualifications for membership in any of the priesthoods were free birth, Roman citizenship, an unblemished civil record, and a physique free from infirmities. Originally, with the exception of the *quindecimviri*, all the old priesthoods were limited to patricians. But in the course of time this exclusiveness passed away, except in the case of the *rex sacrorum*, the *Salii*, the three great *flamines*, and later the *flamines* of the deified emperors. By the *lex Ogulnia* (300 B.C.) five of the nine places in the colleges of the *pontifices* and the *augures* respectively were reserved for the plebeians, while the four others were open to both orders. Wissowa² suggests that in all probability it was the *lex Ogulnia* that opened to the plebs the other priesthoods also. From the beginning of the Empire a new classification prevailed: senatorial and equestrian priesthoods. To the former belonged the four great colleges, the *sodales of the divi imperatores*, *sodales Titii*, *fetiales*, *fratres Arvales*, and *Salii*; to the latter the *Luperci*, the minor *flamines*, the minor *pontifices*, and the *sacerdotes Tusculani*, *Lanuvini*, etc.

The extent to which the accumulation of priesthoods in the hands of one man was customary varied with the kind of priesthood and with the period. As regards the combination of two of the four great priesthoods, we find examples in the earlier Republican period, but not in the later until the time of Caesar, who was both *pontifex maximus* and *augur*. Moreover, the accumulation of priesthoods of this class did not become common till the 3rd and 4th centuries, except in the case of the emperors and other members of the imperial family. There was less objection to the combina-

tion of one of the great priesthoods with one or more of the *sodalitates*, and many examples occur. The *Salii*, however, could not hold any other priesthood. If they joined another, they ceased automatically to be *Salii*. Whether a *flamen* could hold any other priestly office is doubtful.

Priests were allowed to hold civil and military offices. This probably was not intended in the readjustment of civil and religious offices that took place after the expulsion of the kings, but gradually it became the regular practice. There were, however, exceptions. The *rex sacrorum* could not hold any civil or military office, and the *flamen Dialis* was virtually prevented from doing so by the numerous tabus which hampered his actions.

In the early Republican period the usual method of choosing members in the priestly colleges and *sodalitates* was that of co-optation, but in the year 103 B.C. the *lex Domitia* was passed, by which vacancies in the four great colleges were filled by election at the *comitia sacerdotum*, which consisted of seventeen (that is a minority) of the tribes, chosen by lot. The nominations to the sacerdotal *comitia* were made by the respective colleges, which after the election went through the form of co-optation. In the case of the *sodalitates* the old system of co-optation remained. Under the Empire the influence of the emperor in the appointments both to colleges and to *sodalitates* was almost unlimited. Appointment to a priesthood was generally for life. The Vestals and the *Salii* were exceptions.

The priests were provided by the State with funds for the maintenance of the various cults and for the performance of the duties of their office, and with attendants and slaves (*apparitores*, *lictors*, *tibicines*, *viatores*, *servi publici*). Some of them were furnished with residences—e.g., the *rex sacrorum* and the Vestals. They had the privilege of wearing the *toga praetexta*, and, if they cared to take advantage of it, exemption from civil and military duties (*vacatio militiae munerisque publici*).

1. Collegium pontificum.—(a) *Pontifices*.—While the old derivation of *pontifex* from *pons* and *facere* is probably sound, it is not possible, with the data available, to determine precisely the original significance of the term. It is not even known positively that *pons* here means 'bridge,' though scholars once more tend to interpret the word in that way, finding an explanation in those religious associations of bridge-building which are known to have existed in ancient times. The priesthood was not peculiar to Rome, but existed also in other places in Latium—e.g., Praeneste and Tibur.⁴ According to the tradition, the *pontifices* were originally five in number. Including the king, however, who doubtless performed the functions which under the Republic fell to the *pontifex maximus*, there were six. Subsequently the number was increased to nine (300 B.C.), and later by Sulla to fifteen.

With the *pontifices* were closely connected certain other priests or priestesses: the *rex sacrorum*, the *flamines*, and the Vestals. So close was the association that from the beginning of the Republic all these were regarded as belonging to the college of *pontifices*. Towards the close of the Republic the *pontifices minores*² were also members of the college (cf. Cic. *de Har. Resp.* vi. 12).

The *pontifex maximus* was the president of the college and represented its authority. But it is a mistake to suppose that the other *pontifices* consti-

¹ See indexes to CIL xiv.

² The title of *pontifices maiores* was applied to the regular *pontifices* only towards the end of the 3rd cent. after Christ. The title was used to distinguish them, not from the *pontifices minores*, but from the *pontifex Solis*, the priesthood founded by the emperor Aurelian to supervise the worship of his sun god.

⁴ *Religion und Kultus der Römer*², p. 402 f.

tuted merely an advisory body. A question submitted by the senate was discussed by the whole college, and the opinion of the majority prevailed, even if the *pontifex maximus* held a different view.¹ But along many lines he could act without reference to them. In the earlier period especially his power was very great; e.g., he originally appointed the *rex sacrorum*, the *flamines*, and the Vestals, even against the wishes of the appointees. Later this power seems to have been modified, and in the case of the *rex* (Livy, XL. xlii. 4) and the *flamines maiores* (Tac. Ann. iv. 16) he made his appointments from a list of candidates nominated probably by the college, while Vestals were chosen by lot from a list of twenty whom he nominated (Aul. Gell. i. xii. 11). He had also the power to punish these priests: the *rex* and the *flamines* he could fine, and under some circumstances dismiss from office; in the case of the Vestals he had the right of corporal punishment, and originally of inflicting the death penalty.

It was the duty of the *pontifices* to conserve the body of Roman religious tradition. They were primarily theologians, professors of sacred law. They were the final authority on all questions pertaining to the old Roman gods, and on the proper methods of maintaining satisfactory relations with them. It was a fundamental belief in Roman religion that a benevolent attitude on the part of the gods could be secured only by scrupulous attention to all the minutiae of ritual. With these minutiae the *pontifices* were familiar. They knew not only the names of the gods, but also their attributes and the formulae by which they should be addressed. They were consulted not only by the magistrates in regard to matters which concerned the State, but also by private citizens who found themselves under the stress of some religious problem.

They were not, however, merely authorities on sacred law. They themselves took an active part in religious services, and their sacerdotal functions are clearly indicated by the insignia of their office, which include the bowl for libations (*simpulum*), the sacrificial knife (*secespita*), and the axe (*securis*). It was, moreover, with special reference to their duties as officiating priests that, at least in the earlier period, they were subject to tabus similar to those which persisted with so much more rigour in the case of the *flamen Dialis*: they could not look at a corpse or mount a horse. The *pontifex maximus* in particular was not permitted to absent himself from Rome, or at any rate from Italy, for a period of any length. They officiated at the most important ceremonies in the public worship of Vesta and the *penates* as well as at those of the Capitoline triad, for with these cults, which embodied some of the oldest and most sacred of Roman religious ideas, they, as members of the ranking priesthood of the State, had especially close associations. They had the rare privilege of entering the inner sanctum of Vesta; the *regia*, the official headquarters of the *pontifex maximus*, was adjacent to the house of the Vestals, and he stood 'in loco parentis' to them. When Augustus became *pontifex maximus* (12 B.C.), he built a temple of Vesta close to his own residence on the Palatine. The cult of the Capitoline deities had an equal claim on the attention of the *pontifices*. They supervised the monthly sacrifices offered by the *rex* and the *flamen Dialis* on the kalends and the ides. On the ides of September and November the college celebrated a sacred banquet (*epulum Iovis in Capitolio*), till in the year 196 B.C. this function was transferred to the college of the *epulones*. Furthermore, the *pontifices* officiated at the ceremonies held in connexion with cults which,

though recognized by the State, were not provided with special priests. And it was they who, in order to prevent the complete disappearance of the worship of certain ancient divinities like Angerona, Carna, Acca Larentina, and others who were fading out of Roman religious life, made annual libations and sacrifices in their honour. Moreover, they were in charge of certain ceremonies belonging to the category of lustration, as, e.g., the *Fordicidia* on 15th April. They also took part in the rites of the *Argei* (in March and May).

On all these occasions the *pontifices* either officiated in person or were represented by subordinate priests. But there were many important ceremonies in which they participated merely as the advisers or assistants of the magistrates — e.g., when vows were made on the outbreak of a pestilence or at the beginning of a war, or on the occasion of the annual vows on 1st Jan., which were pronounced by the consul or other magistrate, who repeated the words after the *pontifex maximus*.¹ When relations with the gods were endangered by a flaw in a ceremony, the *pontifices* were consulted and charged with the supervision of appropriate expiatory rites; when a prodigy (*monstrum, prodigium*) was reported to the senate, that body consulted the *pontifices*, who gave their opinion as to the best methods of placating the gods of whose anger the prodigy was regarded as a manifestation. At a comparatively early date, however, the *pontifices* relinquished for the most part the care of prodigies to the *haruspices* or to the priests in charge of the Sibylline oracles, reserving for themselves the expiation of certain ones only (e.g., showers of stones, speaking oxen, etc.), in regard to which the efficacy of their methods had long been established. Moreover, the ceremony of consecration (*consecratio*) was performed by the pontiffs; e.g., a new temple or altar was dedicated by the magistrate who had vowed it, or, if he was no longer in office, by a committee appointed for the purpose (*duoviri aedi dedicandae*), but was consecrated by the *pontifices*. By the act of dedication the magistrate gave it up to the god; by the consecration the *pontifex maximus* or one of his colleagues declared it to be the property of the god (*res sacra*). To the *pontifices* also belonged the act of *consecratio capitis et bonorum*. A husband who had sold his wife, a son who had killed his father, or some other equally reprehensible offender could, after adequate investigation, be expressly consigned by the *pontifex* to this or that divinity or group of divinities ('Sacer esto'); and one who had been pronounced *sacer* could be killed with impunity by any one of those whom his crime had injured. In historical times, however, the punishment of one upon whom the sentence of 'Sacer esto' had been passed was left to the tribunes. Another ceremony in which the participation of the *pontifices* was indispensable was that known as devotion (*devotio*). The words in which the commander of an army, in the hope of extricating himself from a perilous position, devoted himself, or one of his countrymen, or the army of the enemy to the gods of the lower world were pronounced first by a *pontifex*; the commander repeated them, phrase by phrase, after him. Again, the *pontifices* supervised both the making of the vow of the sacred spring (*ver sacrum*) and, if necessary, its fulfilment. Through another activity they not only were brought into contact with political life, but sometimes influenced it to a very considerable degree. This was their supervision of the calendar. Besides providing for

¹ Livy, iv. xxvii. 1: 'Dictator, praecunte A. Cornelio pontifice maximo . . . ludos vocit,' xxxvi. ii. 8: 'Id votum in haec verba, praecunte P. Licinio pontifice maximo, consul nuncupavit.'

¹ A case is cited for the year 200 B.C. by Livy, xxxi. ix. 7.

the proper observance of the festivals—a duty which was incumbent on them as the representatives of the rights of the gods—they had charge of the intercalations, and there is evidence that they sometimes manipulated them to further the aims of political leaders or parties.

In the early period of Roman society law and religion were inextricably intermingled, and so we find that the *pontifices* were authorities in the former as well as in the latter field. Even in later times, when the legal system had attained to independent development, the *pontifices* still retained functions that belonged to the sphere of law—e.g., their participation in the marriage rite of *confarreatio*, in the kind of adoption known as *arrogatio*, and in the making of wills, as well as their control of burial, of sepulchres, and of the whole cult of the *manes*. In the case of an arrogation or the making of a will they convoked the people in the *comitia calata* in order to secure their approval of the act.

The archives of the college were in the *regia*. These included the formulae which had to be used in appealing to the gods (*indigitamenta* [q.v.]); the forms for vows, dedications, etc.; the directions for the proper observance of all the details connected with sacrifices; the necessary instructions for the performance of expiatory rites, or, where the offence could not be expiated, for the infliction of the penalty; the calendar (*fasti*); and the annual transactions of the college (*annales maximi*), which, on account of the connexion of the *pontifices* with the political administration of the country, became so important an element in Roman historiography. But the archives contained other documents of even greater importance, namely the decrees and responses which the college formulated on questions submitted to them by magistrates or by the senate. These decrees dealt with the new problems which were constantly arising in regard to vows, dedications, sacred sites, festivals, the cult of the *manes*, and other phases of Roman religion which fell within the scope of the activity of the *pontifices*. These decrees formed a growing body of pontifical law.

(b) *Rex sacrorum*.—On the establishment of the Republic, while most of the spiritual activities of the king devolved upon the *pontifex maximus*, some of them were assigned to a priest whose office was instituted at that time, and who was given the name of *rex sacrorum*.¹ While the office, as we see from the name and know from other sources, was one of great dignity, it was vastly inferior to that of the *pontifex maximus* in power and influence. The *rex* could not hold any political office, and it is clear that appointment to the office was regarded as equivalent to political extinction. The incumbent was honourably but effectively shelved for the rest of his life.

He officiated at the *regifugium*, the ceremony held in the *comitium* on 24th Feb.; and the calendars show the notation *Q.R.C.F.* ('quando rex comitiavit, fas') on 24th March and 24th May. At the *regifugium* the *rex* sacrificed a victim as a sin-offering, and immediately after the sacrifice took to flight, apparently with the idea of escaping the taint.² The old explanation, by which the name of this rite was referred to the expulsion of the kings, is wholly without foundation. Equally unsatisfactory is the explanation usually given in regard to the functions of the *rex* on 24th March and 24th May. It is generally said that these two days were especially appointed for the making of wills (*testamenti factio*) and that on them the *rex*

¹ This is the form of the title attested by inscriptions. Latin authors use *rex sacrificulus* frequently. Livy, ix. xxxiv. 12, has *rex sacrificiorum*.

² Cf. the *poplifugia* (5th July), where, from a similar motive, the people fled from a sin-offering.

presided at the *comitia calata* convened for the purpose. No adequate evidence has ever been adduced to establish this theory, and in all probability, as Rosenberg¹ contends, *comitiavit* here means 'has come to the *comitium* (and sacrificed there),' and the ceremony in each case was, like that of the *regifugium*, of an expiatory character. The *rex* also made an offering on the Capitol on the nones of each month, when he announced the festivals to be held during the rest of the month (Varro, *de Ling. Lat.* vi. 28). Macrobius (I. xv. 9) tells us that in the early period the *rex* made sacrifice on the kalends, after the *pontifex minor* had announced to him the appearance of the new moon. But this ceremony apparently was given up. In fact the evidence of its ever having taken place is somewhat flimsy.

The *rex* was the special priest of Janus, and we have record of the offering which he made to that god in the *regia* on the occasion of the *agonium* on 9th January. It is partly in his capacity as priest of Janus, who presided over all beginnings, though partly also in recognition of his position as a representative of one phase of the royal power, that the *rex sacrorum* is given first place in the old ranking of Roman priests: *rex sacrorum, flamines Dialis, Martialis, Quirinalis, pontifex maximus*.

(c) *Flamines*.—The *flamines*² were special priests attached to the service of individual gods, and charged with the duty of officiating at sacrifices and other ceremonies in their honour. The name of the god is regularly indicated by an adjectival form: *flamen Dialis*, *flamen of Jupiter*, *flamen Martialis*, of Mars, and so forth. Only one exception is cited to this system of designation, namely the title of the *flamen* of the deified Septimius Severus: *flamen divi Severi*. The best attested form of the name of the office is *flamonium*, but *flaminatus* is also found.

The most important of the *flamines* belonged to the college of *pontifices*, and were fifteen in number: three *flamines maiores*, the *flamen Dialis*, *flamen Martialis*, and *flamen Quirinalis*, and twelve *flamines minores*, ten of whom are known to us: *flamen Carmentalis*, *Volcanalis*, *Portunalis*, *Cerialis*, *Volturnalis*, *Palatualis*, *Furrinalis*, *Floralis*, *Falacer*, *Pomonalis*. The *flamines maiores* were always patricians. This was true of the *flamines minores* also in early times, but later this office became plebeian. Under the Empire *flamines minores* were frequently members of the equestrian order.

In regard to the *flamen Dialis* we are reasonably well informed. He was chosen by the *pontifex maximus* out of three candidates, nominated by the college of *pontifices*, only those born of parents married by *confarreatio*, and themselves married by that rite, being eligible. He had many prerogatives (the right of the *toga praetexta*, of the *sella curulis*, and the services of a *lictor* and heralds), but was subject to galling restrictions and a long list of tabus. Although in the old list of priests his title appears before that of the *pontifex maximus*, and he had precedence over him at the priestly banquets, he was, so far as all the duties of his office were concerned, completely under his control. In the early period he was not allowed to spend a single night away from Rome, and even in later times his absence from the city was limited to two and afterwards to three nights. From the year 200 B.C. he was eligible for political office, but the rule that required his continuous presence in the city acted as a bar to his holding any office which required residence in the provinces.

¹ Pauly-Wissowa, s.v.

² The derivation is uncertain. It has been connected with *flare*, 'blow' (from kindling the altar fire; Marquardt), with *flagrare*, *flamma* (Curtius, Corssen, Usener); with the Skr. *brahman*, 'priest' (Meyer).

The numerous tabus by which he was bound show the degree of sanctity associated with his office.

He could not touch, approach, or name any animal or object with which in Roman religious consciousness an idea of uncleanness was associated: a corpse, a bier, raw meat, beans, a dog, a goat, or a horse. He was forbidden to hear the sound of the flutes played at a funeral. In a word, he was excluded from every possible contact with death or with anything connected with the cult of the dead.¹

Moreover, there was another series of tabus, which, while indicating the freedom of the *flamen* from the usual ties of human society, emphasized the extent to which he belonged to his god. He could not come in contact with anything that was tied or knotted,² or with a ring or chain. If he wore a ring, it had to be a broken one. His garments could be fastened only by safety pins (*fibulae*), or some other device lacking continuity. He could not touch or name ivy on account of its tangled and intertwining fibres; he could not walk under a trellis or in a vineyard. If a man in fetters entered his house, he was immediately released and the chains, in order to prevent the pollution of the house, were thrown out through the *compitium*. A slave could not touch him, and only a free man was allowed to cut his hair. He could be shaved only with a bronze razor. Furthermore, for him every day was a holy day, and he was not permitted to see any kind of work. On his walks an attendant always preceded him to warn workmen to desist from their labours while he was passing.

One of the chief duties of the *flamen Dialis* was to officiate at the sacrifice of a sheep to Jupiter on the ides of each month (*ovis idulis*). He himself laid the entrails of the victim on the altar fire. He officiated at the sacrifice of a lamb to the same god at the beginning of the vintage. His services, however, were not confined to Jupiter, for we find him participating in rites that pertained to the worship of other gods; e.g., he took an important part in the expiatory ceremonies of February. It was from him that the *pontifices* received the materials which they used in the purification of the houses. He presided at the Lupercalia, and he officiated at the celebration of weddings by *confarreatio*. In short, he seems to have been not merely high priest of Jove, but, so far as actual participation in sacrificial and other rites is concerned, high priest of the whole national religion.

Like the *flamen Dialis*, the *flamen Martialis* was a patrician married by *confarreatio*, and the son of parents who had been wedded by the same ceremony. In the early period, when the power of Mars was not limited in men's thoughts to the operations of war, it is quite possible that the part of the *flamen Martialis* was an important one, but in historical times it seems relatively insignificant. He was not subject to the tabus which have been mentioned in connexion with the *flamen Dialis*, though originally some of them at least had applied to him. His comparative freedom from restrictions enabled him to hold political offices even in the provinces. Of his sacerdotal duties almost nothing is known. Curiously enough, he had very little to do with the numerous festivals of his god which were held in March.

In the case of the *flamen Quirinalis*, the requirements in regard to birth and marriage were the same as those of the other two *flamines maiores*. Though he ranked below the *flamen Martialis*, he is more frequently referred to as officiating at sacrifices. He sacrificed a dog to Robigus on the Robigalia (25th April); on 7th July and 21st Aug. he sacrificed at the subterranean altar of Consus in the Circus; on 23rd Dec. he made an offering at the tomb of Acca Larentina in the Velabrum. These functions are not so disconnected as at first sight they seem. Quirinus seems originally to have been a spirit of vegetation, and the ceremonies in which his *flamen* has just been described as taking part were connected with agriculture.

Of the other twelve *flamines* we know little

¹ The *flamen Dialis* Merula, before committing suicide, laid aside the insignia of his office, on the ground that it was technically inconceivable for a *flamen* to die in his costume.

² Aul. Gell. x. 16: 'nodum in apice, neque in cinctu, neque in alia parte ullum habet.'

more than their names. In some cases it is only a chance reference to the *flamen* that has preserved the name of the god.

The insignia of the *flamines*, besides the *toga praetexta*, were the *læna*, a short red cloak worn over the *toga*, and especially the *pileus* or *galerus*, a conical cap, on the top of which was a small spike-shaped piece of olive wood, covered with wool. This was the *apex*, though the term is sometimes applied to the whole cap. The cap was provided with strings so that it could be tied under the chin, and would be less likely to vitiate a ceremony by falling off. It was made from the hide of an animal killed in sacrifice, and in the case of the *flamen Dialis* was white (*albogalerus*). The *apex* was not confined to the *flamines*; it was sometimes worn by *pontifices* and other priests, but was most closely associated with the *flamines*, and especially the *flamen Dialis*.

The *flamines* of the deified emperors (*flamines divorum*) also were attached more or less loosely to the college of *pontifices*. Down to the 3rd cent. a *flamen* was appointed for every emperor enrolled among the gods.

There were other *flamines* in Rome, who were not connected with the college of *pontifices*—e.g., the *fratres Arvales* had a *flamen* (*flamen Arvalium*), and so too had each of the *curiae* of the city (*flamen curiae*).

The wife of the *flamen Dialis* (*flaminica Dialis* or merely *flaminica*) participated in the sacred duties of his office. She was not the priestess of Juno, as Plutarch supposed.¹ There is no evidence, for historical times at any rate, that the wives of the other *flamines* had sacerdotal functions.

(d) *Virgines Vestales*.—The Vestal virgins, six² in number, were attached to the public cult of Vesta. They were chosen by lot out of a list of twenty compiled by the *pontifex maximus*. At first they were drawn from patrician families, but later the daughters of plebeian houses were eligible, and under the Empire we hear of daughters of freedmen being admitted. Only those whose parents were both living were eligible. A candidate who had been chosen was formally accepted by the *pontifex maximus*.³ She was then conducted to the house of the Vestals (*atrium Vestæ*); her hair was cut off⁴ and hung on a lotus-tree, and she assumed the garb of the order. She was from six to ten years of age when she entered, and the term of service was thirty years. After its completion she was at liberty to leave the order and marry.⁵ The thirty years of service were divided into three decades, in the first of which the priestess learned her duties, in the second practised them, and in the third instructed the novices. The eldest Vestal was the head of the order (*virgo Vestalis maxima*).

Like many others, the cult of Vesta, goddess of the hearth-fire, had begun in the family, but had subsequently become a State-cult also.⁶ It was the duty of the priestesses to keep up the sacred fire. Once a year only was it allowed to go out and be rekindled (1st March). If it went out at any other time, the incident was regarded as a *prodigium*, and the Vestal on watch was liable to punishment. The fire could be rekindled only by the primitive method of the friction of sticks. The priestesses also brought water from a spring or running stream, with which they sprinkled the temple. They made daily offerings of simple food to the goddess, and each day prayed for the safety and prosperity of the people. Besides these daily duties the Vestals had others, some of them connected immediately with the cult of Vesta, but

¹ *Quest. Rom.* 86.

² In the days of King Numa, according to the tradition, four, but increased to six before the end of the regal period.

³ Aul. Gell. i. xii. 14, 19; the words of the *pontifex maximus* were 'Te, Amata, capio.'

⁴ The hair was an offering. The cutting was not repeated. The Vestals whose statues we have had long hair.

⁵ The number of cases in which this happened is very small.

⁶ For an interesting account of the Vestals see *GB* 3, pt. i., *The Magic Art*, London, 1911, ii. 199 ff., where the author retracts the theory advocated by him in *JPh* xiv. [1885] 154 ff.

some pertaining to ceremonies not primarily or definitely belonging to that goddess. Chief among the former was the festival of Vesta on 9th June (Vestalia). At this season (from 7th to 14th June) the *penus Vestae*¹ was open to matrons, who with bare feet thronged to the temple to ask a blessing on their households; offerings of food were sent to the temple; offerings of sacred salt-cakes (*mola salsa*) were made by the Vestals; the millers and bakers had a holiday, and donkeys and mills were adorned with garlands. On 15th June the temple was cleaned. In regard to the activities of the Vestals that seem to be outside the cult of Vesta proper it may be pointed out that it was they who kept the blood of the October horse and the ashes of the unborn calves sacrificed at the Fordicidia, giving them to the people for use in the ceremonies of lustration held on the occasion of the Parilia (21st April). They were present at the sacrifice of the sheep to Jupiter on the ides of each month.² On 15th Feb. they provided the *mola salsa* used at the Lupercalia. On 1st May they offered prayers to the Bona Dea. On 15th May they took part in the ceremonies of the *Argei*. On 21st Aug. they participated in the Consualia; on 25th Aug. they, together with the *pontifex maximus*, attended the secret sacrifice to Ops Consivia in the *regia*. Fowler (*Roman Festivals*, p. 149 ff.) has pointed out the connexion between these ceremonies and the food-supply, with which the Vestals from the earliest times were closely associated.

The Vestals enjoyed many privileges. A *licitor* attended them when they went out on the street, and even the highest magistrates had to make way for them; on certain occasions they could use a carriage in the streets of the city; if a criminal on his way to execution caught a glimpse of them, he could not be put to death; places of special honour were reserved for them at the public games; they could be buried within the city. But, on the other hand, the life was an exacting one. They were subject to discipline at the hands of the *pontifex maximus*, who could have them beaten for any negligence in their religious duties. It was he too who, in case of violation of the vow of chastity by any member of the order, pronounced the sentence by which she was buried alive in a chamber-tomb on the Campus Sceleratus near the Porta Collina.³

2. *Augures*.—The derivation of *augur* is as uncertain as that of *pontifex*. Ancient etymologists connected it with *avis* and *garrere*,⁴ with *avis* and *gustus*,⁵ with *avis* and *gerere*,⁶ or with *augustus*.⁷ Nor do modern scholars agree on the question. The present drift, however, is to see *avis* in the first part of the word (cf. *auspex*=*avis*-*pex*, a derivation about which there is no doubt), whatever may be the significance of the latter part.⁸

The kind of divination which the Romans called *disciplina auguralis* seems to have existed in Italy prior to the foundation of Rome. Its purpose was a narrower one than that of reading the future; it was intended merely to determine the attitude of the gods towards some action that was contemplated or even in process. The *augures* were

authorities on the significance of the various signs by which the gods manifested their favour or disfavour.

The college of *augures* is attributed by some ancient writers to Romulus, by others to Numa—traditions that have no value except in the fact that they are indications of a general belief in the antiquity of the institution. From three the number of members was increased to six, afterwards to nine, and then by Sulla to fifteen.¹ Membership in the college was always highly esteemed, and the roll of members included many of Rome's most distinguished citizens. The presidency of the college was vested in the oldest *augur*, and the respect paid to seniority is attested by Cicero (himself an *augur* from 53 B.C.) in his *de Senectute*, xviii. (64).

The most weighty measures in Roman political life were undertaken only after the auspices indicated that the gods were favourable. The election of magistrates, their assumption of office, the beginning of a military campaign, the passing of laws by the assembly of the people, and other acts of a similar nature were all subject to this rule. The omission of the auspices or any irregularity in the procedure of the magistrate taking them nullified the act. The *augures* did not take the auspices, at any rate in the older period. That was the duty of the magistrates. But irregularities, on being reported to the senate, would be referred by that body to the college of *augures*. They, after investigation and discussion, drew up a reply (*responsum, decretum*) and sent it to the senate. If the reply established the presence of a flaw (*vitium*), the senate annulled the act. It should be noted that the response of the *augures* did not carry with it the annulment of the act. This took place only as the result of a *senatus consultum*, although the latter was based on the reply of the college. We do not know that the senate invariably followed the recommendation of the college, but it is certain that they generally did so.

A preliminary to the taking of the auspices was the marking off of the *templum* or place of observation. Then the magistrate, after announcing the *leges auspicii* (i.e. the rules that would govern his observation of the signs), stationed himself at that point of the *templum* prescribed by augural law, and, addressing Jupiter or other gods, asked for a certain, definitely specified sign or signs of the divine approval of the proposed action. Signs that were specifically asked for were called *auguria* or *signa impetrativa*, while signs that appeared without being asked for were known as *signa oblativa*. Quite apart from this classification, five different kinds of signs were recognized: from birds, from thunder and lightning, from animals (*signa ex quadrupedibus*), from the sacred chickens (*signa ex tripudiis*), and from incidental occurrences of evil omen (*dirae*). The birds were, in the language of augury, either *alites* or *oscines*. The former gave signs by their manner of flight, the latter by their songs or cries. Among the *alites* were the eagle and the vulture as well as the osprey (*avis sanguisalis* or *ossifraga*), the *buteo* (a kind of hawk), and the *immutulus*. In the list of *oscines* were the raven (*corvus*), the crow (*cornix*), and the owl (*noctua*).² Some birds were included in both lists, and we hear of some that as *oscines* were believed to give favourable, but as *alites* unfavourable, signs, and vice versa.

The *signa ex caelo* (thunder and lightning) belong to a very early stage in the development of augury.

¹ The store-room of the house.

² Horace's words (*Od.* III. xxx. 8) may refer to this occasion: 'dum Capitolum scandet cum tacita virgine pontifex.'

³ J. E. Harrison sees in this custom the survival of a ritual marriage to secure fertility for the crops (*Essays and Studies* presented to William Ridgeway, Cambridge, 1913, p. 144). Her theory is criticized by E. T. Merrill, *Classical Philology*, ix. [1914] 817.

¹ Dio Cass. xlii. 81 speaks of a sixteenth member added by Caesar.

² Cf. Festus, p. 197; Varro, *de Ling. Lat.* vi. 76; Pliny, *HN* x. 43; Cic. *de Div.* I. 53 (120).

Their precise interpretation involved a consideration not only of all the details connected with the appearance itself, but also of the nature of the occasion in regard to which the gods were being asked for a sign. The most favourable of the *signa ex caelo* was a flash of lightning passing from left to right of the observer. Yet even this sign, though generally auspicious, was unpropitious for a meeting of the *comitia*, and its appearance would prevent the holding of the meeting, or, if business had already begun, would result in its discontinuance. *Signa ex caelo* were used at a comparatively early date in the *auspicia* of the magistrates, not only as *signa oblativa* but also as *impetrativa*. By the end of the Republic they were practically the only *signa* that were used by the magistrates. It was not so much that they had crowded the others out as that in the general decay of the augural system they survived as the most convenient. Moreover, it was no longer regarded as essential that the magistrates themselves should take the auspices. A subordinate official, the *pullarius*, whose original function had been the care of the sacred chickens, could do so. The phrase '*servare ex caelo*,' which we find used of this official's observation, is an indication of the kind of sign of which he was supposed to take cognizance. There is, however, abundant evidence that his announcement of a favourable sign had very little to do with any actual appearance. The auspices had become a mere form, and the nature of the announcement in regard to them was dictated by political expediency.

Of the other signs, the *signa ex quadrupedibus* never seem to have been very much used as *signa impetrativa*, though, when occurring as *oblativa*, they could not be left out of consideration. They had to do with the behaviour of animals appearing within the bounds of the *templum*.

The *signa ex tripudiis* were the signs derived from the sacred chickens. By the end of the Republic these were practically the only auguries that were observed by military authorities. They came to have in the camps a place similar to that which the *signa ex caelo* had in civil life. This was largely owing to the convenience of the method.

The chickens were brought in cages, and, after the general who was to take the auspices had placed himself at the door of the tent within the bounds of the *templum*, they were let out. He observed their manner of walking and especially the way in which they ate the food that was thrown to them. The most favourable omen that they could give (*auspicium solistinum*) was to let pieces of food fall from their beaks. When such an omen was wanted, it was easily obtained either by giving the chickens crumbly food or by starving them before they were liberated and so causing a degree of haste in eating that resulted in numerous manifestations of the kind desired.

The *diræ* were unexpected events of an untoward nature which occurred either during the taking of the auspices or afterwards during the action itself. The fall of some object, the sudden illness of some one present, the gnawing of a mouse, etc., belonged to the category of the *diræ*. All *diræ* were deterrent.

With all the possibilities involved in the numerous auguries mentioned above, it is easy to see that the magistrate taking the auspices would frequently find himself at a loss in regard to the proper interpretation. Moreover, till a comparatively late date the *augures* were not present to assist him. The statement made by some ancient authorities that he had assistants does not imply that these were members of the augural college. To be sure, the difficulties of his position were to a certain extent modified by his announcement of the signs for which he was watching. But *signa impetrativa*, which of course were always favourable, might be counteracted by the appearance of unfavourable *signa oblativa*, and the possibilities of conflict were endless. If he made a mistake or if he deliberately ignored manifest indications

of the disapproval of the divine powers, there was danger of the business transacted being subsequently annulled by a decree of the senate. It was on this account, doubtless, that during the last century of the Republic the custom grew up of having *augures* present to help the magistrate with their professional advice at the taking of the auspices before the holding of the *comitia*. Whether they ever actually took the auspices themselves is not certain.¹

The inauguration of persons and places was another important function of the *augures*. They themselves conducted this ceremony, and the evidence advanced in support of the theory that on the occasion of an inauguration they acted merely as assistants to the *pontifex maximus* is, as Wissowa has shown in his article in Pauly-Wissowa, wholly inadequate. After the expulsion of the kings the only persons who were inaugurated were priests. We have definite record of the inauguration of the *rex sacrorum*, of the *augures* themselves, and of the *flamines* of Jupiter, Mars, Quirinus, and the deified Julius. There is no record of the inauguration of *pontifices*, and probably the Vestals were not inaugurated. Livy (I. xviii.) describes the ceremony.

It took place on the *arx*. The *augur*, after indicating with his wand (*lituus*)² the regions of the sky within which he would make his observations, laid his right hand on the head of the candidate, and asked the god to show by a *signum ex caelo* whether the candidate was acceptable to him.

In regard to the places that had to be inaugurated, we find that the list includes all those intended for business which could be transacted only after the auspices had been taken. Among them we find many temples, and such places as the *rostra* and the *curia*. Moreover, the city itself was inaugurated as well as the land just outside the walls, as far perhaps as the first milestone. To this district the term *ager effatus* was applied. There were other *loca effata*, as we know from Varro (*de Ling. Lat.* v. 33), who gives the following list of five additional kinds of territory which were inaugurated so as to make possible the taking of auspices by magistrates absent from Rome: the *ager Romanus*, *Gabinus*, *peregrinus*, *hosticus*, *incertus*. The term *templum* in its technical sense is applicable only to an inaugurated place or building that is rectangular in shape. The city of Rome and the various territories referred to were not *templa*, strictly speaking, but *loca liberata et effata*,³ in which also auspices could be taken. We know very little about the ceremonies with which places were inaugurated, beyond the fact that a star-shaped piece of metal was brought in as a sign of the completion of the inauguration.

Other ceremonies in which we find the *augures* officiating independently of the magistrates are the *augurium salutis*, the *vernisera auguria*, and the *augurium canarium*. The last-mentioned took place every year in midsummer, and was intended to gain the protection of the gods against the action of the heat on the crops. The ceremony was accompanied by a sacrifice of red dogs. The *vernisera auguria* probably had to do with the agricultural operations of the spring. In regard to the *augurium salutis* there is a good deal of uncertainty. Apparently the purpose was to procure from the gods some assurance of a continuance of the safety and prosperity of the nation. It could be held only when there was no Roman army in the field. Tacitus⁴ speaks of its being celebrated in A.D. 47 after an interval of seventy-five years.

¹ Possibly they sometimes did in the last period of the Republic. Cicero (*de Leg.* ii. 20) apparently makes a claim to this effect.

² 'Baculum sine nodo aduncum' (Livy, I. xviii. 7).

³ I.e. freed by the formula spoken by the *augur* from all previously existing religious associations.

⁴ *Ann.* xii. 23.

The archives of the *augures*, which were kept in the *auguraculum* on the *arz*, consisted of *fasti* (a list of members past and present), *acta* (the record of the transactions of the college), and, most important of all, the *libri* or *commentarii* in which all the lore of the craft was contained. Both terms, *libri* and *commentarii*, are used indiscriminately of the traditional material and of the numerous accretions consisting of the responses given to questions submitted by the senate.

3. *Quindecimviri sacris faciundis*.—The third of the great priestly colleges is the *quindecimviri sacris faciundis*. Originally it was a commission of two members (*duoviri s.f.*), and it was not till 367 B.C. that it became a *collegium* of ten, of whom five were patrician and five plebeian. In Sulla's time the number was increased to fifteen. Cæsar made it sixteen, and under the Empire others were added *supra numerum*. In the time of Augustus the college was administered by a group of five *magistri*¹ (chosen annually by the college from its own membership), later by one.²

While the priesthood is less ancient than the *pontifices* and the *augures*, it goes back as far as the Tarquin dynasty, and its foundation is one of the indications of the foreign influences at work in Rome during that period. Its activity was confined to the Sibylline books, to the cults introduced in accordance with their oracles, and to the ceremonies performed, after consultation of the books, to avert the wrath of the gods. But, as the Sibylline books were Greek oracles, the cults introduced through them were Greek, except in such a case as that of the Great Mother, which came from Pessinus in Asia Minor. The result of this was that the *quindecimviri* bore to all cults which were conducted according to Greek forms of ritual (*ritus Græcus*) a relation analogous to that of the *pontifices* to the cults whose ceremonies adhered to Roman tradition (*ritus Romanus*).

The Sibylline books contained the oracles of the Sibyl of Cumæ, to which perhaps some others from different sources were added from time to time.³ When brought from Cumæ, they were placed in the temple of Jupiter on the Capitoline, where they remained till the year 83 B.C., when they perished in the fire that destroyed the temple. A commission was sent to Greece to make a new collection, and returned with 1000 verses, which were deposited in the new temple of Jupiter that had been built on the Capitol. They were left there till Augustus moved them to the temple of Apollo which he had erected on the Palatine. Augustus made a careful inspection of the oracles and rejected such as bore evidence of having been introduced into the collection for political reasons. Tiberius subjected them to a similar inspection, and there are other indications that the books were sometimes manipulated in the interests of political factions.

No one had access to the books but the *quindecimviri*, and even they could not consult them except when authorized by the senate. Moreover, it was only on the occurrence of prodigies which seemed to be of special importance that the senate gave the order for the inspection. When the *quindecimviri* had consulted the oracles, they made a report to the senate, stating by what sacrifices or ceremonies the gods could be appeased. The senate then decreed the performance of these rites under the supervision of the *quindecimviri*.

The clearest indication of the nature of the activity of the *quindecimviri* is furnished by the

list of divinities whose cults were introduced as the result of an inspection of the oracles. Among these are the cult of Apollo (with whom the oracles are most closely connected), Ceres, Liber and Libera (Demeter, Dionysus, and Kore), Mercury (Hermes), Neptune (Poseidon),⁴ and Hercules.⁵ At a later date came Æsculapius, Dis, and others. The *quindecimviri* did not themselves perform the sacrifices or rites, for the Greek cults had their own priests; but they supervised them. They had a similar supervision over *lectisternia*, *supplicationes*, and other ceremonies ordered by the books in expiation of prodigies. That Oriental cults were not regarded as lying outside the field of their activities is shown by the fact that they were in charge of the cult of the Great Mother (see art. MOTHER OF THE GODS), introduced in 204 B.C. in accordance with a Sibylline oracle. Their connexion with this cult was especially close. They actually participated in some of the rites,⁶ and from the latter half of the 1st cent. after Christ they were thought of in two capacities: priests of the Great Mother and custodians of the Sibylline books.

4. *Septemviri epulones*.—This priesthood was instituted in 196 B.C., and to it was assigned the administration of the sacred banquets of Jupiter on the ides of September in connexion with the *ludi Romani*, and on the ides of November on the occasion of the *ludi plebei*. The theory held by Marquardt⁴ and others, that at the time of the organization of the priesthood the only banquet to Jove was that held in connexion with the *ludi plebei*, and that the *epulum Iovi* at the *ludi Romani* was established much later, is highly improbable. The *epulum* of the *ludi Romani* is in all likelihood an old institution.⁵ These banquets, though they were wholly independent of the *lectisternia* in origin, were doubtless strongly influenced by them.

At the banquets a *triclinium* was set up in the temple of Jupiter on the Capitol. An image of Jupiter reclining and images of Juno and Minerva seated were placed at the table, and food was put before them. The senators attended the banquets as representatives of the State, and had places at *triclinia* set up in front of the temple. In a word, this *epulum Iovis* was not merely an offering to the god; it was a communion of the god with his people. The practice of holding sacred banquets increased in frequency. They were given not only on the ides of September and of November, but on the occasion of triumphs, dedications, games, etc. Not only the senators but also the people in general participated in them, being accommodated at tables that were set up throughout the entire length of the *forum*. The strictly religious element in the institution receded into the background. They became great public banquets, but remained under the supervision of the *epulones*.

Before the institution of the *epulones* the *pontifices* had had charge of the *epulum Iovis*. It was the burden of their other duties that compelled them to relinquish this function, and the *epulones*, though an independent college and forming one of the four great priesthoods, were always regarded as supplementary to the pontifical college and to a certain extent subject to its influence.

When first instituted, the college had three members (*treviri epulones*). This number was subsequently increased to seven (*septemviri epulones*) and still later (by Cæsar) to ten. But even after this increase the college was known as

³ There is no real evidence that the *Carmina Marciana* formed part of the collection.

the *septemviri epulones*. An individual member of the college was called *septemvir epulonum*.

5. *Sodales fetiales*.¹ The *fetiales* were the authorities on the *ius fetiale*, the sacred forms that should be observed in international relations. To them the senate or magistrates appealed in regard to questions pertaining to demands for redress, declaration of war, or conclusion of peace. It was they who served as the emissaries of the State to the country with which the negotiations were being carried on. In the discussion of problems submitted to them by the senate the whole *sodalitas*, which consisted of twenty members, took part. On the missions to foreign countries, however, a smaller number went. When the purpose of the embassy was the making of peace, the number of *fetiales* was two;² when redress was demanded, four were employed. That the *sodalitas* was a very ancient one is seen from the use of the stone (*silex*) in killing the victim. It was in fact an old Italic institution, for we hear of *fetiales* not only at other places in Latium but also among the Æquians, the Faliscans, and the Samnites. At Rome the priesthood ranked next to the four great colleges; and in A.D. 22 an effort, which, however, failed, was made to place it on an equality with them.³ Its members were men of distinction during both the Republic and the Empire. Augustus himself was a *fetialis*, as were later emperors.

In Livy, I. xxiv., we are given some details in regard to the appointment and procedure of a deputation of *fetiales* on a peace mission.

The *verbenarius*⁴ asks the king to authorize him definitely and specifically as the envoy of the Roman people.⁵ The king formally gives the authorization requested. Then the *verbenarius* asks for the sacred herbs (*herba pura, verbenae, sagmina*) and is instructed by the king to gather them on the *arx*. These herbs are the symbol of his office. The *verbenarius* then chooses another of the *fetiales* as *pater patratus*,⁶ touching his hair with the herbs. The *pater patratus* is the plenipotentiary and spokesman of the deputation, and it is he who carries the sacred stone and the sceptre. The treaty is made in the presence of the commanders and of the armies by the *patres patrati* of the two nations. After the terms have been read, the *pater patratus* of the Romans, holding his sceptre and calling to witness the people present as well as the gods Jupiter, Mars, and Quirinus, swears that his nation will keep the treaty.⁷ Then he kills a pig with the sacred stone, calling upon Jupiter, if the Roman people shall be the first to break the treaty, to treat them as he treats the victim. After the sacrifice he throws away the stone, saying: 'Si sciens fallo, tum me Diapiter salva urbe arceque bonis eliciat, ut ego hunc lapidem.'⁸ When the same ceremony has been performed by the other *pater patratus*, the treaty is signed by both.⁹ The fact that the stone is thrown away is distinctly favourable to the theory that it is nothing more than a primitive weapon that has survived from the stone age, and not, as W. Helbig¹⁰ has suggested, a symbol of the god of lightning.

In the case of injury at the hands of citizens of some foreign power, *fetiales* were sent to demand redress.¹¹

The *pater patratus* goes to the boundary of the enemy's territory and states his country's case, swearing to the justice of the claims which he makes.¹² Then, crossing the border, he repeats the claims to the first native of the country whom he meets. He repeats them again at the gate of the capital and in its *forum*. If the offenders are given up, he departs as a friend. If the nation addressed asks time for further consideration, he

grants thirty days, publicly repeating his claims at the end of each ten days. After the expiration of this time, if satisfaction is not given, he solemnly calls the gods to witness, and, returning to Rome, reports the circumstances to the senate. If the senate decides on war, the *pater patratus* is dispatched again to the boundary, and in the presence of three adults throws into the enemy's territory a spear smeared with blood and charred at the end. Under the *fetial* law only a war declared in this way is *pium*.

Just as it was the duty of the *fetiales* to demand from another people those who had committed an offence against their nation, so also it was their duty to give up similar offenders among their own people.¹

Octavian declared war against Cleopatra in 32 B.C. according to the *fetial* rite; the emperor Claudius concluded treaties (Suet. *Claud.* 25) as *pater patratus*; Marcus Aurelius declared war against the Marcomanni in this way. But it had long since become a symbolical act. In the war with Pyrrhus a piece of land near the Circus Flaminius at Rome had been legally conveyed to a captive. This was declared enemy territory, and into it the *pater patratus* flung the spear from the *columna bellica* near the temple of Bellona.

6. *Fratres Arvales*.—See art. ARVAL BROTHERS.

7. *Salii*.²—There were two groups of *Salii* in Rome, the *Salii Palatini* whose headquarters were in the *curia Saliorum* on the Palatine, and the *Salii collini*, or *Agonenses*, of the Quirinal hill. The former were the dancing priests of Mars, the latter of Quirinus. Each organization consisted of twelve members and had a *magister*, a *praesul*, and a *vates*. The *magister* was in general charge, the *praesul* was the leader of the dance, and the *vates* of the singing.

The period of their greatest activity was the month of March, with its many festivals in honour of Mars. Although the calendars specifically record only three days of the month (the 1st, 9th, and 24th) on which the *Salii* took down the sacred shields,³ their processions seem to have taken place every day from the 1st to the 24th. Their dress consisted of *tunica picta* and *trabea*. On their left arm they carried the shield, which as they danced they struck with a spear or club held in the right hand. The dancing took place at certain sacred places in the city at which the procession paused. Each evening they halted at one of the *mansiones*, erected for the purpose, where the shields and other paraphernalia were kept till next morning. There also the priests dined together, their banquets being proverbial for their luxury. Next day the procession was resumed, and in the evening a halt was made at another *mansio*. After 24th March there was no procession of the *Salii* till 19th Oct., the *armilustrum*, when they danced on the Aventine. This ceremony corresponds to the *quinquatrus* of 19th March, which was originally a festival of lustration. After the *armilustrum* the shields were replaced in the *sacrarium*, and were not moved again till 1st March. The significance of this institution of dancing priests is variously explained. Wissowa claims that Mars was from the beginning nothing but a god of war, and in the shields and other equipment of the *Salii* he sees merely an appropriate costume for the priests of the war-god. The dance, he thinks, was a war-dance, and it was given in March and October because these two months were most closely associated with the beginning and the end of the annual campaign. On the other hand, those⁴ who regard Mars as a spirit of vegetation classify the dance of the *Salii* among the warlike and noisy demonstrations which are frequently adopted by primitive peoples for the

¹ The Roman grammarians connected the word with *fides* (Varro), *foedus* (Servius), *ferire* (Paulus); Lange derives it from an old substantive *fetis* (cf. *fateri, fari, fas*); Weiss compares the cult-title of Jupiter *Fetritius*.

² Wissowa, *Religion und Kultus*², p. 651, thinks that the number was afterwards increased to four, but his reasons seem inadequate.

³ Tac. *Ann.* iii. 64.

⁴ I.e. the bearer of the sacred herbs (*verbenae*). How he was chosen is not known.

⁵ 'Iubeas me, rex, cum patre patrato populi Albani foedus ferire'

⁶ Wissowa plausibly derives this word from *patrare*, 'to make a father.' On this theory *pater patratus* is a father artificially created as opposed to a natural *pater familias*.

purpose of frightening away the evil spirits that might harm the sprouting crops or interfere with the transmission of the vegetative principle from year to year.

8. *Sodales Titii*.—Of this priesthood we know almost nothing. Tacitus (*Hist.* ii. 95) tells us that it was organized by Romulus for the worship of the Sabine king, Titus Tatius.¹ Dionysius (ii. 52) makes a similar statement. It seems to have been defunct at the end of the Republic, but was revived by Augustus and lasted till at least the end of the 2nd century. The members belonged to the senatorial order or to the imperial house. We have no information in regard to its activities.

9. *Luperci*.—In the case of the *Luperci* we have a priesthood whose activity was confined to a single day of the year, 15th Feb., the date of the celebration of the Lupercalia. There were *Luperci Quinctiales* and *Luperci Fabiani*.² In 44 B.C. a third group, *Luperci Iulii*, was added in honour of Julius Caesar, and of these Antony was *magister*. But this group did not last long, and it was omitted on the reorganization of the priesthood by Augustus. Membership in the order of the *Luperci* did not carry with it a distinction equal to that of the other priestly *sodalitates*. It was an equestrian, not a senatorial, priesthood. The festival lasted into Christian times, not being abolished till the pontificate of Gelasius (A.D. 494).

The meaning of the title *Luperci* has been the subject of a long discussion. Till recently the prevailing view was that the word meant simply 'wolves,' like *hirpi* (in the Sabine language 'wolves'), the name applied to the priests of the god (Soranus pater) worshipped on the top of Mt. Soracte; and it was claimed that we had here another manifestation of the vegetation-spirit, which often turns up in the shape of animals.³ But this theory seems too fantastic for serious consideration, and the author of the latest detailed investigation of the cult (Deubner, *ARW* xiii. 482 ff.)⁴ has returned to the old etymology (Serv. *En.* viii. 343) by which *Lupercus* is derived from *lupus* and *arceo* and means 'one who keeps off wolves.' Deubner's reconstruction of the festival is ingenious and in regard to many points very plausible.

The most important features of the celebration were as follows: (1) goats and a dog were sacrificed (perhaps to Faunus, though this is by no means certain); (2) two young men⁵ were smeared on the forehead with the blood of the sacrifice, which was then wiped off with wool dipped in milk, whereupon they laughed; (3) the *Luperci*, in two bands, naked except for goat-skins stripped from the victims about their loins, ran round the base of the Palatine hill, and as they ran struck with strips of the same goat-skins all those (mostly women) who threw themselves in their way.

We have in the Lupercalia traces of a pastoral festival (implied in the protective measures against wolves), of a lustration of the community (seen in the encircling of the hill), and of a rite for fertilization (for which the striking with the thongs of goat-skin furnishes the evidence). According to Deubner, the course around the hill goes back to the early days of the Palatine settlement, when it was actually necessary to protect the sheep-folds from wolves, and individuals from certain families were appointed *Luperci*, 'those who keep off the wolves.'

¹ Tacitus' own information on the subject seems to have been somewhat vague, for in another passage (*Ann.* i. 54) he says that the priesthood was instituted by King Tatius for the purpose of keeping up the religious rites of the Sabines.

² It is generally assumed that the former represented the Palatine community, the latter the inhabitants of the Quirinal. But Fowler (*Roman Festivals*, p. 320) points out that this is inconsistent with the fact that the running of the *Luperci* was always around the Palatine only.

³ W. Mannhardt, *Antike Wald- und Feldkulte*, Berlin, 1905, p. 318 ff.; *GB*, pt. II., Balder the Beautiful, London, 1913, li. 141.

⁴ See also Fowler, *Religious Experience*, p. 478 ff.

⁵ Perhaps the *magistri* of the *Luperci Quinctiales* and *Luperci Fabiani* respectively.

The practice was not at that time connected with the worship of any god, but later was brought into relation with Faunus. The other elements in the festival, the striking with thongs and the wiping off of the blood, were, according to Deubner, subsequent additions, the latter belonging to the period of Augustus' reforms. That this is a final solution of the *Luperci* cannot be positively asserted, but that it is a more plausible theory than any that has hitherto been advanced may be confidently affirmed.

10. *Sodales Augustales*.—When Augustus died (A.D. 14), he was deified by senatorial decree, and a priesthood (*sodales Augustales*) was founded to pay the honours due to him as a god (*divus*). The *sodalitas* was organized on the analogy of the *sodales Titii*. It consisted of twenty-one regular members from the senatorial order and four¹ honorary members from the imperial family. This number, however, does not seem to have been rigidly adhered to, for there are references which indicate that in later times the membership was as high as twenty-eight. The *sodalitas* was administered by three *magistri*. It had charge of the games held in honour of Divus Augustus and of the ceremonies conducted in the temple erected to him near the north-west corner of the Palatine. Moreover, it took over the ancestral shrine of the Julian *gens* at Bovillæ and once a year held services and games there. At Bovillæ also the archives of the priesthood were kept, and we may assume that its official headquarters were there. When the emperor Claudius was declared *divus* by the senate, his cult was assigned to the same *sodalitas*, which, however, was now called *sodales Augustales Claudiales*. The close relations between the Julian and Claudian *gentes* justified such an arrangement. But a new situation arose on the deification of Vespasian, who belonged to the *gens Flavia*, and another priesthood was accordingly organized, the *sodales Flaviales*. This *sodalitas* also took care of the cult of Vespasian's son Titus when he was deified. It is probable that there was no change in its title during Domitian's reign, and that it was only after his death, when there was a recrudescence of the popularity of Titus, that the designation *sodales Flaviales Titiales* was used.² A third *sodalitas* was founded on the deification of Hadrian (*sodales Hadrianales*) and a fourth on that of Antoninus Pius (*sodales Antoniniani*). To the last were assigned the cults of all the subsequent emperors who became *divi*. For the empresses and princesses who were deified (and the number, especially in the first 150 years of the Empire, was considerable) special *sodalitates* were not instituted. Their worship was for the most part conducted by the *sodalitas* pertaining to their *gens*—e.g., the cult of Livia by the *sodales Augustales*, that of Domitilla by the *sodales Flaviales*, and so forth. In addition to the *sodales* each *divus* had a *flamen*. It is probable that the *flamen* was not one of the *sodales*. Special priests were assigned also to some of the *divi*.

11. State priests of municipal cults. — There were also, in addition to the *collegia* and *sodalitates* that have been discussed, some minor State priesthoods. These were organized to take care of the sacred rites belonging to certain Latin communities that had been absorbed by Rome. The incumbents were Roman citizens. The ceremonies took place sometimes in Rome, sometimes at the original seat of the worship. The list consists of the following: *sacerdotes Cabenses* (Caba), *sacerdotes Cæninenses* (Cænina), *Albani* (Alba Longa),

¹ Tiberius, Germanicus, Drusus, Claudius.

² This point seems established by a recent art., 'The Date of the Arch of Titus,' by D. McFadyen, in *Classical Journal*, x1 [1916] 140.

sacerdotes Lanuvini (Lanuvium), *sacerdotes Lavinenses Lavinates* (Lavinium and Laurentum), *sacerdotes Suciniani* (Sucinia?),¹ *sacerdotes Tusculani* (Tusculum).

In the municipalities throughout the Empire there were, besides the local priests, *sacerdotes publici* modelled on those in Rome: *pontifices*, *augures*, and for the imperial cult *flamines* as well as the organizations of the *seviri Augustales*. More important than any of these municipal priests was the provincial priest, *sacerdos*² *provinciae*, who was elected by the provincial assembly, generally for a year, and who was the chief priest of the imperial cult in the province or group of provinces to which he belonged.

12. *Haruspices*.—Although the *haruspices* never became State priests, they played a part of considerable importance in Roman religion from the time of the war with Hannibal.³ They were of Etruscan origin, and the field of their activities was threefold: (1) the scrutiny of the *exta* of sacrificial victims, (2) the explanation of portents, and (3) the interpretation of lightning. None of these was new in Roman religion. Examination of the *exta* of victims was made by members of the regular Roman priesthoods, portents were cared for by the *pontifices*, and the interpretation of lightning was included in the lore of the *augures*. But the *haruspices* supplemented the work of the Roman priesthoods, and along many lines showed a degree of specialization and an elaboration of detail which went far beyond that attained by the Roman priests; e.g., the examination of the *exta*⁴ by Roman priests was not intended to do more than to determine whether the god to whom the offering was made was propitious or not, but the *haruspices*, by means of a complicated system, one element in which was the charting of the liver in sixteen different parts,⁵ claimed to read not simply the mind of one god on the subject, but the secrets of the future. In dealing with a portent they undertook to show what its meaning was. Their science of lightning transcended in detail and complexity that of the *augures*. The division of the liver into sixteen parts is obviously to be connected with the division of the heavens into sixteen regions upon which their interpretation of lightning was largely based.

The science of the *haruspices* was traditional in the noble families of Etruria, and so important was it considered by the Romans that in the 2nd cent. before Christ they took measures to assure its continuance in the chief cities of that country. For the *haruspices* whom the senate consulted were regularly brought from Etruria. Distinct from them were the *haruspices* who resided in Rome, and who were of two classes: (1) those attached to the service of officials and forming the *ordo haruspium LX*,⁶ and (2) private *haruspices* resorted to by citizens for advice on domestic problems. The status of these, especially the latter, was distinctly inferior to that of the *haruspices* summoned from Etruria.

Recent researches tend to show that the system practised by the *haruspices* in the examination of the *exta* is derived from Babylonia, and that its use in Rome constitutes an important channel of Oriental influence.

¹ This is a conjecture. No city of this name is known with certainty to have existed in Latium. See J. Toutain, in Darenberg-Saglio, iv. 948.

² In the East called *ἀρχιερεύς*, in the West *sacerdos* (in the three Gauls and elsewhere), or *flamen* (Spain, Gallia Narbonensis, Africa, etc.).

³ There is no satisfactory evidence of the Roman Government having called in *haruspices* at an earlier date.

⁴ While the term includes all the large internal organs, the science of the *haruspices* dealt chiefly with the liver.

⁵ A bronze liver, found at Piacenza, shows this division.

⁶ The earliest reference to this *ordo* is an inscription belonging to the end of the Republic (CIL vi. 32439).

GORDON J. LAING.

PRIEST, PRIESTHOOD (Ugro-Finnish).—

The priests among the Ugro-Finnish people did not form a separate social class. Their importance in the community, generally speaking, was evident only at the sacrificial feasts. The office of priest was regarded as an honour, and usually brought no remuneration. We can best study the observance of the pagan sacrifice in the home among the Votyaks, who retain the relics of a sacrificial feast observed in the old native hut (*kuala*). Here the father of the family was the natural sacrificial priest. That dignity descended to his eldest son, and, in the absence of male lawful issue, to the nearest male relative. Besides the family sacrifice, we find a tribal sacrifice held in common by several families in a tribal hut called a 'great hut' (*budzim kuala*). These sacrifices were performed by a descendant of the progenitor of the tribe—an eldest son, if possible. One and the same Votyak thus belongs to two *kuala*-families, a smaller and a larger.

Sacrifices were also offered in sacred groves. Groves were dedicated both to underground spirits—i.e. the great men, princes, etc., of a community—and to great nature-gods. If a family, for some reason or another—usually when a great misfortune had befallen them—dedicated a grove to some great man who was dead, it was deemed right that the sacrifices should be continued in that group by his posterity. When the priestly office did not pass by inheritance, a priest was chosen from among the members of the family or tribe concerned. Nature-gods might be worshipped in a grove set apart by one particular village community, or in a common sacrificial place belonging to a number of communities—sometimes as many as twenty-five. For both, sacrificial priests were chosen. As a condition of appointment, the priest was required to have the respect of the community and also to be skilled in prayer. Often the sacrificial priest remained in office all his life.

When several animals were to be sacrificed at the same time, as many priests took part in the service as there were animals offered. In the groves used by several communities the service was usually performed by the priests of the larger towns or villages of the district. When several priests took part in the service, the people occasionally called the oldest among them the 'great priest'; and his duty was to supervise the 'small priests' in the discharge of their functions. The most general appellation for a priest was 'old man.' He had always one or more colleagues, to whom special duties in connexion with the sacrifices were entrusted. When an individual wished to sacrifice in the grove of his village, he summoned the priest to hold a service for him. The seer could also sometimes appoint the priest to make the sacrifice.

In earlier times, when shamanism prevailed, it was the duty of the shaman to attend to the sacrifices. The shaman priest was held in very high esteem among his people. It was said, e.g., of the

Lapps that they always gave the shaman the best seat in the house, set before him the daintiest viands, and presented him with valuable gifts; indeed, sometimes they even paid tribute to him; and his opinion and advice were always highly esteemed.

It is uncertain whether the Ugro-Finnish priest wore a special sacrificial robe. It is known that he had to wash before every service, and to put on a new, or at least a perfectly clean and, if possible, white robe. Fasting before the sacrifice may also have been customary. Women, as a rule, could not take part in the sacrificial service, and were deemed unworthy of the priestly office.

PRIMITIVE METHODISTS.—See **METHODISM**.

PRIMOGENITURE.—See **FIRST-BORN**, **INHERITANCE**.

PRINCIPLE.—I. **Philosophical.**—The word 'principle,' reproducing the Latin *principium*, is a translation of the Greek philosophical term ἀρχή. This term designated two very different kinds of facts—principles of knowledge and principles of reality (cf. Aristotle, *Met.* 995^b7). This double application of the term runs through English philosophical literature. Not only the axioms of logic—e.g., the Law of Contradiction—to which Aristotle refers in the passage cited, but the fundamental truths of any body of doctrine are called its principles (cf. the title of the work *Principles of Mathematics*, by B. Russell). Sometimes by a redundancy of expression these are called 'first principles'—e.g., in Herbert Spencer's work of that name.

Again, anything fundamental in the nature of things may be called a principle. Thus, when T. H. Green talks of 'the spiritual principle in nature,' or B. Jowett, translating Plato (*Dialogues*², Oxford, 1875, iv. 229), mentions 'a principle which is above sensation,' they refer to a real existent.

A principle in the sense of a principle of reality may be conceived of either as a cause or as a constituent. It is in the latter sense that water is the principle of all things in the philosophy of Thales. But, even when a principle is conceived of as a constituent, other things are usually supposed to be in some way causally dependent on it.

To be fundamental is the essential notion of a principle, of whatever sort that be. If we ask, How fundamental?, the answer is, Logically; the principle is that which comes first in the order of explanation, whether we are explaining the nature of a demonstration or the nature of a concrete fact. Thus, if the principle of the universe is spiritual, it is the existence of spirit that explains all other facts. On the other hand, the principles of morality are the truths about moral relations on which depend all our explanations of particular moral phenomena (cf. T. Fowler, *The Principles of Morals*).

2. **Popular.**—'Principle' has various popular significations which are directly derivative from the different philosophical uses of the term.

(1) We constantly speak of the 'poisonous principle' or 'bitter principle' in substances, meaning by that something concrete which is the source or origin of the definite character which these things possess. These are not far removed from such more philosophical expressions as the 'vital principle' or the 'spiritual principle in nature.'

(2) On the other hand, when we talk about the 'principle' of the steam-engine or of the electric motor, we mean the truth which gives the explanation of their working. Principle is here the formal and not the material cause of a fact. At the same time, while in this case principle means a scientific premiss for logical explanation, the use of the term is not wholly dissimilar from that which it has in the previous instance. By a principle is here meant the ultimate and simple truth which stands at the beginning of our explanation. Again, the fact expressed in our ultimate premiss is held to be the actual cause of the phenomena explained.

(3) Principles of conduct stand on a somewhat different footing. They are generalized rules of good conduct which form the logical starting-point when we deliberate upon the rightness and wrongness of a particular action. A 'man of principle' (cf. Carlyle, *Cromwell*, speech iv.) is one whose conduct is regulated by the agreement of his projected acts with the general laws of moral action. By a 'man of good principle' we mean little more, for it is assumed that, when a man regulates his conduct by testing its agreement with general maxims, he employs maxims which are morally excellent. A 'man of no principle' is one whose conduct is not regulated by being compared by him with a moral law. Regard for principle in politics is strictly analogous to what it is in the case of morals. It means the regulation of action by noting its agreement with a general rule which has been established as a law of social well-being, without taking into account the immediate advantages which the infringement of that rule might bring.

G. R. T. ROSS.

PRISCILLIANISM.—The Priscillianists or Priscillians were a heretical sect charged with Manichæan and Gnostic opinions, which made its appearance under this name in Spain towards the end of the 4th cent., and, after exercising considerable influence in S.W. Europe, was confined within ever narrower limits until it disappeared after a history of about two centuries.

The sect took its name from Priscillian, its reputed founder, but it is very doubtful whether he is justly made responsible for the views which were held by his followers. The conditions of this problem have been altered since the discovery in 1885 and the publication by G. Schepss of the extant works of Priscillian. The other primary authorities are very scanty (a letter of Ambrose, a notice in Jerome, and a reference in Pacatus), but they support rather than contradict the evidence to be drawn from Priscillian himself, by which the witness of secondary authorities must be controlled.

Priscillian was a layman of good family, of fair education, and of considerable wealth, born probably at Merida, in Lusitania, shortly before the middle of the 4th century. He was attracted by that wide-spread movement of thought which found approval and safety when it went to the extreme of monasticism, but was exposed to the dangerous hostility of the ecclesiastical authorities when it gave itself to the cultivation of piety and an austere life apart from and not without criticism of the offices and officers of the Church. S.W. Europe had many groups of ascetically disposed Christians, known in some quarters as 'Abstinentes,' who nourished their faith not only on the canonical Scriptures but also on 'apocryphal' writings, such as the *Acts of Andrew*, of *Thomas*, and of *John*. In these it is probable that Manich

ean ideas and ascetic practices found a common root (see Babut, *Priscillien et Priscillianisme*, p. 231 ff.). One of the earliest works of Priscillian, the *Nonaginta Canones in Pauli Epistolas*, a series of contents-headings prefixed to groups of cognate sections of the Epistles, shows him in general sympathy with this movement, emphasizing those elements in St. Paul which look towards dualism and asceticism (canons 33 and 57), the 'carnal' character of the Law (can. 77), and the virtue of 'beata voluntaria paupertas' (can. 37). The first tendency of the movement was schismatic rather than heretical, and the fact that it captured several of the Spanish bishops—e.g., Salvianus and Instantius—alarmed Idacius, bishop of Merida, who, after consulting Pope Damasus on the matter, summoned a synod at Saragossa for its consideration (A.D. 380).¹ No individuals were condemned by this synod, nor do its decisions and anathemas contemplate errors in doctrine of any kind; they are concerned with practical matters such as fasting, the use of the Eucharist, and the frequenting of conventicles. Priscillian took up the challenge thrown down by this synod, and, by accepting the bishopric of Avila, at once put himself in the forefront of the movement, and entered the lists against Idacius. Idacius proceeded to obtain from the emperor Gratian a rescript condemning in general terms 'pseudo-episcopos et Manichæos,' and authorizing the expulsion of all heretics from Spain. This he then applied to Priscillian in a circular to other bishops in Spain, and also in a letter to Ambrose. Through the latter an unfavourable reception was provided for Priscillian when he proceeded to Italy in company with the bishops Salvianus and Instantius 'cum uxoribus,' to lay their case before Damasus and Ambrose in turn. His *Liber ad Damasum* contains his apology, in which he repudiates every kind of heresy, and especially that of the Manichæans. Damasus probably refused to interfere, but an appeal to the emperor met with better success: the rescript was cancelled, and Priscillian returned to his diocese in peace (382).

The next two years formed a period of great and successful activity for Priscillian. Most of his tracts (iv.-ix.) were now produced, and the important *de Fide et Apocryphis*, in which the note of independence is distinctly heard.

The quotations made by Priscillian supply valuable evidence as to the pre-Hieronymian text of the Latin Bible. 'Le texte biblique de Priscillien présente tous les caractères des textes "italiens": il semble former la transition entre ces textes du iv^e siècle et leur rejeton, le texte "africain de basse époque" que nous retrouvons régnant à la fin du v^e siècle dans l'empire des Vandales' (S. Berger, *Hist. de la Vulgate*, Paris, 1898, p. 8). The 'comma Johanneum' (1 Jn 5) has what is probably its earliest witness in Priscillian, tract. i. (ed. Schepss, p. 6). The *Canons* of Priscillian, often under the name of Peregrinus, and possibly modified in some respects by him, had a considerable vogue for several centuries in Provence and Spain (see Berger, p. 26 ff.).

The progress of the sect may be described in Babut's words:

'The government supported them, their adversary Ithacius was in flight, their influence was extending. The triumph of the spiritual and ascetic reform might well appear to them assured' (p. 167).

The swift disaster which overtook Priscillian and the whole movement was closely connected with the successful revolt of Maximus and the fall and death of Gratian. Ithacius (bishop of Ossunoba) had fled to Trèves, and there claimed the assistance of Maximus in suppressing the 'Manichæan' heresy in Spain. Maximus seized the opportunity of acquiring credit for orthodoxy. There was another possible motive in the wealth of the 'heretics,' reputed to be very great. The first step was to summon a synod at Bordeaux,

¹ See Mansi, *Sacrorum Conciliorum Collectio*, iii. 635; Priscillian, ed. Schepss, p. 85; 'nemo e nostris reus factus tenetur, nemo accusatus'; Sulp. Sev. Chron. ii. 47. 1.

before which Priscillian and Instantius were arraigned as prisoners. To the charge of heresy was added that of gross immorality and the practice of magic. According to Sulpicius, who is probably following the *Apology* of Ithacius, Priscillian refused to plead, and appealed to the emperor. Condemned by the synod, the accused were transferred to Trèves. There Priscillian, though still a bishop, was put to the torture, and the confessions so extorted from him were sufficient to condemn him then and ever since. Ambrose happened to be in Trèves on an embassy at the time, and was so indignant at the spectacle of bishops demanding the death of another bishop that he refused to communicate with Idacius and Ithacius, and was dismissed from Trèves in consequence (Ambrose, *Ep.* xxiv. 12). Having received from Maximus permission to proceed to a capital sentence, Evodius the prefect ordered Priscillian and his companions to be beheaded, and thus they perished—Priscillian, two of the clergy, Armenius and Felicissimus, Latronianus, a poet, and Euchrocia, the widow of Delphidius, the first heretics to be sent to the scaffold by the Church.

The execution of Priscillian was followed first by a reaction and then by a counter-reaction. The horror which was felt throughout the Church was marked by the indignant protests of St. Martin of Tours, the excommunication by a Spanish synod of Ithacius, the forced resignation of his bishopric by Idacius, and the sentence of exile pronounced upon both bishops by Theodosius. On the other hand, Latinus Pacatus pronounced a panegyric on the victims in the presence of the emperor; their remains were removed with all honour to Spain, and their names were inscribed on many sacramental lists there as martyrs. In Galicia the clergy and the people were almost wholly adherent to the movement.

Of the counter-reaction which followed we have no satisfactory record, beyond that which is indirectly given in the accounts of Priscillian and his followers which were circulated by Orosius and Turribius, and the judgment, probably based on Orosius, which was passed by Augustine. Councils held at Toledo (400 and 447) and at Braga (448 and 563) successively dealt with the Priscillianists. After the latter date they disappear. Isolated and persecuted, it is likely that they fell into heresy of the Manichæan or Gnostic type, but the evidence on which the movement in its early stage is labelled with either of these names is precarious. Much turns on the authenticity of a quotation from Priscillian given by Orosius (*Commonitorium*, 2 [CSEL xviii. 153]). Its genuineness has been taken for granted by most writers, and is maintained by Künstle and Lezius; but the searching criticism to which it has been subjected by Babut (p. 279 ff.) lays it under serious suspicion. All the other evidence points in the other direction—the silence of the synod of Saragossa, the express and repented statements of Priscillian himself, the cautious judgment of Jerome, the protest of Ambrose, and the championship of St. Martin. The case was soon found to be weak, and the evidence of Priscillian himself turned against him by the assertion that he held and taught the duty of perjuring oneself in order to conceal dangerous views. This Augustine believed of him on the authority of Dictinnus, which is the authority of one who, having left the Priscillianists and been reconciled to the Church, was seeking to demonstrate the completeness of his conversion.

C. A. SCOTT.

PRISONS.—The one essential quality of every prison, ancient, mediæval, and modern, for untried and for convicted prisoners, for those confined for a fixed period or for life, a dungeon of the Inquisition or a modern establishment conducted on the most humane and enlightened principles, is that it is a place of detention, where the inmates are deprived of that personal liberty and volition which men and women, civilized and uncivilized, have risked life itself, in all ages of the world, to secure.

The vital importance of this obvious fact is generally ignored even by experts. Edmund F. du Cane, chairman of the Prison Commissioners for England and Wales, an eminent authority on prison history and management, wrote in a description of Elmira Reformatory in New York State:

'The prisoners enjoy a luxurious dietary, and many indulgences are granted to induce them to work, so that the penal element of a sentence of imprisonment is entirely absent.

If du Cane had opened the prison doors, he would have found that a cage is a cage, although the bars are gilded; not one inmate of luxurious Elmira, however miserable his circumstances outside, would have remained. To be under ocular inspection every hour of every day (door-knockers are unknown, but there are peep-holes in every cell door); to be compelled, in strict obedience to printed rules and verbal orders and on pain of punishment, day after day, month after month, year after year, to rise up and sit down, to eat, sleep, speak, listen, work, walk, read, write, and receive letters and visits, even from wife and children, at the will of another—such treatment, if long continued, permanently unfits a human being for membership of a free community; and all this in the most depressing surroundings—eating, day after day, the same kind of food, wearing the same clothes, seeing the same official or degraded people, and doing, without substantial remuneration and for the benefit of others, the same uninteresting tasks. It is more than difficult, it is impossible, for a free man to realize what it means to be distinguished not by a name but by a number; to be lost to the outside world, and its news and activities, nature's sights and sounds excluded with perverse ingenuity; to be deprived of all social intercourse or family life, receiving no acts of kindness and unable to do any.

A convict (the kind of man that the newspapers, the novelists, and the playwrights make copy of as 'a hardened ruffian') burst into tears when a prison visitor suddenly shook hands with him. 'I beg your pardon, sir,' said the man, 'but nobody has shaken hands with me for ten years.'

With initiative, self-respect, and self-reliance diminishing day by day, no wonder there come the prison look, sullen, apathetic, or furtive, like a hunted animal, and the prison manner, half abject and half defiant; no wonder that the released prisoner finds himself unfit to work, if indeed he can get anybody to employ him. Disqualified for re-absorption in the community, a useless machine, and a social alien, he turns to drink and vice to drown and divert his misery, and drifts through crime back again into prison.

John Howard's *State of Prisons in England and Wales, with an Account of some Foreign Prisons and Hospitals* was published at Warrington in 1777, but until early in the 19th cent. the treatment of criminals and the punishment of crime by Church and State had scarcely a point of contact with Christianity or civilization; it was not even consistent with the instincts of ordinary humanity.

The sentence pronounced in 1630 upon Archbishop Leighton's father, a physician and divine, for writing against Prelacy in terms no more extravagant and not less honest than those employed by his accusers against Presbytery, was an extreme instance, in degree, but not in kind. It ran as follows: (1) to be twice publicly whipped, (2) to be pilloried in Cheapside, (3) to have an ear cut off, (4) to have the nose slit, (5) to have both cheeks branded with the letters 'S.S.' ('Sower of Sedition'), (6) to pay £10,000, and (7) to be imprisoned for life.

How long old ideas survive may be inferred from the Children Act of 1908. By sections 102 and 103 of that great statute it is solemnly enacted that, in Great Britain and Ireland, no child (a child is defined as a person under the age of 14 years) shall be imprisoned or sent to penal servitude or the gallows. England obtained a Court of Criminal Appeal in 1907. But in Scotland, while a question of property of trifling value, tried in the civil courts, may be the subject of two, in some cases three, appeals, there is as yet, except in a case of conviction for habitual criminality, no appeal from the verdict of a jury, disposing, in the criminal courts, of a citizen's life or liberty.

For the system, the trail of which still impedes prison reform, a false theological view was partly responsible, along with an inadequate estimate of the sacredness of life and liberty. Lunacy and criminality were looked upon as works of the devil, to be exorcized by death, starvation, fetters, or the lash. That the State, by its own shameful neglect and its iniquitous laws, was itself largely responsible, along with the cynical indifference of the community, for both crime and lunacy was an idea as new as that insanitary conditions, permitted by the State, were the chief cause of disease. Original sin was an easy explanation of all abnormal conduct. So thought Mr. and Mrs. Squeers in *Nicholas Nickleby*.

"That young Pitcher has had a fever." "No," exclaimed Mr. Squeers, "damn that boy, he's always at something of that sort." "Never was such a boy I do believe," said Mrs. Squeers, "whatever he has is always catching too. I say it's obstinacy, and nothing shall ever convince me that it isn't. I'd beat it out of him" (ch. vii.).

Neither the pictures of Hogarth nor the arguments of Jeremy Bentham, neither the disclosures of John Howard, Mrs. Fry, and Thomas Fowell Buxton nor the eloquence of Samuel Romilly had much practical effect till the reform of Parliament in 1832. In the beginning of the 19th cent. Acts were passed abolishing gaol fees, ordering the appointment of chaplains, the erection of sanitary prison buildings, the classification of prisoners, the separation of the sexes, and the appointment of female warders for female prisoners. Yet, writing in 1812, James Neild, who followed in Howard's footsteps, said:

'The great reformation produced by Howard was merely temporary. . . . Prisons are relapsing into their former horrid state of privation, filthiness, severity and neglect' (*State of the Prisons in England, Scotland and Wales*, London, 1812).

The movements for the amendment of the criminal law and the reform of prisons dated from the American and French Revolutions; and they were both connected with the growth of democratic ideas and institutions.

The importance of the subject, its human interest, and the difficulties which it presents cannot be exaggerated. There is no more difficult question, unless it be the labour question, the housing of the people, or the liquor question, with all of which the subject of crime is vitally connected. Unfortunately, most critics of present methods are purely destructive. Some ignore the responsibility of the community, and others seem blind to the large share played by poverty and unemployment, drink, gambling, and vice in the production of crime. The index to du Cane's *Punishment and Prevention of Crime* (London, 1885) does not contain the word 'poverty' or the word 'drink'; and J. Devon's original and interesting

study, *The Criminal and the Community* (London, 1912), breathes a spirit of despair. The subject has been canvassed at national and international congresses; and, in the United Kingdom, it has been considered by Government Commissions, royal and departmental, whose reports have resulted in a large number of valuable Acts of Parliament and prison regulations, each one advancing more and more in the direction of the treatment of prisoners as human beings, and not as things. Under these statutes and regulations the penal side of prison life has been diminished, and the reformative side increased, not, as sometimes ignorantly asserted, to gratify a sentimental humanitarianism, but in the best interests of the community, outside and inside the prison. Reformation is cheap at any price. It is a moderate estimate that a thief costs the community £150 a year, while at liberty. It is significant that in no single instance has there been any return to former less humane methods. Two hundred years ago, Montesquieu wrote:

'As freedom advances, the severity of the penal law decreases' (*Esprit des lois*, Paris, 1833, bk. vi. ch. ix.).

While prisoners should not be beds of roses, neither should they be torture-chambers.

Experts have written on prisons and prison reform in every European language. Ex-convicts have described their experiences, with little value for the cause of prison reform, including aristocrats like Lord William Nevill, members of parliament like Michael Davitt, financiers like Jabez Balfour, ladies of fashion like Mrs. Maybrick, and literary men like Oscar Wilde. No subject is more in favour with the novel writer; it is staged by the playwright and discussed on the platform, in the pulpit, and in the press. Too often the case for reform is prejudiced by gross exaggeration. As in Oscar Wilde's powerful *Ballad of Reading Gaol* (London, 1898), pictures are drawn which depend for their point on hardships and cruelties no longer anywhere to be found. It is of little practical benefit to denounce present-day administrators. The question is one of system; it can be solved only by experiment on a large scale and over a prolonged period; and such experiments are being carried on by governments, by communities, and by individuals in the United Kingdom, the United States, and many European countries. Happily for the future, many prison problems will solve themselves, by the diminution and ultimate disappearance of persons requiring penal treatment, through the gradual removal of the chief causes of crime, namely, (a) unemployment and irregular employment, with attendant idleness, the formation of bad habits, lack of energy, and starvation; (b) drunkenness, one of the chief causes of poverty and crime, and likewise one of their most common and dehumanizing concomitants and effects; and (c) the failure to seclude the mentally deficient, the habitual drunkard, and the habitual criminal, so as to prevent the perpetuation of a degenerate race. It is no exaggeration to say that the greater portion of crime in this country is due to economic, rather than to directly moral, causes.

I. *PAST AND PRESENT-DAY PRISONS.*—Down to the beginning of the 19th cent. the time-honoured methods of dealing with criminals made the question of prisons and prison-management of small practical importance. Prisons were places in which the accused awaited trial and the condemned awaited execution. The old plan of getting rid of crime was to get rid of the criminal, as distinguished from the modern endeavour to reform him and to prevent crime by stopping the manufacture of criminals. This is obvious from a bare enumeration of the methods formerly in use: (a) capital punishment, (b) mutilation, (c) flogging, (d) the

pillory, the stocks, and branding, (e) compensation payable to the injured or fines payable to the State, and (f) compulsory exile. Under the Jews, Greeks, and Romans, as also among the Saxons and Germans, the chief and usual punishment of crime consisted in the enforcement of compensation to the injured. For this rational procedure the feudal barons and the Church of the Middle Ages substituted imprisonment, torture, mutilation, and death.

By degrees, partly through the writings of men like Cesare Beccaria in Italy and Jeremy Bentham in England, partly because a greater value came to be put on human life, and partly through the necessities of colonization, while the judges continued to pass capital sentences for trifling as well as serious offences, the executive, especially in the case of young offenders, frequently remitted the extreme penalty. People may be better than their creed; and legislators and administrators have often been more humane than the laws which they enacted and executed.

These causes led to the system of transportation, which was introduced in the reign of Charles II. Criminals whose death-sentences were commuted were sent to the American colonies, along with those who were directly sentenced to transportation.

The old system, thus modified by transportation, continued till the loss of the American colonies in 1776, when ships, called 'hulks,' were established for convicts in the Thames, and at Portsmouth and Chatham. The first hulk was opened in 1778, and the system was not finally abandoned till 1857. Concurrently with the hulks a fresh field for transportation was found, in 1787, in the Australian colonies. In 1834, 4920 convicts were transported to W. Australia. The system of transportation continued till 1867, when the last batch of convicts sent to any British colony was prevented by the colonists from landing in W. Australia. Both systems, transportation and the hulks, were attended with misery, cruelty, disease, and loss of life, avoidable and unavoidable. In the hulks 'the inmates were herded together in unchecked association.' Vice, profaneness, and demoralization prevailed (du Cane, *Chambers's Encyclopædia*, s.v. 'Prisons,' viii. 418). It appears that about a fourth of the deaths in the hulks were due to a deadly, but preventable, malady called 'hulk fever.' Transportation was condemned in a Government report of 1838 in these terms:

'The system of transportation is unequal, without terrors to the criminal class, corrupting to both convict and colonist, and very expensive' (quoted by du Cane, *The Punishment and Prevention of Crime*, London, 1885, p. 139).

Yet, in view of the importance of emigration for those in danger of falling into crime, it is important to remember that many transported convicts, in new surroundings, away from old companions and temptations, and freed from poverty and idleness, became industrious and respectable citizens, and that some of their descendants overseas now occupy responsible positions in Church and State.

The next phase, concurrent for a time with the maintenance of transportation and the hulks, was the cellular prison and convict settlement, with the accompaniment either of solitary confinement by night and day or of solitary confinement by night and association at work and at meals during the day, but in both cases with silence by day and by night. It is doubtful whether England, Italy, or the United States is entitled to the credit or discredit of the origination of the cellular system, which had been advocated by John Howard as early as 1776, always, however, with the accompaniment of work, instruction, and moral and religious influences.

The cellular system, so far as involving isolation at night and continuous silence while the prisoners are in association, still remains in almost universal use in all European countries. But in the United Kingdom the accompaniment of solitary confinement during the day, except as a punishment for offences committed in prison, was abandoned in 1899 for prisoners with short sentences; it has also been abandoned in Scotland in the case of convicts, and reduced in England in 1910 to one month. So far as the present buildings and surrounding ground will allow, the prisoners work, eat, and exercise in association, but in silence.

1. **Kinds of modern prisons.**—The various kinds of prisons which, in the United Kingdom, have superseded the single prison of the past may be divided into seven classes; but it is not meant that there is any hard and fast distinction, so far as buildings are concerned.

(a) *Local prisons*, for those sentenced to not more than two years' confinement, are vested in and managed by three bodies of Prison Commissioners for England, Scotland, and Ireland respectively, created by the Act of 1878. There had been great waste of money, and also, except in a few cases of exceptional local interest and intelligence, great abuses, due to want of any uniform system of treatment, to inhumane or incompetent officials, to antiquated and inadequate buildings, and to the existence of a large number of small and unnecessary prisons. The differences in prison treatment were so great that criminals were known to select for their operations the locality of the gaol with soft beds, generous diet, and lax rules. The Prison Commissioners have always been hampered by want of funds in introducing humane and reformatory methods; they have done much to minimize the disastrous effects of prison life, and their annual reports do not disguise their dissatisfaction with much that is done, and much that is left undone, under their administration. These reports show a progressive realization of the compatibility of humane and reformatory treatment with good discipline.

(b) *Convict settlements*, for prisoners sentenced to what is called 'penal servitude' (first introduced in Great Britain by the Penal Servitude Act of 1853), that is to say, any period of imprisonment from three years up to a life sentence. There are three periods in a convict's sentence: (1) the first month, when he works alone in his cell, (2) the remainder of his period of detention, during which he works in association with other convicts, but in silence, and (3) the balance of his sentence, when he is outside on a ticket-of-leave, liable to be re-apprehended if he fails to report himself or breaks any of the other conditions of his licence. Penal servitude involves so much more food and so much more open-air work, in association with others and not in solitary confinement, that many 'old hands' prefer a sentence of three years' penal servitude (to be served in a convict settlement, such as Dartmoor in England, where the convicts are employed reclaiming ground and in farm-work, or at Peterhead in Scotland, where they quarry granite and build a harbour) to one of imprisonment for two years in an ordinary prison.

Comparative statistics of criminal offences and criminals require to be dealt with cautiously, and with intimate knowledge of the whole field, if one age or one country is to be fairly and accurately compared with another. The comparison between transportation and the hulks, on the one hand, and penal servitude, on the other, is not a complete one; but, subject to all deductions, it is encouraging that, whereas in the days of transportation there were, in 1837 (when the population of England and Wales was some 15,000,000), about

50,000 convicts, in the colonies or at home in the hulks, in 1869 the total number of convicts under sentence of penal servitude was only 11,660, of whom 9900 were men and 1760 women. This number under penal servitude was reduced in 1891 to 4978 (4654 men and 324 women), and in 1903 to 2799 (2669 men and 130 women). Taking local prisons and convict settlements together, it seems to be established that of first offenders about three-fourths never return, while of those convicted for the third time about three-fourths re-appear as prisoners in local prisons or convict settlements.

(c) *Preventive detention prisons*, or departments of prisons, established under the Prevention of Crimes Act of 1908 for convicts who have received a sentence of penal servitude, and who have also been proved to have been 'habitual criminals' at the time the offence was committed, engaged in no occupation except that of crime. These are the 'recidivistes' of France, the 'revolvers' of the United States. The period of preventive detention, which begins when the sentence of penal servitude ends, instead of being unlimited, as it ought to be, as was proposed in the original bill, is limited to a maximum of ten years. In the discretion of the Prison Commissioners the convict may have to serve the full period of preventive detention named in the sentence or he may be liberated at any time on probation. This useful Act requires amendment, because the 'old hands,' when out of prison, even while truly pursuing a life of crime, take care to do just as much work as will make it impossible to convict them, under the definition in the statute, of being 'habitual criminals.'

(d) *Criminal inebriate prisons*, established under the Criminal Inebriates Act of 1898, to which habitual drunkards, falling into crime, may be sent for lengthened periods. It was recognized that the short sentences usually inflicted on the habitual drunkard were worse than useless, and that to send a man or a woman to gaol for a day, a week, or a month on, say, their 200th appearance is to make a laughing-stock of legal procedure. Such short sentences, while long enough to rehabilitate the drunkard for further excess, are too short to afford any opportunity for his or her permanent reform. Hitherto the results of the treatment in criminal inebriate prisons as a reforming agency have been disappointing. Legislation is wanted to enable these institutions to deal with criminals whose offences are directly connected with drink, but whose moral sense is not so obliterated as to make reform practically impossible. The unreformable habitual drunkard must be shut up for life.

(e) *Criminal lunatic prisons*, where prisoners convicted of crime, who were insane at the time the offence was committed, or when they were tried, or who become insane in prison, are confined 'during His Majesty's pleasure.' When deemed advisable by the Home Office or Secretary for Scotland, an inmate may be transferred to an ordinary lunatic asylum. On complete recovery from insanity, he may be handed over to his relatives, under proper precautions and guarantees.

(f) *'Borstal' institutions*, established under the Prevention of Crimes Act of 1908, pt. i., for persons between 16 and 23. Du Cane says that most habitual criminals have begun their malpractices before 20 years of age, and 60 per cent under 15 (see art. JUVENILE CRIMINALS).

(g) *Reformatories* for boys and girls under 16, convicted of crime, to be detained for not less than three or more than five years, of which there are 38 in England, 7 in Scotland, and 2 in Ireland (see art. JUVENILE CRIMINALS).

2. **Differences between the prisons of the past and the prisons of the present in the United King-**

dom. —(a) *Ownership and administration of prisons.*

—The possession, or assumption, of judicial powers, and the use of dungeons attached to their castles and monasteries, formed one of the chief sources of the power of the landed classes, titled and untitled, and of the Church in the Middle Ages. After imprisonment by private persons was rendered illegal, there came the system of small prisons, which, while inadequately inspected by Government officials, belonged to, and were maintained and managed by, local bodies. In 1818, in 59 of the 518 prisons in the United Kingdom women were not divided from men, and in 445 there was no work of any kind for the prisoners to do. Some of these prisons were described as scenes of abandoned wickedness. In 1813 Mrs. Fry, on her first visit to Newgate, found 300 women, tried and untried, with their children, crowded together, in rags and dirt, and with nothing but the floor, without bedding, to sleep on. The Act of 1878 already referred to, which vested all prisons in Prison Commissioners appointed by the Crown, effected large savings in cost as well as improvement in the buildings and treatment, without sacrificing the benefit of local inspection.

(b) *Prison management.*—A writer (M. F. Johnston) in the *Fortnightly Review*, new ser., lxix. [1901] 560, says:

'The improvements which have been effected in recent years in prison management are of so radical a nature that they practically amount to a change of attitude towards the offender. . . . It has come to be recognised that hardships imposed for the sake of the suffering they entail do not act as a cure. They rather tend to brutalise the subject, and serve to intensify the anti-social instincts which led him, in the first instance, to raise his hand against his fellow-men.'

The old class of official and prison administrator not unnaturally, in view of his training, considered only what would maintain perfect prison discipline, and was not influenced by the fact that, while flogging and 'the black hole' undoubtedly crushed the prisoner into sullen and revengeful submission, these methods rendered him unfit, on release, to be re-absorbed into the decent part of the community. From every relaxation of the last century the old-time official has prophesied disasters, which have in no case occurred. He did so when it was proposed that the use of 'the black hole' should cease, with the crank (denounced by Charles Reade in *It is Never too Late to Mend*) and the treadmill; that windows should be increased in size and dim glass removed so that at least the sky, if not the earth, might be visible; when an effort was made to substitute for oskum-picking interesting and educative work; when flogging ceased, except for mutiny or gross violence on warders; and then only when authorized by a visiting magistrate or a Prison Commissioner; when work in association was introduced; when libraries were started; when, instead of everything being done to weaken the family tie (perhaps the only remaining motive for reform), prisoners were allowed to have their children's photographs in their cells; when a little bit of mirror, to promote tidiness, was fastened into the walls of their cells; when it was proposed to lay wooden floors over the miserably cold cement of which cell floors are constructed; when Swedish drill for women and ordinary drill for men were introduced, instead of, or in supplement to, the weary pacing round a circle in the prison-yard; when work in the fields was tried in connexion with local prisons; when a variety of food was substituted for the eternal 'skilly'; when good conduct marks, carrying a money value, were introduced; when magic-lantern lectures, which have been found a valuable aid to discipline, were first started. It is only fair to say that he has, in most cases, admitted that his fears were unfounded; to his amazement he has found that discipline can

be maintained better by the stimulus of moderate rewards, judiciously given, than by the deterrence of the most severe punishment. In 1868, in English prisons, there were 61,000 ordinary punishments; in 1884, under the so-called 'humanitarian' methods, the numbers had fallen to 37,000—a figure which has been since steadily reduced. Convicts on whom the terrors of the lash or the dark cell produce no effect will stop their bad behaviour if they know that perseverance will deprive them of the magic-lantern lecture or cut off the right, recently conferred upon them, of spending a small portion of their earnings on margarine or confectionery. The old class of official still clings to the stereotyped prison in or near towns and within high walls, although he has to admit that reformatories for juvenile and Borstals for juvenile-adult criminals, not to speak of such startlingly successful experiments as George Montagu's Little Commonwealth in England, are conducted successfully in the country, without high walls, and with only a manageable number of attempts to escape.

Prison management is in the hands of the following officials:

(1) *Governor and matron.*—Prison rules are uniform all over the country; but the humanity and reasonableness of their execution depend on the head of the prison; the executive staff take their tone from him or her more than from the Prison Commissioners or from the chaplain or medical officer. No absolute rule can be laid down for the selection of governors and matrons. Admirable appointments have been made by promotion from the rank of warders; in other cases conspicuous success has been achieved by governors who have been in the army or in civil life, and by matrons who have had experience and acquired fitness in other employments, such as nursing. The modern governor and matron are as efficient in the routine part of their work, and they are more ready to make allowances for special weakness, mental and physical, and more anxious to secure the prisoners a fair chance for well-doing after their release. For the difficult duties of a governor or matron there are wanted a keen intelligence, shrewd judgment of character, a personal knowledge of the social conditions of the masses of the people, and a sympathetic heart.

(2) *Chaplain.*—In 1814 the legislature made the appointment of prison chaplains compulsory. Previously, and for some time after 1814, their chief work consisted in ministering to the prisoners under sentence of death and attending them to the scaffold. Till 1868 that spectacle continued to be a public disgrace, denounced by Dickens, but successfully upheld by Samuel Johnson.

'Tyburn itself,' Johnson said, 'is not safe from the fury of innovation. . . . The old method was most satisfactory to all parties. The public was gratified by a procession; and the criminal was supported by it. Why is it all to be swept away?' (quoted by du Cane, *Punishment and Prevention of Crime*, p. 22).

Nowadays the right kind of chaplain becomes the prisoners' friend, and keeps in touch with them after their release. Realizing acutely the share of responsibility of the community for their undoing and misdoing, he is at the same time fully alive to the prisoners' own share of blame. The present writer knows a convict settlement where nominally Protestant convicts have entered themselves as Roman Catholics in order to have the services of a particularly friendly priest. The chaplain, Protestant or Catholic, is not readily gullible, as the public believe. His disappointments do not arise from the prisoner's insincerity, but from his weakness of will, his want of friends, and the temptations which the State licenses or permits. Prison-effected reformation may be quite

genuine at the time ; but it is generally too tender a plant to stand the storm of temptation. Chaplains used to be appointed for life ; short terms, which may be renewed, undertaken by local clergymen, are now found to secure greater freshness. The chaplain has in many cases the supervision of the educational work of the prison and of the library, and he organizes prison lectures. More money is spent on education and the prison library than formerly. Education does not make men and women moral or religious, but it prevents them from becoming criminal. In prisons persons of good education are almost as unknown as total abstainers. The library is one of the few things in a prison which preserve a prisoner's individuality. In Mountjoy Prison in Dublin the writer was told that Dickens is the favourite author among the men, and Annie Swan among the women.

(3) *Medical officer.*—The prison doctor's most important duty used to be to certify, in cases of hanging, that life was extinct, and, in cases of flogging, to see that death did not ensue. Now his observations of the mental condition of a man charged with murder may determine whether the accused is fully responsible and can be held to account as a normal human being, or whether, as to a certain extent mentally defective, he may have his crime, if proved, treated as one of manslaughter or culpable homicide and not of murder, or whether he is in such a mental condition that he is incapable of instructing a defence and must be committed to a criminal lunatic asylum. Every prisoner is seen at short intervals by the doctor, inside or outside the prison hospital ; the doctor, particularly under Scotch administration, has a free hand in the increase or decrease of the prisoner's diet and in regulating his work ; moreover, he soon acquires marvellous skill in detecting malingerers. Prison doctors have opportunities of studying medico-legal questions of scientific and practical importance, including the proportion of prisoners who have been from birth, or whose habits have made them, mentally and morally defective—a question which has an obvious bearing on punitive as well as reformatory treatment.

(4) *Warders, male and female.*—

'The officer who has charge of prisoners has such power, for good or evil, over his fellow-men, that I do not think there are many positions more responsible. Nor are there many in which the officer is exposed to more temptation to neglect his duty, or abuse his trust' (du Cane, quoted by W. Tallack, *Penological and Preventive Principles*², London, 1896, p. 278).

The warders' daily routine, spent in an atmosphere of repression and degradation, is not favourable to the development of human sympathy ; but in the general case no complaint can be made of the fairness of their treatment of prisoners. Instances of favouritism are due rather to the good conduct of the prisoners favoured than to any improper preference. As in lunatic asylums, cruel treatment by prison officers, which cannot be entirely prevented even under the best system of selection and supervision, is associated almost invariably with grievous provocation. Attempts in prison to commit suicide, which are seldom successful, are the fault of the system, not of those who administer it.

(5) *Prison visitors.*—It was not till the Act of 1899 that lady visitors were ordered for all local prisons where there are female prisoners. Religious and philanthropic visitors, who ought in all cases to have a special knowledge of the conditions of the classes from which prisoners come, are now welcomed to local prisons, under suitable regulations.

The English Prison Commissioners' report for 1915 'heartily endorses the praise bestowed on ministers of religion, lady visitors, aid societies, workers, secular and religious, who work day by day with patience and undiminished hope, for the rescue and reinstatement of the criminal of both sexes, and of all ages.

... It is to this organized effort of charity and goodwill, which has been specially directed with increasing force during recent years to the visitation and after care of prisoners, that the yearly improvement of our criminal records, especially with regard to the young offender, is due' (p. 21).

Devon writes :

'The visits to prisoners on the part of people from outside are of great benefit ; anything is that helps to break the monotony of the day, and give opportunity for conversation. They must have preserved many from desperation, and even insanity. They do something to keep up self-respect and to show the prisoner that he is not considered an outcast, impossible of redemption' (p. 237). As to prison lectures, 'anything that prevents prisoners from sinking into apathy, from brooding on the petty incidents that go to make up their lives in prison, from beating against the bars of their cage, is beneficial' (p. 241).

(6) *Prison work.*—The provision of work in prisons, which is a cardinal principle in the Prisons Act of 1898, is attended with great difficulties, if it is to be (1) sufficiently interesting to preserve the prisoner's humanity, (2) educative, (3) remunerative, or at least not productive of loss, (4) not competitive with philanthropic institutions, like blind asylums, and (5) not hostile to trade union rules and the legitimate interests of free labour. In connexion with the present European War, the writer has noticed with what increased industry, and even enthusiasm, work of a patriotic kind has been done by prisoners, toiling extra hours without remuneration other than the much-esteemed privilege of having the war news of the day read to them.

In connexion with prisoners working in association, the question of classification presents great difficulties. An effort is made to keep so-called 'first offenders' separate from so-called 'hardened criminals.' But in many cases the 'first offender's' act of fraud, or assault, is not his first offence, but only the first case which has been reported to the police or in which there was evidence to convict ; and there are so-called 'hardened criminals,' more sinned against than sinning, whose moral nature is by no means totally depraved. It is a widespread and pernicious delusion that an assault implies normal quarrelsomeness or brutality, and that an indecent attack implies normally ungovernable lust ; in both cases, apart from any question of provocation, the disgraceful conduct which has converted a respectable citizen into a felon may be the direct result of drink taken to such an extent (which may be far short of 'drunkenness') as to destroy self-respect and respect for the rights of others.

The difficult question of the universal enforcement of silence among ordinary prisoners in our local prisons and convict settlements remains for consideration. The difficulty consists in reconciling in practice the two principles, 'It is not good for man to be alone,' and 'Evil communications corrupt good manners.' In this important respect our prisons and convict settlements are more dehumanizing than transportation and the hulks in old days or than modern Siberian and Turkish prisons. But, then, it is said that suppression and not supervision is necessary, because conversation, however carefully regulated, is unavoidably subversive of discipline, and prisoners would abuse the privilege, if not for the concoction of plans of escape, at all events for corrupting communications about past and future villainies expressed in blasphemous and obscene language. The difficulties are admitted, but the rule might be relaxed in the case of well-conducted prisoners, furnished with the ordinary material for carrying on decent conversation, by access to newspapers as well as books after the day's work is over, as is done with good results at Borstals, among female convicts in England, and among male convicts undergoing preventive detention. The hardships as well as the pernicious effects of the present system are

so much felt that the writer knows at least one governor who, when dealing with prisoners' marks, does not count those bad marks which have been caused by a prisoner passing a harmless observation to his neighbour.

It is right to add, in regard to prison management generally, that no prison administrators, unless the most old-fashioned, are satisfied with the present system and its results. Therein lies the hope of the future.

(7) *Discharged Prisoners' Aid Societies.*—If efforts to reform are to be of permanent avail, the prisoner must, before release, be gradually prepared for approaching freedom, and must also, on leaving the prison, have work found for him and be otherwise befriended. More might be done in both directions, even under the present system. It is not enough to allow the prisoners to grow their hair of a normal length for a few weeks before their release. Additional relaxations would not be abused, because abuse would mean forfeiture of gratuity and of the period of remission. Opportunity is needed to overcome the shyness and nervousness and the reluctance to face the world which prolonged seclusion produces.

An Act of 1792, enlarged by the Gaol Act of 1823, made provision for discharged prisoners out of public funds. In 1802 the first Discharged Prisoners' Aid Society, 'The Hampshire Society,' was founded. Others followed; but it was not till 1862 that these societies obtained statutory recognition. Since 1887 every prison of any size has had a Discharged Prisoners' Aid Society working in connexion with it. In 1898 the Prison Commissioners issued schemes for the guidance of these societies, containing provisions as to grants in aid to their funds; and when, in 1899, lady visitors were appointed to all local prisons containing female prisoners, this was stated to be with the special object of aiding in the reformation of the prisoners and finding employment for them. In 1900, 39,413 discharged prisoners passed through the hands of 62 Aid Societies, of whom 2000 were found unworthy and 1100 refused assistance. These societies are doing admirable work despite inadequate funds and an insufficient number of voluntary helpers.

(c) *Prisoners with special privileges.*—The modern prison contains two classes of inmates who should not be confined in the same building as those convicted of actual crime, namely (1) untried prisoners, who are entitled to furnish their own rooms, wear their own clothes, provide their own food, carry on correspondence with persons outside, and receive visits from their friends, and (2) debtors (now, happily, under modern legislation, few in number), who have somewhat similar privileges. In the case of convicted prisoners in good health there is little respect of persons, in either accommodation, food, dress, or work. It was not so in former days. Just as, in mediæval warfare, all officers were, if possible, captured alive, that they might be made a source of profit to the captors, so imprisonment was then used as a means of obtaining what would now be called blackmail but was then known as ransom. In old days the wind was tempered in many ways to the woolly lamb, clerical and secular. The so-called 'benefit of clergy' was greatly abused; but, on the whole, like the right of sanctuary, it acted beneficially for the community, for it preserved the only cultured class from the brutal treatment to which secular persons were exposed. But for the benefit of clergy and the right of sanctuary, both history and literature would be poorer. The mediæval Church rivalled the State's brutal treatment of all prisoners, lay or clerical, charged with heresy; but its treatment of non-heretical prisoners was, on the whole, much

more humane. Sometimes it was more than humane, if we can judge from Archbishop Bliss's *Constitutions* (dated in 1357):

'They are so deliciously fed in prison that the prison, intended for a punishment for their crimes, is turned into a refreshment and delicious solace, and they are pampered in their vices by ease and such inducements.'

(d) *Prisoners in modern prisons who were absent from old prisons.*—These are long-sentence prisoners. Long sentences were originally the outcome of the false theological view of sin already referred to. But it does not follow that prolonged imprisonments must cease. Under totally different conditions, they will continue in the case of the reformable, until the offender has shown that he may be released with safety to the interests of his fellow-citizens. In the case of those who have been proved, by repeated and prolonged trials, to be unreformable, imprisonment for life will be substituted for the present absurd system, under which a prisoner, who has shown after a short period that he may safely be released, has to be maintained in prison, and his family in the poor-house, at the public expense to the end of a fixed sentence; and a prisoner is released at the end of a fixed sentence, even although he openly boasts that he means, on liberation, to resume his Ishmaelitic trade, his hand against every man.

(e) *Prisoners in old prisons who are not to be found in modern prisons.*—(1) Children convicted or untried. For centuries prisons were nurseries of crime. Children, some of them born and brought up in prison, were sent, for trifling offences, to the gallows, to Botany Bay, or to prison. In prison they became accustomed to the prison atmosphere and indifferent to it, and they left it 'gaol-birds,' with the prison-brand on them figuratively, and in some cases literally. The establishment of industrial schools for children under 14 in danger of falling into crime, and of reformatories for children under 16 who had been convicted of crime, and the marked success of these establishments had gradually reduced the number of children in our prisons. But, as already pointed out, it was not till the passing of the Children Act in 1908 that it was declared illegal to send any boy or girl under 14 in any circumstances to prison; and it was provided by the same statute that no sentence of imprisonment, except in a very limited class of cases, could be imposed on any offender under 16.

(2) Debtors. Literature has made great use of the abuses connected in old days with debtors' prisons, especially in England. The whole iniquitous system was terminated by the Abolition of Imprisonment for Debt Act, 1880. The number now imprisoned for debt is negligible. They consist, in England, of debtors who are able to pay, but will not, and, in Scotland, of debtors for Crown taxes and for aliment, these cases forming exceptions in the English and Scottish statutes abolishing imprisonment for debt in the two countries.

(3) Prisoners waiting for trial. In England it used to happen that the king's judges would not visit the place of trial for several years, during which prisoners languished in prisons, usually of the most insanitary kind, and their families, being deprived of their bread-winners, starved. Now, if a prisoner is not tried within a short time after apprehension, he is entitled to release.

(4) Prisoners acquitted of the offences for which they had been apprehended, but unable to pay the gaoler's fees, which were always extortionate, and often illegal. Now all gaolers' fees are abolished, and instant and unconditional liberation follows a verdict of acquittal.

(f) *Security of modern as distinguished from old prisons.*—In former times the facility of escape

from prison helped to explain some of the practices mistakenly quoted in evidence of our ancestors' brutality. Nowadays the safety of the community can be attained without taking away the criminal's life or mutilating him by blinding or by cutting off a limb, and, at the same time, punishment can be inflicted by imprisonment in place of the old sentences of flogging, the pillory, the stocks, or branding—either on the hand or on the face, as the statute of William III., passed in 1699, ordered. It was attempted to attain security by confinement in subterranean chambers, like the pits of Jeremiah and Joseph, and Daniel's den, or by thick walls, small and heavily-stanchioned windows, high above the ground, ponderous doors, and weighted fetters. It is now achieved by properly constructed buildings, constant personal supervision, and reliable warders. Our ancestors should not be blamed for practices which were forced upon them by necessity.

(g) *Hygienic conditions*.—Until the 19th cent. these were bad, beyond our power to realize. The inmates were starved, housed in a manner inconsistent with health and with decency, and they were in the absolute power, constantly abused, of keepers of brutal habits. In Henry Brinklow's *Complaynt of Roderick Mors*, written about 1542, the monastic author says:

'I see also a pytyful abuse for presoners. Oh Lord God, their lodging is too bad for hoggs, and as for their meate, it is evyl inough for doggs, and yet, the Lord knoweth, they have not inough thereof!' (ed. J. M. Cowper, Early English Text Society, London, 1874, p. 27).

In the third edition of his great book, published in 1784, John Howard says:

'Many, who went in healthy, are in a few months changed to emaciated dejected objects. Some are seen pining under diseases, "sick, and in prison," expiring on the floors, in loathsome cells, of pestilential fevers and the confluent smallpox' (p. 4).

Gaol fever was one of the commonest as well as most deadly maladies.

Lord Bacon (quoted by du Cane, p. 43) spoke of 'the smell of the gaol the most pernicious infection next to the plague. When prisoners have been long and close and nastily kept, whereof we have had in our times experience twice or thrice, both judges that sat upon the trial, and numbers of them that attended the business, or were present, sickened upon it or died.'

Nowadays gaols are models of sanitation; prisoners are well fed; the death-rate is below that of the outside population; and the old moral evils, arising from the absence of separation between the sexes, are unknown. The outward reforms for which John Howard and Elizabeth Fry and their coadjutors worked have been thoroughly accomplished, and the crying abuses, physical and moral, which they denounced have been removed. Great attention has been paid to the cleansing of the outside of the cup and platter. But whether the proportion of prisoners who leave our prisons more inclined and better fitted to lead law-abiding lives than when they entered is greater or smaller than under the brutal systems of the past is by no means so clear. Dickens exaggerated the disastrous effects of the separate cell, and, since his day, it has been ameliorated by good libraries, the friendly visits of the chaplains and prison visitors, and in other ways, but it still remains true that in their dehumanizing effect modern prisons, with all their vast cost, their perfect discipline, and the good intentions and endeavours of the Prison Commissioners and the officials who manage them, are little better than whitened sepulchres.

(h) *Reformatory methods*.—The modern definition of punishment by imprisonment is founded on the idea (1) of discipline so severe as to act as a deterrent, and (2) of such reformatory influences as religious and moral teaching, and good example and training in self-control, promoted by offering advantages for industry and good conduct, as well

as punishment for the reverse. However inadequate this conception may be, it is at least a great advance on old ideas and methods. At first employed only for detention, imprisonment became one of many methods of punishment, and, ultimately, the only method of punishment, except hanging, flogging, and fining. What is said by F. Pollock and F. W. Maitland applies to the usages of all European countries:

'Imprisonment occurs in the Anglo-Saxon laws only as a means of temporary security. . . . Imprisonment would have been regarded in these old times as a useless punishment; it does not satisfy revenge, it keeps the criminal idle, and, do what we may, it is costly' (*Hist. of English Law before Edward I.*, Cambridge, 1898, i. 49).

H. de Bracton, who wrote in 1268, expressly states that prisoners were to confine and not to punish:

'Carcer ad continendos et non ad puniendos haberi debet' (*de Legibus et Consuetudinibus Anglie*, London, 1569, fol. 105).

Persons were often kept in prisons for lengthened periods and even for life, not as a punishment, but as a means of avoiding the prisoner's right to trial or in order to compel payment of fines or ransom, or to elicit testimony.

It must not be supposed that the idea of deterrence, which, along with expiation, is at the root of our modern system, was unknown in former times. Indeed, the principle of deterrence must have a place, large or small, in every criminal system and in all schemes of prison management. But its importance is usually exaggerated. Tested by the criminal records of all ages and in all countries, even the most savage punishments are conclusively proved inadequate either to stop the supply of offenders or to turn criminals into law-abiding citizens. On crimes of passion deterrence has not time to operate; in cases of deliberate crime the fear of detection and punishment only makes the criminal more wary. The question in the end must be, Are the results worth the expenditure, as our prisons, even the best of them, are at present carried on, that is to say, under a system so identified with exploded theories of punishment that the reformatory elements which have been engrafted on it do not have a fair chance of success? No doubt, persons who would be dangerous to the State if at large are withdrawn for periods more or less extended. On the other hand, thousands are housed, fed, clothed, and doctored by the State who, if at large, would be supporting themselves and their families, and adding by their work to the productiveness and wealth of the State. Some are benefited by good influences under which they come in prison, but, for one of these, there are scores who are brutalized by prison life and who come out worse than they went in. There are cases where, in their results, notwithstanding the best endeavours of their managers, our prisons may come under the condemnation pronounced by Mirabeau on the *Old Bicêtre*, which he called 'a prison to propagate crime and a hospital to propagate disease.'

It may be said that these are grave statements to be made by an administrator of the present system; but they are in accord with a growing section of expert opinion.

'It must be at once admitted,' writes A. G. F. Griffiths, H.M. Inspector of Prisons, 'that the system of isolation has produced no remarkable results. Solitary confinement has neither conquered nor appreciably diminished crime. . . . Cloistered seclusion is an artificial condition quite at variance with human instincts and habits, and the treatment, long continued, has proved injurious to health, inducing mental breakdown. A slow death may be defended indeed on moral grounds if regeneration has been compassed, but it is only another form of capital punishment' (*EBR*²¹, s.v. 'Prison,' xxii. 363).

In 1895 a Departmental Committee reported:

'The great, and, as we consider, the proved danger of this highly centralized system has been, and is, that, while much attention has been given to organization, finance, order, health of the prisoners, and prison statistics, the prisoners have been

treated too much as a hopeless, or worthless, element of the community, and the moral, as well as the legal, responsibility of the prison authorities has been held to cease, when they passed outside the prison gates. The satisfactory sanitary conditions, the unbroken orderliness of prison life, economy, and high organization are held and justly held to prove good administration. But the moral condition, in which a large number of prisoners leave the prison, and the serious number of recommissions have led us to think that there is ample cause for a searching enquiry into the main features of prison life' (p. 7).

II. THE PRISON OF THE FUTURE.—The word 'prison' is used in this title. But in the criminal institutions of the future many of the features associated with the word will be eliminated. In the Children Act of 1908 'places of detention' (not 'prisons') are, by sections 102, 106, and 108, to be provided for certain classes of juvenile offenders. The criminal institutions of the future will be places of detention and reformation for the reformable, and places of detention for the unreformable. But this can be done only by the reconstruction, generally on new sites, of existing prisons, which were built to carry out erroneous ideas by methods now discredited. Instead of being situated in the country, with ample ground inside the bounds for the erection of workshops as occasion may demand, and ample ground outside for farm work and for exercise, existing prisons are generally situated in or near towns; the ground, originally insufficient, has been gradually encroached upon for the erection of workshops and other buildings to meet in some small measure the demands of prison reformers; and the only exercise possible is in Indian file, round and round a circle marked by stones on the ground—a ghastly travesty, euphemistically referred to in an English prison report as 'the prisoners enjoying exercise in the open air.'

It is true that there are important respects in which the prison of the future cannot hope to excel the prison of to-day. The large areas of ground that will be required and the ampler buildings will make the initial expense greater than the continuance of the present system; but thereafter, when the reformatory methods get a fair chance to tell, the expense will rapidly lessen, until the premises are used only to detain those who, after repeated trials, have proved themselves hopelessly unable to be at large with safety to the community. The future prison will be less rather than more secure against escape, although the *motus* prompting escape will be materially lessened. No ingenious devices will be employed to prevent the inmates catching even a passing glimpse of earth and sky and sea; but in cleanliness, heating, and ventilation its buildings cannot improve on those at present in use. The prisoners of the future will not work for the benefit of the State, but for those whom they have defrauded and for the support of their own wives and children. There will be greater variety in food, but there can be no possible advance on the quality of the excellent, but unvarying, diet which at present prevails. The prisoners' clothes may be rougher than the present uniform, but they will not be such as to prevent any man with a shadow of self-respect from allowing his wife and children to visit him. The discipline may be less mechanically perfect, but it will not prevent such conversation as is necessary to keep the inmates human, nor will it be thought essential, in every ordinary interview between husband and wife, to interpose two sets of iron bars between the visitor and the visited, with a warder sitting in the intervening space. The discipline will not be lax, but it will allow some opportunity for the exercise of volition and initiative, the complete stifling of which under the present system renders prisoners on release unfit to stand alone and fight their own battles.

Generally speaking, discipline will be maintained by just treatment and human kindness. 'Even a donkey will go farther after a carrot than when driven by a stick.'

The essential difference between the present prison and the prison of the future may be thus stated: in the prison of to-day the system is not wholly directed to detention and punishment, as it was immediately before Howard's time, yet it is primarily punitive and hardening, and only secondarily and remotely reformatory, whereas, in the prison of the future, the whole effort will be directed to secure that, when the offender is released (if he ever is released), he shall be at least so far reformed as to make it safe that he should return, under friendly supervision and help, to be a free member of the community. Whatever be the precise system, it must be based on the comparatively modern discovery that a healthy open-air life, interesting and educative work, and wholesome moral and religious influences are the chief panaceas for human maladies—physical, mental, and moral. A Dutch proverb was a favourite of John Howard, 'Make men diligent, and you will make them honest.' Griffiths' well-known epigram is subject to the qualifications to which all epigrams and generalizations are exposed; yet there is some foundation for his statement that half the inmates of our prisons should never be let out and the other half should never have been let in.

There are certain classes of persons at present forming part of our prison population who will not be found in the prisons of the future, but in separate establishments:

(a) Persons accused of crime who have been either refused, or who have been unable to find, bail.

(b) Persons for whose offences fines are deemed sufficient, and who are, under the present system, sent to prison in default of payment. By recent legislation time is now given for payment of fines, and part payment of fines can be made, thereby reducing *pro tanto* the period of imprisonment. The result has been to lessen greatly the number of prisoners of this class. Such prisoners, whose offences, generally speaking, are not crimes, but only breaches of social discipline, are really detained for non-payment of debt; and, so far as it is necessary to deprive them of liberty, they ought not to be kept in an ordinary prison, but in an institution in which they could earn, by their work, the balance of the fine imposed upon them, without being branded for life as criminals.

(c) Mental defectives. These are now sent to prison because judges have to deal with all criminals, except lunatics and imbeciles, on the false basis (1) that they are normal, physically, mentally, and morally; (2) that they have had, and have made, a deliberate choice between good and evil; and (3) that they were in a normal condition when the act was done, the fact generally being that they were more or less under the influence of drink, which, like other drugs, can, during the time of its operation, completely transform the most law-abiding disposition. These persons are unable, with the facilities and temptations authorized for them by the State at their doors, and with their wretched surroundings, to refrain from drink, and they are unfit to earn an honest livelihood. The report of the Departmental Committee of 1895 says:

'Weak-minded persons spend their lives in circulating between the prison, the asylum and the workhouse' (p. 34).

When there is risk of injury to themselves or others, they ought to be confined in asylums; when there is neither homicidal nor suicidal tendency, their proper place is in farm colonies,

where, while prevented from committing crime and from perpetuating their degenerate stock, they will be saved the needlessly rigorous treatment to which they are at present subjected. Much in our present system contravenes the maxim that 'all unnecessary pain is cruelty.'

(d) Those whose cases can be met by placing them on probation under the supervision of probation officers, in accordance with the Probation of Offenders Act, 1907. This is known as 'conditional liberty, on probation,' first introduced in Massachusetts, as distinguished from the 'conditional liberation' accorded to prisoners after serving part of their sentences, but without any adequate provision for looking after them. Although the system has as yet been worked only imperfectly, it has already saved this country large sums of money, which would have been spent in maintaining offenders in prison and their families in poor-houses, and the country has had the benefit of the offenders' continued labour. The probation system is capable of great developments; and sooner or later the State will find it economical to employ, and adequately remunerate, probation officers. If people can be got to take charge of lunatics, it should be possible, for adequate remuneration, to provide for the guardianship, outside of prisons, of criminals who are sane. In England, among those who are known as juvenile-adults—those between 16 and 21—the commitments fell from 12,178 in 1900 to 3663 in 1915. Before long all commitments to prison of persons under 21, when the offence is trivial and the antecedents of the offender are good, will be avoided by the extension of the system of supervision.

(e) Those who receive short sentences. The Borsal Committee for Wakefield Prison, reporting in 1915, state:

'There is not a single redeeming feature in a short sentence. It carries with it all the social stigma and industrial penalties of imprisonment, with no commensurate gain to the offender, or to the community. If there still survives in the minds of administrators of justice the obsolete and exploded theory that prison is essentially a place for punishment—and for punishment alone—for the expiation of offences in dehumanizing, senseless tasks, and arbitrary discipline, truly there could be devised no more diabolical form of punishment than the short sentence oft repeated' (*English Prison Commissioners' Report for 1915*, p. 18).

Yet, in spite of such views, which represent the opinion of all criminologists, there were in England, in 1914, 1106 sentences of one day.

Whatever improvements may be effected in the future in the system and methods employed to deal with crime in prison and to reform the criminal during detention there, to the extent at least of making him on his release a safe member of society, it must never be forgotten that these are merely palliatives to reduce the effects of a disease. It is an undoubted fact that the present system and the present methods have failed, and are failing, to rid the country of crime. If it is also true that no effective system of reformation is compatible with the conditions necessarily involved in imprisonment—because effectual reformation, to be permanent, requires retention of individuality, and retention of individuality involves innocent and wholesome social intercourse, which is practically impossible in prisons—then the claim for preventive, in preference to curative, measures becomes all the more manifest and urgent.

There is much to be said for that view, and, if it is sound, the main effort of the statesman and the philanthropist must evidently be to go to the fountain-head and to cut off the supply.

'Adopt, so far as possible, other means than imprisonment for the repression of crime. . . . The best economy of preventive and repressive effort must be that which reduces incarceration to the lowest extent compatible with public security, and which seeks its objects chiefly through influences to be applied outside the gates of jails, rather than within them. . . . Even the best

prisons are in a certain sense evils. One of the chief aims of a wise Penology is to devise means for advantageously and safely dispensing with them' (Tallack², p. 299).

Every movement calculated to improve the social well-being of the people is a step to empty prisons and convict settlements and to reduce and extinguish crime. So far as trivial offences go, it is better not to punish at all than to send to prison. If prisons are to be emptied and crime is to be prevented, it must be done by the State securing (1) that no citizen shall, without fault or physical or mental feebleness on his part, be unable to earn a continuous living wage for himself and his family; (2) that every citizen shall be able to obtain such housing and surroundings as shall make it possible for him and his family to live decent law-abiding lives; (3) that every child capable of education shall receive an efficient physical, mental, and moral training; and (4) that, whether or not, in the interests of personal, social, and national efficiency, the sale of alcohol, like the sale of opium, should be prohibited except for medicinal use, the existing temptations to use alcohol either in moderation or in excess—such temptations being often found at the maximum where the power of resistance is at the minimum—shall be ended.

An eminent criminologist has said:

'The immense majority of cases that pass through our Courts arise out of sheer need, or wretched education and surroundings, and would disappear with the establishment of decent social conditions' (Edward Carpenter, *Prisons, Police, and Punishment*, London, 1905, p. 6).

Judges have often declared, as the result of long and varied experience in dealing with criminal cases coming from all parts of the United Kingdom, urban and rural, that but for the use of alcohol (although not necessarily to excess in the ordinary sense of the word) certain classes of crime would cease to exist, and all classes of crime would be greatly reduced.

If the State does its duty in these essential particulars, the Christian Church will not be slow to avail itself of the opportunity, which it has never yet had, of bringing to bear the power of the gospel of Christ, without the hindrances and pitfalls which at present, to so large an extent, render nugatory the best efforts of religion and philanthropy. The present generation will not see it; but the day will come when no member of any civilized community will be able to say to any judge what a criminal, young in years but old in crime, once truthfully said, before sentence, to the writer of this article, 'My lord, I never had a chance!'

LITERATURE.—See the works cited throughout the article.

CHARLES J. GUTHRIE.

PRIVATE JUDGMENT.—'Justification by faith' and 'the right of private judgment' are the two watchwords of the Reformation. Neither, of course, was new, but each expressed an old truth in a new way. And what gave them their power to open a new chapter in man's history came through the personality of Luther, from whose fiery soul faith burst forth as the destroyer of hierarchical religion. Paul and Augustine had felt before him the same urgency towards the assertion of the ultimate autonomy of the individual, but it remained for Luther to reap where they had sown. Pfeiderer¹ has expressed the relationship of the three in the remark that Augustine was a Romanized and Luther a Teutonized Paul. But Paul, in his turn, was a Christian individualist partly Judaized and partly Hellenized.

The two tyrannies which pressed on the religious man of the 16th cent. were those of the practical system of religion controlled by the hierarchy and of the scholasticism (*q.v.*) which had

¹ *Philosophy of Religion*, iii. 229.

been adapted from Aristotle to serve the theoretical ends of the Church's dogmatic system. The weight of these became more and more intolerable when the civil power allied itself with the hierarchy against all who claimed liberty to judge for themselves in matters of religion. It is true that in no century were there wanting men and groups of men who to some extent sought to think and speak with freedom. The names of Abelard (*q.v.*), Wyclif (*q.v.*), Roger Bacon, John of Goch, John of Wesel, John Hus (see *HUSSITES*), Jerome of Prague, and the Brethren of the Common Life (*q.v.*) will at once come to mind. Moreover, the protagonists of another movement, mysticism (*q.v.*), contributed perhaps even more than all others to the formation of a deep subconscious belief in the inherent right of the individual to formulate his religion for himself. Of the predecessors of the Reformation men like Hus and Savonarola assailed current ecclesiastical practice; John of Goch, Gerson, and John of Wesel devoted themselves to theological thought, while mystics such as Ruysbroek, Eckhart, Tauler, and Suso aimed directly at transcending in individual experience all the externals of religion, while treating these as convenient expressions of the independent life that they lived immediately with God.

In Martin Luther (*q.v.*) these three streams ran into one. A student of St. Paul and Augustine, he early became aware of the cleft between their doctrine and the scholasticism which had trained him. As an Augustinian he knew and practised the austerities associated with the monastic life; in Rome he performed all the exercises appropriate to pious pilgrims; Tetzel with his indulgences set the match to his latent zeal for reform. And Tauler and the *Theologia Germanica* taught him what spiritual power mysticism could exercise. The result of the three influences thus brought to bear on him was the assertion of the Christian principle of 'justification by faith'—a phrase which was but a theological variant of the philosophic principle of 'the right of private judgment' (see *ERE* vii. 619).

It is not in the realm of physics alone that the law of the equality of action and reaction holds good. In the forces which constitute history it also asserts itself. A powerful hierarchy and an authoritative dogmatic system had set themselves in the Middle Ages to crush all spontaneity of individual thought and practice which might seem dangerous to the ecclesiastical system. Luther thereupon did but give expression through his forceful personality to the inevitable reaction for which the minds of all in different degrees were ready. And in doing this he builded more wisely than he knew. The three factors which had gone to make him what he was again separated when his work was done. One gave the principle that lies explicitly or implicitly at the heart of all the Churches of the West which are out of communion with the pope, and is the source of the idea of the democratic State. The second has been the fruitful mother of all later science and philosophy, and has profoundly influenced theology. The third reappears in the lives and writings of all subsequent Christian mystics. But it is one and the same principle that appears in all three—'the right of private judgment.' A few words will suffice to set out the filiation.

1. Social polity.—The chief difference in the conceptions of the basis of all social order which ruled before and after Luther is that in the former the individual was the passive recipient of rights at the hand of the authority which ruled him *jure divino* in Church and State alike, while in the latter he is their active creator. Nor is the distinction more than obscured by the fact that to
